The Nation

VOL. XCII—NO. 2375 THURSDAY, JANUARY 5, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

The Choice *of* a Magazine

BURLINGAME PUBLIC LIB.

SCRIBNER'S Magazine has been more read, more quoted, and more talked about within the past year than any other magazine published. Its position of leadership is established, its quality known, and its reputation for *progressiveness*, for filling its pages with the best, most interesting and entertaining literature and art of the time, is as widely known as its name.

Scribner's Magazine is a family institution. If you read it this year, you will want to read it next year and the year after. There is never any occasion for speculation about its contents. *You are always perfectly sure that you will find every number worth reading, worth keeping.*

1911 will be another great SCRIBNER YEAR

Send your SUBSCRIPTION NOW and ask for an Illustrated Prospectus. You will find it very interesting reading.

$3.00 a year; 25 cents a number

The UNITARIAN ADVANCE

A MONTHLY MAGAZINE OF PROGRESS IN RELIGION

GEORGE H. BADGER, *Editor*

YOU have always taken it for granted, no doubt, that a religious magazine must necessarily be heavy, dull and uninteresting—though good!

Some religious magazines are just that. We aim to make THE UNITARIAN ADVANCE different.

We believe that Religion can be made the most interesting thing in the world,—if you have the right sort of religion: eager; up-to-date; virile; not a thing of cant, but a reality; not an echo of old-time dogma, but a live-wire of tingling progress.

CHIEFLY: are you not interested to have the world progress in reason, justice, truth and freedom: to have religion made human, rational, honest to the core, manfully invigorating, not thinly and softly sentimental, but stalwartly enthusiastic, kindling, and dramatic in modern zest of progress?

Well, that is what THE UNITARIAN ADVANCE is concerned with. Why not have a part in its enterprise?

One Dollar a year; three months for 25c.

THE UNITARIAN ADVANCE
104 East Twentieth Street
New York

THE LIFE OF
CHARLES SUMNER
By Walter G. Shotwell

"is certainly the most exhaustive and perhaps the most painstaking biography of Sumner that has yet appeared," says the *Outlook*. "In this volume of more than 750 closely printed pages, every phase of the great Senator's career is studied in detail, and . . . with a narrative skill that seldom allows the interest to flag."

8vo, cloth. Two portraits. By mail, $1.65.

T. Y. CROWELL & CO., New York

JUST PUBLISHED
Income Taxation

Representing
All
Civilized Countries

A NEW ERA OF HUMAN EXPERIENCE.

THE importance of such an event as the issue of a new edition of the **Encyclopaedia Britannica** would be very inadequately recognized if one thought of it merely as the publication of a book. It is much more than that—it actually marks an era of the world's social development, no less than of its commercial and industrial enterprise. The new discoveries in science and in research, and the remarkable expansion that has accompanied every branch of activity in all civilized countries during the last 25 years, have involved a virtual reconstruction both in the premises and the conclusions upon which a large part of the knowledge of the eighties was based.

A NEED OF THE DAY.

THE new (Eleventh) Edition will therefore meet a pressing need of the day in that it will present, in orderly and convenient form, a scholarly and authoritative inventory of extant knowledge, in the light of the most recent research, and will supersede and displace all previous editions, as well as unauthorized and incomplete reprints. The civilized world will be able to take stock, as it were, of its knowledge—to reduce to concrete form the latest results of study, of experience, and of experiment in every department of activity.

THE GREATEST BOOK IN THE WORLD.

SUCCESSIVE editions—ten in all—of the **Encyclopaedia Britannica** have been issued since its first appearance in Edinburgh in 1768-1771. No other work of its kind has enjoyed so long and honorable a career, and none has been so widely distributed. Of the Ninth Edition (1875-1889), with Supplement (including mutilated and garbled American reprints), more than 400,000 copies were sold throughout the world. The work has gained a position of pre-eminence among works of reference which has never been seriously challenged. As a comprehensive repository of human learning, as a register of social and industrial progress, it has been a potent instrument of popular culture for the English-speaking people. It has, moreover, now come to be an international institution.

5,625 APPLICATIONS for the new Eleventh Edition of the Encyclopædia Britannica having been registered at the end of December, it is evident that the demand—during the next few months—is likely to exceed the ability of printers and binders to turn out complete sets. Intending subscribers should for this reason register their orders well in advance. No payment is required until after delivery of the volumes.

PUBLISHED BY THE PRESS OF THE UNIVERSITY OF CAMBRIDGE.

THE publication of the new Eleventh Edition of the great library of universal knowledge by the Press of the University of Cambridge will be a fitting culmination to the steadily widening task of popular culture which Cambridge has successfully carried on for more than five centuries. Carlyle said that the true University is a collection of books, and since the new **Encyclopaedia Britannica** is a library in itself, it is fitted by its authoritative character and its universal appeal to exercise a far wider educational influence than if it were to be issued, as in the past, by a private publisher. Cambridge has, since 1871, been closely identified with University Extension—a movement having as its object the diffusion of knowledge outside the circle of mere students. The publication of the new Eleventh Edition of the **Encyclopaedia Britannica** will be another step in the direction of spreading the influence of this ancient public institution beyond academic or local limits.

THIN VOLUMES—LIGHT IN WEIGHT AND EASY TO HOLD AND TO READ—LEGIBLY PRINTED ON OPAQUE INDIA PAPER.

THE volumes of the Ninth Edition were 2 1-2 inches in thickness. For most persons their size militated greatly against their usefulness. The old cumbrous volumes are now to be superseded by thin, light, flexible volumes 1 inch thick, printed on opaque and strong India paper. (The new edition is also being printed, for those who may prefer it, on ordinary book paper, similar to that used for the Ninth Edition.) In the India paper impression, the volumes of the Eleventh Edition will be as easy to hold as a novel or pamphlet. Bound in flexible leather covers, a volume may be doubled back, cover to cover, without injury, held in one hand, and so read in comfort. The usefulness of the "Encyclopaedia Britannica" will therefore be multiplied to an incalculable degree.

IMMEDIATE APPLICATION ADVISABLE.

In view of the magnitude of the printing and binding (29 vols. of 960 to 980 pages each), the Cambridge University Press is desirous that all who are interested in the new "Encyclopaedia Britannica" should as soon as possible be in possession of full particulars concerning the work, for its issue in two forms (India paper and ordinary paper) renders it imperative that orders for paper, printing, and binding be given in good time, and upon an accurate forecast of the demand in either form and in the various styles of binding. **To those who apply at once, in advance of publication, there is offered a great advantage in price, for such advance applications will be accepted at the rate of $4.00 a volume (cloth) or $4.25 a volume for India paper, instead of $7.50, which will be the ultimate price of the new edition in its cheapest form, as it was the price at which the volumes of the Ninth Edition were originally sold. Leather bindings (full sheep, flexible, and full morocco, flexible) are now correspondingly low in price.**

Illustrated prospectus (40 pp.), 56 specimen pages on India paper, 4 specimen plates, and form of application showing the special advance terms, will be sent by return of post if the reader will write name and address below, tear off this corner, and post to

NOTE.—Those who possess copies of the 9th edition of the ENCYCLOPAEDIA BRITANNICA (now out of date) are requested to advise us of the fact (giving name of publisher and number of volumes), and if they wish to purchase the new edition, will be informed how they can dispose of their old editions at a fair valuation.

Second Edition Now Ready

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

Some Tributes to This Remarkable Historical Work

Philadelphia PUBLIC LEDGER:

"A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON:

"I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series in ATLANTIC MONTHLY:

"Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE:

"In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE:

"A biography replete with facts and marked by courage and candor, learning, and justice."

Portland OREGONIAN:

"The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL:

"The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL:

"More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW:

"In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN:

"While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES:

"It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR:

"Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL

"No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE:

"It is a book which will take a place in the library of every well established home in this part of the country."

FIRST EDITION EXHAUSTED IN 7 WEEKS

Fully illustrated with portraits and other illustrations With copious notes and bibliography.

The Nation

NEW YORK, THURSDAY, JANUARY 5, 1911.

The Week

Gratifying intimations come from Washington that, after all, the Senate may have something to say about the Lorimer case in a tone very different from that of Senator Burrows. It appears that Senator Burton, for one, has been spending his holidays reading the report of the committee of investigation, and that he and some others are deeply stirred by what they find in the evidence—so much so, that they cannot subscribe to the doctrine that a Senator's seat is safe if his friends bribe a little for him, but not too much; the theory that if you cannot prove that the purchased votes were exactly the ones that elected the Senator in question, why then he is entitled to hold his seat among honorable men whose election has been clear and above board. Obviously, if the Senate cares for its reputation, the question of fitness hangs not upon the degree of bribery, or even upon the question whether the Senator knew about it, but whether there was any bribery at all. A high-minded man in Lorimer's case would have resigned on the first intimation of the scandal and notified his associates and the Illinois Legislature that he would not remain in his seat a day, if anybody had used any money in connection with his election.

A glance at the tables in the report of the Postmaster-General is sufficient to show a growth in post office business which, to those unfamiliar with it, must be little less than startling. Nothing surprises us, of course, when we go back a hundred years; that the receipts of the postal service in 1810 were only a little above half a million dollars, while now they are nearly a quarter of a billion, is the kind of thing every one expects. But that the receipts in 1870 were still under twenty million dollars—that they are more than eleven times as great now as they were only forty years ago—is another matter; and if we go back to 1860 we find the amount to have been only eight and a half million dollars. In other words, our people spend upon postage twenty-six times as much as they did fifty years ago, whereas the population is only three times as great as it was then. Indeed, the people of the United States now spend upon postage alone a sum nearly four times as great as was expended in 1860 upon the entire activities of the Federal Government!

It is a little surprising to find the *Public Ledger* endorsing the sentiment of a local merchant that Philadelphians should "stop their everlasting criticism and get together in a truly coöperative spirit to place Philadelphia in her rightful position before the eyes of the world." What is here recommended to Philadelphia is exactly what San Francisco actually did—for a time; only to learn that agreeing to keep still about political corruption merely added gall to criticism from the outside. The time may have come "when Philadelphia must shake off the village spirit and go forward on broader metropolitan lines," but this is no excuse for refusing to face what is the real trouble, if the *Ledger's* own columns are to be trusted.

The amazing cleverness of politicians is illustrated by the reported plan of the Republican majority in the New Jersey Senate to rush through a series of reform measures before Gov.-elect Wilson has a chance to declare himself in favor of them in his inaugural address. That is expected to take the wind out of his sails completely. The contemplated action would at once reveal the unprogressive spirit of the incoming Executive, and cause bitter regret that the party represented by the noble Senators at Trenton somehow failed of popular endorsement in November. Just how Gov. Wilson is to escape odium no one can imagine. All his popularity will immediately pass to those who opposed him and fought the ideas which they are now to make haste to adopt.

W. D. Connor, chairman of the self-styled "Taft Republican State Committee" in Wisconsin, has filed a statement showing that the committee spent more than $114,000 in its attempt to defeat Senator La Follette and other Progressive Republican candidates at the Republican primaries. It cost Senator La Follette only about $4,000 to win by a vote of four to one, while the regular State Committee spent but $8,000 on both primary and November elections. Now the Milwaukee *Journal* has published a list of 1,400 individuals in Milwaukee County alone who received sums varying from $5 to $250 each from the "Taft Committee." This list, it appears on analysis, contained the names of former La Follette men, Democrats and even Socialists. The purposes of the expenditure were set down as "publicity" and "organization." Progressive Republicans are rather amused than otherwise at the discovery how little the Taft Committee got for its money. But there are members of the incoming Legislature who are determined to have Mr. Connor tell who subscribed it. Some of the inquisitive ones think that they may strike a trail that will lead to the "jack pot" reputed to have been got up at Chicago to defeat not only La Follette but Beveridge and other Progressives in the Middle West.

Reform in our methods of judicial procedure played a conspicuous part in the proceedings of the American Political Science Association, in its annual meeting at St. Louis. Whenever the subject is discussed—and it is coming to be discussed with ever-growing frequency—the sentiment as to the urgent necessity of reform is emphatic, it comes from the highest sources, and it is apparently unopposed. There seems to be no material difference of opinion on the subject, and the only question is how this body of opinion, though relating to a matter of such great and immediate practical importance, shall get itself embodied in the actual practice of our courts. However, it may be set down as certain that a very considerable measure of improvement will come through the immediate influence of the discussion and criticism upon the attitude of the judges. There are many things, especially those affecting the right of appeal, upon which legislation may be necessary, but the judges have it in their own power to reduce enormously the abuses of our legal practice. Fortunately, a precedent in refusing to give weight to a ridiculous tech-

BURLINGAME PUBLIC LIB.

nicality has just as much chance to become infectious as the opposite kind of precedent. But the room for improvement is so great that nothing less than a persistent and determined effort on the part of the strongest men of the bench and bar will suffice to effect the reform needed. At St. Louis, strong language was used on the subject by several speakers, including Mr. Frederick W. Lehman, the recently appointed solicitor-general of the United States.

In his address at St. Louis on Wednesday of last week, Professor Giddings brought out with much force the responsibility of leaders in public life for the formation of opinion about war. He insisted that such prominent individuals are real social causes. From them comes an initiative which shapes the sentiments that sway the masses. This we believe to be profoundly true, and it seems to us to have a double significance in coming from a professor of sociology. For the comfortable theory is often put forward in the name of sociological doctrine that vast movements sweep over society before which the most virile and influential men are helpless, and in resisting or directing which they have no real duty because they have no real power. In particular it has been the pleasant custom to depict wars as "fated," since they are the inevitable collisions of rival principles or competing civilizations, or what not. Against all this, Professor Giddings uttered a timely protest. Hold what theories we may of fate or free will, destiny or striving, the practical truth which we have to grasp and act upon is that an enormous responsibility rests upon those who are set as spokesmen and guides of the people, and that according as they exercise it for good or evil will they be morally judged, both by their contemporaries and by posterity.

The brief but wanton strike last Friday of the firemen employed upon the Staten Island ferry-boats comes as a sharp reminder of one of the great difficulties which must be faced by other cities as well as by New York as municipal ownership and operation are extended. The men had only a fancied grievance, which they did not even present to the authorities; they quit work without notice and recklessly put thousands of people to great inconvenience. A government that cannot protect itself against its own employees is not only impotent but contemptible. This lesson has been learned in France, where a bill is now before Parliament to make a strike by workingmen in the service of the state unlawful. Let there be every provision for conciliation and remedying injustice, but let it be clearly understood that the crippling of public work by public servants will not be for a moment endured.

The New York State Commissioner of Education spoke recently in Syracuse on school system reform. We hope soon to hear a lecture from him on the reform of his own department in the way of making it more useful to rural schools. It is of extraordinarily little benefit to many such, whose sole relations to the Department consist of the brief visits of more or less competent inspectors, the matter of the Regents' examinations, and the making of rules and regulations for procedure and appointments under the laws of the State; while the Commissioner himself gives a good deal of time to passing on questions of law with resultant decisions that form most interesting reading to lawyers. Of course, the fault is chiefly in the laws. Dr. Draper is, we believe, the best superintendent the State has had. But where his department fails is either as an adequate inspector or a real vitalizing force, compelling weak or inefficient school boards to better conditions and bring their schools up to date. As it is, if the attendance is good and the written examinations are fairly well done, the school may in every other respect be faulty, with a poor system, poor teachers, and methods of a bygone generation. So long as school directors are elected as they are, there ought to be a very vigorous department at Albany, with plenty of capable inspectors to hold them up to their duties.

The Academy of Medicine in New York did a conspicuous public service by its discussion of leprosy the other night, and by bringing to its meeting nine victims of the disease. The popular ignorance and dread of this malady are comparable to the fear of the witches in old Salem days. Let a leper be discovered anywhere, and he is treated as if all his claims to humanity had vanished with the breaking out of the disease. The victim is isolated—as was the alleged leper Early in Washington a year or two ago—and refused a sight of his family, while his food is poked at him as if he were a dog suffering from rabies. All of this is but a relic of the mediæval dread of the plague, and is based apparently on the belief that if you touch a leper or breathe the same air, you are lost. The fact that there are fully a thousand lepers in the United States, and that one New York doctor has examined thirty cases in a year, ought to be known—not to cause any laxness in dealing with the disease, but to prevent further hysteria. The scientists are doing everything they can to find a remedy for the disease which, taken the world over, is not believed to be spreading.

The struggles of the British novelist to master American slang result in the creation of a dialect that never was on land or sea. Some of his phrases no American would use at all, and all of them could not possibly be found united in the diction of any one individual. It is naturally irritating to the American to be thus bewrayed to the unsympathizing by a speech which is, after all, not his, yet we cannot be surprised that the foreign novelist should adorn the conversation of his "Yankee" with the choicest flowers of rhetoric culled impartially from the Bowery, Georgia, Chicago, and the Pacific Coast, together with many that are indigenous to the British Isles. We may repudiate this Babylonish idiom with what scorn we will, but we doubt if the novelist himself harbors many illusions about his crude confection. Of course, there is a large element in it peculiarly British; he wishes to be understood by his countrymen, and we fear that unadulterated American—say, the language of "fandom"—would hardly find many English readers. The merest garnish of an "I guess," however, will animate the British lump. Even Burns had to allay his straight Scotch with a liberal infusion of English. Nor does the novelist feel it his task nicely to delimit the geographical distribution of "guess," "reckon," and "allow." He aims rather at a kind of "all-American" dialect. He operates with the "b'jabers's," the "bah

Jove's," and the "ach Himmel's" of our speech—those tokens of international linguistic exchange that are honored everywhere at sight—in the effort to evolve something as sprawling and inclusive as his conception of these States themselves.

The tragic deaths of Moisant and Hoxsey ought to end promptly the dangerous aerial feats of which the public has heard so much. Now that aeroplanes have reached such great heights, why is it necessary to go on trying for altitude records? Surely the art is still too much in its infancy for the men engaged in it to take unnecessary risks. Sensational "glides," spiral twistings, and other dangerous methods of amusement add nothing to the development of the aeroplane. If it is answered that many fatal accidents have occurred, like Moisant's, when at no great distance from the ground, the greater the necessity for caution. Certainly the many deaths in 1910 cannot but hold back the progress of what is bound to be a most useful invention. Moisant's death is the more regrettable because he was one of the clearest thinkers on this whole question, had important plans under way for an improved aeroplane, and, had he not yielded to the exhibition craze, might easily have led the world in other feats besides being the first to cross the English Channel with a passenger beside him. Only last summer, he was complaining that the public expected too much of aviators and too rapid progress. Yet he lost his life in gratifying the curiosity of the public, under dangerous conditions, when he might have had added years of usefulness.

During the fourteen years from 1894 to 1908, the number of homicides in Alabama, according to the report of the Attorney-General, increased more than 100 per cent. In Macon County, however, there was a decrease in both homicides and other serious crimes, the reduction in penitentiary offences in the last four years being no less than 60 per cent., and in homicides reaching 75 per cent. The population of the county is about 30,000, 25,000 being negroes. The wide difference in the figures for the county and the State is not surprising when it is remembered that Tuskegee is in Macon County, and when it is also known that four years ago the county went "dry." As it is impossible that the latter circumstance should not have been directly influenced by the former, Booker T. Washington's institution must be credited with a new benefit to those it was not formally planned to help.

The agitation against Mr. Balfour's continuance as leader of the Unionist party is not surprising, nor is it surprising to learn that the weakness of the agitation lies in the failure to suggest any substitute for the man who has had to bear the brunt of an extremely difficult situation. The time is out of joint, and Mr. Balfour himself would probably be the first to admit that he is not cut out, by nature or inclination, to set it right. But the kind of man that could have coped with the difficulties of the Unionist position during the past few years in such a way as to command the enthusiastic allegiance of the party is the rarest of human beings. In point of intellectual capacity, Mr. Balfour measures up to the highest requirements; it is in the robust personal characteristics that go to the domination of a political situation that he is wanting. When Chamberlain first troubled the political waters with his protectionist propaganda, Balfour's nicely-balanced position, irritating as it may have been, served a good purpose for the party in keeping it going along without a serious split; but in the face of such a crisis as that presented by the Lords' proposed rejection of the budget, the only thing that could have prevented the colossal blunder that impended was the assertion of a masterful will, such as forms no part of Mr. Balfour's equipment. Few men would have been equal to the occasion; the only trouble with Mr. Balfour was that he was not one of those few. In a smaller and yet an extremely important matter he fell short in a similar way; that shelving of protection for the time being, which, if done early and in a strong way, might have saved the day in the recent campaign, was undertaken by Mr. Balfour at the eleventh hour and in a queer haphazard manner, with the referendum accidentally thrown in. But the Unionists seem to be confronted with a choice between Mr. Balfour, with his remarkable talents and his want of the highest qualities of leadership, and some man no stronger in leadership and without the talents.

A Consumers' League has been organized in Paris, with a declaration of principles asserting the importance of a combination among "all who buy and pay," to stand along with the combinations of producers, artisans, and middlemen, and to aid in the suppression of frauds and abuses. This the *Temps* calls "un bon sentiment," but points out that the chief frauds and abuses are those committed by producers at the expense of consumers. Poor quality of merchandise and high prices are evils proceeding from the very combinations with which the Consumers' League proposes to ally itself in a war against them. The *Temps* agrees with Professor Gide, the founder of the League, that the power of the purchaser has known how to make itself heard whenever it has wished, but remarks that, in France at least, it has not wished. This statement it enforces by a reference to the way in which the lessening of imposts on spirits has profited the dealers instead of the public, and it calls for a consumers' boycott, such as made the Beef Trust "yield" in America, and the brewers in Germany.

Another hint of the flexible wisdom of Papal policy appears in the reports from Germany that the new "oath against modernism" is not to be strictly exacted of German Catholic priests, particularly not of professors in Catholic universities. A good deal of importance is attached to a reference to the matter in a pastoral letter issued by Cardinal Fischer of Cologne, on the eve of his departure for Rome. Touching upon the recent Vatican decrees, he urged the faithful not to be in any way disturbed by rumors on that subject, declaring that "the Holy Father has given to the German bishops certain plenary powers corresponding to our actual situation." This is interpreted to mean that no rigorous measures will be urged in Germany, though they may be in Austria and Italy, to compel priests and professors to take the special oath against "modernism." A well-informed writer in the *Frankfurter Zeitung* declares that the Catholic faculties generally maintain that a professor may be, indeed, absolutely bound in matters of dogma, but that, scientifically, he must be free to investigate.

PROGRESS TOWARDS PEACE.

We have received from Alfred H. Fried, the publisher of the German pacivist monthly, *Die Friedens-Warte*, an admirable peace chronology of the past year. No one can peruse it without realizing how the stars in their courses are fighting for the abolition of war. It is like the progress of the glacier—so slow as to be almost imperceptible to those who do not stop to watch its advance, and yet steady and certain. The reason, Herr Fried declares, why we are not more conscious of the revolution of human sentiment upon this question is the old inability of mankind, absorbed as each individual is in his own affairs, to take note of the continuity of events bearing on a given cause. Single happenings, like the bringing about of peace between Japan and Russia and Mr. Carnegie's donation to the peace agitation—news of which had not reached Herr Fried before the publication of his pamphlet—people remark. But there is not time enough to measure the new ground won all along the line. And yet each skirmish in the battle for peace is but part of a whole campaign, to use a military simile, and its value can best be judged only in connection with the entire forward movement.

It is really a striking list of the events of 1910 which Herr Fried has compiled, foremost among them the avoidance of war between Peru and Chili, and Peru and Ecuador on this hemisphere, and the allaying of all danger of a conflagration as a result of the troubles in Crete. To this he might have added the disappearance of the acute friction between England and Germany. The settlement of the century-old dispute between the United States and England in regard to the New England fisheries by the Hague court in a way satisfactory to both nations, was another memorable achievement, as was the disposition of our own quarrel with Venezuela by the same tribunal. Again, there is a remarkable list of international conferences to record: the fourth Pan-American in Buenos Ayres, the Spitzbergen Conference in Christiania, the conference in regard to the laws of aerial navigation in Paris; that dealing with international exchange, held at The Hague; and the Brussels conference on maritime law. One may well ask whether these are not the forerunners of a coming parliament of nations or an international supreme court to do for the various peoples what the Supreme Court in Washington does every day for the States of the American Federation. Certainly, these international conferences are becoming more and more a matter of course and increasing in numbers each year.

Two international events of 1910 are of particular importance from the point of view of peace—the formation of the South African Union and the Russian-Japanese treaty of July 4 last. Herr Fried rightly points to them as demonstrating in a remarkable degree the uselessness of wars, which, as has been so often said, settle nothing. In South Africa mutual good will, concessions, and compromises have accomplished what the war in the Transvaal itself could not bring about. If the rulers of those lands had had the good sense and the determination to adjust their differences, the same result could have been obtained ten years ago without the fearful waste of blood and treasure. Was it necessary to take all those human lives in order to make the Boers the actual ruling party in South Africa? So, too, the Russian-Japanese treaty has placed the relations of Japan and Russia on a better basis and marked out their spheres of influence in East Asia in a clearer way than did the Peace of Portsmouth. Must we really believe that no such result was possible without the slaughter of Manchuria? Reason and common sense emphatically answer no.

It must, of course, be admitted that certain events during 1910 point in the other direction. Occurrences in Korea and in Finland have not made for peace or good will. Everywhere, too, the mania for armaments rages unchecked. So far, no international conference for disarmament has appeared possible, and yet to everybody but the statesmen concerned it is apparent that the burden of armaments spells ruin. The rise in the price of living in all the great industrial nations carries its significant warning. In Germany, for all its marvellous industrial progress, the peasant who bears the soldier on his back groans more loudly than ever. Nearly three-quarters of a million men will be under arms there in 1911, consuming but producing nothing, and the price of meat in the Emperor's domains has risen to such a point that it has become an unobtainable luxury for many workers. We hear much about the necessity for "insurance"; it is the favorite argument of the militarist. You insure your home, he says, against fire and burglary; why not the nation, which is but a conglomeration of homes? He overlooks the fact that there are some kinds of insurance which not even the richest nation can afford; that the man of moderate means prefers to let his house go uninsured if the insurance premiums demanded of him are so high as to impoverish him. Precisely this is happening in Europe, where the cost of war-insurance is placing the control of the governments in the hands of its bondholders—literally in the hands of a few large financial institutions.

Fortunately, the truth of all this is becoming more and more widely felt. Even here in America there is beginning to grow up a restlessness under that policy which devotes 70 cents out of every dollar appropriated to expenditures to wars, past and future. President Taft himself did a great service for peace but the other day, when he put an end to the latest war scare in Washington and voiced the opinion of the nation that this country shall never be the home of a great standing army. We need only a few more outspoken men and women to declare their uncompromising hostility to militarism in the spirit of Tolstoy to make even more rapid progress. The new year holds its opportunities for victories, and the greatest of these opportunities is in the hands of Mr. Taft. How the country would acclaim a complete arbitration treaty with Great Britain, and how the world would applaud Mr. Taft if he brought about an international disarmament congress!

"UNOSTENTATIOUS" MR. SHEEHAN.

It is rather a tame and conventional thing that Mr. Sheehan has done in issuing a set of "principles," in aid of his candidacy for the United States Senatorship from New York. We think also that it was entirely unnecessary. Any members of the Legislature who could possibly be brought to vote for him, certainly would ask for nothing of the sort. A wink from Sheehan would satisfy them better than his exposition of

the Constitution. If he could only assure them that the election of a Senator was all arranged, that he was to have Murphy's O. K. and was "sure to go through," they would gladly spare his dissertation on the "vast but regulated power of the Executive" And as for others, their emotion is likely to be one of surprise that Mr. Sheehan had any settled principles at all to profess. They had never heard of anything of the kind in connection with his political activities. A belated discovery of "principles" is always a little suspicious. If they were life-long, why this unpleasant air of having to extemporize them?

In reality, of course, Mr. Sheehan does not expect this profession of his political faith to affect the vote of a single legislator. He is too shrewd to have any illusions on that point. What he has done is merely to pay a perfunctory tribute to a custom which he doubtless regards as foolish, while his real dependence is upon other things. Indeed, he inadvertently makes this clear in the very letter which he gave to the press last Friday morning. The truly significant passage in it is this: "The time has not come when loyalty to and belief in efficient political organization and unostentatious labor, even more assiduous in days of darkness than in time of sunshine, shall of themselves necessarily create disqualifications for exalted trust." This is turgid language, but what Mr. Sheehan means by it is not in doubt. It is a frank appeal to the baser elements of the Democratic party to stand by one of their own kind. If he were to put the matter into the politicians' vernacular, he would say: "See here, boys, they are trying to take away from us a good thing. We have done the dirty work of the party year after year and never got anything for it, because we were licked. But now we have won, and what do those silk-stocking dudes propose but to run off with the biggest prize of all! I say we won't stand for it. If we were good enough to keep up the organization in the years of defeat, I guess we are good enough to get the offices in the hour of victory."

It is perfectly clear that this is Mr. Sheehan's idea of the way in which the Senatorship should be awarded. Let it go to the man who has done "unostentatious labor" in order to build up a machine strong enough to defy public sentiment. We know the sort of work to which Mr. Sheehan refers. He has done a good deal of it in his time, and up-State people are discovering that he lately put in more of it in close legislative districts. He calls it "unostentatious" labor. That is statesmanese for "gum-shoe business." Others were campaigning, speaking, seeking arguments to convince the independent voters; but the unostentatious laborer was secretly arranging nominations, pledging candidates, pulling wires. No one heard of him during the fight. He was quietly at work—but for himself. No one dreamed that he was a candidate for the Senatorship. Mr. Sheehan says now that he has come reluctantly to favor the election of United States Senators by popular vote. Nobody knows better than he that he could not possibly be so elected in New York. If his name had been on the ticket last November, it would have been scratched unmercifully, and would have been enough to drag down Gov. Dix. But now he comes forward, absolutely in the old Hill spirit, ready to treat the Senatorship as plunder and demanding it by right of machine conquest.

Mr. Sheehan deprecates criticism of Senatorial candidates. "Let us say and do nothing now that will without justifiable cause weaken or injure the capacity for public service of the man into whose hands our honor and our interests will be placed." But the time to ring the alarm bell is before the house burns up. What are candidates for but to be discussed and sifted? How can we judge a man's future, except by his past? If our honor and our interests have not before been safe in his hands, how can he expect us to believe that they will be hereafter? It is folly for Mr. Sheehan to imagine that his public record will not be laid open. He has brought it upon himself. Nothing that we could say about him would damage him a feather's weight, if the facts themselves did not tell their own tale. It is not what we say here, but what Mr. Sheehan did there—in Buffalo, in Albany, as Speaker, as Lieutenant-Governor—that weakens and injures him, and will keep on doing so as long as he seeks to be in public life. His election as Senator would not make a particle of difference in this respect. He would be known at Washington for just what he was at Albany. Time cannot soften these things. There they stand in all their glaring and repellent ugliness. Only one inference from them is possible. The election of William F. Sheehan to the Senate would be taken as a triumph of the lowest species of machine politics, a disgrace to his party in New York, and a blight upon its fair prospects throughout the nation.

"ORGANIZED CHEERING."

President Lowell of Harvard is a bold man. He actually has the audacity to pour ridicule upon sacred undergraduate traditions connected with athletics. In addressing the national convention of music teachers in Boston—and we should like to ask what a college president is doing in that galley anyhow—he attacked the venerable and established institution, "organized cheering" at college games and academic reunions. And he based his objections upon grounds that any freshman could show to be absurd. He talked about organized cheering as being nearly the worst means of expressing emotion ever invented. He said that it would have to yield the lowest place only to a chorus of fog-horns; and delivered himself of a lot of other æsthetic and moral rubbish.

It is hard to be patient with such a daring iconoclast. Let our college presidents stick to their last. They may revolutionize the whole system of education if they desire, they may read learned papers on history or science which no self-respecting college man will look at, or go abroad to take honorary degrees; but when they begin to meddle with the most precious ideals of their students, they should be made to know their place. It is really laughable to read of President Lowell's condemnation of forced cheering and rag-time music in colleges as dreary, and as a sad reflection upon educated men who can find no better way of "expressing emotion." Has he never heard of the real reason for organized cheering and the inspiring motives associated with it? Even he would admit, we suppose, that college "loyalty" is a good thing. Well, then, doesn't he know that the very finest flower of it consists in going off to an intercollegiate contest in an immense *claque* to yell and sing at the word of command? Here is one of the noblest forms of undergraduate activity, from which Mr. Lowell would cut off aspiring youth. There are thousands

of college students fairly burning with ambition to "do something" for their beloved Alma Mater, and if they are not to travel a hundred miles in order to wave flags and rise in serried ranks to cheer for two hours, their young zeal will rust in them unused. And how about the effect on their after-life? The reputation of having been a valiant "cheer-leader" is one of the most valuable things a boy can take away from college. As a title to promotion in professional or public life, it ranks hardly second to that of having been a quarter-back. How could an appointing officer, with a decent sense of "loyalty" in his bosom, resist when told that a candidate had been the sort of "cheer-leader" who had once yelled himself into a hospital, and had several times "rattled" a pitcher? It is obvious that President Lowell has never seriously looked into the matter about which he speaks so superficially.

One of his weakest arguments was that organized cheering is a modern innovation. He said that there was virtually none of it when he was in college. This is sadly futile. We should hope that President Lowell does not expect to commend his view to the present age by pointing back to his own generation of weaklings. They were well enough as stepping-stones of the dead past for our lusty youth, but otherwise the less said about them the better. Moreover, it is utterly vain to say that any custom which any set of undergraduates at any place religiously follows is not hoary with antiquity. As Woodrow Wilson once said, a college "tradition" that can be proved to be no more than five years old, is yet looked upon as if it were as ancient and rock-ribbed as the hills. A decade is enough to make it "one of the things that have always been done"; yet here you go proposing to uproot a tree which dates back to the very foundation of the college! President Lowell, we are confident, will make no more progress in declaring that organized cheering is lacking in antiquity than he will in contending that it is unmusical. Apparently, he would have three or four opera singers in the grand stands subduing everybody to silence or tears.

In fact, so much like Habakkuk, *capable de tout*, does Mr. Lowell appear in this affair that we can fancy him affirming that organized cheering at intercollegiate games and at college meetings is rapidly becoming an intolerable nuisance. Except for the acclaim when the teams enter, it is virtually ignored by the players themselves, while to spectators and officials it is a growing annoyance. It is to be classed with the disgusting habit, which college ball-players have lately taken over from the professionals, of keeping up on the field a perpetual nagging chatter in the hope of disconcerting opponents. But it is fatuous for President Lowell to contend that all this implies a want of "delicate qualities" in those to whom we are giving the highest education. We had supposed that such old notions were now held to be fudge by all up-to-date educators. The idea of there being anything "delicate" about an undergraduate! He has changed all that, and made the gentleman and scholar connote one who hits the line hard, never flinches, and can make a noise like a steam calliope. Asking him to be as musical as is Apollo's lute is a trifle too much.

A WAR OF PROFESSORS.

We have the reassuring news that the historic University of Berlin is not to be the scene of bloodshed to horrify the nations. Thanks to the interference of the Prussian Minister of Education, there is not only to be no duel to the death between Prof. Max Seering and Prof. Ludwig Bernhard, both teachers of political economy, but not even a professorial court-martial or court of honor. The arms have been grounded and a truce declared—for how long nobody can say. But now at least the cavalry captain, the country judge, and the two proprietors of factories and lieutenants of the reserve who, with much flourish of trumpets, had been selected to carry Professor Bernhard's challenge to Professor Seering, may go about their various occupations without the dread of having at some dawn to take part in a bloody encounter.

Professor Seering, we must confess, has evidently been so long a closet philosopher as to have lost much of the quality of the fighting man. The good red blood in his veins has become diluted by too much consideration of the welfare of nations, for when challenged, he failed to order pistols and coffee for two at once. Professor Bernhard is of different quality. He made his reputation by denouncing the Poles and applauding the Prussian government for its policy of denationalizing them. To the Kaiser, this young man of thirty-three seemed a professor after his own heart. He wanted somebody to stir up the dry bones of the university, to be a "live wire" amid the fossilized professors, and so Professor Bernhard was called to Berlin from Kiel in 1908—to the surprise of the university of the *Kaiserstadt*. Indeed, so great was the surprise that the Philosophical Faculty, fossilized as it was, refused to approve the selection and the Prussian Ministry received personal and official requests that Professor Bernhard should be dropped. But the Kaiser knew what he wanted and Professor Bernhard stayed—and repaid his benefactor by vigorous attacks upon the tendency toward state socialism and socialism of every kind, for some of which his economic colleagues, Seering, Schmoller, and Wagner, are reputed to have a too great tenderness.

But this only increased the dislike of the old fogies for their colleague. In one way or another the new battle of the books and the theories was carried on until an open break was unavoidable. Professor Bernhard charged unfair discrimination in the matter of arrangements for his lectures, following after another brilliant assault upon state socialism. When these restrictions came to his notice, Professor Bernhard, as we have already said, did the only thing open to a gentleman and a scholar in the eighteenth century—he challenged Professor Seering, the ring-leader against him. It was hoped that the matter might still be hushed up; but when the next morning Professor Bernhard entered his classroom and found a large audience, in his surprise and delight he stated that, while he could not, of course, publicly discuss his quarrel, he could take them sufficiently into his confidence to tell them about his honor and how he had defended it; that his own conduct was perfectly correct, and that of his colleagues, *ach!* so shocking; and that at bottom he was merely battling for what is even dearer to a German professor than his honor, the "liberty of his chair." Now, as anybody can see, while this was no real violation of a confidence, the irate colleagues posted Professor Bernhard on the big, black bulletin-board of the uni-

versity as no gentleman, a direct descendant of Ananias, as well as the violator of a pledge of secrecy, and on the whole an altogether reprehensible person who was hiding behind a chair when he should have been sitting on it. Their friends promptly pointed out that under the statutes of the university the newest and most callow *Privatdozent* could not be interfered with in his liberty to talk all the nonsense he pleased, and, therefore, Professor Bernhard's accusation was manifestly false. So far from interfering with him—they had all tried to make easier a way difficult enough for an outsider. It was not their fault if he had only a few attendants upon his regular lectures, and sought to take for his own those lecture-subjects which in all political economy offer the most sensational features.

Now, as we have said, there is a truce; but it is perfectly obvious that no real happiness can ever be restored to the economic philosophers in Berlin until the outsider disappears. Yet has he not really rendered a great service to political economists everywhere? Every college graduate remembers how difficult political economy was because everything seemed to be in a flux. If you rashly held one view of the law of Malthus or the operation of the corn laws, your professor promptly showed you a half-dozen others and bade you choose. Political economy has been defined as learning what a lot of duffers thought they knew. Now, Professor Bernhard's method of settling economic disputes strikes us as full of merit and likely to bring some certainty into a confused science. If you were a professor at Yale and declared the gold standard to be the only safeguard of the nation, and your colleague of the University of Nebraska believed in 16 to 1, why would it not be a good thing to fill him full of holes on the campus of the University of Chicago as a neutral meeting ground? You could thus obviously demonstrate the correctness of your own position, and at the same time help upward the struggling young instructors who complained before the Carnegie Foundation that no professor of political economy ever resigned or died. As for socialism, what better way could there be of showing its fallacies than by a little rapier discussion in the style of Cyrano de Bergerac? Altogether, we commend this idea to those of our university faculties who complain that undergraduate football players get more newspaper attention than they do.

THE MODERN LANGUAGE ASSOCIATION.

NEW YORK, December 30.

The twenty-eighth annual meeting of the Modern Language Association was held at the College of the City of New York on December 28, 29, and 30. The address of the president, Prof. Brander Matthews, on "The Economic Interpretation of Literary History" called attention to the comparative neglect which histories of literature show towards economic conditions as determining the course and development of literature. They do not sufficiently take into account the possibility that, for instance, the unjust copyright laws of the middle of the last century may be responsible for the sterility of American literature at that time; or that the easy and cheap importation of French plays may account for the barrenness in dramatic production in the mid-Victorian period in England; or that the Théâtre Français may have made the French drama what it is. Of the four incentives to write—pay, fame, self-expression, and the serving of an immediate purpose—it has been too little considered how far the first, which is, after all, the most pressing, may be responsible for work done out of due time and in violence to the author's natural predilections. Thus Marlowe, who was an epic genius, and Peele, who was a lyric, wrote plays for which they were not by nature unmistakably qualified, since thus they could earn their bread. Dryden wrote comedies for the same reason, though he was not a dramatist, and Johnson essays, though he wholly lacked the light, facile touch of Addison and Steele. Nearer our own times the beneficent Lyceum system made our production of literature a possibility to the New England writers of the last century.

The general character of the papers read was not up to the standard of interest set within recent years. As many as nine out of the total twenty-five dealt more or less directly with the matter of influences or sources, and when the work or author influenced and the work or author influencing are of no great vital interest in an absolute estimate of literary values, the question of sources is not of engrossing appeal. *Quellenstudien* have received too great prominence in doctoral dissertations and similar products of ambitious scholarship both in this country and in Germany. Of these papers the two possessing chief interest dealt with Sir Walter Scott as a conscious borrower and as an unconscious lender. Dr. S. L. Wolff of Columbia showed pretty conclusively that Scott used Sidney's "Arcadia" in the composition of "Ivanhoe." A deadly parallel of characters and events, by the mere force of cumulative evidence rather than by any single striking similarity, made it evident that the later writer not only knew the earlier all too well, but also used a special edition. The other paper, by Prof. G. W. Thompson of the University of Maine, readjusted the balance by making clear that what was an offence in Scott had become a crime in his imitator, Wilhelm Hauff. Hauff stole without fear and without reproach from the twenty-one novels of Scott, which we know he had read. There is not a single incident in his "Lichtenstein" which cannot be found in Scott, and the clear cases of borrowing run far up into the hundreds. As an unabashed plagiarist Hauff stands unrivalled.

There was no paper of a purely linguistic character, and none in the field of Anglo-Saxon. There were four in Middle English, one of which was concerned with the relation of Chaucer to Edward III, the other with the question of the evolution of the "Canterbury Tales." In the former paper Samuel Moore of Harvard held that Chaucer's rewards from the King were purely the result of official service, and were not due to any appeal made by his poetry. Prof. C. F. Brown of Bryn Mawr offered a new test by the use of *shal* and *shul* in the best Chaucerian MSS. to apply to theories concerning the evolution of the Tales. Thus the Man of Law's and the Squire's Tales are consistent in their use of *shal*, and would therefore seem to go together, as has already been maintained on other grounds. Prof. A. H. Potter of Brown University brought out the curious fact in literary history that, though there are five editions of the chief poems of Stephen Hawes from 1509 to 1555, there is not a single bit of evidence that any one ever read a line of his works. His "Comfort of Lovers," a curious love allegory, has not been printed since 1510. It is now possible for Professor Potter, who has acquired rotographs of all the first editions, to bring out a definitive edition of Hawes, and to show that he is not the last decadent utterance of the Middle Ages, but one of the first voices to proclaim the Renaissance.

Of the four papers in the province of Elizabethan literature the most stimulating was an analysis of Shylock by Prof. E. E. Stoll of Western Reserve University. It was much after the fashion of the author's paper last year on certain anachronisms in Shakespearean criticism, and developed the theory that Shylock is not to be regarded as the pathetic figure of Irving's presentation, if we attempt to realize Shakespeare's conception. He was a comic character, a villain and a butt, a gross egoist and an atheist. All contemporary evidence

is against treating the Jew as an object of pity; he bore a curse and deserved no sympathy. So, throughout the play, he is scorned and scoffed at by every one. His plea of his common humanity was that, since he was a man, he would have revenge. In the discussion after the paper the point was emphasized that, while we should not read into Shakespeare what is not there, we must find out what is there, and that it is wholly in conformity with the canons of art that the great artist often builds better than he knew. Shakespeare did not share all contemporary prejudices, and Shylock is not the inhuman monster that, for example, Marlowe's Barabas is. He has enough of our humanity to justify the modern broader sympathy for him as a persecuted Jew.

Two extra-departmental addresses were delivered, one by Prof. W. G. Hale of the University of Chicago, on "The Harmonizing of Our Grammatical Nomenclature," the other as a smoke talk by E. M. Shepard of this city. The former, speaking as a professor of Latin, proposed that a common terminology should be adopted for the imperative, subjunctive, and auxiliary moods uses in the ancient and modern languages. The ideas expressed under such a terminology are those of volition or anticipation, of wish, obligation, propriety, or natural likelihood, of possibility or ideal certainty. At present the terminology is utterly confused and confusing. Mr. Shepard, speaking as a man of affairs, called upon the teachers of modern languages to uphold the lofty standard embodied in a study of the humanities, to make the cause of the classics one with that of modern literatures, and to lead young men to see in life more than that which will lead to the accumulation of wealth in an age absorbed in the pursuit of riches.

The president for the coming year is Prof. L. F. Todd of the College of the City of New York; the vice-presidents are Profs. L. Fossler of the University of Nebraska, W. A. Nitze of the University of Chicago, and C. F. Brown of Bryn Mawr College. The next meeting will be a joint one with the Central Division, and will probably be held in Chicago.

THE SOCIETY OF BIBLICAL LITERATURE.

PHILADELPHIA, January 1.

The annual sessions of the Society of Biblical Literature were held on December 30 and 31 in the new home of the Union Theological Seminary, New York. The attendance was larger than usual and the occasion gave the members an opportunity of inspecting the magnificent and spacious structure. Including the president's address and the report of the American School of Biblical Archæology in Jerusalem, twenty-six communications were presented. As usual, the papers on Old Testament themes largely predominated over those devoted to the New Testament—a condition that was commented upon in the report of the corresponding secretary and the chairman of the publication committee, Prof. J. A. Montgomery of the University of Pennsylvania, who urged the New Testament scholars to emulate the energetic "immodesty" of their Old Testament colleagues.

The presiding officer this year was Prof. D. G. Lyon of Harvard University, who chose as the subject of his address a survey of the results and future prospects of archæological explorations in Palestine. Apart from the great work of the survey of Western Palestine, explorations have been conducted at less than a dozen sites, and in only a few of these has the work been at all exhaustive. The Palestine Exploration Fund of Great Britain has been the most active, as it was the first in the field. The German Exploration Society followed, and more recently important work has been done under Austrian auspices, while our own country is now represented in the excavations carried on by Harvard University at Samaria, with Dr. Lyon as the general director. The work at this site has been made possible through the munificence of a single individual, Jacob H. Schiff of New York, and the results obtained during the past two years are of such a character as to render it most desirable that it should be carried on with even greater vigor.

Prof. Richard Gottheil of Columbia University, who was the director of the American School in Palestine in 1909-10, presented a short but interesting account of the work done by the school during the year of his incumbency. Apart from a number of archæological excursions to certain important sites, a complete collection was made of all the Arabic inscriptions in Jerusalem, with a view to future publication, and in connection with this task the greater part of the time of the school was devoted to the study of the Mohammedan period of the city's history.

The larger number of the papers were of a highly specialized and technical character, such as that of Prof. Max L. Margolis of the Dropsie College of Philadelphia, on the Word-Accent in Hebrew, which he showed, contrary to the opinion usually expressed in Hebrew grammars, was on the syllable before the last and often on the second syllable from the end of the word. A paper by Prof. Paul Haupt was on the well-known term Selah, in the Psalms, about which there have been almost as many opinions as there have been scholars who have written about it. Professor Haupt proposes to take the word from a Semitic stem, signifying to throw, and to regard it as the term to indicate the moment when, in the temple service, the priests blew on their trumpets as a signal to the people to prostrate themselves.

Among the papers of a more general character was a summary account of the "Religion of the Canaanites," by Professor Paton of Hartford Theological Seminary, which was distinguished by the charm of presentation, as well as by its incisive scholarship. Professor Paton maintains that modern Biblical scholarship does not take into sufficient account the influence of Canaanitish practices on the development of the religion of Israel. The Canaanites represent the agricultural population whom the Hebrews drove out upon their conquest of Palestine, but the conquerors, as often happens, took over the culture and much of the religion of the conquered. The places that became sacred centres, where Jehovah manifested himself to the Hebrews, were in almost all cases, Canaanitish seats of worship. The Hebrew festivals represent the transfer of the agricultural festivals of the Canaanites to which in subsequent times a Hebrew coloring was given by attaching to them a reminiscence of events in the national life of the Hebrews. Thus, before the more primitive aspects of the ancient religion of the Hebrews passed over into Judaism, it was saturated with Canaanitish beliefs and practices. Equally polished in its manner of presentation was Prof. C. C. Torrey's (Yale University) discussion of the authorship of the Epistle to the Hebrews. Against Professor Harnack of Berlin and J. Rendell Harris of Birmingham, Professor Torrey showed the insufficiency of the reasons advanced to prove that the author of the Epistle was a woman. His view, in brief, was that the composition was not an epistle in any strict sense of the word, but an oration or sermon by a master of the rhetorical art, perhaps originally delivered or written in Alexandria in the latter part of the first century and brought to Rome. Through subsequent additions at the close, the sermon—the nearest parallel to which is the fourth Book of Maccabees—was given an epistolary form, and its popularity laid to the rise of the tradition ascribing it to Paul. Another noteworthy New Testament paper was an exhaustive discussion by Prof. B. W. Bacon of Yale University of the two-fold tradition that divided the early Christian church into two camps, one celebrating the resurrection of Jesus annually on the fourteenth of Nisan (corresponding to the seventh of April in the year 30 A.D.—the date of the crucifixion); the other instituting the weekly "Lord's Day." The division ended with the Council of Nice, which definitely established the observance of Sunday. Professor Bacon took the view that the "Quarto-deciman observance" in the East marked symboli-

cally the triumph of life over death, as shown by the annual awakening of nature, whereas in the West the emphasis was laid on the appearance of Jesus on the third day after the crucifixion, which thus became for them the weekly "Lord's Day." An important part was played in this controversy by the phrase "the day after the Sabbath," occurring in the twenty-third chapter of Leviticus, as the beginning of the period of fifty days from Passover to Pentecost. A paper by Professor Jastrow of the University of Pennsylvania on this phrase followed. There were chiefly two views current among the Jews, regarding the expression, the orthodox view or opinion of rabbis being that "Sabbath" here meant the first day of Passover, whereas the heretical Jewish sects, including the Samaritans and, in later times, the Karaites, took the word literally to mean Sunday, so that Pentecost, according to this view always fell on a Sunday. The new Christian sect adopted the heterodox view. Professor Jastrow showed that the word sabbath in this connection did not mean the weekly day of rest, but was a survival of the original application of the term—established by cuneiform evidence—to designate the day of full-moon, *i. e.*, the fifteenth (or fourteenth) day of the month. In two passages in Leviticus, the term, therefore, describes the fifteenth day of Nisan, not as a festival day, but merely as the middle of the month.

The Rev. John P. Peters of New York had an interesting suggestion for the famous phrase at the beginning of Genesis, "The spirit of Elohim hovering over the face of the deep," which he explained as a reminiscence of the god Marduk—the hero of the Babylonian creation epic—driving the evil winds into the face of the monster Tiamat, of which the Hebrew word for "deep" *Tehôm* is the equivalent. Instead of "hovering over" the verb used refers to the movement of the wind striking the face of Tehôm or Tiamat. The original conception of the myth has been modified in the adaptation of the old tale to a monotheistic view of creation, through the fiat of a great power behind and above the universe. The important question as to the original pronunciation of the "Ineffable Name" usually transcribed Jahovah or Yahovah by modern scholars was discussed by Prof. A. T. Clay of Yale University, who showed on the basis of recent evidence brought forward by the ostraca found at Samaria, and on an ostracon found at Nippur and recently published by Professor Montgomery, that the correct form of the name was in all probability Yâwe—as handed down by Theodoret and others. When combined in proper names with other elements, the form became Yaw, with the final vowel syncopated.

Prof. E. D. Burton of the University of Chicago was elected president for the ensuing year. Before adjourning, the society passed resolutions strongly advocating the continuance of the excavations at Samaria. M. J., JR.

Correspondence

FRESHMAN COMPOSITION.

TO THE EDITOR OF THE NATION:

SIR: In a letter to the *Nation* of December 1, the method of teaching English in the freshman year is seriously questioned. The prevailing method is defined as the teaching of literature with the emphasis on the historical side; and the teaching of composition which requires a study of "models of style," and the writing of themes "in which the main emphasis is placed upon form, and not upon ideas, the purpose being to give the student a command of good clear English which he will find useful whenever in later life he has any ideas to express." With the first aspect of this definition, this letter will not deal; but it may be said in passing that there should be in the early part of the college curriculum a course required of all students which presents literature as literature. It is, however, with the second part of the definition that I am concerned; that is, with the proposition that in the teaching of English and composition the emphasis should be on what is said, not on how it is said. Now the present writer believes that the freshman year is the time to teach the student how to write; that the prevailing method as defined is a sound method. But it must be understood in the beginning that the study of English composition cannot be separated from the study of literature; and, furthermore, that the study of form cannot be separated from the study of ideas. The question is not literature versus composition, or manner versus matter, but it is a question of emphasis.

In the first place, the freshman knows only in a limited degree how to write. Satisfactory as his production may be in some respects, it is nevertheless merely a "gob" of ideas; a mass of material without a vital organization and innocent of a definite purpose, or of proportion, or of progression. This being granted, the freshman year would seem to be the time to master the problem of expression, for it is desirable that the student be free, as soon as possible, to give his whole attention to ideas; an impossible condition when he dares not leave the beaten track of the simple declarative sentence, and does not know the psychological function of the paragraph. In short, the student should in the freshman year develop a clear idea of form, and should practise shaping his ideas, until form becomes as ready a servant to his will as are his feet and hands. "But if he has no ideas, how can he shape them?" it is asked. It is not true that he has none; he has ideas and plenty of them, but they are not of the same order as those of the instructor.

"But we mean to accomplish all this certainly," we hear the advocate of ideas proclaiming. Get your student to think, and then with the guidance of principles (which, we must remember, he has never studied and which he does not know the reason for) he will write successfully. Even if it were possible to cultivate most robust ideas on politics, society, or art, the form in which those ideas would be expressed would not necessarily be such as to convey the ideas. The testimony of such writers as Huxley and Stevenson would uphold the point, if one needed such testimony after reading many freshman themes on which one inscribes in red ink, "Promising work"; for it is a very common experience to find freshman work in which there is vigor and personality, but work which is at the same time ineffective through ignorance of the laws of expression. It is true that the kind of thinking one does has a direct effect upon form; but it must also be remembered that it is the mission of form to cultivate the right kind of thinking.

A knowledge of form is, moreover, the surest guide to the mastery of ideas. Once the student sees that every good writer lays out his ideas according to a pattern, that there is a certain logical plan underlying the whole essay, or poem, or textbook, he is able to grasp ideas, as the writer intended, in their proper relationships. Ask a freshman to read an essay for the ideas there, and he will report them as if they were all on the same level and will often show no subordination. Ask him to read the same essay with a view to writing out a plan which shall represent the thought and he will then be obliged to follow in the footsteps of the creator. A knowledge of form then, is not to be regarded as something which interferes with the understanding of ideas, but as a something without which ideas cannot be caught. In point of fact, a freshman course in English, with the emphasis on form, is a course in the laws of human expression; and guided by such a course the student will come to realize that the point of literature lies not only in *what* is said, but in *how* it is said; for all that has been said in literature was said many times before it found its final saying.

ADA L. F. SNELL.

Mount Holyoke College, December 20.

THE SEQUENCE OF FORD'S PLAYS.

TO THE EDITOR OF THE NATION:

SIR: The dramatist John Ford has left us two plays in which he collaborated with other writers, and seven which were wholly his own. The date of composition for some of these dramas is reasonably obvious; that of others has been considered very uncertain. On this point I wish to offer a little evidence, which, though not conclusive, may be of value. If we examine the metrical details of Ford's plays as other men have examined Shakespeare's, we find that they fall into three groups, which I have called Period I, Period II, and Period III. The criteria employed are (a) use of rhyme; (b) use of double or feminine endings; (c) use of triple endings, as in the following lines:

This stranger, an Athenian, named Parthenophil.
There's not a page, a groom, nay, not a citizen.

The results of these tests are shown in the following table:

TABLE I—EXTERNAL EVIDENCE.

PERIOD I.

Love's Sacrifice: published 1633.
'Tis Pity: published 1633. Ambiguously called by Ford, "these first fruits of my leisure."

PERIOD II.

Sun's Darling: acted at Cockpit in 1624. (The metrical table below considers only Ford's probable share in this play.)

Lover's Melancholy: acted at Blackfriars and Globe, 1628.
Broken Heart: printed 1633.
Perkin Warbeck: printed 1634.

PERIOD III.

Fancies Chaste: printed 1638.
Lady's Trial: performed for the first time at the Cockpit theatre, 1638.

TABLE II—METRICAL EVIDENCE.

	Rhyming pentameter lines.	Unrhyming pentameter lines.	Ratio of double endings to unrhyming lines.	Number of triple endings.
L. S.	90	1541	14.9%	4
T. F.	104	1407	14.9%	12
S. D.	168	337	38.3%	28
L. M.	44	1781	36.7%	92
B. H.	42	2285	49.2%	187
P. W.	22	2310	42.6%	148
F. C.	2	1770	60.3%	228
L. T.	4	1998	41.7%	93

[N. B.—In "Sun's Darling" the amount of rhyme is probably increased by the nature of the play. The date for "Lady's Trial" is on the authority of Malone's "Shakespeare," by Boswell, Vol. I, p. 464. I have omitted "The Witch of Edmonton," chiefly because it is so difficult to separate the work of the three authors in that play.]

Although I have arranged the plays of each period in that order which I think most probable, I make no attempt to justify the order within the three periods, but simply the three periods themselves. My position in regard to the second and third periods is supported by all the external evidence which we possess, and is the one adopted by Dyce in his edition and by Havelock Ellis in the Mermaid Series. For the two plays of the first period there is no external evidence except the very ambiguous statement about "'Tis Pity," given in my table. Dyce and Ellis put them after "The Lover's Melancholy" in their editions, but assume no responsibility for that order. The fact that "'Tis Pity" is usually considered Ford's masterpiece forms no objection, for Ford was thirty-eight when the "Sun's Darling" was acted at the Cockpit, and might easily have written a masterpiece three or four years earlier. The very fact that he published three of his most powerful plays in one year, 1633, shows that he must have written two of them some time earlier, and we know that Elizabethan plays were frequently written years before they were printed. The fact that "'Tis Pity" and "Love's Sacrifice" are put first among his extant plays by no means implies that they were the earliest ones he wrote. On the contrary, a lost drama of his was acted as early as 1613, and six other lost plays of his are of early or of unknown date.

My suggested order, then, has nothing in it either unreasonable or in conflict with known facts. Now a word as to the value of the evidence presented. It is obvious that Ford's double endings do not increase steadily from play to play, but there is no reason why they should. The point is this, that in all the plays of the second and third periods masculine and feminine endings are mixed together in nearly equal proportions. This probably represents two influences, the desire of the poet to gain a conversational variety in his verse, and a conscious imitation of Fletcher. In the same way, although the number of triple endings varies greatly, through the last two periods they are always used so frequently that they represent a characteristic trait and a conscious effort toward particular effects. In the plays of the first period, on the other hand, double endings are in a marked minority, and triple endings occur so rarely that they seem merely the result of chance forces. In other words, the blank verse of the first period shows no imitation of Fletcher, and is better adapted for pure poetry than for staged dialogue; the blank verse of the second and third periods shows a marked Fletcherian influence, and by the conversational variety of its effects is especially adapted to stage presentation. The verse of the first period perhaps is at times better poetry; the verse of the later periods points to a longer dramatic experience.

Then, just as the first period is separated from the others by its use of endings, so the third period is separated from both the earlier ones by its avoidance of rhyme. Ford's use of rhyme, through all his work, is confined chiefly to the rhyming couplet at the end of a scene or significant passage, supplemented occasionally by a rhyming letter, quotation, or oracle. In other words, rhyming with him is a matter of dramatic technique rather than of meter. This does not lessen, but rather increases its value as a test. The steady decrease of rhyme through his plays, which becomes especially marked in the two that are almost certainly his last, seems to represent the gradual fading away of a stage convention which the poet was outgrowing. There is one rhyme in "The Lady's Trial" which I think accidental. Aside from this, each of these dramas has no rhyme except the final couplet, which ends the play.

I do not offer the above figures as conclusive proof, nor have I much sympathy with those men who would make mathematics the sole criterion of poetry in the work of either Ford or Shakespeare, but if my tables can be brought into line with other and more purely literary evidence, either of chronological sequence, or of some powerful external influence on the poet, they may prove useful.

FREDERICK E. PIERCE.

Yale University, December 10.

SINGLE TAX.

TO THE EDITOR OF THE NATION:

SIR: A correspondent in your issue of November 17 asks that the moral sanction for the single tax—if any such exists—should have a little passing attention bestowed on it by the *Nation* in connection with certain developments that are said to be taking place at Cleveland, O.

What one man may not do, many men may not do. Let a person walk into a shop and demand, on pain of distraining, a sum of money equal to the rent, and explain he is going to do public good with it—if he morally dares. If he put bits of paper into a ballot-box and shook them about for an hour, that would not give him a moral right he did not possess before. Or, if he elected himself to be his own representative, or elected some one else to be that, he could not bring something out of nothing. A number of men committing depredations in a street could not plead when brought into court that they acted *collectively*. They would be told they could not do together what they could not do separately. Every magistrate enunciates individualism from the bench from time to time. "The last of the Individualists" will have "disappeared" the day when a schoolmaster can teach a class, how, by the addition of negative numbers, a positive number can emerge.

The only scientific road that has ever yet been pointed out as leading out of the organized anarchism toward which most governments are drifting is that pointed out by the individualists. Voluntary taxation is the ideal that one would look to see advocated more and more from generation to generation in every free country. For the protection of their personal rights, all men would contribute towards government and support it; and the only way to get a government that would be for all would be to get a government that stood for freedom, and for the rights of the individual man. The ultimate object of the confiscation of rent is well known to be the confiscation of land altogether. That the thrifty owners of farms and homes built on allotments throughout the United States should have their labor sequestered and their property divided up to make the thriftless classes happy under some political scheme is something that no man who did not abandon honesty on entering politics could for a moment think of without anger. The world has been plagued too long by would-be reformers who were prepared to bring about the millennium with a turn of the hand, if only allowed to throw all human rights into hotch-pot and parcel out the universe by their drawing-office plans. If one can speak of the "intention" of impersonal nature, it is safe to say the thriftless class is intended to be landless and propertyless.

Where property can be improved in value by the change in the community about it, property can also be diminished in value from the same cause. Such diminution can often be seen in the case of residential property, and of business property which may become surrounded by a poorer class of residenters than was originally catered for.

The public of Cleveland is not compelled to do business in the Public Square. If extra money is not spent on the shops there to make them attractive, commodious, and adapted for a growing trade, the public will, manifestly, do its shopping elsewhere. And then the centre of Cleveland is liable to move. The centres of old towns in Europe and this country are always on the drift. Where a person is far-seeing enough to buy where the centre will some day be, and then his, or his descendents', profits are confiscated, there is a breach of tacit agreement committed which could only be called by one short word. We are not all Socialists yet, and the views set forth above are what some readers think on the subject of the Single Tax.

PEACE AND ARMAMENTS OF WAR.

TO THE EDITOR OF THE NATION:

SIR: Mr. Roosevelt, in his recent Nobel lecture delivered in Cambridge, spoke warmly in favor of the cause of international peace, and added words to this effect:

(a) Were the United States without a powerful navy our voice in international

council could be of no more value to the cause of peace than that of China.

My preacher said yesterday:

(b) If the plans of the International Peace Society were carried out and all armament not necessary for police work disbanded, some fine day would see our shores invaded by five hundred million hostile Chinese and Japanese.

Should we not urge our friends, the advocates of a stronger navy, in the language of the examination paper, to "take (a) or (b), but not both"?

A HARVARD PROFESSOR.

Cambridge, Mass., December 19.

THE AUTHOR OF "THE UNDER DOG."

TO THE EDITOR OF THE NATION:

SIR: May I call your attention to the fact that "The Under Dog," referred to in the article on "Recent German Poetry" in the *Nation* of December 15, is not by Elsa Barker, but David Barker of Exeter, Me. An edition of his poems before me bears the imprint: "Bangor, Maine | O. F. Knowles & Co., printers | 1887." READER.

Bangor, Me., December 18.

Song-Surf. By Cale Young Rice. New York: Doubleday, Page & Co. $1.25 net.

Hyllus: A Drama. By Ralph Cheever Dunning. New York: John Lane Co. $1.25 net.

What is particularly baffling to the habitual reader of current verse is the difficulty of detecting any larger spirit blowing through it all and ordering it to one common issue in the end. Much of it is merely inadvertent; the writers never repeat their initial indiscretion. Even that which shows some sort of conviction moves to as many motives as there are poets. All that can be said of it in a general way is that, on the whole, it seems inclining to develop a kind of racial consciousness as contrasted with the individual temper of the past. There are, of course, the usual humanitarian themes. Mr. Landels illustrates them as well as any one—indeed, he does the social indictment rather better than most; and, as in so many other cases, it is the best thing he does:

Frances O'Flannigan, seamstress, of thirty-two Paradise Alley,
Found in her room by the neighbors, dead ('twas the morning of Christmas),
Lying so still and so white on a bundle of straw in the corner;
Peacefully sleeping, they thought, till they touched her, and lo, she was marble!
Peacefully praying, they thought, for her thin hands were crossed on her bosom!
Coldly the gray morning dawned, and peered through the rickety window;
Coldly the gray morning light crept thro' the desolate chamber—
Only a broken-down chair, and a box that had served for a table;
Never a stick in the grate, and never a crust in the cupboard,
Never a blanket to warm her, but only her poor tattered garment!
There like a statue she lay, Frances O'Flannigan, seamstress . . .
Only a seamstress! Who cares for the years she has fought with starvation,
Labored from morning to night in her garret despairing and cheerless,
Working her hands to bone, like a slave that is chained to the galleys,—
Yielding her blood drop by drop to the demons of fashion and cheapness!
"Died from starvation," say they? *"Murdered"* 's the verdict of Heaven,—
Murdered by Sleek, the fat draper, and *you*, my fine ladies of fashion!

But this is not all. While this sort of thing is fairly familiar by this time, there is also a disposition to stretch the elementary sympathy for humanity in such a way as to include the vital experiences of nature and the generations of animal life as a whole. It is in this direction, if anywhere, that the modern epic is to be looked for—in the strange adventure of evolution. In fact, wherever a voice is heard to speak with assurance, you shall find that the singer is inspired by this new sense of kinship with things that grow and change. It may be only a vague recognition of a common impulsion and unrest with matter, as in Mr. Scott's "Natura Victrix":

Nature! at whose will are driven
Tides of ocean, winds of heaven,
Thou who rulest near and far
Forces grappling sun and star,
Is to thee the knowledge given
Whence these came and what they are?

Is thy calm the calm of knowing
Whence the force is, whither going?
Is it but the blank despair
Of the wrecked, who does not care,
Out at sea, what wind is blowing
To the death that waits him there?

Mother Nature, stern aggressor,
Of thy child the mind-possessor,
Thou art in us like a flood,
Welling through our thought and blood—
Force evolving great from lesser,
As the blossom from the bud.

Or again, as in Mr. Robinson's "Calverly's," it may consist with a vain regret for the impermanence and fleetingness of the individual, the creature of a hapless and haunting memory:

We go no more to Calverly's,
For there the lights are few and low;
And who are there to see by them,
Or what they see, we do not know.
Poor strangers of another tongue
May now creep in from anywhere,
And we, forgotten, be no more
Than twilight on a ruin there.

We two, the remnant. All the rest
Are cold and quiet. You nor I,
Nor fiddle now, nor flagon-lid,
May ring them back from where they lie.
No fame delays oblivion
For them, but something yet survives:
A record written fair, could we
But read the book of scattered lives.

We cannot have them here with us
To say where their light lives are gone,
Or if they be of other stuff
Than are the moons of Ilion.
So, be their place of one estate
With ashes, echoes, and old wars,—
Or ever we be of the night,
Or we be lost among the stars.

Or once more, this sense of mutability may combine with a vision of succession equally fugitive and tantalizing, as in Miss Gates's "To the Unborn Peoples":

Hail! Hail! to you, ye glorious hosts,
Ye formless shapes that haunt us now;
Ye gathering tribes, unresting ghosts,
Behold us here, as low we bow
In salutation to our Kind;
Our kindred dear, whose blood will be
As red as ours, whose hands will find
To rooms we found not, door and key.

Ye waiting Ones that bide your time,
Ye too shall know of joy and pain;
The storms will smite the hills you climb;
The sun will scorch you on the plain:
The seas will lure you; you will go
In paths our ships may never find;
On Isles unknown and peaks of snow,
Your tribes will camp, your horns will wind.

Ye unborn Peoples, we have tried
To march in ranks where none retreat;
In rifts of rocks our records hide,
And you may find them, when your feet
Shall stand in places where our hands
Were torn and soiled by thorn and grime.
To you we leave the Seas and Lands,
And all the glorious spoils of Time.

But whatever form it takes, the feeling is present in some form or other; and now and then it comes to perfectly clear and self-conscious expression, as in Mr. Hole's "The Chained Titan," a long and

elaborate apologue, in which the humanitarian and the racial are inextricably mingled and the whole melancholy procession of mortality parades its wrongs and misery before the agonized Prometheus:

Lifting eyes,
I saw within the mist pale spectre forms
In flight grotesque, each blind to each, with all
The dreams, the treacheries, hates, and pitiless greeds
That urged them on so hideously betrayed
I feared to turn lest that I gazed upon
Might prove but pictures thrown upon the mist,
As on a waving screen, by one whose face
Leered devilish through the darkness.
Such the stir;
So were the shadows driven by blindfold hopes,
Despair and furious passions that the night
Was rent by soundless cries and blasphemies;
Unheard appeals from drifting multitudes
Troubled by their own dreams were hurled at heaven,
While spectres, dragged down vortices of fate,
Stretched hands in vain for help. In the far gloom
Amorphous shadows—Famine, Pestilence,
Contagious Fears, and Death that softly runs
And seizes unawares—took grisly shape
From men's imaginations. Dragon-winged,
With fiery eyes, insatiate swallow, these
Battened upon the flocking human shades
Even as fierce monsters, ravening plough their way
With dreadful jaws a-gape through hapless shoals
In oceans refugeless. . . .
While in the midst
The ghostlike sense of deathly silence grew
Where never life had been nor any sound,
And crept and lengthened as the darkness creeps
Dogging the evening sun.

Even Mr. Watson's King Alfred is teased by dreams of instability and revolution; while the praise that he himself apportions to King Edward is largely for his participation in the common shifty human heritage:

A man not too remote, or too august,
For other mortal children of the dust
To know and to draw near.

On the other hand, it is equally remarkable that those poets who continue to speak for the individual, do so despondingly and with faint heart. Without confidence in his own fixity he is able to find no stay, no principle of support outside of himself—only a flux and ceaseless agitation. In the words of Miss Everett's "Eternal Question,"

Gray mist, gray sea, and a slow, wailing wind,
Swaying the sullen water to a stir
Of unvoiced heartache, silence desolate
That pains to anguish, vacancy, and lo,
Out of the dark, a voice, greeting, and then
The voiceless fog again, the waste of sea,
Oh, thou great God, is this the whole of life?

At best, as in Miss Lee's "Before Sleep," he can but cover his eyes and drink the potion of forgetfulness:

O child of weeping, here's the night!
O child of struggle, rest thee now.
Let peace come nestle on thy brow.
Put out the light—

Nor back into the battle hark.
Now in thy room at evening's goal
Put out the light. And in thy soul
Put out the dark.

With such a spirit abroad it is not to be wondered at that drama is slight and ineffectual. In particular it would be amazing if there were any widespread interest in tragedy or appreciation for it. Even Mr. Phillips owes his success to a panoramic effect of movement and variety rather than to any profound revelation of the seats of character. His "Pietro of Siena," which has something the same thesis as "Measure for Measure," is less striking as a trial of stability of soul than as a play of feeling and incident. Beside the work of a Racine its consciousness is astonishingly thin and superficial. But it contains passages of Mr. Phillips's admirable poetry, not the worst of which is the soliloquy with which Luigi anticipates execution. It is worth comparing with the words of Claudio in a similar situation:

And now not only Nature shakes off sleep,
But now the laborer to the field repairs
To dig the sweet earth, or to clip the hedge,
Or through the furrow follow on the plough.
Now wakes the young wife, and but half-awake
Kisses the dreaming babe beside her laid,
While all her deep heart murmurs in its ear.
The soldier starts up to the trumpet-call;
The shopman takes the shutter from the shop,
And in the window carefully displays
His wares; the trim girl into market trips;
And many a memory stares up at the sun.
. . . . . .
And whether sad or sweet the world awake
Whirls with a million graves about the sun,
Life, life begins! And I this hour must die.
And who knows that we cease who seem to cease?
If I must answer, ere the dawn is full,
For all my faults and folly, and to whom?
Haled before him who made me, or to view
A heavy river rolling amid souls,
Or to remember in an outer dark?
Life! Life! I cannot die, I dare not die.

Naturally, there are poets who avoid contemporary problems altogether and take refuge in some quiet chamber of the fancy aloof from all such vexatious concerns. And very grateful they are, too, after the fret and worry of things unsettled. Among others there is Miss Lanyon, who practises agreeably a kind of artificial Irish ballad or folk-song, and who strikes out occasionally an unaffected lyric with a little something by no means unpleasant of added modern refinement about it:

For a sword into my hand,
For a sign above my door,
For a word upon my mouth,
For a way my feet before,
For the road, and the road's end,
For the work and for the dream,
For the ship with straining sail,
For the harbor-lights that gleam. . . .

For the upward-winding track,
For the shining peaks above,
For all time and for to-day
In God's Name—I take your love.

Mr. Rice, too, in his "Song-Surf," which is republished from a foreign edition of his verse and may not be familiar to the American reader, follows much the track, in his "At Winter's End," "where pure description," in Pope's words, "takes the place of sense":

The weedy fallows winter-worn,
Where cattle shiver under sodden hay.
The plough-lands long and lorn—
The fading day.

The sullen shudder of the brook,
And winds that wring the writhen trees in vain
For drearier sound or look—
The lonely rain.

The crows that train o'er desert skies
In endless caravans that have no goal
But flight—where darkness flies—
From Pole to Pole.

While even more frankly Mr. Dunning takes the part of "presenting the least possible surface to the blows of circumstance by immersing himself in the study of Greek" and producing a tragedy in the general manner of the antique models on the subject of Hyllus, the son of Herakles. To be sure, he sacrifices a certain kind of interest and curiosity in doing so; but if he demands of the reader a corresponding amount of literary detachment, he succeeds in making it worth while. Perhaps the speech in which Hyllus reveals the motive of the piece is as quotable as any, where the business of the play is so closely pursued as to make extraction difficult:

World, O world too wide,
O staring stars upon the moon-blest sea
And wide-winged night upon the waves thereof,
O quiet cove and whispering airs of spring
Abroad upon the sea and blessed land
So fair unto my feet and good to feel:
Faint lights upon the hill-side that I know
And thou, O girl, the body of all these. . . .
How have I prayed thee, being apart and far,
Yea farther hence than many eagle flights.
Where all the home gods end and strange begin
And prayer falls pointless lacking names to call,
I made to thee an altar in a wood
Of holy pines and prayed so, and my prayer
Befell like peace to purge the nights of fear:
Nor any beast grew bold and all wild gods
Restrained their wills from mischief: whence my feet
Trod ever a good ground nor knew a snare.
This fell from but the naming of thy name,
A goddess then: likewise all lesser gods
And Artemis high-souled had honor done.
But Aphrodite was not one of these:
Thou wert mine Aphrodite—unto thee

The white dove bled and higher thoughts
rose up
Beyond all flight or spirit of dead birds
Or smoke of incense.

CURRENT FICTION.

The Doctor's Christmas Eve. By James Lane Allen. New York: The Macmillan Co.

When "The Bride of the Mistletoe" appeared a year ago, Mr. Allen announced two sequels to follow, the second of which was to be named "A Brood of the Eagle." His change of the latter title to "The Doctor's Christmas Eve" is indicative of the seriousness with which he takes every detail of his work. The reason for the change is, to be sure, not apparent. In the earlier tale (or study) the "eternal trio" are presented in the persons of a Southern college professor, his wife (the "bride of the mistletoe"), and a country doctor who, in love with the bride, has married another woman. The doctor has never breathed his passion, but it is in some way known to his wife, his children, and his neighbors, as well as to its blameless object. We have here pictured the second generation, which is possessed of an uncanny insight into the secrets and faults of the elder. These are, taken literally, such children as never were, in any age or clime. Their thoughts, like their vocabulary, are such as might conceivably belong to little old men and women dressed in abbreviated garments. But Mr. Allen's persons, for that matter, can never be taken literally. They are emotional apparitions, moving in a plane of intense and strained sensibility, haunted by uneasy dreams of sex. The discovery that her husband has something of the elemental and universal male about him comes to the bride with a shock of insult. The professor himself is ashamed of his normal and healthy instincts. The doctor is wretched for years because he cannot forget the sex of another man's wife. As we have said before, in speaking of Mr. Lane's fiction, there is something mawkish and morbid in the processes of a mind perpetually preoccupied with the "mystery" of the sex-relation. We seem to be eavesdropping at a private confessional, or sharing the dreams of an anchorite. Mr. Allen is very insistent as to the Americanism of his setting and his people. There could be nothing less characteristically American than the quality of his imagination. It is Gallic rather, and decadently Gallic. It is clear that Mr. Allen does not, and cannot, grasp this fact. "The Doctor's Christmas Eve" gratefully lacks those touches of sensual description which occurred in "The Choir Invisible" and "The Bride of the Mistletoe." But the old animus is here, the mainspring of the action is the same. The fact of this monotonous preoccupation—should we say obsession?—is the stranger because this writer does not lack humor of detail. The following bit is worthy of the year which produced "Chantecler":

Then out in the henhouse a superannuated rooster drew his long single-shooter out of its feather and leather case, cocked it, and fired a volley point-blank at the rafters; the sound seemed made up of drowsiness, a sore throat, general gallantry, and a notice that he kept his eye on the sun even when he had no idea where it was—the early Christmas clarion!

But humor denies here its larger protection; and the result is a product labored and pretentious rather than alive and potent.

Not Guilty. By W. E. Norris. New York: Brentano's.

A story which opens with the arrest and trial of a young Englishman of good birth on a charge of murder might naturally be expected to carry one among the intricate paths of detective romance. The first chapter, with its minute account of the circumstances of the crime, seems to offer excellent material for Scotland Yard to bungle, and for the young amateur sleuth, male or female, to make hay with. But Stephen Haverfield's fate lies not in the hands of any inspired grocer's clerk or seamstress. If it were not for the presence of an undeniable adventuress, the tale, despite its premises, might be designated as of the harmless rural British type, bringing together a reformed man about town and a fair country-bred English girl in a pleasant idyll. If the modern novel had sufficiently marked points to be recognized as a breed of literature, we should incline to rate this story as a mongrel. But Mr. Norris has here, as always, so amiable a manner of presenting his tale that the general reader will not be likely to quarrel with him on the ground of its somewhat flimsy substance. It is the "idle hour" type of commodity, and sufficiently good of its kind. The death-bed confession by means of which young Stephen is eventually vindicated suggests the sort of machinery with which the writer is fain to content himself. Thereafter, the idyllic strain is heard without interruption.

The Shears of Destiny. By Leroy Scott. New York: Doubleday, Page & Co.

Henry Drexel is a young American man of business, and Olga Valenko is a young Russian Princess, and it is quite natural that, between the cloth covers of a popular romance, they should find themselves born for each other. More strangely it happens that the fates and destinies and such branches of learning forbid their marriage on the last page: though hopes are thrown out for the future. The Princess Olga's father is Military Governor of St. Petersburg, and she herself is a revolutionary: hence the plot. Into the details of the incidents which press upon one another's heels with the rapidity of the negatives of a biograph, we need not go. Enough to say that the business is managed with a good deal of skill. That is, the story is romantically correct in the sense in which a play is theatrically correct. There are a variety of minor figures, including an American capitalist and an American correspondent; while the scene bristles with Russians of all degrees, from the noble Prince Berloff to "The White One," mysterious leader of the revolutionists. A good time-killer for the indolent reader.

Let the Roof Fall In. By Frank Danby. New York: D. Appleton & Co.

The opening chapter of this book plunges one into a state of depression. It is a clever introduction to throw into strong relief the character of Derrick Malone, who suddenly finds himself the unwilling successor to the title and estate of his cousin, Terence, Lord of Ranmore. When Terence, dying and half in delirium, pleads with Derry to make right some great wrong which involves the girl Rosaleen at Ranmore Castle, Derry promises. Derry's loyalty to his promise in keeping Terence's name spotless from the mother and sister, and the obligations under which his promise places him, help to form a plot into which the various types of people and changing scenes are ingeniously introduced. The largeness of Derry's nature and his simple sincerity dominate the whole and are shown in the unselfishness of his love for Rosaleen, as well as in his inability to recognize the feline craftiness of Lady Carry in making him her tool. The climax is reached through her maliciousness. Rosaleen, imagining herself a hindrance to Derry, makes a great sacrifice for him. Through it, however, circumstances force a reconciliation between Derry and his family, condemnations are turned to blessings, and Castle Ranmore is saved from ruin.

The close of the book falls below the standard set in the preceding pages. All obstacles that would interfere with the happiness of the principal characters are fearlessly obliterated. To those whose habit it is to read the last page of a book before they are well into the first chapter, this may be a comfort.

PRAGMATISM.

Pragmatism and Its Critics. By Addison Webster Moore. University of Chicago Press. $1.36 postpaid.

When Professor James died, last August, it may have seemed to those who are acquainted only with the more popular literature of philosophy, that Pragmatism had no longer a representative

in this country who could make the new view both intelligible and interesting. Readers of the more technical journals of course, knew better; and Professor Moore of the University of Chicago, by the publication of his new book, has shown to all who will read it that Pragmatism has still a champion who can defend and expound her doctrines, not indeed with the grace and charm of style of her lost leader, but in a manner that is almost always clear and is often captivating.

The book consists really of two parts, the first (chapters one to five) being in substance the course of lectures on "The Origin and Meaning of Pragmatism," which Mr. Moore delivered at the University of Chicago in 1908; while the second part is made up of a number of papers, written and published at various times, in answer to various critics. These papers are here printed with but little change, and this is unfortunate, for the result is that the book, in spite of its pleasant style, is notably lacking in unity. The first five chapters form a unitary whole and presuppose in the reader little or no previous knowledge of the subject; but the last seven jump from topic to topic in bewildering fashion, determined only by the chance happenings of that external environment of whose influence the pragmatist is, in theory, so skeptical. Moreover, most of these answers to critics presuppose for their thorough comprehension a considerably more detailed statement of the criticisms in question than the limitations of his space allowed the author to give.

Mr. Moore's presentation of Pragmatism differs from that of most of his predecessors in saying relatively little on the threadbare topics of truth and knowledge, and in emphasizing chiefly the three following points: "(1) the historical background of the pragmatic movement; (2) the central rôle of the conception of evolution in the development of pragmatism; (3) the social, or perhaps better, the 'situational' character of consciousness and *a fortiori* of thinking."

The story telling how Pragmatism came to be needed and how it actually arose is among the best things in the book. It all started (what did not?) with the Greeks. Their early ways of viewing things did not "work," and these failures of theirs and their general lack of unanimity, therefore, constituted a new problem. The existence of such a problem led to the view that knowledge was something *an sich*—a special sort of instinct, quite as separate and distinct as the others. Starting with this supposition, the sophists proposed as a solution of the problem their subjective, almost solipsistic view of the individual consciousness. But if the sophists were right, how could there be any such thing as agreement between different "minds"? Hereupon Plato, accepting the sophists' psychology, came to the rescue with his intellectualistic metaphysics, which has been the basis of all metaphysics ever since. This postulated the existence of an absolute and static Reality which should give truth to our ideas and righteousness to our ideals. Unfortunately, however, after this hypothesis had been tried for some few thousand years, with no great success, it became more and more apparent that the assumed absolute Reality gave, and could give, no actual help to either our ideals or our ideas. Hence, at last, the rise of Pragmatism, or that general tendency in modern thought which assumes no static reality (because it finds and needs none), and which points out that there is no datum in our experience which our ideas do not help to make.

For Pragmatism insists that we shall be thoroughgoing with our conception of evolution and not half-way believers. Not only forms and species have been evolved, but the very laws of evolution themselves. In short, according to the pragmatic view, there is not a single part or phase or element of the universe —whether a material being or a moral purpose—which remains eternally immune to change.

The great and determining element in this evolution, so far as we are concerned, is thought. All the reality that we can ever know is influenced by thought; and, conversely, all thought is a way of actively influencing reality. Ideas are not static and representative; they are dynamic, functional, tools for readjustment, "plans of action." Pragmatism is thus a part of the modern advance and a product of the modern spirit which refuses to be dominated by mere brute fact and external authority. "The very essence of modern humanity is the desire and determination to have a voice and a vote in the cosmic councils." And the progress which modern humanity has made has been everywhere through the use of ideas as its tools.

So repeatedly and ardently does Mr. Moore impress upon us the power of ideas in altering reality that the reader is likely to get the impression that this is a newly discovered fact just patented by the pragmatists and denied by every one else. And yet one can hardly suppose that Mr. Moore really thinks any one could be found who would seriously question it. Surely it is not here that the pragmatists and their opponents part company. The crux comes only with the further question, *Why* do ideas work?—or, to be more exact (since all ideas work somehow), Why do some ideas work "in the way they set out to work," while others fail to do so? Is not the only satisfactory answer to be sought in the fact that some ideas are *true*, while others are not? And if you completely identify the truth of an idea with its successful working, have you not made an answer to the above-raised question forever impossible?

In other words, from the very fact that some ideas work so much better than others, it should seem that the conditioning environment, which thought does not make, is of considerably more importance than one would judge on reading Mr. Moore's book. Possibly the influence of thought needed to be emphasized more than that of the environment; but by putting all the emphasis in one place our author has certainly given us a rather one-sided view of the nature of things.

Organically connected with this inability to see both sides is the chronic pragmatic blindness toward the representative nature of ideas, and from this Mr. Moore suffers no less than do his brothers. All will admit that ideas are functional; but are they only functional? In certain relations they may be regarded as "plans of action," but are they not also representative? Is it really good description to call the judgment, "America was discovered in 1492," a "plan of action"? If all ideas are functional, is not representation at least one of their functions? And if so, does not this representation depend for its truth on something more immediate than the question how, later on, they succeed in working?

Doubtless the pragmatist will have his reply to these, as to all other criticisms: "You don't really understand." In fact, after finishing the last seven chapters of Mr. Moore's book, the reader will probably conclude that all but the pragmatists have misunderstood Pragmatism, and that nearly all the criticisms of it rest ultimately on misunderstandings. And he will probably close the book with the wonder why all non-pragmatists should be so dense—or perhaps with the suspicion that there may be something a little wrong with a doctrine which seems so incapable of making itself clear even to specialists, and which only the initiate can comprehend.

But let not these remarks, in their turn, be misunderstood. Mr. Moore's attitude toward his critics is never one of complaint, but is always courteous, self-respecting, and sportsmanlike. He neither whines nor rages, but is ever good-natured and fair-minded. And his critics he everywhere treats not as adversaries, but as co-workers in the search for truth.

Memoirs of the Duchesse de Dino. Edited with Notes and Biographical Index by the Princesse Radziwill. Second Series, 1836-40; Third Series, 1841-50. New York: Charles Scribner's Sons. $2.50 net each.

These memoirs are the product of no

common pen. Dorothea, Duchesse de Courlande, Duchesso de Dino, Duchesse do Talleyrand-Périgord, Princesse de Sagan, to give her all her dignities, was not merely one of the great dames of her day; she is revealed in these pages as possessing literary gifts of so high an order as to strengthen the suspicion of her share in the composition or alteration of her great uncle's memoirs. She was born in 1792, married to Talleyrand's nephew in 1809, and lived till 1862. When her husband's uncle became French Ambassador at Vienna in 1814, she went with him as mistress of the embassy. When he was sent to London in 1830 she accompanied him in the same capacity. She lived with him till his death in 1838, entirely devoted to his welfare, and she has given us in these pages a picture of the old Talleyrand which is among the masterpieces of memoir-writing. From this connection she was naturally for many years in the very heart of political affairs, as no one was, save perhaps that other Dorothea of the Baltic, the Princesse de Lieven. To great beauty and spirit she added unusual talents, and in the best sense was a great lady of the *haute politique*. The story of the appearance of these volumes is curious enough. Some years ago, it seems, Mme. de Castellane published a book entitled "The Memoirs of the Duchesse de Dino," written in 1822, and ending with her engagement. On these, two years ago, the French Academician, M. Lamy, wrote a series of articles. With this the Princess Radziwill's "hand was forced," as she tells us, and she published, beginning with 1908, the three volumes of the Duchesse de Dino's "*Chronique*," a combination of diary and letters which began in 1831 and concluded in 1850. These in turn appeared almost immediately in the English translation before us, but with the present title "Memoirs," the change being due no doubt to the difficulty of translating "Chronique" otherwise.

Like Humboldt, "at bottom a remnant of the few disappearing elements of the eighteenth century," the duchess was none the less alive to the great changes about her. The railway was just being built and her comments on it are most amusing:

> A vast amount of time is wasted in stoppages at the numerous stations. . . It is certainly a marvellous invention, and the machinery is interesting. All is worked with perfect punctuality and in order, but at the same time it is an unpleasant way of travelling, to my taste. There is no time to see anything; for instance, we passed along the outer walls of several towns which I should have liked to examine; we did not even pass through villages, but went straight across the country, with no other event than occasional tunnels, cold and damp.

Could anything better reveal the gulf fixed between a more leisurely age interested in everything, and our own? It is the same throughout with this great lady of an older time. With all her manifold affairs, she still has time to read—and to write a diary. And it is no mere novelizing. The memoirs of Cardinal Ximénez, Bossuet, de Brosse's "Italy a Hundred Years Ago," Villemain's "Eighteenth Century," Sainte-Beuve's "Port-Royal," at her house in Paris, or Rochecotte, in her travelling carriage, at Berlin, in Naples, or her estates in Germany—she has always a book, and a good solid book. On them, as on the people about her, the comments she makes are shrewd and penetrating. "He is not a gloomy fanatic like Louvel," she says of Alibaud, who tried to kill Louis Philippe, "nor a modern Erostratus like Fieschi, but is merely a beggar of considerable self-possession and badly brought up." Of Balzac, "his face and bearing are vulgar, and I imagine his ideas are equally so. Undoubtedly, he is a very clever man, but his conversation is neither easy nor light, but, on the contrary, very dull. He watched and examined all of us most minutely." The book tempts to infinite quotation. Nor is the light thrown on events less interesting. The real dangers from the radicals which threatened Louis Philippe; the gradual emergence of Napoleon III; the illuminating observation of the fallen Orleanist King, "What would you expect; I thought myself infallible"; and the acute observation on Napoleon III, "the conclusion seems inevitable that there is no one at present to take his place, and he must be endured as he is." These, with notices of Thiers and Guizot, are most valuable. One of the most remarkable portions of the book, to take a wholly different thread of the narrative, is the account of the reconciliation of Talleyrand to the church. It might well find place in the history of religious experience. The curious blend of family affection, religious feeling, and high politics make it at first amusing, but, toward the close, pathetic and affecting. Not the least striking is the apparent inability of the old diplomat to understand that he had done anything to estrange the Papacy, he the ex-Constituant, champion of the Civil Constitution of the Clergy, one of the four who consecrated the new hierarchy of the schismatics, ex-bishop of Autun—and married.

It is, in short, an extraordinarily interesting book. Throughout there is scarcely a dull page. If one takes the account of the famous revolution of 1830 in Dessau as related by Max Müller, and the German revolution of 1848 as related here, one can almost understand how modern Germany evolved from that of Frederick the Great. Nor is the interest confined to historian or scholar. They took themselves seriously, these great dames, in a spirit which reminds one of Bagehot's fling at Gibbon that the latter could not distinguish between himself and the Roman Empire. But the most casual reader, tempted from page to page by the clear and vivid style, losing little even in translation, by the brilliant sketches of times and characters, the amusing stories, the clever observations on books and life and individuals, will be ready to grant much to the author of such a fascinating human document, such an illuminating picture of a vanished age.

Bohemia and the Čechs: The History, People, Institutions, and the Geography of the Kingdom, together with accounts of Moravia and Silesia. By Will S. Monroe. Boston: L. C. Page & Co. $3.

There is no lack of English books on Bohemia, as Mr. Monroe's ample bibliography shows, but there is a certain justification for his claim that his is "the first general work of travel and description on Bohemia" in our language. Yet it is not a book of travel, nor an authoritative description of the land and its people; but a compilation from many sources which attests the author's interest in the Czech language and literature and his familiarity, through frequent visits, with the country and its institutions. An extreme Slavophile, Mr. Monroe has produced a fairly readable, if one-sided, sketch of his subject, in which the numerous quotations stand out in striking contrast to his own rather commonplace and sometimes even slipshod language. He has been especially wise in drawing on Count Lützow's various standard works on Bohemian topics, as well as on Maurice's painstaking "Story of Bohemia." As for his attitude in approaching the conflicting claims of Slav and Teuton, the following passage is sufficiently explicit:

> It requires no prophet to assert that German dominance in Bohemia is a matter of past history. One need not mourn its demise; for in the centuries the Germans were in power and lorded it over the Bohemians, what contributions, it may be asked, did they make to literature, science, art, or humanity? Who is the German-Bohemian educator that one would mention in the same hour with Komenský, historian with the name of Palacký, composer with the name of Dvořák, or man of letters with Vrchlický? The German-Bohemians, with all the odds in their favor, have never displayed any indications of great talent, and one may well wish the Čechs, with their extraordinary virility and unusual promise, godspeed in their struggles with the acclimated foreigners within their borders.

In his historical summaries, Mr. Monroe follows largely Czech writers, though he also leans on the authoritative Gindely, from whom he adopts the form of "Waldstein." In dealing with Wallenstein's career, the author's lack

of historical grasp is painfully apparent, and he finds it necessary, toward the end of the volume, to remark that "Waldstein, it will be remembered, was the powerful commander of the Roman Catholic forces during the Thirty Years' War." He errs in saying that Wallenstein was assassinated in his palace at Prague, instead of at Eger.

The account of Bohemian Language and Literature, Painters, and Paintings, and Bohemian Music and Composers, is valuable as a convenient summary, though surcharged with superlatives. The following notice of Dvorák shows Mr. Monroe's style at its worst.

> Antonio Dvořák (1841-1904) is the best-known Bohemian composer in America, due not only to the fact that he directed for some years the National Conservatory of Music in New York, and the dedication of a symphony and quartet to the Americans, but also to his recognized rank as one of the eight or ten greatest creative tone artists of the nineteenth century.

Strangely enough, the list of distinguished Bohemian physicians and scientists does not contain the names of the renowned professors Skoda and Rokitansky, whom their native country ought to be proud to claim.

A peculiar feature of the book is the insistent Czech spelling of geographical names, which is unnecessarily bewildering to the English reader, who is far more familiar with the German appellations. "Olomouc" (Olmütz), "Hradčany" (Hradschin), "Vltava" (Moldau), etc., etc., constantly stare us in the face, and no plea of nationalism can excuse the absurd "Moháč (for the Magyar Mohács), or the even more preposterous "František Josef" for the Emperor Francis Joseph. Matthias Corvinus, of Hungary, and Matthias, Emperor of Germade, masquerade as "Matthew," and the Lobkowitzes and Radetzkys have forced upon them a Czech modification of their names which they themselves discarded. Among minor slips are "Auersberg" for Auersperg; "Taafe" for Taaffe, "Baron" for Count Goluchowski, and "Count" Silvio Pellico. Nor was Aehrenthal a "Count" when he "took charge of the unsteady ship of state in 1906." Anton Ritter von (not "Baron") Schmerling was not "an Austrian bureaucrat of the Metternich and Bach school," but a liberal statesman and opponent of Metternich, though a strict German Centralist. The attractive illustrations in the volume deserve a word of praise.

The Influence of Wealth in Imperial Rome. By William Stearns Davis, Professor of Ancient History, University of Minnesota. New York: The Macmillan Co. $2 net.

After a preface which proclaims the purpose "to consider the influence of money and of the commercial spirit throughout the period of Roman greatness," and disclaims any attempt at "exhaustive or original learning," the author of "A Friend of Cæsar," "A Victor of Salamis," etc., opens with a short, crisp chapter entitled The Business Panic of 33 A. D., which is so modern and aggressive in tone, and so suggestive of the columns of the muck-raking magazines, that one immediately feels assured at least of entertainment, and settles to the reading of the following chapters: on The Accumulation of Wealth; The Expenditure of Wealth; Slaves, Freedmen, and Plebeians; Private Munificence; Marriage, Divorce, Childlessness; Why the Roman Empire Fell.

In spite of its many virtues, however—its comprehensiveness, so wide that the author feels called upon to explain that sometimes a liberal interpretation has been given to the term "money power"; its apt grouping of a vast and unwieldy body of more or less fragmentary knowledge, its liveliness of presentation, and its general intelligibility—the book does not quite beget satisfaction. This is due first of all to the nature of the author's undertaking as a whole. It is true, he "makes no claim to exhaustive or original learning," and does not intend the book "to be a critical compendium for the advanced scholar"; it is not for the research worker, and we may absolve it from criticism on that score. But the abounding and skilfully classified material contained in it will nevertheless attract to its use such advanced scholars as teachers and students of ancient history and the classics and archæology, and they will miss the citations and references which serious students of antiquity regard as indispensable for the expansion of their own knowledge and for the critical estimation of their authority. As it is, they may read Professor Davis for such points of view as his book presents, but for real authority they must continue to go to modern critical works, principally in German, and to the ancient sources themselves. Nor will the wider circle of cultivated readers who are drawn to the book by a general interest in financial and social phases of ancient life find it free from objection. For such persons its pages are too densely crowded with facts.

Unfortunately, too, there are other defects. The reader meets with such oversights and actual errors as "Celicia," "Diodochi," "Phillipus," "Antonius Pius," "Papius Poetus," "quirites," "citzens," "amythestine," "acceed," "cortège," "aserted," "the sacrifices of Horace's father . . . has been mentioned." If the book were not from the pen of a writer of some reputation, all this might be explained as ignorance, or the careless writing of inexperience, or as just an indication of the author's having had a college education. In the case of Professor Davis, however, we must look upon it as the result of carelessness due to inordinate haste.

But whatever the cause, the fact of carelessness raises the presumption of inaccuracy in the statement of fact. We note that Fowler is not, as he states, a biographer of Cicero; that it was Crassus, not Ahenobarbus, whom Marcus Brutus called "the Venus of the Palatine"; that the statement that Cicero had eight large villas is overdrawn; that to speak of the orator's "regular dwelling on the Palatine, and that of his father at Carinæ," leads the reader to think of the Carinæ as at least an extra-mural place; that "bidens" in the passage of Juvenal referred to is not a pitchfork, that the famous *nemo togam sumit nisi mortuus* is hardly to be rendered, "nor have to put on a cumbersome 'dress suit'—the toga—save to go to a burial," and that "the unsophisticated children bawl at the grinning masks of the actors" is needlessly free for

> cum personæ pallentis hiatum
> In gremio matris formidat rusticus infans.

It is to be regretted that Professor Davis did not choose either to make his book really popular, or else to take the time and trouble to go to the original sources for all of his data, as he has done for many of them, and compile a book for which students and teachers unable to possess or use the cyciopædic works of German scholarship would be genuinely thankful.

The High Court of Parliament and Its Supremacy. By Charles Howard McIlwain. New Haven: Yale University Press. $2.50 net.

Originally the Central Assembly of England was feudal in its nature. One of its characteristics was that it did not make but declared the law; such law based on custom was fundamental in its nature, and rules inconsistent with it were considered void; there was, up to modern times, no clear division between the different departments of government, Parliament being the highest court, both legislated and adjudicated. The lower courts had legislative as well as judicial powers. As acts of Parliament were analogous to judgments in the inferior courts, such acts were not regarded "as inviolable rules *made* by an external omnipotent legislative assembly, but rather as judgments of another court, which might be, and were at times, treated as no modern statute would ever be treated by the courts today." It is to this historical ground that the author attributes what he calls the "legislative" activity of the courts in the United States, greater here than in England, because it was checked there by the growth of the new doctrine of Parliamentary omnipotence. In Tudor England, however, the government

was one of fused powers, while that of the United States is a system of separated powers, and therefore the precedent is not one to follow slavishly.

As to the soundness of the author's view concerning the little respect which was often paid by the courts to statutes enacted by Parliament, there can be little question. Much the same thing is observed in the development of other systems of jurisprudence. Jhering has given numerous instances where Roman jurists, "while pretending to do reverence to a law, in reality knock it over the head." Yet the very fact that the courts resort to transparent fictions to justify their action, instead of boldly claiming it as a right, shows that legally they consider the statute as supreme. Instances cited to support a contrary view in reality prove nothing; the most that they do is to show that if Parliament should pass a law which is absolutely impossible of enforcement, it could not be regarded as binding. There may be a few isolated dicta which seem to go farther; but no actual decision, based on the bold assertion that a statute on any temporal matter is void if it contravenes a so-called fundamental or higher law, is cited by the author.

It seems, therefore, rather fanciful to attribute the power exercised by our courts to this alleged historical fact. It can be explained by the political theories prevalent at the time of the Revolution, namely, that, as all government is based on the consent of the governed, and all governmental agencies have only limited power, an act of the legislature contrary to the Constitution, to which it owes its origin, is *ipso facto* void, and should be declared so by the courts when it comes before them. While it may be conceded that in practice this theory has vested the courts with what resembles legislative powers, it is none the less true that in their decisions and in theory the courts have disclaimed the possession by them of any such power and have justified their action solely by the unconstitutional character of the legislative enactment.

Grave doubts might be entertained as to the views expressed by the author that the present English doctrine as to the power of Parliament is inconsistent with popular government. Of course, if the doctrine of parliamentary omnipotence is equivalent, as he intimates in one part of his book, to a claim of a divine right vested in the legislature, and if that is the principle grafted on the English Constitution by the Revolution of 1688, it has no place in our age. But no proof for such assertion is given, and it certainly is contrary to the doctrine which was the foundation of the Revolution and of the political action of the Whigs during the seventeenth and eighteenth centuries. They did not see in Parliament the sovereign, but the organ of the sovereign state. It may be that as long as the political education and the political rights of the people were virtually non-existent, Parliament was *de facto* the sovereign. But it does not follow from this that, even where an almost universal suffrage exists, Parliament should not be vested during the term of its existence with the sole and exclusive power to make the law, or why its members should not have the right to exercise their own judgment on the matters submitted to them, or be bound to follow slavishly the instructions given to them by their constituents, as the author intimates. Such representative government may be popular government in the best sense of the word; we are not prepared to assent to the proposition that no government is entitled to be so called unless it recognizes the imperative mandate, the referendum, and the recall.

Notes

In January, Little, Brown & Co. will bring out four new novels: Anthony Partridge's "The Golden Web"; "The Capture of Paul Beck," by McDonnell Bodkin; "Berenice," by E. Phillips Oppenheim, and "The Gift of the Grass," by John T. Moore. The same house will begin the publication of the Modern Criminal Science Series, with translations of works by C. Bernaldo de Quiros, the Spanish criminologist, and Hans Grass, professor of criminal law at Graz, Austria. The translations will bear the titles, respectively, "Modern Theories of Criminality" and "Criminal Psychology."

A fifth edition, "revised and enlarged," of Rossiter Johnson's "History of the War of Seeession" comes to us with the imprint of Wessels & Bissell Co. The revision and enlargement consist of brief supplementary notes appended to eight of the chapters, and of an additional chapter entitled "The Measure of Valor," chiefly devoted to a statistical recital of losses in the war. Otherwise, the edition is reprinted from the same plates as its predecessor; and even the index, with the exception of one transposed entry, is that of the old edition, pagination and all.

The University of Pennsylvania will publish "The Swedish Settlements on the Delaware, their History and Relation to the English and Dutch, 1638-1664, with an Account of the South, the New Sweden, and the American Companies, and the Efforts of Sweden to Regain the Colony," in two volumes, by Amandus Johnson, Ph.D. The work, which is said to be the result of five years of research in the archives and libraries of Sweden, Holland, England, and America, will be illustrated by above one hundred half-tone reproductions and line cuts of old maps, original sketches of forts, and Indian deeds.

Prof. H. H. Johnson of the University at Rennes will publish with Francis Griffiths a translation of Anatole Le Braz's "Le Pays d'exil de Chateaubriand."

In our note, December 1, on the announcement of "The History of Nations," published by John D. Morris & Co., and edited by Henry Cabot Lodge, we called attention to the misrepresentation of "Volume 21, South America, by Philip P. Wells," as an original work. Mr. Wells desires us to state that there is no such misrepresentation in the book itself, since its relation to Deberle's "Histoire de l'Amérique du Sud" is explicitly stated on the title page and in the preface. He adds, concerning the prospectus: "My contract with the publishers was fulfilled by the delivery and acceptance of my manuscript. I had no control over, or responsibility for, the book-selling methods adopted by them. The statement that I 'delved deeply into hidden sources,' if correctly quoted by you, is unauthorized by me and absurd." We regret that our note gave a false impression of Mr. Wells's part in the transaction.

"Ancient Myths in Modern Poets" (Baker & Taylor), by Helen Archibald Clarke, follows the story of Prometheus from Hesiod to Shelley and Lowell, and that of the sun and moon from the Homeric Hymns to Keats. Although the author does not attempt to solve some of the nicer problems of æsthetic values which her book must inevitably suggest, the mere grouping together of this material serves in a measure to reveal the important difference between the Greek and our newer way of adjusting fable to the needs of artistic presentment. Precisely how far a poet may depart from original outlines and how far safely graft on values symbolic of his own contemporary conditions, still remains a great problem in every variety of art. In the days of an exotic romanticism there was a general tendency to catch symbolic overtones in almost any story, and ancient myths had untold meanings. Something of that condition is still to be seen in the works of Shelley and Keats. Shelley, in particular, furnishes an interesting contrast with the ancient method. Where Æschylus has placed a sturdy reliance upon the main outlines of the Prometheus story, strengthening the gaunt bone and muscle merely, Shelley, whatever else he did, has added a bewildering complexity of surface tints and atmosphere. Yet, despite his profusion, he has certainly not increased the subtlety of his master nor made greater the volume of the human appeal. Other problems of a like nature this book unwittingly presents for reflection.

Redfern Mason's "The Song Lore of Ireland" (Wessels & Bissell) is a detailed account of the progress of Irish poetry from the first beginnings, of which hardly more is known than of the days of the Homeric rhapsodes, down to the early nineteenth century. In the Celtic prime, the bardic colleges of Ireland were the resort of scholars from all parts of Europe. Poets were made, not born, in those days, and Mr. Mason's description of the process makes one wonder what sort of stuff was turned out:

> Early in the morning the students assembled, and, having heard a discourse and been given a subject to work upon, they breakfasted and retired to their rooms. Window there was none; for the ollaves (professors of poetry) believed the light of day and glimpses of the world without incompatible with the concentration necessary for bardic composition. The student flung himself on the bed and gave his mind to poetic creation. Toward the close of day a servant came round with candles, and

each student wrote down what he had composed.

Many of the bards were killed during the Cromwellian invasion, but these academies lingered on until the time of the Jacobites and the penal laws. To us, this method of training poets sounds Alexandrian, but, as the poems were in Irish, we can only judge of their scanty remains at second hand, as Spencer did; he vilified everything Irish, and hoped that the people would "consume themselves and devour one another," yet admitted from what had been translated to him that the Irish bards did not lack "sweete witt and good invention, but skilled not of the goodly ornamentes of poetrye." What the bards and harpers did was to keep alive the national spirit, and it took five centuries of English persecution to suppress them. Mr. Mason hopes for the revival of the Irish harp, together with the Irish language, and is a firm believer in the neo-Gaelic movement. We owe most of the collection of Irish melodies to the industry of Petrie, who for half a century devoted his leisure to writing down what was orally preserved, and amassed a treasury of no fewer than 2,000 Irish tunes, the legacy of the common people. Though Shakespeare refers to Irish dancing, the literature of Ireland is strangely silent about it. The story of Ireland's poetry and music is inevitably the story of Ireland's wrongs, and this account of it is written with excusable bitterness. But the book ends on a hopeful note in the last chapter, The Dawning of the Day. Its most interesting feature is the numerous musical illustrations, which show the original form or variations of some of the oldest popular tunes, such as the "Coulin," the "Last Rose," and "All the Way to Galway," which is the original form of "Yankee Doodle."

One of the most interesting books on the country of the Nile is Douglas Sladen's "Queer Things about Egypt" (Lippincott). It is not his first attempt in this line, as similar titles in regard to Japan and Persia indicate. He has had opportunities not open to the average tourist, and with notebook and camera he has made the most of them. Much of his observation lies outside the tourist's path and interest, as the servant question, housekeeping, business, and court etiquette, and such places as Damietta, Rosetta, the Fayum, and the great oasis of Kharga.

Prof. Salomon Reinach, who is perhaps the most prolific among contemporary scholars, has recently published what may be regarded as the most remarkable of his productions—his Bibliography. It extends from April, 1874, to January, 1910, and covers no less than 103 pages, including a serviceable and very essential Index of 27 pages. The number of separate volumes published by him is considerably more than fifty, while his monographs, articles, addresses, reviews, and notes in encyclopædias, dictionaries, year books, and periodicals of almost all countries run close to 4,000. The range of M. Reinach's productivity (he has just turned fifty) is as remarkable as its size. Beginning his career as a classical archæologist, he has gradually enlarged his scope until it at present includes the entire domain of ancient and modern art, prehistoric antiquities, the history of religions, and the general development of culture. It is interesting to note in illustration of his wide intellectual interests that the very first volume published by him (in 1876) was a French translation of Schopenhauer's essay on the "Freedom of the Will," of which the eleventh edition appeared last year, and that in the midst of his busy career he found time to introduce our greatest historian, the late Henry C. Lea, to the French public by preparing a translation of Mr. Lea's monumental work on the "Inquisition of the Middle Ages," in three portly volumes. Reinach's studies in the classics and archæology are represented by an admirable "Manual of Classical Philology" in two volumes. In his "Apollo" he has given the best extant survey of the entire history of art, just as in the companion volume, "Orpheus" (see the *Nation* of August 18, 1910), he has endeavored in the same way to cover the whole domain of the religious history of mankind. In three large volumes under the title of "Cultes, mythes et religions" (1908), he has collected the more important of his articles scattered throughout the periodicals of various countries. His contributions to the antiquities of France are represented by scientific catalogues, and researches on the collections of the wonderful Musée de Saint Germain, of which he is the director; nor should mention be omitted of his most useful series of "Répertoires" of Greek and Roman statuary and of Greek and Etruscan vases. As the editor of *Revue archéologique* in conjunction with Georges Perrot, he has naturally written the bulk of his special articles and notes for this periodical, the enumeration of which alone covers twenty-two closely printed pages. A member of the French Académie des Inscriptions et Belles Lettres—its president in 1907—he has also been one of the most regular and prolific contributors to the *Comptes Rendus* of the Institut. By actual count the number of periodicals and periodical publications to which he has been a contributor is 105—scattered throughout the world and covering almost every subject from volcanoes in France in the *Comptes Rendus* of the Académie des Sciences to medical antiquities in the *Lancet*, and extending to "Ladies' Saddles" in *Notes and Queries*. His articles in the *Nation*, to which he has from time to time been a contributor since 1884, alone number thirty-five.

"The Journal of the Yukon," 1847-1848 (Ottawa: Government Printing Bureau), by Alexander Hunter Murray, has been recently edited by L. J. Burpee. This document, although not recording an original exploration, contains the earliest known detailed description of much of the ground covered. It describes the customs of the Indians of the Yukon at the time when the British first went among them. It contains an account of what might be called the extreme outpost of the Hudson's Bay Company; and it throws light on the policy and methods of the fur trade. The principal object of the journey, the building of Fort Yukon, naturally brought the Hudson's Bay Company men into what was then Russian territory, and into competition with the Russian-American Company. Alexander Murray, the author of the Journal, was born in Scotland in 1818, and shortly after emigrating to the United States entered the service of the Hudson's Bay Company as a senior clerk. He was a man of education and taste, as well as a shrewd and successful trader. Not the least interesting feature of the Journal is the series of sketches which it contains. These were drawn under the most difficult circumstances, and with no better appliances than "a few steel pens now going on their third year, and filed down to stumps." The volume is interesting and genuinely instructive, containing, in addition to the narrative, considerable material of a scientific character.

"Highways and Byways of the Rocky Mountains," written and illustrated by Clifton Johnson (Macmillan), is superficial and misleading. The author's understanding of geographical classification is so poor that he includes all the "Great Plains" States in the Rocky Mountain area, and excludes them, in a former book, from the Mississippi Valley. To find Kansas figuring as a Rocky Mountain State is disturbing. Furthermore, his "highways and byways" are mainly along the railways, and his narrative is chiefly made up of conversations with the oldest inhabitants. There is little about the Rocky Mountains, and this is not always correct. For example, he gives the impression (p. 125) that Pike tried to climb the peak now known by his name, saying that "after vigorous attempts to scale the mountain, Pike abandoned the project." Pike did not get nearer than about fifteen miles to what he called "the Grand Peak," and then saw it from another mountain. Pike's Peak was first climbed by Dr. Edwin James of Long's expedition, and Long properly named it "James Peak," but circumstances gradually fixed the other name upon it. In another place he says that Acoma has been in its present place for 700 years, whereas it is only 370 years since Coronado entered the country (1540), the first European to do so, and there is no record before that time. In speaking of the "nutting" expeditions of the Acomas he does not, as he should do, describe the nuts, which are from the Piñon, and are peculiar to a particular belt of country. Again, he says that Santa Fé is the oldest European town in the United States (p. 115), an honor held by St. Augustine, Fla., which was founded in 1565; Sante Fé was founded by Oñate in 1605. The first village started by Oñate was San Gabriel, in 1598, on the site now occupied by the village of Chamita. The book is illustrated by the author with photographs of scenes that are commonplace to the last degree. As a rule, they present the crudest and least attractive side of the places where he went, and they are poor photographs at that.

Owing to the widespread public interest in Spain's domestic crisis, "Spain from Within" (Stokes), by Rafael Shaw, will command attention. Its author has had unusual opportunities for learning the public sentiment of the masses in the peninsula. The task he sets himself is to serve as spokesman for Spain's lower classes, who, like those of Russia, are incapable of making known to the outside world their secret yearnings and aspirations. Unfortunately Mr. Shaw lacks the judicial temperament, and in places his book degenerates into a rabid attack upon Rome. This partisan bias appears throughout, but particularly in the introductory chapters, where are related many scandalous anecdotes which the author has derived from his humble informants. As a sample of the mildest of these, might be mentioned the story of a poor peasant woman who

fell asleep in church, and, awakening after midnight, was surprised to see a company of armed priests going through the manual of arms. The informant on this occasion was a lad who sold fruit to the husband of the witness. Later, the reader is told that during the recent Barcelona riots priestly sharpshooters, stationed on housetops, committed many a murder. More surprising still, Mr. Shaw believes that the bomb outrages which have disgraced Barcelona for so many years are not the work of anarchists, but of the Jesuits; and that the troubles of 1909 (in which, incidentally, forty religious establishments were looted) were started by the *agents provocateurs* of the Carlists acting in unison with the church party. It is difficult to conceive of such extreme Machiavelism. Every traveller hears much of this same talk, but such utterances should be liberally discounted. He greatly minimizes the dangers of anarchy and exaggerates the importance of Carlism. Every one of Spain's evils is attributed to the Ultramontanes. Intelligent Spaniards consider obscurantism and anarchy dangers equally to be guarded against. To them "Black Spain" and "Red Spain" are alike abhorrent. This feeling is well stated by a recent writer in the Barcelona publication, *La Cataluña*, the organ of "Young Catalonia." The writer in question thinks that education is the only remedy for existing evils. Whether 60 per cent. of clericals impose themselves upon 40 per cent. of free thinkers or *vice versa*, the result will be equally disastrous. In either event the national unrest will continue. Education must provide a common ground for compromise. Yet making due allowance for the author's prejudices, the book contains much that is valuable. The chapters on politics and education offer information not readily acquired elsewhere. An excellent feature is the appendix giving brief biographies of prominent Spanish politicians together with an account of the various political parties, and the journals which serve as their organs. Some of the intriguing backstairs methods which form so large a part of Spanish politics, and which are not easily understood by foreigners, are interestingly exposed.

In urging "Common Sense in Politics" (Moffat, Yard) Job E. Hedges seems to imply that the people are too peevish about public affairs, and that they are prone to put upon the politicians blame that more justly rests upon themselves. Graft exists because the people do not choose their representatives carefully, and fail to watch their conduct closely, but, after all, "the most corroding corruption in politics is not money-making, but is the practice of hypocrisy." Therefore, "when the cry of 'stop thief' is raised, it is sometimes wiser to watch the man who makes the outcry than to follow the crowd." Mr. Hedges settles offhand some vexed points of constitutional doctrine. For instance, he says that "every thinking man knows that the President's duty is done when he expresses his opinions in his messages to Congress." And yet the public "doesn't stop to consider ways and means, and gives its approval or disapproval of a President or a Governor, according to his success in forcing action by legislators." Both in the tenor of its opinions and in the oracular quality of its style, the book recalls the essays in which Dr. Samuel Johnson used to pooh-pooh popular discontent with the management of public affairs.

"Heroic Spain," by E. Boyle O'Reilly (Duffield), is a sketchy narrative of an eight months' tour in Spain, varied with pleasant excursions into the domains of history, literature, architecture, and art. The author has not only travelled the beaten path, but describes many nooks and corners not visited by the ordinary tourist. She has much independence of judgment, and fears not to upset old idols. The chapter on literature is not merely a rehash of standard text-books, as has been the case in several recent books of this kind. It evinces wide reading and original thought. She shows sound judgment in minimizing the importance of Galdós and Palacio Valdés, the two contemporary Spanish novelists with whose works English-speaking readers are unfortunately most familiar. In the earlier period she is less at home. A translation which she says is taken from the Romancero del Cid is really from the Poem of the Cid, a very different work. It is also a mistake to describe cloak and sword plays as picaresque, and to state that Lope de Vega was especially noted for his preeminence in that *genre*. But these are minor errors. In general her information is accurate. An introductory chapter gives the prospective tourist much practical advice. The illustrations are unhackneyed and artistic. There are also a few original poems of more than average merit. "Heroic Spain" is by far the best book of Spanish travels which the year has produced.

The new edition of W. M. Sloane's deservedly popular "Life of Napoleon Bonaparte" (Century; 4 vols.), which first appeared in 1896, will be welcome. It is more convenient to handle than its predecessor, yet it has also been considerably enlarged, new chapters having been added on the Continental System, the Louisiana Purchase, and the St. Helena epoch, and the portion on Napoleon's youth having been expanded. Space has been saved by a substantial reduction of the illustrations, which were so salient a feature of the earlier edition, and by minimizing the number of authorities and footnotes. While we concur with most of Professor Sloane's dicta in regard to the slight value of references and bibliographical apparatus, we are bound to say that we find it difficult to justify the omission of Lord Rosebery's "Napoleon, the Last Phase" from a general bibliography, which contains twenty-two titles on St. Helena (even though it is mentioned in the list of references at the beginning of the chapter on that topic). It would have been far better, in our estimation, to omit the general bibliography entirely, and restrict the mention of authorities to the lists at the heads of the chapters, unless it were possible (which it is not) to render the former to all intents and purposes complete. The dangers inherent in partial bibliographies—especially those in which the titles are arranged in alphabetical order with no indication of their relative importance—have been demonstrated again and again. The last decade has witnessed the appearance of several excellent general lives of Napoleon, so that Professor Sloane's work no longer enjoys the reputation it once had, of being the sole modern scholarly work which rendered accessible to English and American readers the results of recent minute investigation. Despite this fact, its proportions, arrangement, method, and style are such as make it fill a place which no other history of Napoleon quite occupies. Now that it has once more been brought abreast of the scholarship of the last fifteen years, it will continue to be read and studied with interest and profit.

Benn Pitman, brother of the inventor of the Pitman method of shorthand, and himself the author of various works on the subject, died in Cincinnati, December 28. He was born in Trowbridge, Wilts, England, in 1822.

Samuel Henry Butcher, Unionist member of Parliament for Cambridge University since 1906, died last Thursday. He was born in Dublin in 1850, son of the Bishop of Meath. He taught successively at Oxford and the University of Edinburgh, and in 1904 was a lecturer at Harvard. He was a trustee of the British Museum and president of the British Academy of Letters. Professor Butcher was widely known as a classical scholar. With Andrew Lang he published a prose translation of the Odyssey in 1879, and his own published works include a small volume on Demosthenes (1881), "Some Aspects of the Greek Genius" (1891), "Aristotle's Theory of Poetry and the Fine Arts, with a Critical Text, and Translation of the Poetics" (1895), and "Harvard Lectures on Greek Subjects" (1904).

The death is announced of Charles H. Woodman, at the age of sixty-three, the author of "The Boys and Girls of the American Revolution" and "Defence of Turkey"; he also wrote articles for the *Atlantic Monthly* and *Appleton's*.

Julia Arabella Eastman, founder and for eighteen years associate principal of the Dana Hall School for Girls, a fitting school for Wellesley College, died in Wellesley on New Year's Day, at the age of seventy-four. Miss Eastman was the author of a number of children's books, including "Kitty Kent's Troubles," "Romneys of Ridgemont," "School Days of Beulah Romney," "Short Comings and Long Goings," "Striking for the Right," and "Young Peck."

The death is reported of Dr. Bernhard Kahle, professor of northern philology and ethnology at the University of Heidelberg, aged forty-nine. His writings include "Die altnordische Sprache im Dienste des Christentums," "Isländische geistliche Dichtungen des ausgehenden Mittelalters," and "Die Sprache der Skalden auf Grund der Binnen- und Endreime."

Science

Six years ago there began to appear in Germany an extended work with the title, "Krankheiten und Ehe: Darstellung der Beziehungen zwischen Gesundheits-Störungen und Ehegemeinschaft." The editors were H. Senator and S. Kaminer, with the aid of twenty-three collaborators treating special topics. Apparently almost simultaneously an English version was prepared by J. Dulberg of Manchester, which in its completed form is a large work in two volumes, together more than 1,200 pages. Three

years ago an abridged edition was published, and this has now been issued in this country as "Marriage and Disease" (New York: Paul B. Hoeber). The smaller book, 250 pages long, seems to be a really successful attempt to shorten the original, which in some chapters was rather prolix. The more general aspects of marriage itself occupy a little more than a third of the text. The rest is given to a discussion of the influence of various diseases on the married state, a discussion that goes rather far afield and touches a great variety of prematrimonial conditions. Curiously enough, we find no allusion to the deaf-mute. In the present form the book will be helpful to the general practitioner, and in a more limited way to some general readers. Its direct usefulness to those who merely contemplate matrimony for themselves is perhaps more problematical.

A sign of the times is the appearance of "An Introduction to Agriculture," by A. A. Upham (Appleton), a text-book for high-school upper grades. In general this little handbook covers its ground well. We miss in it, as a book for country children, sections on the thinning, grading, and proper packing of orchard fruit, and on the usefulness and simplicity of the split-log road-drag. Space should have been found, even in so short a book, for these in connection with their general subjects. But the book is better than its lapses indicate. We welcome in it the brief chapter on that part of the farm which can be made the most profitable, and where children can learn so much, the vegetable garden. The style is simple and clear; the summaries, questions, and appendices should be helpful in class work; and we believe that the ultimate aim of the author, to prepare pupils to read and understand agricultural literature, will be attained The fact that there is a call for text-books of this kind is prophetic of better times in our agriculture.

The "General Biology" of James G. Needham of Cornell University (Ithaca: Comstock Publishing Co.) is described as also "a book of outlines and practical studies for the general student." It purposes to be a guide for students who can devote but one college year to the subject, and is said to be based on the actual experience of the writer in seeking suitable practical exercises. The result is not convincing. Far too much ground is covered to make it possible to cultivate much of it really well, and yet a number of interesting and valuable matters, particularly matters more strictly physiological, are hardly mentioned. On the other hand, the book contains a great deal of useful material, with many excellent illustrations. Some of this material is very well put together, but in places the treatment is sadly superficial. With a really good teacher an ordinary student might find the book exceedingly useful; without such aid he would become a mere smatterer.

Dr. Willis Goss MacDonald, one of the noted surgeons of this country, died last Friday in Albany at the age of forty-seven. He was born at Cobleskill and attended the Cobleskill Free Academy, the State Normal College at Albany, and the Albany Medical College, and from the last named he was graduated in 1887. He attended the University of Berlin in 1889 and 1890. Returning to Albany, he became instructor of surgery in the Albany Medical College, and shortly after became professor of surgery. He went to the Albany Hospital as assistant attending surgeon in 1902. Since 1907 he had been attending surgeon, as well as consulting surgeon, of Westfield Hospital.

Drama

A book which has for its aim to illustrate the connection between the Latin, Italian, and early Elizabethan stage, is announced by the Oxford University Press, entitled, "Early Plays from the Italian." It is edited, with essay, introduction, and notes, by R. Warwick Bond, and contains "Supposes," "The Bugbears," and "Misogonus."

Henry Arthur Jones has long occupied an undisputed position among the leading modern dramatists of England, and, in skill of technical workmanship, stands pretty nearly at the head of them. And the independent thought, the shrewd observation, and the definite purpose to be found in most of his serious plays compensate largely for the purely theatrical qualities with which they are too often disfigured. But he is addicted to exasperating faults. He is too much given to platitudinous moralizing, to transparent trick, and to drawing wholesale conclusions from specific and abnormal premises. Professedly his latest play, "We Can't Be as Bad as All That," which has just been produced in the Nazimova Theatre, is a satire upon upper middle-class British society; actually, it is a plea, if not for the right of absolute free love, at least for the right of a man and a woman to set legal, religious, and social laws at defiance, if they love devotedly and their union can be accomplished in no other way. He makes the reservation, however, that they must be prepared to pay the price, which is virtually an admission that the common sense of the world is opposed to his philosophy. In his latest play, the one decent female character is a woman who started wrong, and it may be admitted that, in the light of circumstance and of her later conduct, she is justly and reasonably entitled to the rehabilitation bestowed upon her, but it does not in the least follow, as a social law, that any woman falling in love with the husband of another woman is entitled to run off with him. Nora Shard when only a child, fell under the influence of Harold Furnival, a brilliant young statesman, who was most unhappily married. For his sake she surrendered all, and they were on their way to a fool's paradise, when he was instantly killed in an accident. Some years after she became the nurse of a hopelessly sick millionaire, who, before he died, married her, that she might be the guardian of his daughter. As Mrs. Engaine she wins the heart of Sir Ralph Newell, a rich English baronet, who takes her down to the country house of his sister, Lady Carnforth. It is there she becomes the centre of the idle, dissipated, malicious, and worthless set, upon whom Mr. Jones empties the vials of his amusing and vigorous, but not particularly original, satire. Lady Carnforth discovers her identity and threatens to expose her unless she will consent to the marriage of her step-daughter with Lady Carnforth's brother, who is a degenerate and bankrupt blackguard. Nora refuses, in a capital scene, and, in a still stronger one, showing Mr. Jones at his ingenious best, tells her whole story to Sir Ralph—who has just asked her to marry him—though knowing that he had been the bosom friend of Harold Furnival and had always been furious in his denunciation of the woman who had, as he believed, lured him to ruin and death. The situation here is poignant, and the suspense is maintained with great adroitness and remarkable psychological insight. The scene is pure drama, in which the conflict is wholly one of character and conscience. It is worth all the rest of the play put together, and it is played with the rarest restraint, intensity, and naturalness by Nye Chart, a new leading man of first-rate quality, and Katharine Kaelred. Sir Ralph at first is inclined to back out from his engagement, but, in the end, realizes the inherent nobility of the woman—she really is a fine creature, as Mr. Jones has depicted her—and all ends well. It is not necessary to enter into the details of an ingenious, interesting, but theatrical subplot, nor to dilate upon the subordinate characters, which are modelled upon familiar stage types. They are sketched with Mr. Jones's usual cleverness, but the coloring, at times, is somewhat crudely laid on.

There was no especial reason for a revival of A. W. Pinero's theatrical comedy, "Trelawny of the Wells," unless it could be much better done now than it was before. It is a fantastic little piece, with humor and sentiment in it, but no remarkable qualities of literary or dramatic workmanship. At the Empire the present representation is distinctly inferior to the earlier one at the Lyceum. The farcical episodes are unduly exaggerated, and the sentimental passages less delicately handled. Miss Ethel Barrymore has not learned the secret of the rebellious charm with which Mary Mannering invested the part of Rose in the old days, nor can Louise Drew replace Elizabeth Tyree as Avonia Bunn, or Constance Collier fill the place of Hilda Spong in the character of Imogen Parrott. The allotment of the part of the sympathetic Tom Wrench to an actor of the personality of Charles Dalton was a grievous error. Charles Millward furnished some clever acting as Ferdinand Gadd, but was often unpardonably boorish. George C. Boniface was delightful as the mouthing old Telfer, and Maud Milton was excellent as his wife. Charles Walcot, of course, was competent as the choleric and selfish old Chancellor. It is strange how this piece has been talked of as a classic, for it is in many ways a crude bit of work. Its ridicule of the Crummles school of actors is but a feeble imitation of Dickens. Some of these old players were, it must be admitted, more or less legitimate objects of sport, but the worst of them had histrionic capacities of which the modern performer often knows nothing.

Liebler & Company have completed the cast of "Judith Zaraine," the new drama of C. M. S. McLellan, in which Lena Ashwell is to star, assisted by Charles Waldron. John E. Kellerd is to have the part of Col. Pontifex, whose military activities at Minetown

(the scene of the play) provoke the unemployed to violence; Howard Kyle will be Conrad Borinski, the philosophic shoemaker; Gordon Johnstone will be Jack Borinski, the leader of the unemployed, and other parts will be played by Walter Cluxton, Edward Langford, Charles Dowd, and Little Donald Gallaher, who leaves "Alias Jimmy Valentine" to create the part of Carl Borinski, Jack's brother. Miss Ashwell will, of course, be the Judith, and Mr. Waldron the David Murray, the capitalist whose operations have brought on the labor troubles.

A Chinese actress, Madame Chung, has been playing in "The Dragoon of Wrath" in the Little Theatre, London, and creating something of a sensation. A writer in London *Truth* says:

I had heard much of Mme. Chung, but nothing to make me understand how great an artist she is. A plaintive, pathetic, diminutive little person, she has really remarkable gifts of comedy and tragedy, and I have seldom seen finer or more subtle acting in an English theatre. The scene where she accepts one of her lovers, a tall, thin prince, is exquisite; while her death scene, when years afterwards she meets her death at the hands of the discarded lover, is marvellously played.

Sir W. W. Pinero's new comedy, "Preserving Mr. Panmore," will be presented in the Comedy Theatre, London, early in the new year. The cast will include Marie Löhr, Kate Sergeantson, Iris Hawkins, Ada Ferrar, Arthur Playfair, Edmund Maurice, Dawson Milward, and Dion Boucicault.

"The Princess Clementina," of George Pleydell and A. E. W. Mason, which was produced at the Queen's Theatre in London recently, is a bit of romantic melodrama. It tells how a gallant Irishman was sent on a mission to convoy the Polish Princess Clementina from a polite prison at Innsbruck to her bridegroom, the Old Pretender, at Bologne, with what bravery and address he accomplished it, how he fell in love with his charge, but resisted temptation, and finally came out of all sorts of trial furnaces with infinite credit to himself. H. B. Irving has made a marked success as the masterful hero of the play.

Herbert Trench's plans at the London Haymarket are now pretty well settled. Some time in February he will produce Charles McEvoy's comedy, "All That Matters," a study of West Dorset life and character, a field of which the author possesses intimate personal knowledge. His familiarity with it was exhibited in "The Village Wedding," seen recently at the London Coronet. "All That Matters" is, however, a work of larger scope. As described by Mr. Trench, it contains an element of tragic feeling and of passion, affording a strong contrast to the more placid pictures of rural existence. The two leading parts will be entrusted to Phyllis Neilson-Terry, as a farmer's daughter, and to Norman Trevor, who appears as an impoverished squireen. After Mr. McEvoy comes Mr. Rudolf Besier, either with his new play, "Baldwin" or with a dramatization of H. G. Wells's novel, "Kipps." The catalogue does not end here, however. Mr. Trench has decided to present Ibsen's "The Pretenders," a play which very nearly received a production at the hands of Sir Henry Irving.

The Lord Chamberlain has changed his mind with regard to the performance of Sophocles upon the London stage. He has now consented to a production of Gilbert Murray's English version of the "Œdipus Rex," which probably will be taken in hand either by Herbert Trench or Sir Herbert Tree.

Frank Curzon will start at the London Globe, early in January, with the Baroness Orczy and Montagu Barstow's romantic play, "Beau Brocade." Bertram Wallis plays the principal male character, that of an English officer unjustly degraded—the period is 1746—who in revenge takes to the road.

Music

Clara Novello's Reminiscences. Compiled by her daughter, Contessa Valeria Gigliucci. New York: Longmans, Green, & Co.

Half a century ago Clara Novello was as famous among operatic sopranos as Nellie Melba is to-day; "Novello cake" could be ordered in the restaurants, as "pêche Melba" can be now. Forty-seven years elapsed between her last appearance in England and her death, on March 12, 1908; yet her relatives collected nearly a hundred obituary notices that had appeared in English papers. She herself, though born in London, represented a rare fusion of races, her father having been the son of an Italian father and English mother, while her mother was the daughter of a German father and Irish mother. Her early retirement from the stage was due entirely to private and domestic reasons, for her voice kept its charm to an exceptional age. In early womanhood an eminent surgeon had predicted, after examining her throat, that her singing powers would be unimpaired at eighty, should she live so long; she was eighty-three when she sang for others the last time, and even when verging on ninety she amazed those about her by singing snatches of old tunes in a voice marvellously fresh and steady. This preservation of her voice she ascribed partly to the fact that she had always avoided straining it beyond its compass, rejecting from her contracts such composers as she judged to have written unvocally; and partly to her extreme sobriety in eating and drinking. The Novello household was, indeed, noted in London not only for its musical attractions, but as a place where the art of plain living and high thinking was cultivated to perfection, wherefore such men as Keats, Shelley, Lamb, Leigh Hunt, were wont to consult its head on matters affecting their daily life. Perhaps the greatest compliment ever paid to Clara was that Lamb addressed to her a poem in which, after confessing that the gods had made him "most unmusical," that he hated trills and shakes and, at an oratorio, "only wished the thing was done," he nevertheless paid a cordial tribute to her art.

Of the great composers of the time, there were two, in particular, who took a special interest in her—Mendelssohn, and Rossini. Her sister relates how, on one occasion, when Malibran was present at a social gathering, Clara also sang, and then asked Mendelssohn to play. He complied by giving them a marvellous improvisation in which "he introduced the several pieces Malibran had just sung, working them in with admirable skill one after the other; and, finally, in combination, the four subjects blended together in elaborate counterpoint," doing things which her father felt inclined to declare impossible, even though he had just heard them done. Subsequently Mendelssohn sent for her to sing in Leipzig, where, as he wrote to her brother, "the public became like mad," being "equally delighted with her clear and youthful voice and with the purity and good taste with which she sings everything." To Sterndale Bennett, he wrote (1837):

For years I have heard nothing that has pleased me more than this voice. . . . She was most in her element with Handel amid whose surroundings she has grown up and become great. People asked each other in astonishment: Is that Handel? Did Handel write so? Is it possible? From such a performer the composer himself can learn.

No less complimentary was Rossini, who insisted on having her come to Italy to create the soprano part in his "Stabat Mater" in Bologna. On this occasion she and the other singers daily dined at Rossini's table. After the meal, he made them rehearse, dwelling particularly on the quartet, "Quando corpus," which soon went as smoothly as an accordion, yet was done over and over again, until she said to the composer: "If you rehearse us because you enjoy hearing it, all right, but don't say it can be improved." Rossini had previously assisted her in finding the best teacher; he also composed cadenzas for her, to be used in his operas, wrote her letters of advice, and persuaded her not to deliver any letters of introduction in Milan, to avoid distractions from study.

When she was still a girl, she had the privilege of waltzing to Chopin's playing. But he would only play for her after she had recited "Peter Piper" for him. Liszt also played for her, and once he dined at their house. She witnessed the frenzies of women over him. When he broke the strings of his piano, they rushed on to the stage and fought for them; "and when he left Vienna, fifteen or twenty carriagefuls of these cracked creatures pursued him as far as the first station, where change of post-horses took place." She once saw him play on the piano with his back turned to the instrument. Those were times when even serious musicians indulged

in tricks, to amuse the public. Paganini used to take out a pair of scissors, cut three strings, which hung down, and on the remaining string proceed to play his "Witches' Dance."

Queer things happened in those days in opera houses, as well as in concert hal's. One time, when Clara Novello was in Madrid, Queen Isabella kept a crammed house, on a gala night, waiting above two hours before the performance could begin. Of her colleagues, Miss Novello has many interesting things to relate, particularly of the eccentric Malibran, of whom she tells several characteristic anecdotes. What she says (p. 48) about Lablache's wonderful "face-acting" should be read by all opera singers, most of whom do not realize that to this phase of their art they ought to devote as much attention as to the training of the voice. In speaking of Rubini's singing, in "Lucia," she refers to

his divine voice, tears a component part of his liquid notes, singing as if to himself, in a far away reverie, pianissimo, the entire first part of the soliloquy in the third act—I felt entranced almost to fainting away in ecstasy. In art as in beauties of nature, absolute perfection strikes one dumb, utterly.

In 1842, Miss Novello married an Italian and retired from the stage temporarily, living in Italian rural regions, of her life in which she gives quaint details. She tells also of her sojourn in the cities; in Venice, for instance, where, in those days, the amateur tenors, with guitar accompaniment, had not been superseded as yet by the big military bands. But enough has been said to show that these reminiscences bring before the reader's mind uncommonly vivid pictures of musical life half a century ago. They are all the better for not having been written with a view to publication. After her death, her daughter found them among her papers, as mere jottings. These she arranged in chronological order and connected them with as much explanatory and additional matter as was necessary to make a continuous story. There are several illustrations, besides an introductory memoir by Arthur D. Coleridge.

Claude Debussy is working very slowly at his "Tristan" and his "Fall of the House of Usher"; he has not yet finished much more than the titles.

Mischa Elman will be the soloist at the next two Carnegie Hall concerts of the Boston Symphony Orchestra in New York, on January 13 and 14.

Liza Lehmann, the popular composer-pianist, and her English quartet will return to New York on Jnuary 7, after a three months' tour to the Pacific Coast and the South. Mme. Lehmann will give her first recital in New York this season on Monday afternoon, January 9, at Mendelssohn Hall. Her programme will consist of selections from "The Golden Threshold," miscellaneous solo numbers by each member of the quartet, "Four Cautionary Tales and a Moral," and "The Happy Prince," which will be recited, with music, by Miss Constance Collier.

Herman Brandt, one of the best-known violinists in the country, and a composer, has died in New York. He was well known in musical circles from here to the coast, and had been a member of the most prominent orchestras in the United States. For a number of years he was first violinist in Thomas's orchestra in Chicago, and conducted in San Francisco the Brandt String Quartet, regarded by musical critics as one of the best string orchestras ever formed in this country.

Art

Colour Printing and Colour Printers. By R. M. Burch. With a chapter on modern processes by W. Gamble. New York: The Baker & Taylor Co. $3 net.

While this is not altogether the book on color prints which some of us have been expecting for years, it is certainly a useful piece of pioneer work, particularly from the technical standpoint. Criticism is forestalled somewhat by the author's prefatory statement: "The present volume is not offered to the reader as a complete history of color printing, but merely constitutes an attempt to indicate some of the lines on which the compilation of such a book might proceed." And farther on, we are told that the book "is mainly concerned with English color work, although, of course, references to what was done in other countries could not very well be excluded." We are not entirely unused to this evidence of insularity in British publications. As a matter of fact, the history of color printing cannot be written with reference to England alone. Mr. Burch, who evidently knows his subject well, does, indeed, make frequent excursions into the foreign field, but not always systematically. There are such contrasts as due recognition of F. E. Ives of half-tone fame, and an ignoring of Louis Prang, whose lithographic reproductions of the Walters ceramic collection should have procured for him some mention. And, again, among the many books and periodicals cited, the *Zeitschrift für Reproduktionstechnik*, the late lamented *Monatshefte für graphisches Kunstgewerbe*, and the Japanese *Kokka* are conspicuously absent. On the other hand, the German book on color etching by Vojt Preissig (which appeared also in Bohemian), is noted, but not the English one by Hugh Paton (London, 1909.)

Yet the fact remains that this is a decidedly useful compilation, in which the development of color printing, both typographical and pictorial, is traced from the early block books to the most recent photomechanical processes. This is done, in the main, by critical examination of a very large amount of material, all conscientiously and somewhat dryly recorded, from sumptuous publications, such as the "Alhambra" of Owen Jones or Zahn's folios on Pompeii, to our American Sunday "colored supplements." While the faculty of crisp, clear characterization is shown in the descriptions of various processes, a little too much is occasionally left to the imagination; which is natural, perhaps, for one writing from the standpoint of the printer with his technical knowledge. On p. 251, for instance, it does not appear that Miss Mary Cassatt laid an aquatint ground on her color plates. The account of modern color etchings is meagre, and modern original work in lithography and wood engraving is left out of consideration altogether.

For these reasons and others, there is still a place for a comprehensive, clear survey of color prints, which should deal in a critical, connected manner with the artistic results of the desire to imitate natural colors which showed itself about as soon as pictures began to be printed. The richness of mezzotints, the grace, sometimes feeble, of stipple engravings, the water-color effect of aquatints, the decorative qualities of the Japanese chromo-xylograph, the completeness of effect of Le Blon's efforts, Baxter prints, Debucourt's plates and certain recent etchings, the luscious tints of the lithographs of Lunois and the mere color suggestions in those of Whistler—these are a few indications of the multiple fascination which this art of color-printing has ever had. And this fascination exists quite independently of our opinion as to the result compared with the chaste beauty of the black and white print. Such a review of the whole field the late Sylvester Rosa Koehler, a man of a remarkable acquaintance with processes, had in mind, but never carried out.

"English Costume, from Prehistoric Times to the End of the Eighteenth Century," by George Clinch (McClurg), is popular in form, but contains a great amount of well-ordered information concerning civil, military, official, academic, and ecclesiastical costume. There are more than a hundred illustrations, invariably from original sources. A considerable ingathering of relevant antiquarian and literary matter adds to the readableness of the chronicle. In general, the work is done in scholarly and cautious fashion, but the description of bronze-age costume, pieced together from scattered finds, must naturally be taken skeptically, while the assumption that the Gauls and Britons of Roman times wore virtually the same costume, is more convenient than convincing. Royal portraits and effigies are frequent, and there is complete analysis of the costumes in which Queen Elizabeth was depicted.

More admirable as a person than as an artist, Rosa Bonheur has afforded excellent material to her latest biographer, Theodore Stanton. "Reminiscences of Rosa Bonheur"

(D. Appleton & Co.) is a thick book, fully illustrated, and perhaps overswollen by such secondary matter as the personal tributes of the heroine's friends. It is, however, pretty good reading, and fails only where success was impossible in the translation of the slangy "ragging" letters which she wrote to her intimates. Her father, Raymond Bonheur, was a light of the St. Simonian sect. After a disastrous trial of the communistic life, the painter settled in Paris, where he worked surrounded by two daughters and a son. The studio in the Rue Rumford was small, but afforded a stall for the animal models of Rosa and Auguste. At twenty-three Rosa had won the gold medal of the Salon. Later she wrote to a friend: "Rewards are much like blisters on wooden legs—they don't effect much." But, as a matter of fact, this brilliant beginning soon made her way easy. A fortunate alliance with the English dealer, Gambart, soon put her in a position to occupy the little Château of By, in the forest of Fontainebleau, where she lived most of her life with her friend, Nathalie Micas. Tame lion cubs played about the house. The menagerie at various times boasted chamois, moufflons, a mare that followed her upstairs, and an Indian pony, presented by Buffalo Bill. Her "old masters" were the Ninevite reliefs in the Louvre. Rosa painted industriously, diverting herself by shooting hares in the forest, and on occasion by sniping Prussian pickets. It never occurred to her to look up certain less famous painters a few miles away, at Barbizon. One divines in her a strong but limited intelligence, an emotional life intense rather than fine, a robust and indefatigable geniality. She said that it would be delightful to be a painter though one produced only daubs, and she meant it. Her zeal for meticulous and literal representation she never seems to have questioned. We suppose she could have seen a horse by Degas without a qualm. Rarely has so great a reputation implied so little artistry. But Rosa Bonheur was the kindest of souls and most faithful of friends. Her memoirs abound in traits of good will and of radiant good sense. Of George Sand, she wrote:

I venerate Mme. Sand, and have only one reproach to make against her: She was too womanly, too kind, and dropped the treasures of her noble heart and the pearls of her soul on the dung-heap, where cocks found the pearls and swallowed them, without being able to digest them.

A somewhat mixed metaphor, but a sound moral diagnosis. Again, she could not abide the brothers Goncourt, resenting their analytical preoccupation. Of life she had a singularly just sense, but she ordered her pictures framed in garnet plush. Mr. Stanton's book may be dipped into with profit, but it is poorly conceived as a biography. There is no chronological thread. It is impossible without much labor to tell where Rosa Bonheur was and what she was doing in any year. The sheer vitality and interest of the material do something to offset the lack of orderly arrangement.

The death is reported from Berlin, in his sixty-first year, of Prof. Joseph Uphues, the sculptor. One of his best known works is a statue of Frederick the Great in the park at Sanssouci, a replica of which was presented to this country by Emperor William. Other works by him include a Kaiser Wilhelm monument at Düren, one of Bismarck at the same place, a group in the Siegesallee in Berlin, and a statue of Schiller at Wiesbaden. Among his decorations was the Order of the Imperial Eagle of the third class.

Finance

COMING EVENTS.

That the Stock Exchange, in the face of its almost unanimous profession of despondency, should have witnessed during most of the closing week of 1910 a general recovery in prices and should have opened the New Year with a still more vigorous advance, is an incident which, if not fundamentally important, was at all events interesting. The stock market of the past year, in its early and severe declines, may now be said to have rightly foreshadowed the coming relaxation in general industry. But the fulfilment, in trade at large, of the financial market's prophecy, did not come until Stock Exchange prices were themselves recovering; and that makes the question legitimate, how much of the market's later prophecy, in the way of reaction from the low midsummer prices, has been fulfilled.

But a Stock Exchange movement has to do, not only with general conditions, but with specific events, and there are four events of the first importance which will occur in the early weeks of 1911, which have been discussed in Wall Street as controlling influences, and which can hardly fail to leave some mark on the Stock Exchange history of the year. If the steel trade organs are rightly informed, the question of maintenance or revision, on an official basis, of prices in that industry will be settled within a fortnight. If bankers' expectations are fulfilled, another New York city bond issue will seek a market shortly afterward. Some time in February we may look for the Interstate Commerce Commission's decision on the higher railway rates. After probably no very long interval, the Supreme Court will decide the Oil and Tobacco cases. Exactly what will be the outcome, in each of these impending events, is a matter of sufficient doubt. But can anything be assumed beforehand, as to their influence on the market?

If the price schedules should be left unchanged by the manufacturers' conferences, the situation would be just what it was before. If they are lowered, some interesting possibilities would arise, with a bearing on the market. The point at issue, in the steel trade controversy, is whether lower prices will increase outside demands, or not. Manufacturers who are unwilling to reduce prices answer no. But they made the same reply on the eve of the famous "open market" in the steel trade of 1909, supporting their argument very plausibly by the fact that a tariff bill was pending, and the country's plans for trade unsettled by it. Yet when the cut was made, a sudden and unexpectedly large demand for steel appeared from all directions; the industry awoke from its torpor; orders on the Steel Corporation's book rose from 3,500,000 tons in March, 1909, to 4,000,000 in June and to nearly 6,000,000 in December, and the advance on the Stock Exchange which ensued converged with exceptional violence on the Steel Corporation's shares.

A New York city bond issue has often been a landmark in the financial movement of the day. It was so in 1907, when two successive issues failed to find a market, and the coming financial trouble was thus in a way foreshadowed; but it was so in 1908 as well, when a $50,000,000 offer, on February 14, made in the midst of profound after-panic depression and uncertainty, was six times oversubscribed, at an unexpectedly good price, and elicited 1,168 separate bids. It was that incident which marked the distinct turn for the better in the year's investment markets, and which introduced the movement of genuine financial recovery that followed.

Decision by the Interstate Commission, on the question of railway rates, would probably not be awaited with so great concern, were it not for the reckless and inexcusable outcries regarding ruined credit and railway insolvency which were raised by highly interested parties when the sweeping rate advances proposed last June were first held up. The real problem before the commission was obscured by this performance.

That problem was, whether the proposed rate advances were unreasonably great or not. This question the commission is to decide. It may concede all the advances asked; it may grant such as are reasonably proved to be essential; it may refuse them all, if no conclusive proof is forthcoming. The stock market has apparently assumed the third conclusion, but without convincing evidence. If its assumption turns out to be wrong, the response of the Stock Exchange should be interesting.

Six years ago, the Supreme Court's decision in an Anti-Trust case was awaited by Wall Street at this time of year with profound anxiety. If Northern Securities were to win, all would be well on the Stock Exchange; if it lost, the worst was to be apprehended. It lost; the stock market stood silent for a day; then rushed into a violent movement of recovery—under the leadership, Wall Street had good reason to suspect, of a financier most deeply and personally interested in the company. When prices rose, the Stock Exchange applied itself to discovering reasons why the decision was not alarming. But that was an after-thought. The real les-

son taught by the episode of 1904 was that the market, in advance of the decision, had misinterpreted the financial bearing of the Supreme Court's ruling, had greatly overdiscounted even the effect on sentiment of the merger's dissolution, and, had, therefore, when the decision actually came, begun to pay some attention to the real influences at work on the financial situation.

Turner Essays in American History

Dedicated to Frederick Jackson Turner, on the Occasion of His Presidency of the American Historical Association, 1909-1910. 293 pp., 8vo. $1.50 net.

In their special fields these essays are each a permanent contribution either in substance, point of view, or interpretation, to the literature of American History.

CONTENTS:

Some Activities of the Congregational Church West of the Mississippi. By L. K. Mathews, Wellesley College.
Oregon Pioneers and American Diplomacy. By Joseph Schafer, University of Oregon.
Some Problems of the Northwest in 1779. By J. A. James, Northwestern University.
Kansas. By C. L. Becker. University of Kansas.
Federalism and the West. By H. C. Hockett, Ohio State University.
Independent Parties in the Western States, 1873-1876. By S. J. Buck, University of Illinois.
Virginia and the Presidential Succession, 1840-1844. By C. H. Ambler, Randolph-Macon College.
The Southern Whigs, 1834-1854. By U. B. Phillips, Tulane University.
The Beginnings of Spanish-American Diplomacy. By W. S. Robertson, University of Illinois.
Some Notes on the Study of South American History. By P. S. Reinsch, University of Wisconsin.

Jordan's The Stability of Truth

A Discussion of Reality as Related to Thought and Action. By DAVID STARR JORDAN, President of Stanford University. $1.25 net.

The substance of the third series of the John Calvin McNair Lectures delivered before the University of North Carolina, Jan. 7, 1910.

Braun's Margaret Fuller and Goethe

By F. A. BRAUN, State University of Iowa. 271 pp. $1.35 net.

Member of "The Transcendental Club," leader in the famous Boston "Conversations," editor of "The Dial," mentor and friend of many of the great New England authors, Margaret Fuller might be called the most influential woman in American Literature.

The development of her personality, her important place in the formative period of American literature, and her personal influence on the great men about her, are reviewed. Her true relation to Transcendentalism and to Goethe, who called out her inner life and whose doctrines she adopted and taught, are discussed in detail. Her complete religious credo and the body of her interesting and comprehensive criticisms of Goethe are included.

Henry Holt & Co., 34 W. 33d St. NEW YORK

FOR SALE—A complete unbound set (Jan. 1897—Nov. 1907) PUBLICATIONS SOUTHERN HISTORY ASSOCIATION. $50.00. G. S. WILLS, 300 N. Charles Street, Baltimore, Md.

LETTERS of JOHN DONNE

By CHARLES E. MERRILL, Jr. Ed. with notes.

This limited edition is the first *verbatim et literatim* reprint of a notable book (almost lost to students for some 250 years), that enables us to realize the identity of the poet and the saintly Dean of Walton's admiration.

(600 copies printed on hand-made paper. Small quarto, old-style boards, slip case, frontispiece portrait, $5.00 net.)

RED-LETTER DAYS OF SAMUEL PEPYS

Selections from the Diary. Ed. by E. F. ALLEN; Introd. by F. B. WHEATLEY.

Typical passages giving in little the enlivening chronicle of Mr. Pepys, who turns himself inside out with such astonishing frankness in his immortal *Diary*. *(12mo. Cloth. Illus. $1.25 net.)*

STURGIS & WALTON CO.

IMPORTANT BAKER & TAYLOR CO. BOOKS

Beginnings of the American Revolution

By ELLEN CHASE

3 vols., 8vo, 1500 pages, 75 full-page illustrations, net $7.50, carriage extra. Edition de Luxe, full boards, paper label, net $15.00, carriage extra.

THE MOST COMPLETE ACCOUNT YET MADE OF THE CAUSES, CIRCUMSTANCES AND PERSONS PRODUCING THE AMERICAN REVOLUTION.

The author has availed herself of special sources in State and City archives, the contemporary newspaper files at the British Museum, as well as family tradition, and she has used her opportunities so as to present a treatment of the beginnings of the Revolution not hitherto available anywhere and to make a significant contribution to American History.

The Golden Age of Engraving

A Specialist's Story About Fine Prints **By FREDERICK KEPPEL**

8vo, 550 pages, 263 illustrations, cloth, $3.50 net, post. 26 cts. Limited Autograph Edition, full boards, paper label, $7.00 net.

It ranges over the whole field from Dürer's work to Pennell's and offers a wealth of comment, counsel, and suggestion. The illustration is rich and varied, consisting of examples of the work of nearly every great engraver and etcher from Dürer down.

Life of Admiral Paulding

By REBECCA P. MEADE. *12mo, about 300 pages, illustrated, net,* $1.50

The biography of one of our naval heroes, written by his daughter.

The Narrative Bible

Edited by CLIFTON JOHNSON, author of "The Country School," "Highways and Byways," "Golden Books for Children." *12mo, 300 pages, illustrated, net,* $1.50. *Postage,* 15 *cents.*

The Bible narrative told in Bible language, condensed by omissions.

Is Mankind Advancing?

By MRS. JOHN MARTIN. *8vo, 350 pages, net,* $2.00.

A bold and open-minded discussion of this inexhaustible question.

Retrospections of an Active Life

By JOHN BIGELOW. *Three volumes, 8vo,* 48 *illustrations. Cloth; boxed, per set, net,* $12.00.

A memoir of the classic type, rich in state and personal correspondence and intimate reminiscences of men and events.

The Growth of the Gospels

By W. FLINDERS PETRIE. *12mo, about* 100 *pages, net,* 90 *cents. Postage,* 8 *cents.*

The latest word of science on the text of the New Testament.

The Guide Series

Ten titles, including a Guide to Pictures, by CHARLES H. CAFFIN, Guide to U. S. History, by Henry W. ELSON, and eight others. *Each 12mo, illustrated, cloth, net,* $1.25.

Women as Letter Writers

By ADA M. INGPEN. *16mo, illustrated,* $1.25 *net.*

The best letters written by women.

Ways and Days Out of London

By AIDA RODMAN DE MILT. *8vo,* 320 *pages, frontispiece in color,* 65 *illustrations, net,* $2.50. *Postage,* 17 *cents.*

Lavishly illustrated and delightfully written, this book should be a much valued gift, both to travellers and stay-at-homes.

To the Unborn Peoples

A Book of Poems. By ELLEN M. H. GATES, author of "The Treasures of Kurium." *Tall 12mo,* $1.00 *net.*

"Mrs. Gates again has proved her possession of a sympathetic and tender muse."—*Chicago Record-Herald.*

South African Folk Tales

By JAMES A. HONEY, M.D. *12mo, net,* $1.00. *Postage,* 10 *cents.*

A collection of tribal tales, translated from the native speech, that reflects the flavor and tang of South African life.

LETTERS AND MEMORIALS OF WendellPhillipsGarrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net, postpaid.

TWO NEW BOOKS

PRAGMATISM AND ITS CRITICS

By ADDISON W. MOORE. 294 pp., 12mo, cloth, postpaid $1.61

This is the clearest and most satisfactory summing up of the controversy that has yet appeared. Even the most technical matters are presented in such a way as to be intelligible to any one who is genuinely interested in the movement. The book covers all the important points at issue, but special emphasis is laid on: (1) The historical development of the pragmatic movement; (2) Its relation to the conception of evolution; (3) The social character of pragmatic doctrines.

The treatment is sympathetic and incisive.

THE MEANING of SOCIAL SCIENCE

By ALBION W. SMALL. 320 pp., 12mo, cloth, postpaid $1.62

Outlines a plan of coöperation among the various types of specialists in social science. Its keynote is the proposition that the main business of social science is to be the agent of all men in finding out the meaning of life, including in particular the means by which men may most surely progress toward the largest realizations of life.

THE TRUTH ABOUT MEXICO

Here is a book which maintains that a cold-blooded partnership exists to-day between President Diaz, "whose name should be a stench in the nostrils of the world," and American capitalists backed by the U. S. Government. As a result men, women, and children are bought and sold like cattle, but unlike cattle, they are starved and flogged to death, all to wring larger profits from the 900 million American dollars invested with Diaz in Mexico. **John Kenneth Turner** tells **the truth** with many vivid photographs and ample proof in

BARBAROUS MEXICO

the first few chapters of which appeared last year in one of the magazines, but which were suddenly stopped before half the facts were told. Your indignation would stop the horrors of Mexican Slavery. We are independent publishers—you can get BARBAROUS MEXICO from us. You owe it to yourself to know the conditions that make our "Sister Republic" hand in hand with American capitalists, perpetrators of some of the darkest crimes in history. Send for BARBAROUS MEXICO to-day. Your check or money order for $1.50 will bring your copy postpaid by return mail. Some book-stores sell it but the sure way is to buy direct.

Important New Macmillan Books

A reference book of unusual value
Edited by
PAUL MONROE, Ph.D.
Professor of the History of Education, Teachers College, Columbia University, Author of "A Text-book in the History of Education," "A Brief Course in the History of Education."

The Cyclopedia of Education

Every teacher, principal, school superintendent, editor, minister, legislator—every man who deals with large questions of public welfare which are intimately connected with education, needs a reference work which outlines every educational problem, the suggested solutions, the statistical information, and the fundamental facts necessary to clear thinking in regard to it. This Cyclopedia is indispensable to every one who appreciates the growing importance of education as a social process.

To be complete in five vols. at $5.00 each. Vol. I ready Jan. 25

Professor EPHRAIM EMERTON'S
Unitarian Thought
is an interesting book on the distinctive Unitarian position in matters of faith, with some account of its influence in American development.
Cloth, 8vo. Ready next week

Dr. JAMES H. SNOWDEN'S
The Basal Beliefs of Christianity
will be welcomed by every one who was charmed by the unusual lucidity of his recent outline of metaphysics entitled, "The World a Spiritual System."
Cloth, 12mo. Ready January 25

Dr. HENRY C. SHELDON'S
New Testament Theology
A vital theological discussion of high value to every one who does more than skim the surface of the religious thought of the day.
Cloth, 12mo. Ready next week

Dr. L. H. BAILEY'S *popular book*
The Outlook to Nature
is being reprinted with extended revision as one of a "nature outlook" set of live, bracing books urging contact with nature as a means of increasing "efficiency, hopefulness and repose." *Ready in January.*

Professor HENRY H. OGDEN'S
Rural Hygiene
Aims to increase the comfort which might easily be added to rural life, and to show how interdependent in matters of health are both city and rural communities. *Ready next week*
Rural Science Series. 12mo, $1.75 net

Professor JOHN WIDSTOE'S *new book on*
Dry Farming
is the first attempt to organize and make intelligible to the general farmer the results of many experiments in regions of limited rainfall.
Ready Jan. 25. Rural Science Series

Mr. ALLEN FRENCH'S *new book*
The Siege of Boston
is an exceptionally interesting and vivid account of the facts connected with the port of Boston in the opening days of the Revolution. *Ready shortly*
Stories from American History Series

Professor E. R. A. SELIGMAN'S
The Income Tax
An exceptionally authoritative discussion of the history, the theory, and the practice of income taxation at home and abroad. By the well-known Professor of Political Economy and Finance at Columbia University. *Cloth, 8vo. Ready in early Feb.*

SCOTT NEARING'S *suggestive work on*
Social Adjustment
is a robust, uncommonly successful classification of the social problems especially pressing in the last quarter century. Alive with a clear constructive social philosophy. *Cloth, 8vo. Ready shortly*

Professor WILLIAM LYON PHELPS'S
Essays on Russian Novelists
uniform with the very interesting volume of "Essays on Modern Novelists," published last year.
Ready shortly. Cloth, 12mo. Probably $1.50 net

Mrs. HUBERT BARCLAY'S *new novel*
Trevor Lordship
is the best kind of love story—the story of the love which meets successfully the necessary adjustments of married life. *Ready in February*

JOSEPHINE DASKAM BACON'S *new novel*
While Caroline Was Growing
Mrs. Bacon's searching wholesome wit is known to every reader of "The Madness of Philip," or "Memoirs of a Baby," and surely the mentality of a growing girl is a promising subject for her pen. *Ready shortly*

CHARLES G. D. ROBERTS'S *new book*
Unknown Neighbors
makes us feel again the nearness of the heart of the wild, a strong sympathy with life in the open.
By the author of "Kings in Exile." *Ready shortly*

HAMILTON DRUMMOND'S *new novel*
The Justice of the King
The tender, humorous, quaint fascination of that "beloved vagabond" Villon is in the book, but it is a story of all times, of human love, sympathetic and delicate.
Cloth, 12mo. Ready early in February

Have you read **Jim Hands?** Don't Forget it

It is one of the most amusing, most penetrating novels you will find in many a year, . . . conspicuously successful in finding its way to the heart of you. *New edition, decorated cloth, 12mo, $1.20 net; postpaid, $1.32*

The Nation

NEW YORK, THURSDAY, JANUARY 12, 1911.

The Week

The news that President Taft is in full negotiation with Ambassador Bryce for an arbitration treaty with England, to cover every possible difference of opinion, is the very best that could come out of Washington. The Hay treaty, leading to this end, was, it will be remembered, rejected by the Senate, ostensibly upon Constitutional grounds. It is hard to believe that Mr. Taft could begin going ahead with this project without some assurance that the present membership of the Senate Committee on Foreign Relations is broader-minded than was that with which Mr. Hay had to deal. With a treaty with one great Power concluded, which would force us to arbitrate every question, whether of "honor" or relating to territory or anything else, a long step in advance would be taken, and it would, we believe, be followed by similar treaties with other nations. Speedily in this way the need for our great armament could be removed and a long step taken toward a permanent supreme court of the nations. Mr. Taft said at the dedication of the Pan-American building at Washington: "I shall not be satisfied until all nineteen of us [American Republics] can intervene by proper measures to suppress a quarrel between any other two." Why should not there be a similar relationship between the great nations of the globe?

Whatever may be the final outcome in the Lorimer case, the country will be spared the disgrace that threatened, of an easy-going acceptance of the white-washing report of the majority of the Senate Committee. A white-washing report it may be called without hesitation, because, whether Lorimer be guilty or not, and whether he be entitled to his seat or not, the report was manifestly lacking in a proper regard for the seriousness of the matter with which it dealt. But the opposition which a few Senators indicated from the first, and which was soon powerfully reinforced by President Taft's hostility to the white-washing programme, has now become so strong that a thorough threshing out of the matter is assured. The activity of the Lorimer lobbyists, it appears, has taken the form of scarcely-veiled threats that, if his election is thoroughly investigated, his friends will take revenge by attacking the validity of the election of other Senators. It does not require an extremely exalted opinion of the Senate to make one confident that resentment against tactics of this kind will hurt Lorimer's cause.

The transformation of the United States Senate has been accelerated by the death of Senator Elkins, one of the few remaining conspicuous members of the majority party in that body who represent the older generation and hold over into the Sixty-second Congress. Besides its effect on the Republican management in the Senate, Senator Elkins's death will perceptibly strengthen the Democratic position there, and accentuate the possession of something like a balance of power by the progressive or insurgent group of Republican Senators. The Sixty-first Congress opened with the Republicans in possession of very nearly two-thirds of the seats, there being 60 Republican Senators against 32 Democrats; the Sixty-second Congress, as at present indicated—though Montana is somewhat in doubt—will have only 50 Republican Senators against 42 Democrats. This is a fairly near approach to equality. Both of the Senators from West Virginia will be Democrats, whereas both were Republicans in the present Congress; the other States in which the Democrats have gained a Senator at the expense of the Republicans are Maine, New Jersey, New York, Ohio, Indiana, Missouri, Nebraska, and Montana. This represents a wide geographical distribution, and makes a change in the aspect of the Senate such as seldom occurs between two successive Congresses.

In the very interesting statement made by Mr. Crumpacker, Chairman of the House Committee on the Census, concerning the prospective size of the House of Representatives under the new apportionment, the remarks relating to the underlying considerations in the case deserve more than passing attention. Everybody recognizes that the process of enlargement of the numbers of the House must come to an end before it goes very much farther; but Mr. Crumpacker points out an objection to the progressive enlargement of the constituencies which is necessitated by the process of keeping the size of the House within bounds. "If we make the ratio too large," he says, "the personal interest of the voter in his representative becomes less important to him, and we may lose something of the vital strength of our representative form of government." And he calls attention to the fact that our constituencies are already more than three times as large as those of England or France. But there is an essential difference between our case and that of those countries, in the division of functions between the States and the Federal Government. Of the things in which the legitimate "personal interest of the voter" differs in different constituencies, incomparably the greater part are, with us, matters under the control of the separate States; and thus it is only in an extremely minor degree, as compared with England or France, that the question of the size of constituencies for the national Legislature has significance. There is thus to be found, in this mere matter of numbers and practical convenience, a distinct and not unimportant argument for the maintenance of the important functions and powers of the States.

The Supreme Court's decision against the Alabama Peonage law will cause rejoicing North and South. Here was a long step toward reënslaving the negro. Of course, as Justice Hughes pointed out, there was nothing in the law which spoke of a particular race, but, as a matter of fact, it was as directly aimed at the colored man as are the disfranchising laws. Unlike the open attempts at enslavement in peonage camps which were so vigorously opposed in the Roosevelt Administration, this was a legal attempt to meet the difficulties caused by the instability of negro labor. On its face, the law made it a misdemeanor to take advance pay for labor and to fail to work out the advanced money. Practically, by the aid of chain-gang sentences, it meant that if a workingman bound himself to serve, but

found the conditions of labor insupportable, he could be reduced to involuntary servitude by the indirect method of making his failure to pay a debt a crime. Under this law, domestic servants have repeatedly been sent to the chain-gang for alleged violation of contract, the word of the white employer being, in every case, accepted against that of the employee. The Supreme Court's decision will be heartily welcomed by broad-minded Southerners everywhere; for they understand that, vexing as the labor problem is, the solution lies in other directions than involuntary servitude.

President Taft has earned, and will receive, the applause of the nation for his firmness in refusing to relieve from a sentence of imprisonment a rich man convicted under the law against peonage. His action is all the more impressive, and all the more praiseworthy, because it was not taken until after the fullest inquiry and because it was accompanied by a deliberate and unmistakable statement of the reasons actuating him, reasons which apply in a large range of other cases, as well as in that of peonage. "The Government of the United States," says the President, "has been at great pains and cost to suppress peonage. . . . It is a kind of offence that is regarded lightly in some communities. . . . When, therefore, a man of high business standing and large enterprises is convicted of the offence the punishment should be such as to deter others from the practice. Fines are not effective against men of wealth. Imprisonment is necessary." We have got to learn the lesson that if we wish to extirpate an abuse, we must show that the law means business. The President has made good use of an excellent opportunity to teach that lesson.

There is something anomalous in the power of life and death over periodical publications which is conferred upon the Third Assistant Postmaster-General in the decision of questions relating to second-class postage. And when the exercise of that power results in crippling useful societies in their ability to disseminate knowledge, it is high time Congress were making a change of some kind. If the position of the present Third Assistant Postmaster-General in regard to the privileges of societies like the American Forestry Association, the American Association for the Advancement of Science, the Playground Association of America, and many similar associations, is correct according to the law, then there ought at once to be a change in the law. Clearly, the purpose for which the low second-class rate is established is served by the publications of such societies in fully as high a measure as by the ordinary newspaper or magazine published on a commercial basis.

Gov. Wilson struck a clear note in his speech at Jersey City, the first of the series he is making on the Senatorship question. He put the issue against Smith squarely on the ground of the broad principle of rule by the people versus rule by special interests. Smith of New Jersey represents the "business" idea of politics about as distinctly as any man now before the American people. That he does so is too well known to require argument; all that Gov. Wilson has to do is to keep the significance of the fact to the front, and there is no fear that he will fail to do it. The thing itself is nothing new, but the people have never before been so fully awake to it. The system that Smith and his kind represent is not an invention of modern reformers; its existence has been perfectly known and acknowledged by those conversant with the realities of our politics for scores of years. "Under this system," said Gov. Wilson, "it is just as necessary to maintain and subsidize, if possible, a faithful and subservient minority as a faithful and subservient majority." What is this but Jay Gould's classical statement, in the palmy days of Erie, that in Republican counties he was a Republican, and in Democratic counties a Democrat? But there are two other classical utterances that have gone a good deal out of fashion in these latter days, one from a leading representative of big business, the other from a leading representative of machine politics. "The public be damned" and "what are you going to do about it?" have had their day.

Gov. Baldwin evidently does not feel that either the weight of three-score and ten years or the novelty of his present duties need interfere with his marking out a large and distinctive programme. His message to the Connecticut Legislature covers an extraordinary number of matters, to each of which he has evidently given very close and earnest attention. His recommendations of municipal suffrage for women, of a State Civil Service Commission, of legislation concerning aviation, and of a scheme for transforming the State Senate into a body representative of the people as a whole, are perhaps the most striking features of his message; but he also deals with the questions of a State Public Utilities Commission, a Federal income tax, legislation to provide compensation for accidents to workingmen, and many other topics. In relation to the last-named subject, Gov. Baldwin recommends making automatic provision for compensation in the case of specially hazardous employments, but urges caution as to making the provision too general; and on the income-tax question he seems to share Gov. Hughes's apprehension as to the possible effect upon State securities of the Constitutional amendment now pending, upon which he recommends getting the opinion of the Attorney-General of the State. He advocates election of United States Senators by direct vote of the people; and, indeed, the time seems to have arrived when opinion on that subject has become nearly unanimous throughout the Union.

Mr. Mann of Illinois is a Congressman of parts and of good reputation, but the rôle which he has now apparently assumed for himself is that merely of trouble-maker. He proposes to stand by and throw sand into the gearing of the legislative machinery. His plan is to take advantage of the new rules of the House in order to discredit them. Under the method of giving up one day a week to motions to discharge a committee from further consideration of a given bill, it was expected that useful legislation might be pressed forward; but Mr. Mann got the right of way at the head of the calendar of such motions with a bill to remodel the postal service. This measure is of such portentous length that it would take the clerk three days to read it, yet the rules entitle Mr. Mann to insist that it shall be read entire. And when it is proposed to bring in a new rule providing that bills shall be read on "discharge" days only by their titles, the Illinois

Congressman declares that it will be very easy for him to draft a bill of which the title would cover 200 pages. This is the very whimsicality of obstruction. No individual member can long persist in asserting by technical devices his own will against the wishes of the majority of the House. Mr. Mann has introduced a set of tariff-repeal bills designed to embarrass certain Democrats and Progressive Republicans. They are called "pop-gun" bills. If Mr. Mann is not careful, he will gain for himself the name of a pop-gun statesman.

The result of the Democratic caucus in Ohio is gratifying as a victory for independent activity and progressive politics as against machine domination. In Maine the Democrats have made choice of a man who is regarded as highly qualified for the Senatorship, being a lawyer of great ability and a man enjoying the confidence of the community. The situation in New Jersey would be more satisfactory if the candidate pitted against Smith had higher qualifications; but the crucial significance of a victory for honest government, in a State which has so long been a byword for corporation dominance and corporation abuses, overshadows all other considerations. However, this very fact makes the importance of New York's decision, as affecting the party's standing before the nation, all the greater. New York is in a position to send to the Senate a Democrat who will in all ways be a credit to his party and to his State, a man whose ability and training, equally with his character and public spirit, mark him out as the man we need in the Senate. To fail to choose Edward M. Shepard for Senator would be a monumental blunder for the Democratic party.

The new form of charter prepared for St. Louis by a committee of citizens appointed some eighteen months ago, and now published for consideration of the voters, takes a step toward the simplification of municipal government in large cities, although it does not go so far as to adopt commission rule. In place of the present bicameral legislative body, the committee's charter draft provides for a single council of fourteen members only. Eighteen offices in all are elective, including those of the Mayor, the comptroller, president of the assessors, and the president and members of the council. Departmental heads and all other city officers of importance are to be appointed directly by the Mayor; but there is provision for a municipal civil service commission which shall have power to approve or reject the Mayor's appointees. The working of this system in a city of 688,000 people ought to prove an interesting experiment in municipal government.

"The cause of the classics is equally the cause of the modern languages. The modern languages cannot flourish in an atmosphere where Latin and Greek are asphyxiated." Such, or something like them, were the words addressed to the Modern Language Association by that scholastic recluse, that narrow-minded pedant, that dry-as-dust, ignorant of the affairs of this progressive world, the Hon. Edward M. Shepard. And he actually went on to pronounce the study of the humanities to be the most effective bulwark against the disintegrating power of commercialism. It is not surprising that the assembled professors should assent to the latter proposition; they have traditionally a sour-grapes attitude toward money, of which, poor souls, they have so little. But the applause which greeted Mr. Shepard's insistence on the essential interdependence of ancient and modern letters was neither perfunctory nor born of prejudice. It suggested that the teachers of the modern languages are more and more giving serious thought to the fate that hangs over divided houses. If this is the case, those who, with Mr. Shepard, believe in the high mission of the humanities in modern life may well take heart.

The Luzzati Ministry in Italy is already in troubled waters. Less than a year after taking office with a promise of support from all parties, the Prime Minister finds himself in Parliamentary difficulties. The Socialists were the first to break with him; the Clericals next. The large group of Deputies which ex-Premier Giolitti controls have more and more stood aloof, and the question all along has been whether Luzzati was not simply being permitted to rule on sufferance, and whether Giolitti might not conclude to return to power. Just now the burning question is the law of electoral reform introduced by the Ministry. It proposes a great extension of the right of suffrage—virtually to all who can read and write. The definition, too, is made very simple: in effect, any man who can read his ballot and write a name upon it will be entitled to vote. This pleases the radicals, though not going as far as they desire; but the centre and moderate parties profess alarm at the influx of new voters. Partly to offset that, the law provides that the exercise of the franchise shall be compulsory. Those having it must use it, under penalty of a heavy fine if they do not. This part of the plan is satisfactory to the Giolitti party, which draws its support largely from the middle classes, many members of which have been in the habit of neglecting to vote. By thus doing something for both extremes, it is expected that the Luzzati Government will be able to sustain itself at least until after the coming expositions at Turin and Rome in honor of Italian unification and independence.

Gen. Loynaz del Castillo, a candidate for the Presidency of Cuba, announces that there will be war there only if President Gomez should seek reëlection. We do not think that he very greatly exaggerates. The Gomez Administration has sunk so low that it is openly accused both of corruption and of instigating assassination. Thus, *La Discusión* of Havana has recently said: "It is undeniable that a shivering sensation is passing over the whole country on account of this system of ordering men killed." *La Lucha* estimates the number of mysterious "removals" at twenty-seven within the past year. All of the Havana anti-Gomez newspapers have declared that the offence for which Gen. Pino Guerra was retired from the army was getting well after he had been shot at the President's door by a police lieutenant, whose escape was in no wise hindered. Nobody is punished for crimes of this kind. In brief, Cuba has about the worst government it has ever had, and this must be particularly mortifying because it is to Mr. Taft and to the second American intervention that Gomez owes his office. If some sound Conservative is not elected to succeed him, there are certainly troublous times in store for Cuba, and, we fear, fresh complications for the United States.

SOCIALISM VERSUS DEMOCRACY.

The January *Atlantic* contains an article entitled "Socialism and Human Achievement," by Mr. James O. Fagan, the merit of which it is difficult to define, and yet it is a merit to which discussions of socialism that are far more ambitious, and that are intellectually far abler, cannot lay claim. The effectiveness of the article lies in a certain homely sincerity, in an appeal to the reader's instinct for the truth, rather than in any formal argument, any novelty, or even weight, in the particular facts presented, or any attempt at philosophical analysis. Mr. Fagan feels—as nearly all of us felt only a few years ago—that the growth of democracy, with all its faults and shortcomings, has achieved great things for the people, and he says so. He protests against the "tacit acknowledgment that our individualist civilization is a failure," the basis of so large a part of that easy-going acceptance of socialism by people of undisciplined minds which is so prominent a feature of our time. Nearly every arraignment of existing conditions by radical reformers depicts the present economic system as one in which the condition of the masses is becoming worse and worse; and yet the opposite is evidently true. And besides this false comparison of the present with the past, socialist and semi-socialist reformers are continually painting the present itself falsely; and this by the simple process of picking out individual instances of evil, and treating them as typical of the whole or a large part of the conditions affecting the masses in our time.

That the socialistic movement of our day has a nucleus in purely idealistic conceptions of what society ought to be and in abstract economic considerations concerning what society can be made, no one could for a moment deny. There are noble enthusiasts like Tolstoy whose contempt for prevailing motives and standards, and whose aspirations after spiritual perfection, suffice for an absolute rejection of the existing constitution of society; and there are also economic theorists who, whether adhering to or rejecting the doctrines of Karl Marx, find in their analysis of economic forces an adequate warrant for their gospel of a new earth, if not for a new heaven. But it is not the acceptance of the views either of spiritual perfectionists or of economic doctrinaires that accounts for that spread of the socialist and semi-socialist propaganda among hundreds of thousands of ordinary people of the comfortable classes, which has been so remarkable a phenomenon in the past decade. With the great majority of these people, the hold of the existing order on their allegiance has been chiefly undermined neither by a dominating spiritual exaltation nor by a profound intellectual conviction; they are prepared to accept socialism not because of a well-grounded belief that it would mean the saving of the world, but because of an exceedingly ill-grounded belief that the existing order has meant the degradation and ruin of the mass of mankind. Not to one out of a hundred of them does it occur either to attempt a genuine appraisal of the present, or to make a real comparison with the past.

A heavy responsibility rests upon those whose connection with works of philanthropy and social reform gives to their utterances a peculiar hold on the attention of men and women keenly alive to the distress of their fellow-creatures. In so far as the simple truth, plainly and unsparingly told, may have the effect of giving to their readers a pessimistic view of existing conditions, this consequence must be accepted. But to tell the truth in these large matters requires intelligence as well as good intentions; and only too often one finds not only a want of intelligence but what cannot be described by a term less harsh than irresponsibility, or even bad faith. Two recent instances may well serve to illustrate a thing that is constantly being done. One is that of an article which appeared some months ago in a popular magazine, and was afterwards circulated as a leaflet by an association interested in the welfare of working women. This article presented a terrifying picture of the way in which the high price of food was destroying the vitality of the working girls of America; the central point of it being that girls who used to get a nutritious lunch for fifteen cents were now compelled to confine themselves to lettuce-sandwiches and the like because the price of an egg or meat lunch had gone up to thirty cents. This leaflet was distributed by a society in New York, though its managers might have learned by ten minutes' inquiry, that few if any prices of the kind had been raised here at all. The other instance was a heart-rending story connected with the Chicago garment-workers' strike, taken down verbatim by a professor of economics from the lips of one of the strikers, and published under the title "Bricks without Straw." Whether the individual story was true or not, we cannot undertake to say; but the whole implication of it was wildly inconsistent with all reasonable probability, and yet there must have been hundreds of kind-hearted readers upon whose defenceless minds it passed current as a typical example of general conditions.

Exaggeration, and even distortion and misrepresentation, of economic evils might do no particular harm, if nothing were involved but the remedying of a particular trouble, the removal of a particular abuse. But the habitual painting of conditions in colors darker than the truth warrants, the habitual talking of a part as if it were the whole, the habitual representation of situations as desperate when they have redeeming aspects which a fair observer and clear thinker would recognize—these things have, in our time, consequences that go much farther than the particular matter immediately in question. They are taken, by thousands of immature and impressionable minds, as part of a general arraignment of the existing social order; and before we can say that they are harmless we must decide whether the existing order has outlived its time, and whether the new order to which so many are ready to give a light-hearted welcome would better serve the needs of man. There are still those who believe that the homely virtues of the past—industry, endurance, self-reliance, frugality, sacrifice for mother and father and children—virtues that grew out of the individualist system, and that in large part grew out of the very hardships of the individualist system, are worth preserving. They see no reason to believe that these human qualities could have grown up in any other way, and feel no assurance that they will be preserved when the soil in which they have been nurtured shall have been removed. And they cannot look on with indifference at the spread of errors and delusions which powerfully promote a movement directed to that end.

TAXATION DIFFICULTIES.

The stanchest upholder of the powers of the States cannot deny that for the benefits of our system of local self-government there is paid a heavy price. That the benefits are worth far more than the price, we firmly believe; but that is no reason why we should blink the truth. The lack of any method of procuring uniformity in State laws, in a large number of matters in which uniformity is manifestly desirable, causes a sort of paralysis of governmental function from which a centralized government would not suffer. This is especially true in the field of taxation. The impossibility of a decent enforcement of a general property tax law is due partly to the nature of the case, but also in a great measure to the feeling on the part of the authorities in any one State that rigorous enforcement would drive persons of wealth into other States in which the conditions are less onerous. In the case of the inheritance tax, unless it is made very high, this consideration evidently has less force, and consequently this tax has been instituted in a severe form, and enforced with vigor, in a number of States; but this policy, particularly in New York, has led to the imposing of inequitable burdens in many instances through duplication, or even triplication, of the tax when the decedent's property has been such as to bring it under the inheritance-tax law of more than one State. And to the other aspect of the matter—the tendency of the higher rates on large inheritances to cause men of wealth to change their domicile—the recent report of the State Comptroller drew attention in a pointed way.

The remedy for these various evils and defects is to be sought in the promotion of a coöperative spirit among the States, resulting in uniform methods of taxation and in the proper distribution of taxes. In the case of the inheritance tax, it would be particularly easy to procure uniformity, not only in methods, but in actual rates; for the inheritance tax is in the nature of a supplementary, rather than a primary, source of revenue, and there is no strong reason for one State to adopt a different rate from another, unless for the very purpose of enticing wealthy residents, and that game would, we feel sure, in the great majority of instances, not be found to be worth the candle. It is to be hoped that at the State Conference on Taxation, which meets in Utica this week, and one of whose sessions is to be devoted largely to the Inheritance Tax law, this question of a uniform law for the various States will receive serious attention. At the International Tax Association Conference, held last September at Milwaukee, the draft of a bill for this purpose was reported by a committee which had carefully considered the subject. This proposal follows in great measure the lines of the present New York statute, and varies from it chiefly in making the maximum rate 15 per cent. instead of 25, and in providing against double taxation. It is not to be expected that the adoption of a uniform law will be accomplished without persistent effort, but there is ample warrant in existing tendencies, throughout the Union, for the expectation that such effort would attain success in a fairly near future.

Just what limit considerations of practicability and public policy should set to taxes on inheritances or on incomes is a question requiring careful and sober thought; but the time has gone by when any tax that is objected to by men of wealth can be waved away as absurd by simply pointing out that any State which adopts it will suffer from an exodus of wealthy people. This consideration must be taken into account, of course; but it has no character of finality. It is preposterous to suppose that the people of this country will be content indefinitely to forego the right to impose taxes which the people of other countries find no difficulty in collecting. If an inheritance tax is felt by the best thought of the country to be desirable, if a progressive tax falling heavily on large inheritances is felt to be desirable, the accidental difficulty due to the division of jurisdiction between the several States will be surmounted.

STRIKES BY PUBLIC EMPLOYEES.

Commissioner Tomkins of this city spoke truly and soberly in his conference last week with the engineers employed on the municipal ferries. Referring to the inexcusable and abortive strike the week before, which tied up the service for several hours, he described it both as a breach of discipline and as a failure in loyalty to the city. With every willingness on the part of the authorities to confer with the men working on the municipal ferry-boats, in the hope of removing grievances and adjusting terms of employment, the authorities are bound to give the public a steady and efficient service, and their orders must be obeyed. Commissioner Tomkins does not conceal his wish that municipal ownership may be extended, but he pointed out to the ferry employees that their conduct furnished a strong argument against the city's undertaking further experiments like that of municipal ferries. These are operated, he remarked, "at a serious loss," and if, in addition, the employees are going to indulge in reckless strikes, with cool disregard of public convenience, the effect will be every way disastrous. It was the clear implication of the Commissioner's address to the men that no one of them who struck work could hope to be taken back.

It cannot perhaps be said that they order these things better in France, but the similar French problem is on a much larger scale than our own, and the present Government is attacking it in a resolute and most interesting way. The recent strike on the state-owned railways of France almost threatened the commercial life of the nation. It was firmly met by Premier Briand, and finally broken; but he said at the time that it was incumbent on the authorities to devise legislation which would make its repetition impossible. And in pursuance of his promise to take measures against another such calamitous strike, he laid before the Chamber on December 23 his "projets de loi," the full text of which we now have at hand.

The bills themselves are preceded by a long "exposé des motifs." Premier Briand reviews the development of the economic life of the nation; dwells upon the fact that, in private enterprises, the relations between employers and laborers are now tending to pass from the ideas of war to those of peace—that is, to conciliation and to arbitration of differences; points out that the state as employer is not able, like the individual manufacturer, to resort to the weapon of the lock-out, since the public service must be continuous; and concludes that the régime of warfare, or anything approaching it, must be absolutely done away with on the national railway systems. To effect this is the object of the

new laws proposed by the Government.

They proceed upon the principle of fully recognizing the right of public employees to organize in their own interest. The new legislation would not lay a rude hand upon the existing unions. They are, in fact, accepted as the official representatives of the workingmen, with which the authorities are to deal collectively. Indeed, the first of the proposed laws has to do with the relations between the railway administrators and the officers of the unions, minute provision being made for interviews, for presentation of complaints, and for peaceful adjustment of every difficulty which may arise. In case of persistent differences, the second law of the series will come into play. This covers the question of arbitration, and devises an elaborate system under which arbiters may be appointed to settle any disputes which cannot be disposed of directly. But after having arranged all this, the Government would go further and take a bond against failure of the measures of conciliation and arbitration by making an actual strike of state railway employees illegal. Such it had already been declared to be by the French courts, but they pointed out that no penalties had been prescribed by law. That lack the new "projet" seeks to make good. In Articles 22 and 23, it is forbidden to "every association or union," either to "prompt the railway employees to strike, or to plan or organize a strike." For infraction of this law, any or all of the officials of the union may be prosecuted, and the penalty affixed is a fine of from $10 to $40, or imprisonment from fifteen days to three months. If a strike occurs while any difference is in the way of arbitration, the penalty is a fine of from $20 to $60, or imprisonment from two months to a year. Finally, the individual employee is reached in a clause which provides:

> Every engineer, conductor, brakeman, or other employee engaged in running a train, who shall have thrown up his work while on the road, as well as every employee who has been regularly detailed to replace a man in charge of a train, but who shall, without valid reason, have refused to do so, shall be punished by imprisonment from six months to two years.

The Prime Minister of France found no lack of popular support in the attitude which he assumed toward the railway strikers. It remains to be seen whether the people and Parliament will go with him in his legislative proposals. It must at least be said that M. Briand has shown a due sense of the critical importance of making the government safe from its own employees. If letter-carriers and telegraph-operators, electricians and engineers, in the employ of the state, are free to subvert the ends for which the state exists, there is an end of government. This is just as true in New York as in Paris, and of ferry-boat as of railway employees.

COLLEGES AND HIGH SCHOOLS.

One of the incipient educational rebellions that are muttering through the land is that of high school against the college. We must throw off college domination of high schools, is the cry. It was recently heard again at the State Convention of Academic Principals at Syracuse. Entrance examinations shall be the first abuse to go. The schools, declare the schoolmasters, must be free to try new subjects; and the estimate of the teacher who has wintered and summered the boy shall be the sufficient passport into college. No one who has seen much of the men in charge of the public high schools can doubt their devotion and high level of intelligence. If any large proportion of them demand a reconsideration of the relations between school and college, it is bound to come. The question involves the endowed universities and colleges of the East in a peculiar and perhaps a critical way.

The present stir is in part the effect of a wave which has moved from the West eastward, as one of the results of the splendid successes of the State universities of the West, and in particular of their system of articulation with the high schools of their States. When a boy passes on from the high school into the college by much the same process which a year before carried him into the senior class of the high school, the question of entrance requirements is simplified almost out of existence. Where the system is fully developed, the schools determine their own studies and tests, and the university acquiesces. The right of admission to the university goes back to the right of the embryo citizen to make use of his State university if he so desires, and can show any kind of fitness.

In the East the tradition has been that the colleges were founded for the training of the intellectually select; in earlier times they were thought of largely as places of training for the ministry and the law. Entrance was accordingly guarded by tests designed to keep out those who had not some propensity for learning. Preparation of boys for college tended to be the function primarily of endowed academies or private schools, helped out where necessary by the country minister. The system was distinctly aristocratic, though the aristocracy was wholly one of mental equipment.

This situation in the East has been deeply modified in the last generation or two by the strengthening of the public high schools. A college to-day which had no hold on the high schools would be moribund. Yet the public school men rightly maintain that they must think first of the 90 per cent. of their pupils who do not go to college. This is the difficulty which faces the endowed colleges of the East, and they must find a way out of it, for they no longer are without rivals. The great State universities of the Middle and Far West are surging to the top. When the farmers and miners of the West were convinced by the figures that professors could double the wheat crop and the yield of mines, they began to believe in professors; and now they are willing to hire professors who shall bring their sons and their daughters to the same level of culture as the youth of the East. This liberality is put to effective use by far-sighted university presidents. We need point only to the State universities of Wisconsin, of Michigan, of Illinois, of California, to make clear the menace to undisputed supremacy in scholarship and education which has been held by Harvard, Yale, Columbia, and Princeton. The universities and colleges of the East can no longer fall back on the undiscriminating loyalty of graduates. They must face the demand on the part of the high schools for greater independence of the college. How far should they go in answer to this demand?

Not far enough to endanger the old ideal of intellectual aristocracy, if the best interests of the country are to be considered. A country like this needs differentiation of types in universities as in men. Competition between types sharpens that competition between individuals which is the stimulus to mental and spiritual alertness. If the value of a university is to be judged by num-

bers, the future is with the West. For the endowed universities and colleges salvation is through rigid selection for quality. They have strong traditions of the disinterested search for truth and of the obligation of unselfish leadership; and in the eager and generous intercourse of the intellectually alert there is created an atmosphere that is in itself incalculably stimulating. The Harvard Law School and West Point are two examples: each of them has followed the policy of squeezing out the weaker brethren; and each of them has in consequence enormously increased its service to the country. If such colleges as Harvard, Yale, Williams, and Bowdoin will recognize that they are, for the present at any rate, large enough in numbers, and set themselves to raising their standards both before and after admission, they will soon establish themselves securely as the resort of the picked youth of all parts of the country.

There would seem to be right, then, on the part of those college men in the East who hold out for the tonic and selective value of examinations for admission. Yet the endowed universities would be both arrogant and blind if they neglected the public schools, or set up standards which would bar out their boys. Universities exist to raise the level of citizenship; and a university which should be indifferent to the best strength of the country would deserve support from no one. If we may look on entrance requirements as a kind of strainer, the problem for the colleges of the East is to adapt the holes to the product of the public high school, but without so enlarging them as to allow the thicker headed to slip through.

This can be attained only by full and frank conference between the faculties of the colleges and the teachers in the high schools. Experience has shown that there is far less divergence of interest when the parties get together than when they attack each other at conventions in phrases aimed at the headlines in the next day's newspapers. College men cannot afford to pass by the fund of wisdom and experience amassed by the men in the schools; and they owe honest and zealous support to the system of public schools, as to one of the cornerstones of our civilization. A standard of entrance to college which shall insure and strengthen the position of the endowed colleges, and at the same time open their doors freely to the pick of the graduates of the high schools, is the thing to be worked out.

SUMNER'S CENTENARY.

Charles Sumner has not fared well, on the whole, during the past thirty years. His reputation was higher between 1851 and 1870 than it has been between 1880 and 1910. The reasons are near at hand. By the publication of a flood of diaries and letters, we have been given an intimate view of the personalities of the public men of Sumner's day, and his own has suffered not a little under the light thus thrown upon it. We see, for example, that his vanity was enormous. He came to have that kind of insistent and obtrusive egotism which Mr. Howells, we believe, has described in him as well-nigh a personal affront. Sumner's speeches, moreover, have become hard reading. They belong to a style of oratory now overpast. To modern taste, they seem insufferably diffuse and fearfully overlaid with all kinds of learned quotation. Like Theodore Parker, he saluted the backs of his opponents with the whole tree of knowledge torn up by the roots. In his orations we still perceive elevation of sentiment, but we miss in them that directness, that force, that swift progress of logic set on fire by emotion, which alone can make old addresses live for other purposes than those of historical citation. It is not strange, then, that with the body of his works more and more unread, and with his personal defects and peccadilloes thrown into high relief since his death, Sumner should appear to have sunk far below the horizon. Yet this is all the more reason for looking back on the centenary of his birth to the really great qualities which the man displayed.

One notable thing about him is that from early manhood he was absorbed with the greatest moral questions that can occupy the human mind. This was partly the set and circumstances of his generation, but more the native prompting of his soul. A wide and indefatigable student from youth up—Wendell Phillips told how Sumner's lamp burned latest at Harvard—a deeply-read lawyer, a travelled man of fruitful acquaintance in many lands, he poured all his acquisitions and all his fervor into love of humanity and a passion for justice. This from the first was his real eminence among statesmen. It made him stand higher from the shoulders and upwards than all but a few of the public men even of his own striving age, while by comparison with the Senators who have since wreaked themselves on tariffs and patronage, he appears to dwell apart like a star.

It was this possession of moral ideals and their complete domination of him which gave Sumner so wonderful a hold upon the clergy and warm-hearted and intelligent women and aspiring young men. They first heard him at lyceum lectures and college commencements. The addresses which he gave on such occasions were somewhat stilted in language, but they were shot through with the highest moral conceptions and purposes. Our sophisticated college boys to-day might be tempted to smile at an orator who exhorted them to cleave only to Right and strive ever for Justice; but Sumner's commanding personality and transparent sincerity made many an undergraduate's heart burn within him as the discourse ran on lofty themes. Sumner's biographer, Pierce, accumulates the evidence to show how wide and intense was the fascination of Sumner's moral earnestness; so that when the conscience vote of Massachusetts became strong enough to elect a Senator, there was a universal turning to Sumner as the man who would be a Senator with a conscience. On the broader stage of national politics, Sumner went on to new distinction, but it was always a distinction founded upon his intense devotion to human rights and the moralizing of law as between both men and nations.

What Sumner did for the slave and what he did against war had a common root. They both sprang from his innate hatred of cruelty and injustice. In a letter which he wrote before going to the Senate, in answer to an unfriendly critic, he told of the genesis of these ideas of his:

> My name is connected somewhat with two questions, which may be described succinctly as those of peace and slavery. That which earliest enlisted me, and which has always occupied much of my thoughts, is the peace question. When scarcely nine years old, it was my fortune to listen to President Quincy's address before the Peace Society, delivered in the Old South Church. It made a deep and lasting impression on my mind; and though, as a boy and youth, I surrendered myself to the illusions of battles

and wars, still, as I came to maturity, I felt too keenly their wickedness and woe. A lecture which I heard from William Ladd, in the old court-house at Cambridge, shortly after I left college, confirmed these impressions.

Thus the cause with which Sumner began remains to be carried to success all these years after the second one to which he gave so much zeal had its triumph. It is striking, even pathetic, to read Sumner's letters to Cobden more than half a century ago, and find them filled with the arguments and appeals which must still be used: the crushing burden of armaments; the waste of productive energy; the need of an arbitral court of justice between the nations; the demand that responsible statesmen take the lead in seeking agreements to disarm and in all possible ways to prevent the "unutterable atrocity of war."

It is, accordingly, a double function which the celebration of Sumner's centenary ought to fulfil. There is commemoration of what he achieved with reminder of what he left for us to do. The evils of slavery did not die with its formal extinction; the lingering prejudice and oppression remain to be combated. And in the whole question of the relations between countries—especially of providing the means by which wars may be avoided—there is a vast work to be done before we reach a practical embodiment of those principles relating to the true grandeur of nations which Sumner proclaimed seventy-five years ago.

GERMAN STUDENTS IN ENGLAND.

Last summer a company of young men from German universities travelled in England together. They saw what they could of her educational and commercial life, her art and agriculture, and everywhere made a very pleasant impression by the frank idealism of their attitude. Lady Courtney of Penwith was so pleased with the friendly interest of these students in things English that she offered a prize to the one who should, after his return to Germany, give the best account of what he had seen and felt. This prize was won by Richard Hille of Leipzig, who offered merely a series of extracts from his notebook, written in remarkably good English and with evidence of a good faculty for perception and imaginative interpretation.

To give some idea of his quality we cite one or two of Mr. Hille's observations:

> England's trees and shrubs seem to have left their flock, the forest. At the borders of the fields they are standing, forgotten by the statisticians, who measure the size of woods by square miles, not by the number of trees. Their rows divide the width of the landscape. This diminishes its grandeur, but makes it more lovely. It gives resting places for the eye, and animates the uniformity of the green lawn by a darker ornament. It is to be considered that the bright green of the English turf has been bought by a good deal of the blue of sky. Nature is just.

From that remark upon nature, pass to one upon man:

> *Der rücksichtslose Engländer*, well known on the Continent, was surely abroad during my English stay. I did not meet him. The politeness at the table and towards ladies, the conduct of policemen and guards, and the good-nature of poor fellows in the streets are worth taking as models. English regardlessness abroad is, I suppose, nothing but the fault of a virtue: the national pride, exceedingly well cultivated.

The absence of anything like prejudice, not to say animosity, in the reports of this German student, is noteworthy. He has his criticisms of English public architecture to record, as of some other things; but the spirit is throughout that of one eager to understand the fact rather than to pick flaws or score points. Herr Hille saw eight dramatic productions while in England. One of them was by Cambridge students, and this their German visitor declares to have been "splendid." Of the others, some of them in the best theatres in London, he writes that, with one exception, they "stood behind corresponding German theatres in the choice of the piece as well as the acting." We suppose that no impartial man, acquainted with the state of the drama in both England and Germany, would question the soundness of the judgment.

It is not, however, so much the opinions of this German university student and his fellows that we would note as the temper which they took with them on their travels. They were manly and patriotic without being bumptious or offensive. They enjoyed their experiences without feeling it necessary to act everywhere as if they were having a roistering good time. Above all, they had the inquiring mind, the observing eye, and the idealistic spirit. They were not ashamed to be intensely interested, to express admiration, to ask instructed questions, and to seek the basis of just comparisons between what was new to them and what was familiar. In a word, these German students went to England with unabashed enthusiasms and a fine abandon which ought not to be in the least surprising in educated youth, but which we all know to be very seldom characteristic of American college students.

We do not attribute all of the difference to faulty educational methods among us. Qualities inbred in the blood have a good deal to do with it. Even young men must wear their "race's badge," and if it means naught in overplus and a careful hiding of the feelings, it cannot be wholly escaped. But the fact remains that there is something in our habits and training which makes our college students suffer by contrast with their kind on the Continent of Europe. Those absorptions and enthusiasms which here go so largely into college athletics, there manifest themselves in devotion to art and music and literature and public life. We may say that there is much that is absurd in the exaggerated pose of French university students, in the premature rush into politics by Russian students, in the love of song and poetry and learning displayed among the young men in German universities, but these are qualities consonant with youth and aspiration and cannot be sacrificed without a loss. Exuberance may be corrected, but what are you going to do with a boy who is blasé? Certainly, so far as it is within their power, our educational authorities should cultivate the fine flower of idealism in their students, so that with us, too, educated youth may have lofty ambitions and cherish high hopes without being ashamed.

THE AMERICAN ECONOMIC ASSOCIATION.

BALTIMORE, January 7.

The twenty-third annual meeting of the American Economic Association was held in St. Louis Tuesday, December 27, to Friday, December 30. The annual meetings of the American Political Science Association, the American Statistical Association, the American Sociological Society, the American Association for Labor Legislation, and the American Home Economics Association were held at the same time and place. The programme of the Economic Association included nine sessions, of which three were joint sessions either with the Political Science Association or with

the Association for Labor Legislation. In accordance with the custom established in recent years the greater number of the sessions were devoted to the discussion of questions of practical and immediate importance.

The presidential address of Dr. Edmund J. James, entitled "The Economic Significance of a Comprehensive System of National Education," was essentially an argument for the nationalization of our system of public education. President James contended that the full economic benefits of public education could not be obtained until educational facilities in all parts of the country were approximately equal, and that this equalization could be accomplished only by national aid.

The session devoted to Money and Prices proved in outcome to be one of the most interesting of the series. The principal papers were read by Prof. J. Laurence Laughlin of the University of Chicago and by Prof. Irving Fisher of Yale University. Both dealt with the same phenomenon—the rise in prices since 1896. Professor Laughlin attributed the change in prices chiefly to causes other than those connected with the circulating medium. Tariffs, trade unions, Trusts, speculation, and widespread extravagance, in his opinion, have been the determining factors in the rise. Professor Fisher rejected entirely the theory that a change in the price level could be caused by changes not connected with the circulating medium, and devoted his paper to an inductive verification of the quantity theory of money. Starting with the assumption that changes in the general price level are determined by five factors, viz., the quantity of money in circulation, the velocity of its circulation, the quantity of deposits subject to check, their velocity of circulation, and the volume of trade, he showed statistically that the joint result of the changes in these factors corresponded closely with changes in the general price level as indicated by the index number of prices. The method employed by Professor Fisher had already been used by Professor Kemmerer of Cornell University in his "Money and Credit Instruments in their Relation to General Prices," published in 1909, but Professor Fisher's figures showed a closer correspondence, partly because of the use of a new measure of the velocity of the circulation of money.

In view of the fact that the year 1910 was the centenary of the publication of the "High Price of Bullion," the one session on Economic Theory was appropriately devoted to Ricardo. Prof. J. H. Hollander of the Johns Hopkins University and Dr. James Bonar, deputy master of the Canadian Mint, who read the principal papers, gave appreciative appraisement of the work and influence of Ricardo.

The discussion at the session on Railways and Canals covered chiefly the question of governmental versus private operation of the means of transportation and the relative advantages of rail and water transportation. Prof. Emory R. Johnson of the University of Pennsylvania and Prof. E. R. Dewsnup of the University of Illinois read the principal papers. Interest in the discussion was much enhanced by the participation of W. M. Acworth, the distinguished English authority on transportation matters. The session devoted to Accountancy gave to the rapidly increasing number of economists who are interested in accounting methods an opportunity to bring under discussion some of the relations between economics and accountancy. The principal papers were read by A. Lowes Dickinson of New York city and Prof. William M. Cole of Harvard University.

The session on Population and Immigration was marked by the strong feeling in favor of severe restriction on immigration shown by nearly all the participants. Prof. J. Allen Smith of the University of Washington contended that a policy of restriction, if it is to avoid international difficulties, should be uniform in its application to different races. Prof. T. N. Carver of Harvard University argued that the large influx of immigrants who go chiefly into the lower grades of labor tends to decrease the proportion of the product going to such laborers as compared with the share received by the skilled and managerial classes. An extremely interesting paper read at the same session by Prof. J. A. Field of the University of Chicago traced the little-known history of the early Neo-Malthusian movement.

A joint session with the American Association for Labor Legislation on Industrial Accidents and Industrial Diseases was notable chiefly because of the widely different points of view from which the participants approached the subject. The principal papers were read by Miss Alice Hamilton, a medical investigator for the Illinois Commission on Occupational Diseases; by F. L. Hoffman, statistician of the Prudential Insurance Company; by F. C. Schwedtman, chairman of the Committee on Industrial Indemnity Insurance, National Association of Manufacturers; by D. L. Cease, an official of an important national trade union, and by Thomas I. Parkinson, counsel of the Legislation Drafting Association.

At the session on Taxation, Prof. T. S. Adams of Washington University urged that the income tax offered the best substitute for the impracticable personal property tax. Prof. H. J. Davenport of the University of Missouri read a paper on "Land Value and Taxation." At the concluding session, under the leadership of John Martin of New York city, a praiseworthy effort to reach a satisfactory definition of socialism was made.

During the meeting final arrangements were made for the transformation of the *Economic Bulletin*, which has been published by the association since 1908, into the *American Economic Review*. The scope of the *Review* will be wider than that of the *Bulletin*, since it will contain articles as well as notes, reviews, and bibliographies. Prof. Davis R. Dewey of the Massachusetts Institute of Technology has been appointed managing editor of the *Review*.

Prof. Henry W. Farnam of Yale University was elected president for the ensuing year, and Prof. T. N. Carver of Harvard University was reëlected secretary-treasurer. The generous hospitalities extended by the citizens of St. Louis and Washington University were admirably designed to facilitate the purposes of the meeting.

THE AMERICAN POLITICAL SCIENCE ASSOCIATION.

BALTIMORE, January 7.

The seventh annual meeting of the American Political Science Association, held in St. Louis, December 27-30, bore witness to the rapid growth of that association since its organization in 1903, and to the value of its proceedings and publications. The secretary and treasurer reported an enrolment of approximately thirteen hundred and fifty members and a satisfactory condition of its finances.

Gov.-elect Woodrow Wilson, president of the association, in his address, to which he gave the title "The Law and the Fact," emphasized the peculiar province of Political Science, or, to use the term which Dr. Wilson said he preferred, of Politics, to consider primarily the general as distinguished from the individual welfare—not, of course, that the interests of individuals are without significance to the political scientist, but that the recognition and regulation of these interests should be determined by their relation to the welfare of the social or political whole. The address, which was a valuable one by reason both of its high literary qualities and its elevated moral tone, will appear in full in the February issue of the association's journal, the *American Political Science Review*.

The topics to a discussion of which the various sessions of the meeting were devoted were: Recent Constitutional Developments in Europe, Municipal Government, Judicial Organization and Procedure, Primary Elections, and International Law.

The first of the topics furnished material for an exceptionally interesting series of papers, dealing respectively with pending or recent constitutional

changes in England, Germany, Russia, and Turkey. The various plans for abridging the power of the English House of Lords or reconstituting its membership were described by Prof. T. F. Moran; the political and constitutional conditions which will hinder the development of a true system of ministerial responsibility in Germany, until national particularism has been overcome and democratic régimes established in the individual States of the empire and especially in Prussia, were pointed out by Prof. W. J. Shepard; the progress in parliamentary institutions in Russia, and the means by which the Czar, in violation of his manifesto of 1905, finally procured a governmental control of the third Duma, were clearly outlined by I. A. Hourwich; and the work of the Turkish Parliament, upon which a favorable estimate was passed, was described by Prof. A. H. Lybyer.

At the session devoted to City Government, recent tendencies in municipal charters were summarized by Dr. H. E. Flack; and the value of the present and possible work of the Federal Bureau of the Census in the collection of municipal statistics, and especially of those which will make possible the accurate measurement of the administrative efficiency of city governments, was described by Mr. Meyer.

The session devoted to Primary Elections was especially interesting and valuable, furnishing as it did an opportunity for reports upon the practical working of the direct primaries in such States as Illinois, Missouri, and Iowa. Upon the whole, the judgment one might fairly found upon the facts stated would be that the primary system, while by no means a failure where it has been tried, has fallen far short of realizing the benefits which its more ardent supporters have expected from it. Indeed, to those who are less sanguine of the good to be expected from the system, some ground is furnished for a prediction that, whatever benefits may be derived from it during the first years of its trial, by way of breaking down the dominance of party machines, the final result, when these machines have adjusted their mechanism to the new situation, and when the public interest in the experiment has waned, will be unsatisfactory.

The session devoted to Judicial Organization and Procedure revealed the same condemnation of present conditions and methods of administering justice in this country which has been pronounced whenever thinking and impartial students have been called upon to express judgment. The discussion was, however, rendered especially valuable by the description given by Chief Justice Olsen of the really remarkable work of the Chicago Municipal Court, over which tribunal he has presided since its establishment in 1906; and by the remarks of Prof. John D. Lawson of the *American Law Review* upon the workings of English methods of judicial procedure as commissioner of the American Institute of Criminal Law and Criminology.

But a part of one session was devoted to a discussion of topics within the field of international law and diplomacy. This gave opportunity, however, for an informal address by Theodore Marburg upon the "Methods of Eliciting Public Opinion in International Arbitration," and for a valuable paper by Prof. G. G. Wilson upon the jurisdiction of states over the strata of air above their several territories.

The papers read at St. Louis will be published at an early date either in the *American Political Science Review* or the annual volume of its *Proceedings*.

For the year 1911 the following officers of the association were elected: President, Simeon E. Baldwin; first vice-president, Albert Bushnell Hart; second vice-president, Emlin McClain; third vice-president, Ernst Freund; secretary and treasurer, W. W. Willoughby.

THE ARCHÆOLOGISTS AND PHILOLOGISTS AT PROVIDENCE.

GRANVILLE, O., January 6.

It was predominantly a New England and Middle States audience that listened to the papers of the American Philological Association and the Archæological Institute, in annual session, December 27-30, in Providence, though the sprinkling from various Southern and Western States was large enough to attest the national character of these organizations and the widely-spread interest in their work. As the detailed programme was printed in these columns in advance, it remains only to make some comment on a few of the more important features of the meetings. The usual annual address before the two societies in joint session was delivered by the president of the Philological Association, Prof. Paul Shorey of the University of Chicago, a characteristically witty and profitable discussion of "Classical Philology and National Culture." Space forbids any attempt at analysis, but among the main points were a caution against the too close following of German guidance in philological study, a suggestion that there are profitable lessons to be learned from the French in this field, and an exhortation to an increased measure of genuine independence among American philologists. Many of the papers presented before the Philological Association were rather too technical to be followed with full appreciation and interest in the brief oral presentation necessary to a crowded programme. As these papers almost all find their way into print, either in the annual volume of the association itself or in some of the philological periodicals, it may be questioned whether the committee which arranges the programme, in selecting between papers actually to be presented and others to be read simply by title, should not be guided more rigidly by the ease and general interest with which any given paper is likely to be followed. It must not be inferred, however, that the programme as a whole was devoid of papers of general interest. At the suggestion of Prof. William Gardner Hale (presented by another in his absence), a committee of the Philological Association was authorized to consider, in conjunction with committees of other organizations, the possibility and advisability of a common terminology for grammatical studies in the various foreign languages dealt with in our colleges. The matter was passed without discussion, though it is known that any attempt to commit the association definitely to such a common terminology will meet with very vigorous opposition. Prof. John C. Rolfe of the University of Pennsylvania was chosen as president of the association for the coming year.

The meetings of the Archæological Institute, with its added attraction of lantern illustration of recent excavations, naturally drew the larger attendance. The products of the student's spade in Samaria, Sardis, Crete, Cyrene, Guatemala, and southwestern United States were summarized in a series of papers which reflect great credit upon the institute and its management. Ten years ago, one of the leaders in the work remarked, no such series of papers could possibly have been presented by Americans. A paper by Frank J. Mather, jr., of Princeton University, on Italian Paintings in America, represents an interesting series of papers dealing with the acquisitions of American art galleries and museums and revealing the surprisingly large amount of material for the study of European art available to the American student without the necessity of crossing the ocean. Dr. Esther B. Van Deman, a research associate of the Carnegie Institution, presented a very original study of the technical characteristics of Roman brick-work. This, by the way, was but one of seven or eight papers delivered by women, none of them giving any ground for supposition that scholarly work in this field is conditioned in any way by sex. Another paper of remarkable interest was read by William H. Goodyear of the Brooklyn Institute of Arts and Sciences, dealing with late studies of the Leaning Tower of Pisa. The meeting of the council of the institute was well attended, members being present from such distant points as Winnipeg, St. John, Colorado, Kansas, and Missouri. Hereafter the general secretary of the institute will be employed for his full time, which should mean a still further

acceleration of the very encouraging rate of growth maintained during recent years. On the invitation of the American Institute of Architects, the Archæological Institute will take up its national headquarters in the historic "Octagon" in Washington, where the American Federation of Arts is also to have its central offices. Financially, the report of the institute shows gratifying progress, though that fact should blind no one to its great need of a much larger endowment, if it is to achieve results. The American School in Palestine, for instance, which is under the direction of the institute, sorely needs a building, a working library, and an annual income of at least $16,000. Representatives of twenty-four American Theological Seminaries have signed their names to an emphatic declaration of the value, from their point of view, of the researches which the institute is promoting through the Jerusalem school. The School in Athens, through the generosity of Mrs. Sears, is to have hereafter $1,500 for excavation each year. This school, and the one at Rome, have each at present an annual budget of something above $20,000. It will surprise many to learn that the school at Rome, in the sixteen years of its operation, has enrolled students from about eighty different American colleges and universities. This is a fact full of promise for the future, proving as it does that the interest has already gone far beyond the few institutions represented on the committee and faculty of the school. Prof. Francis W. Kelsey of the University of Michigan was deservedly reëlected to the presidency of the institute. Prof. Mitchell Carroll of Washington, D. C., was continued as general secretary, hereafter to give his full time to the work. Dr. George Bryce of Winnipeg was added to the list of vice-presidents, otherwise unchanged. Prof. Paul Shorey of the University of Chicago was made a member of the executive committee. William Sloane of New York city continues to serve as treasurer. The district secretaries are Prof. George H. Chase of Harvard University for the Eastern States; Prof. F. W. Shipley of Washington University, St. Louis, for the Middle States; Prof. H. R. Fairclough of Leland Stanford University for the Western States, and Prof. A. Judson Eaton of McGill University for Canada. The place of meeting for next year was left to depend somewhat upon the question of railway rates. If satisfactory concessions can be procured, the two societies will go to St. Louis, otherwise to Pittsburgh. Certain overtures having been made for a joint meeting of the Philological Association with the Modern Language Association, the matter was referred to a committee for consideration. The proposition is certainly of interest in connection with the recent notes of warning that the onslaught on the classics is endangering the cause of the modern languages as well. It is not to be supposed, however, that the philologists will regularly abandon their present habit of meeting at the same time and place as the Archæological Institute. J.

NEWS FOR BIBLIOPHILES.

The sale of the first part of the library and autograph collection of Edmund Clarence Stedman took place at the rooms of the Anderson Auction Company on January 12 and 13, but the catalogue was issued too late for any notice in this column. Part ii of the collection will he sold January 19 and 20, afternoon and evening. This portion, F to O of the alphabet, is, perhaps, principally notahle for the interesting series of manuscripts and letters of Eugene Field. The chief of these is a sixteen-page manuscript, written and decorated by Field, having for title "A Lyttle Folio of Proper Olde Englysshe Ballads: ffor Edmonde Clairaunce Steadmann. By Eugen-A-Feld. These ben done att Chicagoe in the yere 1887." A characteristic letter by Field, perhaps sent with the manuscript, says that the verses were "copied from an old manuscript recently discovered in a hair trunk on the North Side, by Ephraim Baggott, our prominent archæologist, excavator, and sewer contractor."

Books and letters of Richard Watson Gilder, Edmund Gosse, Fitz-Greene Halleck, Bret Harte, Lafcadio Hearn, W. D. Howells, Andrew Lang, W. J. Linton, J. R. Lowell, Philip Bourke Marston, S. Weir Mitchell, and other modern authors, English or American, are in this portion.

Correspondence

PENSIONS IN THE SOUTH.

To the Editor of The Nation:

Sir: In the *Nation* of November 17 appeared a review of the United States pension commissioner's annual report for 1909, which referred, also, to the "Confederate veterans," and said: "They have been well inoculated, too, with the pension virus." And again: "In the South, the pension system menaces, as a writer in the *South Atlantic Quarterly* points out, the proper educational and social progress of that section." Such references to Confederate pensions come to an "old Confederate" as the sting of a lash on the bare skin, so gratuitous and unjust do they appear to him. This is particularly true in the case of the present writer, who is one of the survivors of the Confederate army.

In the Southern States, the movements to bestow pensions on the surviving Confederate soldiers in the several States were not initiated by the old soldiers themselves, hut were a response to a generous and patriotic sentiment among a later generation, which composes almost exclusively Southern Legislatures. There has never heen any clamor for pensions raised hy the Confederate veterans; nor has there ever been, so far as I am informed, any formal expression given out by veteran organizations, or Confederate "reunions," appealing for the payment of pensions, or making any allusion to the subject.

It is my conviction that none but the needy and indigent among the "old Confederates" are on the pension rolls; and certainly, within my own horizon, any veteran who possesses even a moderate competence, or who has sons or daughters ahle to provide for him, would regard it as a humiliation to he offered a pension by his State. I do not number among my personal acquaintances a single individual who draws a Confederate pension; and the question having heen put to several of my acquaintances who were Confederate soldiers, the same reply came from each, that he did not know personally a single pensioner. Moreover, the pittances paid to pensioners in most of the Southern States are too small to excite the cupidity of false claimants, and all pension claims are closely scrutinized. The pension law of South Carolina of 1902 contains this provision: "Property sufficient to produce $75 in applicant's own or his wife's name debars him."

The exhibit made below of the number of pensioners and amount of pensions paid in the former Confederate States embodies the information obtained by correspondence with the officials of the several States, the State of Georgia alone failing to respond to inquiries. Information concerning the common-school funds was by inadvertence not asked for, but was incidentally obtained in a few cases. A number of the State officials strongly rejected the intimation that pensions are a menace to educational progress. The figures given are for the year 1909, and it is proper to say that the appropriations for pensions have been since increased in nearly, if not all, the Southern States. Mississippi, for example, appropriated $300,000 for 1909 and $400,000 for each of the years 1910 and 1911.

State.	Pensioners.	Amount pensions.	Average pension.
Alabama	16,969	$822,307.75	$48.45
Arkansas	8,560	462,629.84	54.04

THE AMERICAN COLLEGE.

To the Editor of The Nation:

Sir: The letter on "Life at the Sorbonne," in the *Nation* of Decemher 15, points out clearly the character of the collegiate inefficiency in the United States. That such inefficiency exists is well recognized by those who compare the intellectual standards of this country with those of European nations. The present writer has attended universities in Madrid, Rome, Geneva, and Paris, and the spirit in all has heen that of directing the intellectual pursuits of *men*, who are voluntary seekers in such pursuits. It is the coöperation of student and teacher in an effort after truth;

in which the teacher, unhampered by the joint office of disciplinarian, feels himself in accord with those he teaches. Such an atmosphere is the one rightly identified with a university of any dignity. Compared with these institutions an American university cannot be regarded as more than an overgrown high school. The result of our method can be, and has been, but one: the lowering of the intellectual standard, and the preservation of the high-school attitude in the majority of students. It isn't until after his graduation from college that a man realizes, if ever, the fallacy of the "undergraduate" attitude and of his ideals. He hasn't grown up to the significance of education until after his education is supposed to have been completed.

It is not at all the province of a university to play the part of a school of discipline, or of correction. Its aim should be purely the dissemination of advanced knowledge in the best and most vital way, to those who wish it. There is nothing that increases the sense of responsibility so readily as the assumption by others that it exists. Men disinclined toward education should not be pushed and hauled through a system of fact: cramming, when they are supposed to have arrived at an age of personal responsibility in taste and action. If they have not arrived at such maturity let not the college give cognizance of the fact by dragging them along. Small wonder that college students are immature when the exercise of free judgment is denied them. A university should, and in Europe does, protect itself and its degree by a final examination, but any further surveillance that is not personally solicited by the student is absolutely beyond the realm of the university.

It is folly to assume that American youth is constitutionally incapable of the development and mental seriousness of European youth, and yet it is upon this very assumption that the colleges base their system. That the young American of to-day is relatively behind in his development, and remarkably lacking in intellectual integrity is due, no doubt, to the ideals which insist on "success" at any cost, whether to individual honor or to the overcoming of somebody else, and in a very great measure to the college which does not regard him as a man, and which makes "marks" the premium by which he is to gauge his success.

It seems to me high time to institute a college atmosphere where there is less attention to the letter of discipline, and more to inspiration and efficiency in teaching. Let this be the college's sole preoccupation, and we shall not be long in seeing a change in our intellectual ideals.

E. F. STAFFORD.

Boulder, Col., December 31.

GLADSTONE ON THE CONSTITUTION.

To the Editor of The Nation:

Sir: One thing more should be added to the discussion of "Gladstone and the Constitution." Contrary to Mr. Dawson's statement in the *Nation* of November 24, that Mr. Beard's "American Government and Politics" omits the inevitable and famous remark of Gladstone, it will be found by consulting page 2 of Mr. Beard's book that he does not deserve the unique praise bestowed on him. The familiar old saying is still with us, and the distinction to be gained by its exclusion from our books on American Government, is yet to be won.

D. R. ANDERSON.

Richmond, Va., December 31.

THE CASE OF SENATOR LORIMER.

To the Editor of The Nation:

Sir: In your criticism of the Senatorial report regarding Mr. Lorimer in the *Nation* of December 27 you state that he "should have resigned long ago and gone back to the Legislature for a vindication." You stato in a previous paragraph that Senator Lorimer was not connected personally with any acts of bribery and, so far as known, now, not enough votes were bought really to elect him. Then why should he go back for vindication? If a majority of innocent members voted for him, was that not sufficient to insure an honest election?

I agree with you that he should resign and go back; not for vindication, but for retirement to private life. The situation has become acute; not because his election as Senator is a question of Constitutional law, but on account of the brazen-faced manner in which the Illinois Legislature repudiated the will of the primary and nullified the act of a previous Legislature. Now, why should he go back for vindication? Certainly not to the people who rejected his former candidacy, and who certainly after all that has happened would do so again. Not to the Legislature; for if it was sincere at his former election it would choose him again. Why not? Senator Lorimer has committed no act for which he should stand trial before the term of his office comes to a close. He cannot be held responsible for acts of bribery of which he was ignorant. If the bribery was such that the votes of the majority were tainted, then decency and self-respect would prompt him to procure a vote of vindication.

But Senator Lorimer entered a contest in violation of every code of morality. He was not legally and according to the will of the primary a contestant, but through chicanery and brazen insolence of the members of the Legislature. The same conditions prevail at present in other States, and to prevent a repetition, the United States Senate should, in behalf of its dignity and to retain the confidence of the people, insist that the Legislature shall respect the will of the voters in the primary and absolutely refuse the credentials of those elected contrarily. It is a question of public morality—whether a public officer shall be encouraged to repudiate the wishes of the people, which he morally is bound to respect, even though he may find a legal excuse. C. H. ALLEN.

Detroit, Mich., January 4.

THE CASE OF FRED D. WARREN.

To the Editor of The Nation:

Sir: A few years since, three residents of Colorado were indicted for an offence alleged to have been committed in Idaho. Without extradition papers, they were forcibly carried into the latter State. Although eventually proven innocent and released, they first appealed against their kidnapping to the Supreme Court of the United States, which, by refusing to interfere, gave the appearance of sanctioning this forcible carrying out of one commonwealth citizens indicted in another.

A certain editor living in Girard, Kan.—a man named Fred D. Warren—was a friend of these men. He determined to put that seeming sanction to a practical test.

Mr. Taylor, a former Governor of Kentucky, had been indicted in Kentucky on a charge of murder, but had escaped into Indiana, the Governor of which State refused to give him up to the Kentucky authorities. Warren, with no ill will for Taylor, chose the Taylor affair for his test.

On the outside of matter that he sent through the mails, Warren printed an offer of reward for the kidnapping of Taylor into Kentucky, just as Warren's friends had been kidnapped into Idaho. This form of kidnapping had apparently been sanctioned by the Supreme Court, and as for the printing, on the exterior of mail matter, of an offer of reward for arrest, that is in common use by national banks and rural sheriffs. Moreover, Warren submitted his matter to the postmaster at the office at Girard, and was told that its mailing would constitute no misuse of the mails.

Nevertheless, Warren was arrested. Though Taylor, appearing as a witness, swore that he did not consider himself harmed; though no malice was assumed; though the method employed by Warren was admitted to be in general use by national banks and officers of the law, and though a postal authority had been consulted previous to the alleged misuse of the mails, and had given his decision that Warren's action was no violation of the postal regulations, Warren was found guilty, and sentenced to prison under the act of September 26, 1888, which prohibits "the deposit for mailing of all matter, otherwise mailable, upon the envelope or outside cover or wrapper of which is written, printed, or otherwise impressed any language of a scurrilous, defamatory, or threatening character"! Warren's appeal has since been dismissed, and the finding of the lower court affirmed.

Is this miscarriage of justice, the bare facts of which speak for themselves, to be passed over in silence by Warren's fellow newspaper editors?

REGINALD WRIGHT KAUFFMAN.

Columbia, Pa., December 30.

MARK TWAIN'S BIBLIOGRAPHY.

To the Editor of The Nation:

Sir: In your issue of December 22 you refer to Mr. Johnson's "Bibliography of Mark Twain" and cite material in two instances which was received by the compiler too late for inclusion. I would call attention to two more titles that ought to be mentioned in a work of this character, and which no doubt will not come to the notice of the ordinary reader. In a periodical published in Liverpool entitled the *Tobacco Plant* there is included in Volume I, page 101, an article entitled "Mark Twain Tells About a Pipe." This is in the Christmas issue for 1870, and in the Christmas issue for the year following there is "The Anti-Tobaccoite: A Sketch from Life by Mark Twain." The former was also printed in America in *The Galaxy* and reprinted in *Memoranda* as "A Curious Relic for Sale."

Mr. Johnson is interested at the present time in a bibliography of Lafcadio Hearn, which he hopes to publish some time within a year. W. H. MINER.

Cedar Rapids, Ia., December 24.

THE PRESIDENT OF THE MODERN LANGUAGE ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: In your interesting and otherwise accurate report of the recent meeting of the Modern Language Association, published on January 5, there is an ambiguity in the announcement of the president for 1911, the names of two of our members being fused into a delicious blend that baffles analysis:

Nam mixta duorum
Corpora junguntur, faciesque inducitur illis
Una.

Our president is Prof. L. F. Mott of the College of the City of New York.

C. H. GRANDGENT,
Secretary of the Modern Language Ass'n.

Cambridge, Mass., January 8.

Literature

E. C. STEDMAN.

Life and Letters of Edmund Clarence Stedman. By Laura Stedman and George M. Gould, M.D. Illustrated. New York: Moffat, Yard & Co. 2 vols. 8vo. pp. xi, 604; vii, 688. $7.50 net.

These portly volumes will be of much interest and value to students of American literature, to admirers of Mr. Stedman's verse and prose, and to his personal friends, of whom he probably counted more than any other recent man of letters. Throughout their labors, the biographers have, doubtless, had these three classes of readers in mind, and, given this point of view, it seems only fair to say that they have accomplished their task in a thoroughly loyal and a satisfactorily competent manner. They have presented ample materials for judging Mr. Stedman, both as a man and as a writer; they have chosen those materials so as to shed much light upon the development of American literature in the past half century; they have suffered little or nothing that is indiscreet to mar their pages, except some uncritical enthusiasm that is easily pardoned and some medical lucubrations that may provoke dissent; they have arranged their mass of matter in a form that makes consultation easy and reading not over difficult, and finally, they have provided an elaborate bibliography and a useful though apparently not an exhaustive index. When we add that the publishers have done their work well and that the number of typographical errors does not seem to be large, it is fair to conclude that the work is one which students, librarians, and not a few general and special readers will wish to place upon their shelves.

Whether now, from the point of view of the maintenance or the increase of Mr. Stedman's fame and from that of the interest and profit of the reading public as a whole, the biographers have done well in giving a busy world so elaborate, not to say formidable, a work, is a matter about which opinions are likely to differ. This is emphatically the day of the full length and full dress biographical portrait, and in extenuation of their thirteen hundred pages, our biographers can point to numerous recent works almost as monumental, concerned with personalities of less than profound interest and importance. Would an exuberantly self-conscious and effusive age like ours go back, if it could, to the days when Samuel Johnson compressed into a small octavo volume his "very powerful life" of Richard Savage —to quote Leslie Stephen—and gave Englishmen, and incidentally Americans, the most important lesson they have yet received—and not fully profited from—in the art of biographical writing? It is our opinion, stated with regret, that mere size produces such an impression upon the modern imagination, that gush and sentimentality and delight in personal details and in notoriety have so affected modern taste and judgment, as to make something like an intellectual and æsthetic cataclysm necessary before succinct and restrained books of whatever sort regain their proper place in public estimation. We have no quarrel, of course, with the voluminous and minutely elaborated works with which scholars, in the language of the eighteenth century, "oblige" their fellow scholars and the small group of readers that is interested in the extension of the bounds of knowledge. Our quarrel is with the biographies made up out of old letters, with the aid of the typewriter, the paste-pot, and a pair of shears. As a rule, the letters are rarely worth reading for their own sakes, and what they tell about the subject of the biography might often be given in a couple of lines. And when, in addition to letters, we have slabs of diary—may the phrase be forgiven—and memoranda by friends, and testimonials of esteem from all sorts of persons obscure or not obscure, and clippings from newspapers, and quotations from magazines and books—when, in short, we have the authorized biography, as that fearful and wonderful product is now manufactured, lying on our table—thank heaven, not on our conscience—we are tempted, peaceable as we are, not merely to quarrel with the easy-going public that buys such portentous books, but to protest that, unless we bring our writers of biography to reason, they will bring the reading world to Bedlam. We shall soon be devoting to the memory of every Governor of every one of our forty and more States as many pages as Plutarch gave in his "Lives" to the chief worthies of the ancient world.

Having thus relieved our feelings, we must, in justice to the book under review, hasten to say that, while it is the occasion of our outburst, it is not to an excessive degree amenable to our strictures. It seems to us too long by half, and it illustrates many of the defects we find in the elaborate biographies of the day; but, as has already been said, it is a conscientious and competent and valuable performance, taken as a whole, and it is sure to be of great service to close students of Mr. Stedman's career and of the period of which he was probably the most distinguished poet and critic. One special merit even the most casual reader ought speedily to discover in it. Almost from the start an exceedingly manly, kindly, alert, and engaging personality stands revealed. As one reads on, one may ungratefully chide his copious biographers, or one may wish to relegate to Limbo some of his unreserved friends, but one's admiration for Mr. Stedman himself grows steadily to the very end. His pluck, his rare combination of the practical with the æsthetic genius, his unflinching pursuit of his ideals, his noble capacity for friendship, his loyalty to his fellows of the craft, and in particular his swift recognition and encouragement of worthy young aspirants, his reverence for the beautiful, his glowing patriotism—in short, the qualities that made him "The Friend of Poets," to quote the title of a chapter in his biography—all these features of his character serve to differentiate him from his predecessors and contemporaries and to give him a unique place in the history of American literature. It is chiefly because we have been so impressed by Mr. Stedman's character as a man—his standing as a poet and a critic need not concern us here—that we regret the almost prohibitive size and price of these volumes. May we not hope that Miss Stedman, to whom the task most fittingly belongs, will treat the present work as material from which to construct the succinct, inspiring memorial of Mr. Stedman which his achievements and his fine spirit deserve and without which the world will be the poorer?

Stedman was no exception to the rule that a boy destined to lead a literary life will somehow or other at an early age lay hands on the proper seminal books. Witness his remarks on the topic (Vol. I, pp. 46-57). On the other hand, he could no more than the rest of his contemporaries escape from the provincial literary enthusiasms that characterized the America of two generations ago. Devotion to Tennyson, however, soon displaced admiration for the "majesty" of a certain American poet who shall be nameless, and devotion to Tennyson, whatever growls it may draw from the young poetical lions of our own matchlessly poetical age, was an excellent thing for Stedman, and might

not be bad for some of his successors. Poe, too, whom he discovered in his sophomore year at Yale, and for whose fame he was to labor so unselfishly and effectively, was a writer calculated to stimulate the imagination and the acumen of a youth who was certain from the beginning that he would never sacrifice his own literary ambitions to the desire for pecuniary gain. Stedman could, we believe, time and again have made his fortune had he been willing to abandon his ideals; his putting aside the temptations of wealth is therefore far more to his credit than is the case with most poets and scholars, few of whom have invented a successful cosmetic or displayed, as he did, shrewd judgment in stocks.

We cannot dwell upon his business career, which is fully described in the first volume. Not the least interesting phase of it is his service as a war correspondent and as a clerk at Washington early in the sixties. Some of his letters of this period make instructive reading, and, while they show occasionally that he was not the best of prophets, they prove conclusively that he had an insight into character and a sense for the meaning of events rarely granted to men as fundamentally literary in their instincts as he showed himself to be from the beginning to the end of his career. If any one wishes to test for himself the truth of the statement that Stedman blended in a remarkable way the man of letters, the man of affairs, and the man of the world, let him read in the first volume the acute and sympathetic letter to Mr. Howells on the subject of Landor (p. 508), and, in the same volume, the letter to Whitelaw Reid on the subject of the Beecher Trial (p. 514). This reference to Stedman's admiration for Landor reminds us, by the way, that Swinburne's letter to Stedman on the old poet (p. 492) is a piece of spontaneous criticism which no wise reader will neglect.

The second volume more or less deserts the chronological method of narration employed by the first and treats Mr. Stedman's later career under his volumes of criticism, his editorial undertakings, his club relations, and similar chapter divisions. The result, in our judgment, is not altogether happy, especially as Stedman's own accessible writings are very copiously drawn upon and since the encomiastic utterances of his admiring contemporaries become rather monotonous and unconvincing. It was doubtless gratifying to the poet-critic to learn that four bishops of the Protestant Episcopal Church read with keen appreciation his "tribute to the Prayer Book," but such a recommendation will scarcely send many wary readers to the pages of "The Nature and Elements of Poetry." Much more to the purpose are the frank remarks of Mr. Swinburne with regard to the deficiencies of certain famous American poets (p. 100). The "literature of over-power" in the form of gush has been so well represented in our beloved country that it is refreshing to know that Lowell's "Commemoration Ode" did not leave upon Mr. Swinburne's ear—a very acute organ—"the echo of a single note of song." Let us trust that the angels are even now delighting Mr. Swinburne's ear and that such of the four bishops as have passed beyond are not reading Mr. Stedman's tribute to the Book of Common Prayer, with "its singular and felicitous delineations." If, however, the spirit of Lord Tennyson was permitted to read the obituary remarks printed by Stedman in the *Tribune* of October 7, 1892, that erstwhile exigent poet must have been highly delighted. We could spare many of the quotations from Mr. Stedman's books scattered through these volumes, but we would not willingly part with this meritorious waif of criticism. Indeed, we part now with regret even from this overfull second volume, for we are parting from a true poet, a sympathetic and creative critic, and an exceptionally inspiring man.

CURRENT FICTION.

Der Narr in Christo, Emanuel Quint. Roman von Gerhart Hauptmann. Imported by Lemcke & Buechner, New York.

The cry for return to the primitive purity of Christianity, of which Tolstoy was the protagonist, has produced a type of hero that might be called the Nazarene. The man whose attitude towards social injustice and individual self-righteousness is supposed to be the same as that of Jesus in His time, appears more and more frequently in fiction and drama. A notable example is the hero of Gerhart Hauptmann's first long novel, just published.

Those who have followed the development of the poet know that he has for a long time been attracted by this theme. He is a son of Silesia, which has ever been a fertile soil for pietism and mysticism; but he is also the offspring of generations of weavers, and the intimate and direct knowledge of their wretched condition had in early youth roused his social conscience. He read in the soul of the poverty-stricken, physically and mentally starved people that tendency towards spiritual exaltation which breeds Messianic types and fosters in the mass a readiness to embrace any gospel that promises escape from misery. Thirty years ago he wrote a psychological story, "Der Apostel," which is in a way the nucleus of the new work. The hero in that tale went about with flowing robe and sandalled feet preaching against force and homicide and exhorting the people to return to peace through the portals of nature. In Emanuel Quint the type tentatively embodied in the "Apostel" finds its perfection. By his birth he is doomed to stand outside of the social pale; by the unfortunate atmosphere of his home he is forced into isolation. Thus the youth becomes a dreamer and a dissenter, and an alien in the materialistic, artificial, yet inhuman society of his time. But the need of communing with those of his kind is strong in him. He, too, like the "Apostel," has "something to tell his brethren." His sermon in the marketplace of the little Silesian hamlet brings about a collision with the authorities, but being a non-resistant, he is held to be harmless, and is dismissed with a rebuke.

With this début Quint becomes a hero to those who have listened to him, and wins his first disciples. Strengthened in his faith by "Brother Nathanael," who becomes his John the Baptist, Quint gathers about him a motley crowd of men and women in various walks of life, who follow him in his aimless wanderings, eagerly awaiting the miracle, and expecting him to declare himself the Christ. But he simply drifts with the spiritual wave which he has raised, obeying a vague impulse of his visionary nature; and when at last he believes himself to be the long-heralded Messiah and attempts to live up to the part suggested to him, he finds that their fund of faith in him has been meanwhile exhausted and that his followers have deserted him. Acquitted of a heinous crime which one of his converts had committed, he wanders away until the last trace of him is lost in the snow-bound solitude of the Alps —a fitting finale for a tragedy of pseudo-Messianic delusion.

Hauptmann has proved himself an artist not only in the delineation of this character, but also in the logical development of the plot. There is no lack of incident, and there are numerous episodes illustrating his hero's relation to those about him and bringing in a variety of characters no less skilfully portrayed. But there is no break in the continuity of the narrative, the central figure stands out with the sharpness of an old woodcut and always dominates the subordinate *dramatis personæ*. Nor does Hauptmann once forget to maintain the objective and impersonal standpoint of the mere recorder. There are passages in the book when his aloofness is almost too strongly emphasized and when he appears almost too eager to disclaim all responsibility for his hero's idiosyncrasies and actions. Yet though the poet has nowhere formulated the meaning of his life, the figure of Emanuel Quint is felt to be symbolical. For Hauptmann has once more made himself the mouthpiece of the folk-soul. He has consciously or unconsciously replied to two questions that have been repeatedly asked

in our time in no irreverent manner by religious and irreligious people: "What would Christ do were he to come into the world to-day?" and "What would the world do to a Christ to-day?"

Harmen Pols. By Maarten Maartens. New York: John Lane Co.

This superficially resembles a story by Phillpotts with a Dutch setting. The rustic types of Mr. Maartens are closely analogous to the characters of the Dartmoor tales. The central situation is very like that of "The Thief of Virtue"; only with Mr. Maartens, however he may dally with the naturalistic method, romanticism is an instinct. "The Thief of Virtue," for example, is not bitter or sordid, but it is grim: it makes no effort to "turn out right" for the comfort of the reader. In "Harmen Pols" a similar theme is treated with romantic intention. Mr. Maartens, moreover, lacks the restraint of Mr. Phillpotts. His humor is often mere facetiousness, and there is a general exuberance of style which belongs perhaps to the conscious performer in an alien tongue. Harmen Pols is a young Dutch peasant who has reached manhood with much of the child still in him. His father is a small freeholder, a man of grim piety, a hard taskmaster to himself and others. His mother is a still youngish woman of charm and character, with a past. She has married Pols senior shortly after breaking with a former lover, and from the first he has suspected the paternity of the boy. His suspicion becomes conviction, and without letting her know of his feeling, he sets himself to expiate her fault. The presence of the old lover in the neighborhood increases the embarrassment of the situation for Harmen when it all dawns upon him; and his love for the alleged daughter of the man is the last straw. But everything is readily straightened out. Harmen turns out to be the son of his mother's husband, though she confesses to sin through long years in the cherishing of her old love for the other man. The story ends in an atmosphere of forgiveness, relief, and resignation on the part of the older trio, and a prospect of immediate happiness for the young pair.

The real blemish of the story lies in its farcical business of the old aunt and her group of grotesque comforters. They are not more absurd than certain immortal characters of Boz, but it is tolerably clear that Mr. Maartens does not take them seriously, as the characters of true farce must be taken by their creator; and again he pays the penalty of dalliance.

Jim Hands. By Richard Washburn Child. New York: The Macmillan Co.

In this volume the author's studies of New England factory-town types have been collected and strung together. These incidental characters and episodes are in themselves remarkably genuine and interesting, but the scheme for combining them is thin and artificial. By a misapprehension which the impatient reader does not share, the love story of the boss's son and the foreman's daughter is needlessly involved, and tediously protracted. Jim Hands, shoe-factory foreman, is himself a distinct creation, kind-hearted, very human, and "no fool"—the American workman at his best. By using his tolerant fellow-feeling and genial vernacular as a medium, the author has imparted finer values to some rather raw phases of experience.

THE FAR NORTH.

Hunting with the Eskimos. By Harry Whitney. Illustrated with photographs by the author. New York: The Century Co. $3.50 net.

Hunting Camps in Wood and Wilderness. By H. Hesketh Prichard, F.Z.S. With a foreword by Frederick C. Selous, Gold Medalist of the Royal Geographical Society. Illustrated by Lady Helen Graham, E. G. Caldwell, and from photographs. New York: The Sturgis & Walton Co. $4 net.

The Toll of the Arctic Seas. By Deltus M. Edwards. With illustrations. New York: Henry Holt & Co. $2.50 net.

The Great White North. By Helen S. Wright. With illustrations. New York: The Macmillan Co. $2.50 net.

Dillon Wallace, who contributes a brief introduction to Mr. Whitney's volume, is quite within bounds in the assertion that the author has brought from the Arctic "a remarkable and absorbing narrative of thrilling adventures and unusual experiences," and has made "a distinctive and valuable contribution to the literature of the region." It will be remembered that Mr. Whitney went north with Commander Peary in 1908, intending to procure musk-ox trophies if possible and to return with Capt. Bartlett on the Erik, after the Roosevelt should depart into the polar void with Peary. But the quest for the musk-ox had failed when the day for the Erik's southward journey arrived, and he suddenly concluded to remain with the Eskimos for a year. The carpenter and boatswain of the Erik hastily erected him a ten-by-twelve house from empty provision boxes, Capt. Bartlett replenished his scanty supply of underwear from his own wardrobe, and on August 21 he watched the last vestige of smoke from the Erik's funnels vanish on the southern horizon, and then realized that he was "marooned in the most desolate region of the earth." On the Roosevelt he had had to accustom his nostrils to the presence of some fifty Eskimos in close quarters, plus about three times as many dogs, and on the Erik he had lived for a time in close proximity to thirty tons of whale meat, stowed on the deck under the heat of the July sun to serve as dog food for the coming winter. But as winter came on the forced association with the Eskimos in their ill-ventilated and untidy *igloos* added to the annoyance of disgusting odors the still more painful necessity of having his body constantly infested with vermin, a situation from which the very infrequent opportunity for a complete bath could offer only a temporary respite. A year under such conditions gave to Mr. Whitney an opportunity to observe the Eskimos in their normal habits of life such as the usual Arctic explorer cannot possibly obtain. As compared with the incidental treatment of the same subject in Peary's recent volume, for instance, the picture of Eskimo life and character which one finds in Mr. Whitney's pages is far more detailed and convincing. Peary's heavy drafts upon the natives for assistance made it inevitable that his coming should immediately upset their usual ways of life, and only after his departure could things settle back to their normal level.

Mr. Whitney's final impressions of the Eskimos are more favorable than most of us might imagine possible. Toward one another and toward the stranger within their gates he finds them very kindly in disposition, their family affection surpassing anything he has observed in any other people. Physical punishment of a child is virtually unknown among them, and there seems to be no occasion for it. Their tenderheartedness, however, is limited strictly to the human kind. The doctrine that "a merciful man is merciful to his beast" is as yet above their primitive morality, and they will beat their sledge dogs to death without the slightest compunction. They show a fairly well developed sense of humor. They are honest and straightforward in their dealings. One may surmise that neither Mr. Whitney nor Peary has succeeded in getting sufficiently in touch with their religious rites and beliefs to be able to impart much valuable information on the subject. Mr. Whitney was strongly impressed with the art instinct displayed by some of them, one drawing lifelike representations of animals and incidents of the hunt and another showing an excellent eye for proportion and perspective, though wholly without previous practice. The head and tail-pieces accompanying some of the chapters are apparently samples of the work of these pioneer Eskimo illustrators, though one finds no statement to that effect in the book. But we have forgotten that this is a book which by title deals with hunting rather than ethnology, and we have space left only to add that Mr. Whitney returned to "civilization" with a goodly supply of trophies from such

of the larger forms of animal life as are found in the Arctic.

Mr. Prichard's volume sticks more closely to the quest of game, taking the reader to the pampas of Patagonia for the Guanaco, to the Patagonian Andes for the guemal, the condor, and the wild cattle which trace their origin to escape from the early Spanish settlers on the Valdez peninsula, to Newfoundland, and the Labrador for caribou, to the forests of the St. Lawrence and Gander Rivers for moose, and to the province of Namdalen for the Norwegian elk. A pleasing feature of the book is the author's recognition that in these days the man who kills any wild animal not in itself detrimental to human welfare is under strong ethical obligation to give a satisfactory reason for the slaughter, though not all might agree with him that the collector's desire for a fine pair of horns constitutes such a reason. Mr. Prichard greatly deprecates the killing of horned game to supply the market for trophies, and holds that any successful game legislation must absolutely prohibit the exposure of such trophies for sale in shops, or even their private sale. He is on impregnable ground here, but goes strangely astray in his objection to the prohibition, on this side the water, of the use of the dog in hunting moose and deer. To be sure, it is only the leashed hound, as employed in Norwegian elk hunting, that he would tolerate, but if hunters in our northern forests could lawfully be accompanied by dogs at all, when on the chase, any restriction in the manner of their use would soon be a dead letter.

In Labrador Mr. Prichard was brought into contact with the work of the Moravian mission stations, and he is enthusiastic in his praise of the benefits which they have conferred upon the Eskimos, especially in preventing the introduction of liquor and other harmful features of our more advanced civilization. Peary, in his recent volume, has expressed the hope that no attempt at the introduction of Christian missionary effort among the Eskimos of his field of operations will ever be made; but their situation is somewhat different, since they do not offer so accessible a market to the cupidity of the liquor vendor as those of southern Labrador. In its liberal margins, the quality of its paper, and its excellent typography, this volume is a satisfaction to the eye, though tastes will differ as to the particular tone of its red buckram binding. The drawings by Lady Helen Graham, and the illustrations in color by E. G. Caldwell are pleasing in themselves, but after all, it is the photographic work of the author and of Mr. Geoffrey Gathorne-Hardy which really illustrates the text.

In "The Toll of the Arctic Seas" Mr. Edwards holds his pen down quite closely to the most important explorers, less than twenty in all, from Barents to Peary. It is not a record which one can read for mere entertainment. Many will turn to its pages from a legitimate desire, but only a morbid passion for the horrible could draw any enjoyment out of the tale. Barents, freezing and starving to death in his boat off Ice Point; Hudson, turned adrift by his mutinous sailors in a little shallop, to die amid the icy waves; Bering, crazed with his sufferings, scraping the cold sand in his hovel over his body to ease the pain as his life ebbed away; Franklin, perishing with 129 men, no one knows how; Richardson and Hepburn, members of one of Franklin's parties, obliged to safeguard their own lives by shooting one who had already secretly murdered one of their companions and deceived them into eating his flesh under pretence that it was wolf meat; Capt. Tyson, of the Polaris, drifting for above five months on an ice floe after the loss of his ship, with indescribable suffering from cold and hunger and in constant dread of cannibalism on the part of certain of his comrades—such are a few specimens of the horrors with which the record is filled.

Similar to the volume of Mr. Edwards in its general plan, "The Great White North" includes many minor voyages not noticed in the other. These accounts are too fragmentary in many cases to be of serious value, and the exclusion exercised by Mr. Edwards seems the wiser course. The illustrations in both volumes are too often mere pictures of Arctic life or scenery, with no relation whatever to the part of the text in which they are placed. Under a picture of the cairn erected by Peary in memory of Prof. Ross G. Marvin, the latter volume makes the erroneous statement that the cairn stands over his body. It was erected on land, of course, and Marvin's body was not recovered from the hole through which he went to his death far out on the polar sea. Both volumes have been too hastily prepared.

A DECADE OF GAIN AND LOSS.

History for Ready Reference. By J. N. Larned. Vol. VII, Recent History (1901-1910). Springfield, Mass.: The C. A. Nichols Co.

This work is essentially a catalogue of current happenings. The method upon which it is based—of taking excerpts from periodicals, and of combining a miscellany of such excerpts under a single title—has its undoubted advantages, although unity of treatment is not always one of them. Still, a judicious culling of well-considered opinions upon any large subject, such as Social Betterment or Municipal Government, for example, when the abstracted opinions are arranged in chronological order, makes a very passable substitute for an essay by a single hand. Moreover, the bibliography is always in evidence, and the newspaper man as well as the general reader may find in this up-to-date account of the world's doings—the account extends down to March, 1910—a more serviceable repository of information than in a belated article of the normal encyclopædia type.

An extensive Appendix of eighty pages gives a conspectus of historical courses for study and reading. It is confined to works in English, including translations into English from other languages. Within these limits it is excellently constructed, the aridity of a mere inventory of titles and authors being relieved by sententious oases of illuminating comment, not confined to the works listed, but covering the more general aspects of historical epochs and their great personages. The filiation of the study of general history with this volume's catalogue of current events, however, is rather tenuous.

Among the articles which run to more than the average length may be mentioned those on Combinations, Industrial and Commercial; Railways; Labor Organizations; Science and Inventions; Japan, covering the Russo-Japanese war; India, affording an account of the recent unrest in that country and the overtures of Lord Morley in the direction of an Indian home rule movement; and England, under which title the recent budget is analyzed. The article on Education fails to note the withdrawal of retiring allowances that under the previous provisions of the Carnegie Foundation could be claimed, as of right, at the expiry of twenty-five years of service by a professor in an accepted institution.

A re-survey of the last decade, such as this volume affords, brings into sharp contrast the more pronounced social gains and losses of recent years. To the debit of our common humanity stand such items as Kishenev, Adana, the Atlanta race riots, and the Congo rubber atrocities. It requires all the optimist has of resolution and hope to confront the insidious international growth of the white slave trade. Under the heading of Municipal Government the theme of corruption is the main note in the record of Philadelphia, Pittsburgh, St. Louis, and San Francisco. The horrors of war were never more pronounced than at Port Arthur and Tsushima, nor were war armaments ever more vast and oppressive than today. Lastly, the Payne-Aldrich tariff makes a fitting climax to the stupid, selfish, and burdensome legislation that has disgraced the world's statute books.

Luckily, there are offsets, and in this array a little child shall lead them. The article "Children under the Law" is a hopeful recital of the establishment of children's courts, of the prohibition or the amelioration of child labor, and of the humanization of the criminal code in various lands as regards the juvenile

offender. Next may well come the extension of the classified civil service in this country. Instead of there being only 11 per cent., as in 1883, there are now 63 per cent. of our civil servants under the ægis of the law. If the war mania grows and rages, and armaments increase, so has the revolt against war grown also. Of this the National Peace Congresses and the Hague Tribunal stand witness. The work of education and research also have received in the past decade princely benefactions, as the names of Cecil Rhodes, Carnegie, Rockefeller, and Kennedy attest. The various workmen's compensation acts and the propaganda for the conservation both of health and natural resources are distinctly on the right side of the ledger. Altogether, it is a tough old world that we inhabit, but fortunately the children of light are still able to give the devil a good brush.

Life in the Roman World of Nero and St. Paul. By T. G. Tucker, author of Life in Ancient Athens. New York: The Macmillan Co. $2.50 net.

With Dill's admirable book on "Roman Society from Nero to Marcus Aurelius" on the one side and Warde Fowler's volume on "Social Life in Rome in the Age of Cicero" on the other, Professor Tucker has not had a very clear field for independent work. Mr. Fowler's volume was begun expressly as a companion to Mr. Tucker's "Life in Ancient Athens," and it was apparently the discovery that Mr. Tucker himself was at work upon a volume to answer the same purpose that caused a change in his plans. At any rate, we have two books in the same series, each somewhat narrower in title than in substance, and both covering a great deal of the same ground, since the changes in the social customs of the Romans from Cicero to Nero were by no means radical, aside from such alterations as the political revolution necessarily entailed. In itself, however, Mr. Tucker has given us a readable volume, well calculated to help interest the general reader in ancient life and thought, an end which he unites with Mr. Fowler in regarding as of vital importance to the cause of classical learning.

The chapter on Children and Education would have gained from a liberal use of certain passages in Quintilian's "Institutio Oratoria" and the "Dialogus de Oratoribus" of Tacitus, in which the home and school training of Roman children is vigorously discussed. The statement that the Academic philosophy "disputed everything and held no doctrine to be more true than its contrary" is very far from an accurate characterization. To hold that the human intellect is provided with no absolute criterion of truth is one thing, and to maintain that no doctrine is any more true than its contrary, or in other words that there is no truth, regardless of the ability or inability of the mind to comprehend it if it did exist, is quite another. In the chapter on religion, some of the author's statements are put too baldly to do justice. Religion and personal morality tend too easily to part company in all ages and among all races, but to state that the religion of the Romans had no bearing at all upon their own morality is to ignore the facts of human nature, as well as the evidence of Roman history and literature. The question is merely one of degree. That the official worship of the state "offered nothing to the emotions or the hopes" is also an over-statement. With all the easily demonstrated deficiencies of the Roman faith, it was by no means so dead as such statements would imply, and Augustus was not devoid of his ordinary sagacity in his opinion that it had hold enough on the hearts of the masses to justify his enormous expenditures in repairing the damage done to its temples and altars through the neglect or outrage incident to the civil wars. Mr. Tucker runs, doubtless, with the larger crowd in assuming an entire insincerity in Horace's outward show of respect for this religion, but a reasonable interpretation of the work of the poet's mature years does not justify this position. But we must not find fault with too many comparatively unimportant details in a book which, as a whole, is scholarly, readable, and well calculated to advance the interests of classical culture.

Reminiscences. By Goldwin Smith. Edited by Arnold Haultain. Illustrated. New York: The Macmillan Co. $3 net.

To have lived a long and varied life of intense intellectual activity, in touch with the best of the time, is the first requisite of interesting autobiography; and the second is to be able to write in a style that lures and charms. Both these qualifications the late Goldwin Smith had, as this volume alone would be sufficient witness. It is also, unfortunately, witness to the fact that Mr. Smith did not live to complete a full and ordered story of his own life. Sections of it he had written; glancing views he had taken at men and public measures and the political and social developments of his own day: some chapters are, no doubt, very nearly as he had prepared them to appear in print; but as his private secretary and editor, Mr. Haultain, explains, it was largely a series of fragments and sketches which had to be pieced together to make this book. As it stands, it is of great value; but it leaves the reader doubly regretting the accident which cut off the valiant and far-planning old man in the midst of his work. Few autobiographies end on such a tragic note: "That door to a happy and perhaps not unfruitful old age and exit was shut. I received a shock which ruined my intellect, my memory, my powers."

It is probable that Goldwin Smith had written with most care the chapters which recall his boyhood and school-days. His evocation of that far-off time is idyllic in its fresh simplicity. The scenes and people about the "little boy," back at whom the old man looked in kindly detachment, live again under the strokes of Mr. Smith's pen. "Between that state of things and the present, there is only a single lifetime, yet I feel as if I were writing of antiquity." But we soon get away from the idyll. The exciting religious and educational and political questions which stirred the English world of the author's young manhood are here dealt with only hastily, though Goldwin Smith took his part in them all—particularly in educational reform. His reasons for throwing up his Oxford professorship are hinted at rather than given, and his life at Cornell and afterwards at Toronto does not take on body in these pages. One feels that the "Reminiscences" should be followed one day by a "Life," which is, indeed, understood to be in preparation. Not that the present work is disappointing. Its recollections embrace the great literary and political figures of the last half of the nineteenth century, and the wonderful pungency of Mr. Smith's writing marks nearly every page. He emits phrases that stick in the memory. American politics suffers from "fatuous localism." Of associates, who went into holy orders, but did not fulfil their early promise, it is said that their intellects "felt the pressure of the white tie." Baron Parke's talk is thus characterized: "Every sentence he uttered was like a die stamped by a mighty engine." It is such intellectual gleams that lighten Mr. Smith's pages almost throughout.

The editing has been done with intelligence. Mr. Haultain apologizes for making his footnotes so numerous; they are intended to help the "general reader." In them we have detected one or two wrong dates, perhaps misprints, and one rather comic misunderstanding. Of Gladstone, Mr. Smith wrote that he may have had "a tincture of Liverpool." Mr. Haultain takes this as a personal allusion, and solemnly appends his note on the Earl of Liverpool. The reference was, of course, to the city of Gladstone's birth and its supposed contribution to his mental make-up, as implied in the story of the old Whig, who said of him: "Ah, Oxford on the surface, but Liverpool below."

Notes

Henry Holt will issue immediately "Turner Essays in American History." The volume is dedicated to Dr. Frederick Jackson Turner by the authors, his former pupils at the University of Wisconsin.

In commemoration of the tercentenary of the Authorized Version, S. F. Pells will publish with Simpkin & Marshall "The Great Texts of the Bible and Our English Translations."

The complete body of Henrich Heine's poetical remains, including the two tragedies, "Almansor" and "William Ratclif," has been rendered into isometrical English verse, and will form the next issue of the Villon Society.

Baker & Taylor Company announce the following books for publication this spring: "The Tennessee Shad," by Owen Johnson; "Dan McLean's Adventures," by Frederick Walworth Brown; "The Blue Goose Chase," by Herbert K. Job; "Malory's King Arthur and His Knights," by Prof. Henry B. Lathrop of the University of Wisconsin; "Seeing Europe by Automobile," by Lee Meriwether; "American Lyries," edited by Edith Rickert; "Guide to English History," by Prof. Henry Elson; "Guide to Cities of Western Europe," by Esther Singleton; "Child's Guide to Living Things," by E. T. Brewster, for children from eight to fifteen; "Kindergarten in the Home," by V. M. Hillyer; "A Paradise in Portugal," by Mark Sale; "The Iliad of Homer," translated into verse by Arthur G. Lewis; "The Corpus Christi Pageants in England," by Prof. M. Lyle Spencer; "The Canon in Residence," a novel of cathedral life in England by Victor L. Whitechurch, and "A Poet's Anthology of Poems," by Alfred Noyes.

The list of books which the Putnams will publish early this year includes: "Bawbee Jock," by Amy McLaren; "The Return," by Walter De La Mare, a novel; "William the Silent," by Ruth Putnam; "Later Pratt Portraits," by Anna Fuller; "The Great Infanta: Isabel, Sovereign of Flanders," by Miss L. Klingenstein; "Behind the Screens: an English Woman's Impressions of Japan," by Evelyn Adam; "Songs of Cheer," a volume of verse by Allie Sharp Balch; "Love and Marriage," by Ellen Key, with an introduction by Havelock Ellis; "The Ashes of a God," by F. W. Bain; "The Great Illusion," by Norman Angell; "Incidents of My Life," by Dr. Thomas Addis Emmet; "Christ's Social Remedies," by Harry Earl Montgomery, and "A Short History of Women's Rights," by Eugene H. Hecker.

The Putnams, acting as the American representatives of the Cambridge University Press, announce the publication of the following volumes: "The Liturgy of the Primitive Church," by Reginald Maxwell Woolley; "English Patriotic Poetry," selected and annotated by L. Godwin Salt; "A Companion to Latin Studies," edited by John Edwin Sandys; "Cyzicus," by F. W. Hasluck, and "Disarrangements in the Fourth Gospel," by F. Warburton Lewis.

The only publications which Frederick A. Stokes Company definitely promises for February are "The Chasm," by George Cram Cook, and "The Vow," by Paul Trent.

George Gibbs's new novel, "The Bolted Door," is announced by the Appletons for January 20.

A second volume of the "Reader's Guide to Periodical Literature" has been issued by the H. W. Wilson Company of Minneapolis, giving the cumulated entries for the years 1905-1909. Besides a long list of magazines and proceedings a considerable number of books of essays and the like are included in the index. The editorial work has been carefully done by Miss Anna Lorraine Guthrie.

The "Almanach de Gotha," published by Justus Perthes of Gotha, has reached its one hundred and forty-eighth year, an age befitting its theme. Here, as usual, the royalty and nobility of Europe and the diplomatic tables for the world are set before the eye. The two frontispieces present the King and Queen of Belgium.

From Lemcke & Buechner we receive the always welcome "Minerva: Jahrbuch der Gelehrten Welt," now in its twentieth year. The frontispiece is an excellent portrait of Lord Lister. The increase in size and usefulness of the present volume is indicated by the fact that nearly four hundred new institutions and learned societies have been added to its list.

With the regular "Minerva: Jahrbuch der Gelehrten Welt," there now appears the first volume of a "Handbuch der Gelehrten Welt." In this a brief history, bibliography, and constitution of institutions of learning of the world are given, but not the membership of the faculties and other matter contained in the "Jahrbuch." A second volume of the "Handbuch" is in preparation and will give the same information for libraries, archives, museums, and observatories.

The *Bible in the World*, the monthly journal of the British and Foreign Bible Society, announces the publication in the near future of two important works. One is a new edition of the Hebrew Bible, but without vowel points, and in type not smaller than the present octavo edition of the society; the other is an edition of the Greek Pentateuch and Psalter on the basis of the Septuagint. The preliminary work in settling the text of the latter work is progressing rapidly.

The house in Gough Square, London, E. C., associated with Dr. Samuel Johnson, has been purchased and is to be presented to the nation by an unknown donor. It was there that Johnson produced the *Rambler*, and from it that his wife was buried. The house has in various ways been connected with the production of books, having been in turn a type foundry, a printing office, and a book bindery. Fortunately, it still retains internally some traces of its eighteenth century character.

One feels the positive elements in the mind of Anatole France more distinctly in his volumes of criticism than anywhere else in his works. "On Life and Letters" (Lane) is a translation of the first series of "La vie littéraire"—short articles on men and books of the day originally contributed to the *Temps*. M. France entered late upon his career as a journalistic critic, and with the understanding that he was to be allowed to write as he pleased. He did not permit the exigent press to alter the suave and serene informality of his manner. Without elevating his voice he continued in a larger circle his ironical play with ideas, his elegant connoisseurship in the pleasures of letters. He ends a paper on George Sand with the characteristic declaration that all nature seems to have no other end "than to throw two beings into each other's arms, and to make them enjoy, between two infinities of nothingness, the ephemeral intoxication of a kiss." And quite as characteristically he begins the next paper with a set of quotations from "The Imitation"—among them, "Be not familiar with any woman; but commend all good women in general to God." It is easy to think of him as simply the sagest trifler in the world.

There is no denying that this appearance of sovereign irresponsibility has its momentary appeal amid the clamant gospels of the hour. And yet as one follows M. France from Hamlet to Maupassant, from Leconte de Lisle to Zola, from Balzac to George Sand and Idealism in Art, and On Behalf of Latin, one becomes conscious of an unobtrusive but constant element in his comment that is of a positive character. This Frenchman who opens his mind to all things will not open it to intemperance, to brutality, to ugliness. This man whose pride it is to know the latest mood of the world spirit will not wholly surrender to that mood. This unattached skeptic preserves a quite unshaken faith in form and measure, in lucidity and grace, in temperance and beauty. In short, he holds himself responsible to his classical masters in France, Rome, and Greece for the perpetuation of the finer Athenian tradition in life and letters. An assailant of every form of superstition, he is still a devout lover of what the emancipated intellect can regard as "the good and the beautiful." "There is no poetry," he says in his essay on Leconte de Lisle, "except in desire for the impossible or in regret for the irreparable." Truth crumbles insubstantially under his fingers, but her image remains in his mind. No one more swiftly than he recognizes the eternal *ter frustra*—the Elysian gesture of art pursuing the inviolable shade.

Although issued by a party organization, the pamphlet containing three recent addresses by Prof. J. H. Morgan on "The Place of a Second Chamber in the Constitution" (London: National Liberal Club) is by no means to be placed in the class of mere campaign literature. Its author, who holds the chair of constitutional law in the University of London, is the best-equipped British writer on that subject in the generation following Anson and Dicey, and this brief publication gives a remarkable example of his union of learning and insight. He lays special stress upon the fact that most of the advocates of the theory that Upper Houses are a check upon hasty legislation base it upon the assumption that the executive and the legislature are separate. They have in their minds countries where large powers are given to an Upper House with a view to its coming to the support of the executive against a Lower House which has an unrestricted initiative in legislation independently of the ministry. Arguments drawn from such instances "not only do not strengthen," says Professor Morgan, "but rather weaken the case in favor of a strong Upper House where the executive rests on the support of the Lower one." The writer points out that the responsibility of the ministry for legislation is a nineteenth-century development of the British constitution, whereas the foreign constitutions with

which it is often compared are of the British eighteenth-century or even seventeenth-century type. He goes on to maintain that the really important distinction in a comparative study of the place of a Second Chamber in a constitution is not the extent to which the constitution is written or unwritten, nor whether it is unitary or federal, but whether the executive is dependent upon the legislature or independent of it. The historical sketch leads up to the practical conclusion: "Once transfer the power of dissolution from our cabinet to our House of Lords, as in effect you do the moment you concede to the Lords the right to reject money bills, and you have destroyed responsible government in this country. Our House of Lords will become an autocracy as powerful as the German Bundesrath." The pamphlet closes with an analysis of the various proposals for meeting the present emergency. Professor Morgan's own conviction is that the carrying of any such scheme as the government's intended limitation of the Lords' veto will have to be followed by a drastic reform in the constitution of the Upper House. He inclines to the view that an Upper Chamber directly elected by large constituencies and small enough to admit—in case of deadlocks—of resolution into one assembly consisting of two Houses without imperilling the predominance of the Commons, provides the solution that is most easily compatible with the preservation of the cabinet system.

Gilbert T. Stephenson's "Race Distinctions in American Law" (Appleton) embodies in methodical form the results of a painstaking study of State and Federal Constitutions, statutes, and court decisions having to do with race distinctions or discriminations. The period covered is from 1865 to the present time, though earlier legislation is also occasionally summarized. Those who imagine that we have made great progress in assimilating the negro, or, for that matter, other non-European races, may well feel appalled at the extent to which racial distinctions, from the smallest to the greatest, have become embedded in law in this country. Not alone in the more familiar categories of suffrage, education, intermarriage, and travel, but in such matters as labor contracts, apprenticeship, vagrancy and pauperism, and a considerable list of occupations skilled or unskilled, the negro finds himself legally at a disadvantage in comparison with the white man; while beyond the law is the equally potent force of custom. To call a white person a negro is, in some Southern States, actionable; while in at least three counties in North Carolina, and in Syracuse, O., a negro is not allowed to remain over night. A fragmentary mass of evidence (pp. 253-273) suggests an ominous tendency to eliminate the negro as a juror in the South. We know of no book which summarizes this peculiar legal situation so fully or so dispassionately; and the work is of the more value for permanent reference because the author bolds no brief, but confines himself strictly to a statement of the law as it is.

Masuji Miyakawa's "Life of Japan" (Neale Pub. Co.), first published in 1907, reappears in a second edition "completely revised," but still with abundant errors of facts and numerous instances of the peculiarities that characterized the first edition. The author's propensity to quote his well-known "friends" is still conspicuous, as is his trick of self-advertisement. Everywhere his effort is evident to appeal to the prejudices of the classes of the American society whose knowledge of Japan is naturally limited and colored. The book falls into three parts: Old Japan, New Japan, and the Japanese-American Relation. The first part should never have been printed, so frequent and grievous are its errors. One seldom sees the civilization, and especially the history, of an old nation treated by one of its members in a foreign tongue with more levity and greater disregard of sound scholarship. The second part is less careless, and chapter xi, treating of the judicial institutions, has value as a faithful record of facts. In the third part, which the author probably regards as the most important section of his book, there is found an interesting discussion (pp. 230 ff.) of Japanese immigration to the United States. Otherwise, this section is marked by the author's manifest desire to appeal to the patriotic vanity of the American reader. Dr. Miyakawa's main thesis is that Perry was "the national redeemer of Japan," that Japan is "America's foster-child" and pupil, and that her entire population is deeply and "tearfully" grateful for the justice of American diplomacy and the benefit of American friendship.

"Through the Wildernesses of Brazil by Horse, Canoe, and Float," by William Azel Cook (American Tract Society), is a record of the journeys and missionary activities of a Bible colporteur. Ever since the days of George Borrow the possibilities of a book of this character have been thoroughly appreciated. Unfortunately, Mr. Cook has not followed in the footsteps of his distinguished predecessor; for his soul is filled with bitterness against the "pagan Portuguese." He can hardly mention the word "priest" without spluttering. "It is always the priest who poisons the minds of the people respecting the Gospel." "In another district, the priest hired an assassin to slay a certain medical missionary." Another priest "blustered and roared loudly, vomiting clouds of black smoke and a river of lava from his sacred crater." Mr. Cook has seen a considerable part of eastern Brazil, particularly of the state of Goyaz, but his chief observation on the capital of that state is that "five fat, fanatical, French friars reign over" it. Nevertheless, there are very interesting descriptions of the manners and customs of two little-known savage tribes, the Bororós in southern Matto Grosso and the Cherentes on the Tocantins. The publication of such a volume will not tend to increase the number of those who believe in sending Protestant missionaries to Catholic countries. There is no index, and there are many errors, both biological and typographical, but the pictures are good.

Philippe Monnier's "Venice in the Eighteenth Century" (Boston: Richard G. Badger) well deserved translating; for it gives a comprehensive and lively account of a nation in dissolution. The decline and fall of states are among the great topics of history; but no other state was ever like Venice, either in her grandeur or her decrepitude. M. Monnier has read widely in the Venetian memoirs, chronicles, and gossip of the last century of the republic, and in the records of innumerable travellers who visited the world's capital of pleasure. He describes the general life, the conditions and customs of the people, class by class, and then he turns to more specific subjects—to painting, literature, and music—and to several of the chief personages of the time. His chapter on Goldoni is excellent. So too are his essays on Gasparo and Carlo Gozzi, and on that astonishing adventurer, Casanova. He writes discriminatingly of the painters, doing full justice to Tiepolo, the "bastard of Veronese," for instance, but not placing him on the pinnacle to which recent faddists would exalt him. M. Monnier does not harp on the moral aspects of Venetian decadence, but he sees them. Addressing a Parisian audience, he cultivates a sparkling style. His chief defect is that he is often too obviously sparkling. But his substance is both entertaining and valuable; and to be too lively is certainly a venial fault in a world where dulness sometimes predominates. The translation has been well made, although occasionally Gallicisms peep through, and the foreign names are not always spelt correctly. The translator ought to have given an English version of the Venetian phrases. But, after making all due deductions, this is a book which every lover of Venice will be glad to own.

The death is reported of Dr. Samuel Alfred Ort, dean of Wittenberg College, at the age of sixty-seven. For eighteen years he was president of the college and was one of the most widely known Lutherans in the United States.

Brig.-Gen. Edgar Swartwout Dudley, retired, died at his home in Johnstown, N. Y., last Monday, aged sixty-five. For the periods 1876-1879 and 1884-1888 he was detailed professor of military science and tactics at the University of Nebraska. He was assistant instructor in the department of law at the Infantry and Cavalry School at Fort Leavenworth from 1889 to 1891. After serving as judge-advocate of volunteers during the war with Spain, and later, he was appointed in 1901 professor of law and history at the Military Academy, remaining there until June, 1909. He received the degree of doctor of laws from the University of Nebraska, and was a member of the National Geographic Society and the American Society of International Law. His book on "Military Law and Procedure of Courts-Martial" is the text-book at the Military Academy.

Science

The announcements of the Cambridge University Press include: Number VII of the Cambridge Manuals of Science and Literature, entitled "The Natural History of Coal," by E. A. Newell Arber; "Principia Mathematica," by Alfred North Whitehead, and "Diophantus of Alexandria: a Study in the history of Greek Algebra." (Putnam is the American agent.)

Among the Putnams' forthcoming science books are: "A Shorter Course in Woodworking," by Charles G. Wheeler, and "Neglected Factors in Evolution," by Henry M. Bernard.

In "Neighbors Unknown," shortly to be published by Macmillan, C. G. D. Roberts

has much to say about the bear, caribou, heron, flying squirrel, panther, lynx, and loon.

The *Journal of Experimental Medicine* will hereafter be issued once a month, instead of once in two months, as heretofore. Dr. Benjamin T. Terry takes the place of Dr. Eugene L. Opie as the associate of Dr. Simon Flexner in the editorial control.

The Sarah Berliner fellowship, which grants the sum of twelve hundred dollars for study or research in biology, chemistry, or physics, will be awarded this year for the second time. Applications must be in the hands of the chairman of the committee, Mrs. Christine Ladd Franklin, No. 527 Cathedral Parkway, New York, before February 1. This fellowship is awarded every other year; it is open to women who hold the degree of doctor of philosophy or who are similarly equipped for the work of further research.

The Seventh International Congress of Dermatologists has been called to meet in Rome from the 25th to the 29th of September, 1911. The convention will be held with Prof. Tommaso de Amicis of Naples as chairman, and Dr. Gaetano Ciarrocchi of Rome as general secretary.

The bibliography of the geographical literature of 1909, just published by the *Annales de Géographie*, maintains the excellence of the preceding annual issues, of which this is the nineteenth. The editor has had the assistance of sixty-three writers of various nationalities, who have contributed brief, but helpful, descriptive notes of most of the works catalogued. These are 1,153 in number, and include government and scientific society publications. In the index of authors and travellers whose works have been analyzed or cited will be found about 2,500 names.

In a notable volume ("The Geology of New Zealand," Christchurch, N. Z.: Whitcombe & Tombs), Prof. James Park shows that the chief asset of New Zealand, after its genial climate and its fertile soil, is its waterpower, which is already being harnessed, in one instance, at Dunedin, by an American engineer. Its coal-beds are reckoned to hold 1,000 million tons. It is said to possess the only considerable deposits of iron ore on the shores of the Pacific, the Parapara deposits in Nelson province are estimated to contain one hundred million tons. Now that the exhaustion of the iron beds of Europe and America is within measurable distance, the fact, if it be a fact, is important. But even New Zealand's rich stores, Professor Park believes, will not long retard the extinction of the iron age, and the advance of the age of aluminum. Aluminum, in turn, will give way and then, in a couple of centuries, battleships will be beaten into ploughshares, and agriculture will once more be the staple occupation of the people. Meanwhile, the output of the fast shrinking metals, now so wastefully mismanaged, will have to be regulated by law and probably conducted by the State. Of the more exhaustive studies, we may mention those on the genesis of the surface features of New Zealand, the table-topped mountain-ranges of Otago, the non-resistance of the islands to the travel of tangicial impulse, and the consequent perpetual rising and sinking of their masses, the mountain-making on a gigantic scale, and the systems of powerful "faults," which have played an important part in determining the structural features. There is also a brief study of neolithic man as presented in the still living Maori; and the date of the extinction of the moa is declared to be as yet an unsolved problem.

The best-known works of Dr. Wilhelm Meyer, who died recently at Meran in his fifty-eighth year, include: "Spaziergänge durch das Reich der Sterne," "Auf der Sternwarte," "Vom Himmel und der Erde," and "Muszestunden eines Naturfreundes."

Drama

Four Plays of Menander. Edited by Edward Capps. Boston: Ginn & Co. $2.50.

The first English edition of the Cairo fragments of Menander's Comedies was published in 1909 by Lord Harburton under the pseudonym "Unus Multorum." This was an amateurish book containing obvious mistakes of interpretation, some bad grammar, and critical notes of no value. It is a good example of the truth that genuine literary appreciation and ability to read Greek do not alone qualify their possessor to translate or to edit. Of the foreign editions Van Leeuwen's (1908) offered a scanty but valuable Latin commentary; Robert's (1908) was vitiated by its headlong and now totally discredited reconstructions; Sudhaus (1909) limited himself to a bare critical edition, now insufficient; Maurice Croiset (1908) published a single fragment, the "Epitrepontes," which he edited with his usual skill and literary tact. None of these can be said to have superseded Lefebvre's *editio princeps* (1907), and it was not till the appearance of Körte's Teubner text (1910) that we could feel that we had anything but tentative editions. Körte enjoys the great advantage over all editors since Lefebvre of having made an independent collation of the MS. The deplorable lack of a facsimile, delayed we know not why, has so far handicapped the rest.

Meanwhile Professor Capps of Princeton University has prepared an edition suitable for schools and colleges, equipped with a full literary and grammatical commentary, and critical apparatus, and with introductions which, though admirable as far as they go, are to be supplemented by a more comprehensive general introduction in a future edition. This is a book that will no doubt hold for a time at least the field for which it was designed. If Mr. Capps had followed the example of Jebb and given a translation opposite the text he would have made a far wider appeal. It seems to us that this might have been done at the price, which is high for a textbook. Nor would it have demoralized the student whom Mr. Capps helps over every least difficulty by translating liberally in the notes. But he evidently did not wish to win every vote, for, besides denying the amateur or general reader a translation, he has vexed the soul of the scholar by placing his critical notes at the end of the book instead of where we should like to see them, at the foot of the text.

We still want what Hertelius said he would give a year of his life to see, a whole play of Menander. The "Perikeiromene," for instance, has been restored to us from three separate cities, Oxyrhyncus, Aphroditopolis, and Antinupolis, and still we have barely half the play. The burning question, therefore, for most editors, is the reconstruction of the plots. There are scenes in the Cairo Menander in which no two editors are agreed over the distribution of the parts or their probable significance for the whole. The awful example of Robert, whose theory of the "Perikeiromene" was demolished by Körte's later identification of a single letter of the MS., should be a warning to sober editors. Mr. Capps quotes with approval Professor White's admonition to be content to be commonplace in the work of restoration. But it is not commonplace to transform a comedy into a farce, as we find the "Samia" transformed in this edition. The plot is complicated enough by the presence in a bourgeois family of an infant which is supposed by the master of the house to be either his own or a stranger's which his wife has persuaded him to adopt (either view is possible for the text), whereas it is really the child of his own son and the son's fiancée next door. Mr. Capps gratuitously imagines that there are two infants in the case, both in the house of Demeas, and that he, not knowing his infant from his infant grandson, falsely accuses his wife of being the mother of the latter. In the scene with Chrysis he thinks the nurse may be carrying both children, and that Demeas only knows that one of the bundles is a baby. To restore Menander to this tune is hardly fair, and to affirm on the strength of such restoration that the "Samia" "reveals Menander in a new light" (p. 230) is not scientific. Moreover, this view involves the assumption (p. 237) that an Athenian father who refuses to rear his own child will consent to adopt a foundling. The same tendency to be over-ingenious is evident in Mr. Capps's theory that Charisius in the "Epitrepontes" has left his own house, and is living in a house which, though it is his father's, and, what is more, is in the country, has been hired by a *leno*. The introduction of this *leno* as tenant of the father and host of the son is designed to support the editor's own conjecture that Charisius is playing a highly Quixotic part in leaving his guilty wife and giving her a chance to recover her dowry without being divorced. But for most of this development of the plot he depends on the St. Petersburg fragment, whereas Körte

stakes his reputation (*quovis pignore spondeo*) that this fragment is from quite another comedy. Mr. Capps may be right, but if so it is by divination, not from the evidence. Just so Patæcus may well be the husband of Myrrhina in the "Perikeiromene" (Körte, less probably, gives her an anonymous absent husband), but we are not convinced by the proof offered in 703 of the play, for the good reason that Mr. Capps wrote that line himself.

The following are conjectures by the present editor which do not seem to us sufficiently colorless. In Perik. 224, he reads σ' ἔδει "will eat yourself," *i. e.*, "wait patiently," a strange use which the passages quoted do not support; at 235 ὅλα in the sense of πάντα which is late and unnecessary; at 271 θρηνεῖς, meaning "whine" or "grumble," a use of the word which is not maintained by the passage quoted from the "Electra," because there the meaning is obviously the normal one "mourn the dead"; at 654 to read αἰσχρῶς προέσθαι is to import the idea that it is disgraceful to expose and abandon an infant daughter, which was not the view of Menander or his contemporaries; at 275 is added to Menander's vocabulary περιττοί = "fastidious," and at 661 ῥεθος = "the face," the latter an epic word which would have given most readers a slight shock if it had really occurred in the manuscript. The same is true of the line "A dragon can't rattle the door," a joke which the editor invents by conjecturing δράκοντος at 885. In "Samia" 120, we see no evidence that Demeas and his son have had a quarrel; in fact that is ruled out by the former's express statement in 60 ff. We observe that on page 175 Sosias is said to be attended by "a couple of ragamuffins," which is inconsistent with the escort of "several peltasts" given him on the next page.

With these exceptions, we have nothing but praise for the notes, the useful discussions of the staging and of the function of the Menandrian chorus, and the complete critical apparatus. There is a good bibliography and a photographic reproduction of part of the St. Petersburg fragment to which Mr. Capps assigns such importance for the elucidation of the "Epitrepontes." He is more scrupulous than Körte in bracketting all restorations. But then Körte gives us a reprint of the manuscript opposite his page, which Mr. Capps does not. The proofreading is accurate and we have noted only "editiorial" page vi, and τουπάνιον for τουπτάνιον page 245.

The Cairo manuscript should teach us how risky it is to generalize about a dramatist from quotations. The late Churton Collins, for instance, in the "Essay on Menander" which is still the best English estimate of his genius, labelled him a misogynist. But one of the most striking features of these new scenes is the way in which the characters of the women shine out and the men are humbled before them. Collins quoted part of the speech of Onesimus, fr. 174 Kock, to illustrate the theology of Menander. But we now see from the context that the speaker was an impudent slave using the Epicurean jargon of the day, and we have no right to count this as evidence of the views of the poet himself.

If the play which was presented in the New Theatre on Saturday evening had been called "Becky Sharp," it would have been less open to criticism. To call it a dramatization of Thackeray's famous novel is to make a false pretence at the expense of the author's credit. All attempts to reproduce the essential spirit of a great novel in dramatic form are necessarily idle, but efforts to deal with Thackeray in this fashion are especially hopeless. His descriptive, moralizing, humorous, and satiric commentary is so essential to the proper development and comprehension of his characters that it may be said to constitute their chief vitality. The fame of "Vanity Fair" has made it the prey of the adapter more than once, with the general result that all the other principal personages in one of the most wonderful groups of character studies in modern fiction have been virtually reduced to the position of mere feeders to the brilliant and heartless little adventuress. This has been done in the present instance, and there is this justification for it, that Marie Tempest, for whom the piece was originally made, possesses various personal and artistic qualifications which fit the part of Becky admirably. She is past mistress in all the arts of coquetry, knows how to deliver a wicked line with defiant audacity, has the touch of the French manner which Becky could assume so well, and diffuses a general impression of alert and fearless intelligence. She has the graces to allure and provoke a voluptuary of the Steyne type, and to dazzle and control a pudding-headed dragoon like Rawdon Crawley. It might be hinted that she is now somewhat mature for a part in which youthfulness was a most potent attribute, but the ripeness of her art enables her to conceal, in part at least, the flight of years. She still sings with the same skill and dances with the same lightness that long ago won renown for her in musical comedy.

Yet the plain truth is that the piece can scarcely be called a play at all, although it has dramatic moments, as when Rawdon Crawley returns from the sponging-house to surprise his faithless wife with Lord Steyne, a scene whose theatrical effectiveness is sufficient excuse for the variation from Thackeray. Otherwise it is a sort of panorama, with Becky the central figure in each successive picture. There are twenty-six speaking characters, but most of them are but feeble reflections of the originals. Albert Bruning succeeded in expressing some of the savage cynicism of Steyne, Louis Calvert was a sufficiently vulgar Sir Pitt, Olive Wyndham was a sympathetic Amelia, Graham Browne played Rawdon Crawley with comprehension, and Rose Coghlan lent instant prominence to the small part of the warm-hearted Mrs. O'Dowd. Mr. Ferdinand Gottschalk played the insignificant character of the Viscount de Truffigny with his accustomed neatness. To the eye the production was a constant delight, the reception at Gaunt House being an especially striking spectacle.

Music

Mistakes and Disputed Points in Music and Music Teaching. By Louis C. Elson. Philadelphia: Theodore Presser Co. $1.50.

Piano Teaching. Its Principles and Problems. By Clarence G. Hamilton. Boston: Oliver Ditson Co. $1.25.

Louis C. Elson, the eminent Boston critic and instructor in musical theory at the New England Conservatory, thinks there is great need of a Congress for the Revision of Music and Notation, and he hopes that when America holds its next World's Fair, instead of giving a number of concerts with native and foreign musicians, it will inaugurate such a congress; it might introduce order where chaos now rules, and it would be epoch-making. Music, as a science is as yet far less unified than the other sciences. Among the points which cry loudly for unification are the misuse of the sextolet, the irregular use of the long slur, the use of accidentals, the misunderstandings of long grace notes and turns, the dual use of the word portamento, the irregular methods used in artificial groupings, the fingering in piano playing, the pedal marks, tempo marks, the incorrect use of the word "time," etc. Pending the gathering of such a congress, Mr. Elson has endeavored in his new volume to give information to teachers, in compact form (172 pages), on those points in music on which authorities differ, as well as on those on which there are undoubted popular errors. It is the first compendium of the kind that has been attempted, and it may not only be accepted as authoritative, but the lucidity of its style leaves no ground for misunderstanding in any case.

While the points referred to appeal chiefly to professionals, there is much information on topics of interest to all music lovers. The author holds that if animals are attracted by music, it is chiefly because they come under the spell of rhythm. Bird music he does not consider. As for cats, their contributions to the art are of no particular value, even after death, for there is no such thing as catgut strings in the violin market. Violins themselves do not improve by age alone, but by being well played upon. The belief that a silver cornet sounds better than a brass one has no scientific foundation. An English manufacturer tried to dispel this error by making three cornets, of brass, silver, pasteboard, the result being that no one, when blindfolded, could tell which one was being played—yet the error survives.

Many musicians have laughed at Schumann's directions, in the first move-

ment of his G minor sonata: "as quick as possible," followed, a little later, by "quicker," and, finally, by "quicker still." In this case, however, there was no error, for, as Mr. Elson points out, at each acceleration the composer simplified the passage somewhat, which made it "possible" to play "faster." The author's remarks on tempo are the most important pages in the volume. It is a relief to see the "rubato" question at last treated rationally in a book. The author utters one more protest against the use of the words "time" to indicate the rhythm of a measure (instead of speed) and "bar" for measure (instead of the line that divides the measure), and he calls attention to the fact, which most pianists, professional as well as amateur, ignore, that in the music of the seventeenth and eighteenth centuries tempo marks should be taken more moderately, the quick movements less quick, the slow movements less slow, than in modern music. Among other points touched on are keys and color, absolute pitch, composers as conductors, American fingering (which is not American at all), piano touch, mispronunciation of names, when a child is musical, etc. One important point overlooked is the word "nasal," erroneously applied to sounds made without the use of the nose as a "sounding board." And there is another similarly misleading term of the use of which Mr. Elson himself is guilty, the word "damper," as applied to the right pedal. That word should really be given to the left pedal, which puts a damper on the sounds, while for the right pedal the adjectives "sustaining" or "coloring" should be employed, because those indicate its main functions.

Professor Hamilton also uses the word "damper-pedal" in the misleading sense (everybody does, for that matter), and he has not got away from the notion, which Paderewski has so amusingly ridiculed, that "tempo rubato" implies repaying of "borrowed" time. In all other respects this new volume by the author of "Outlines of Music History" is most commendable, its 171 pages being crammed with information every teacher and pianist needs. While some of it is elementary, telling teachers how to get and keep pupils, what to charge, how to stimulate their interest, etc., it soon soars into higher regions, discussing points that are ignored or only lightly touched on in the usual "methods." While technic is not ignored, more attention is paid to expression; and herein lies the unique value of this little treatise. Special chapters are devoted to the teaching of the rhythmic element (in which a device suggested on p. 77 is particularly clever) and the melodic and harmonic elements. Timid players will be glad to read that "when lyric melodies are applied to the piano . . . personal expression vies with formal structure, and sometimes dominates it entirely," while all accompanists should read and ponder p. 89, on which attention is called to the fact that a forte in the melody equals a mezzo-forte in the accompaniment, and a piano in the one a pianissimo in the other. In the pages on harmony the most important paragraphs are those which might be headed *cherchez la mélodie*. Mr. Elson might have got a point on p. 111, where the author calls attention to the important fact that a climax does not necessarily mean an increase of tone or speed, because we may desire a climax of restfulness or quiet. "Thus a gradual retarding and softening of the flow of tone, like that possible at the close of Grieg's 'Berceuse,' may waft the hearer from heaven back to earth so gently that he is still left hearing the voices of angels." Excellent remarks follow on variety in emotional expression and the relations to it of various composers. The concluding chapters are on public performances of pupils, various types of pupils, and the selection of music and books. At first sight the interspersed illustrations, such as Rembrandt's portrait of a Rabbi, Raphael's Madonna di Foligno, York Minster, seem absurdly out of place in a book on piano playing; but they are not used to adorn a tale, but to point a pedagogic moral.

It is not generally known that Liszt's orchestral works are performed more frequently than those of Richard Strauss, and as for his piano pieces Chopin's alone vie with them in vogue. In this, his centennial year (he was born on October 22, 1811), the number of Liszt performances will be doubled, if not trebled. Ferrucelo Busoni opened the local campaign on Monday by giving a recital in Carnegie Hall devoted chiefly to Liszt. There will be many like it before the end of the year, but only three other pianists, Paderewski, Hofmann, and Friedheim, will be able to penetrate beneath the brilliant surface of Liszt's music and reveal the treasures of thought concealed there, as Busoni does. Joseffy might, but he is too busy teaching and editing an edition of Liszt's piano works, which G. Schirmer is printing. Busoni is doing the same thing for Breitkopf & Härtel, who are publishing all the orchestral and vocal works, too. Huneker's long-expected life of Liszt, which is to be issued simultaneously in several languages, will also appear in the course of the year.

During the four seasons of opera at the Manhattan the French baritone, Maurice Renaud, was generally considered the greatest of the artists engaged by Oscar Hammerstein. This winter he has been singing with the Chicago Opera Company, and yesterday he gave a song recital at Carnegie Hall, the first in his career of nearly thirty years. Few opera singers appear to the same advantage in the concert hall as in the theatre, and M. Renaud is not one of the exceptions; he is so consummate an actor, and so used to making facial and musical expression go together, that one misses something when he sings outside the scenic setting, just as one does in the case of Wagner's music. Yet his recital was one of the greatest musical treats of the season. No other artist now before the public sets forth so completely as he does the poetic contents of a song, as well as the musical, and from this point of view, as well as in the matter of style, polish, diction, phrasing, his singing was a model for all. He sang fourteen songs, mostly French, but his rendering of Schubert's "Lindenbaum" and "The Wanderer" showed that, like Jean de Reszke, he is also master of the German style.

The fourth Congress of the International Music Association will be held from May 29 to June 3 in London. Its work will be done in six sections, viz.: history; ethnography; theory; acoustics and æstheties; church music and musical instruments; bibliography and organization. The languages of the congress will be English, German, French, Italian, and Latin. Announcements of papers will be received by the secretaries in London, No. 160 Wardour Street, London, W., until the end of February.

Angelo Neumann, who died about the middle of last month in Prague, where he was director of the German National Theatre, had published his "Personal Reminiscences of Wagner," in which is related his difficulty in obtaining, in collaboration with Dr. Förster, the right to present the "Ring" outside of Germany. Neumann was seventy-two years of age.

The death is reported from Hampstead, England, at the age of seventy-seven, of Joseph Goddard, author of "The Philosophy of Music," "The Rise of Music," and of the forthcoming work, "A Comparative View of the Development of Opera in Italy, Germany, France, and England."

Art

In "The Herkomers" (Macmillan) the successful painter, Sir Hubert von Herkomer, tells of his parents and of his own rise from the position of artisan. His parents were of humble position, the father a wood-carver, but of unusual character and wisdom. German emigrants, they tried their fortune in both England and America. The elder Herkomer encouraged the boy in art, and put him through a peculiar and useful discipline of concentrating upon memories until he could actually visualize them. Young Hubert had his hardships, supported himself long by illustration, but is able to say that he was never rejected and never badly hung. At twenty-six was painted The Last Muster, military pensioners at chapel, and from that time the young painter was famous. He had grounded himself upon the discreet sentimentality of Frederick Walker, painted rather better than the average R.A., was free from baffling eccentricities. Sir Hubert admits a few lapses into "purpleitis," and tells how once he manfully retrieved an empurpled picture of his from a protesting owner, and consigned it to the flames. Sir Hubert's activities as teacher, engraver, decorator, and portrait painter are so well known that we need merely say that his own account of his career is

both frank and modest, and very agreeable reading. We quote one or two characteristic traits. Of so versatile a talent it is odd to read:

I was not a sketcher; I had deliberately avoided acquiring that facility. . . . I could not, and cannot to this day, sit down and make an irresponsible sketch. "Make a picture of everything you do" was the Walkerian shibboleth; and from habits of thought and work it has soaked itself into my nature.

Once having occasion to paint a gander, and despairing of sketching him in motion, the painter had recourse to a device suggestive of artistic limitations:

I bought a fine bird from a peasant, had it killed, and then strung it up in its walking attitude with innumerable pieces of string that were attached to the roof of the model house. There it stood, strutting proudly towards me, real and natural. With such a quiet model I was enabled to get both drawing and texture of the feathers.

These things are a parable of much modern art, from Britain and elsewhere. One of Sir Hubert's most famous portraits is The Lady in White. He cites for mastery of the use of white on white Bastien's portrait of Bernhardt, forgetting Whistler's White Girl of earlier date. Sir Hubert characteristically evaded the specific difficulty of the problem by making the white background an actual photographic screen which received cast shadows. But the interest of this book is less artistic than personal. It reveals a stalwart, serviceable character, adequate in many emergencies, successful whether in making an exhibition or in erecting a memorial tower to a mother's memory. It is possible that certain self-revelations in this autobiography will tend to diminish the artist while exalting the man.

"The Art of the Munich Galleries" (L. C. Page & Co.), by Florence Jean Ansell and Frank Roy Fraprie, is an average piece of bookmaking, and, in accuracy, below the level of the series to which it belongs. Passing rather tangled phrases and bad spelling of names, there are considerable inaccuracies of statement, and obviously the best authorities have not been consulted. For example, Botticelli's Entombment is certainly not the picture described by Vasari, and is regarded as a school-piece by many critics. Documentary evidence has long since shown that Vasari's account of Filippo Lippi's amours and of Filippino's parentage is correct. Since there are many excellent guides to the old Pinakothek, the rather limited value of this book must lie simply in its independent criticism of modern paintings in the new Pinakothek and the Schack Gallery. There are about fifty illustrations.

In his new "Life of George Romney" (Scribner) Arthur B. Chamberlain's contribution of novel facts or opinions is very small, but the book justifies its existence by good sense and general readableness. The author has reproduced for the first time from the original paintings a number of Romney's important works. The social side of the man is naturally made much of, and the Emma Hamilton incident is treated with exemplary frankness and tact. Skilful use is also made of contemporary criticisms. We cannot agree with the author's estimate of Romney's position in art. His qualifications seem to us the slenderest. He transcribed with a rather shallow facility the obvious prettiness of women and children, and one's liking for his subjects is too often counted for real accomplishment. In his life, Romney was a perfect exemplar of the eighteenth century ideal of the man of feeling. A capital essay might be written about him from this point of view. That *sensiblerie* which is the rather shaky basis of his art finally degenerated into morbid fear of persecution. Earlier it had made him suspect foes where none were, and sadly limited his contacts and outlook. Mr. Chamberlain falls into a consecrated misuse of language when he speaks of classicism in Romney. If it is to be classic to like lanky girls in simple clinging drapery, then English art from Romney to Walter Crane has been Hellenic to the core. The mere statement of the case shows its absurdity. Romney shows at their apogee the defects of the English portrait school, and by way of compensation illustrates also certain almost artless merits. To capture the fine flower of bonniness in a sketch was his ideal, in which, occasionally, he succeeded admirably; but he lacked the rich, temperamental balance of Gainsborough, the probity of Hogarth, and the culture of Sir Joshua, and at best must be regarded as a diminished and Anglified Greuze. Whoever resents this opinion will find the corrective in Mr. Chamberlain's entertaining volume, where he will also find the pictorial material for forming his own judgment.

Finance

THE WORLD'S GOLD OUTPUT IN 1910.

Last week the Director of the Mint gave out his preliminary estimate on the world's gold production of 1910. Three districts nowadays yield three-fourths of this annual output—Southern Africa, Australia, and the United States. Of these three localities, it is estimated by the Mint that Africa yielded last year about $4,000,000 more than in 1909, Australia $5,400,000 less; the United States, $3,600,000 less. This estimated five millions decrease in yield of the three great producers is offset by slight increase over 1909 in such countries as Russia, Japan, China, and India; but the estimated product of $454,874,000 for the whole world in 1910 is only $852,000 above the total of 1909. On this result, the Mint director ventures the comment that "any possibility of an embarrassing over-supply of gold, with the attendant rise in prices which economists predicted to go with it, has been passed."

This is an interesting view. The Mint estimate has not gone unchallenged, for the *Engineering and Mining Journal*, chiefly because of a much higher estimate on last year's Russian output, reckons $9,800,000 increase over 1909 for the world at large. Nevertheless, the government figures point to the tendencies of the day in gold production. Except for the period when the Boer War blockaded the Transvaal gold fields, none of the twenty past years has shown an increase of less than $10,000,000 in the world's annual gold output. The usual rate of increase during the period has, indeed, been much larger than that figure. Between 1890 and 1899, it rose from $118,848,000 to $306,724,000, an average annual increase of $20,800,000, with one year, 1898, gaining no less than $50,800,000 over the year before. Dropping to $254,576,000 in 1900, when the Boer War blockaded the South African gold fields, production rose again to $327,702,000 when the Transvaal mines reopened in 1903, and reached $454,422,000 in 1909—an average annual increment of $21,000,000.

A decided halt in this long-continued rate of increase would doubtless again direct attention to the theories of volume of gold production as an influence on prices and prosperity. It can hardly be said, however, that knowledge of such conditions in the gold market would be equivalent to advance knowledge of industrial conditions. The world's gold output decreased in each successive year from 1878 to 1883—a period of booming prosperity and rising prices. It increased very rapidly in each successive year from 1891 to 1897—a period of falling prices and industrial reaction. Increase in gold output over the preceding year was greatest, not in such periods of financial exaltation as 1901 and 1906, but in 1898, when not only did the ratio of increase far surpass all other years of the present generation, but when the actual expansion in the product, as compared with 1897, was greater than in any other year but one in the world's history—that one year being the twelvemonth when the richest surface deposits of the California gold fields were first turned up by the pick of the forty-niners.

People of different shades of economic opinion will interpret differently these various facts, and will draw different conclusions from the estimates of slackening increase during 1910. Those who ascribe to the volume of annual gold output all the phenomena of the period-

ical upward or downward swing of commodity prices, would probably argue that increasingly rapid annual additions to the existing stock of gold do not operate instantaneously on prices—from which fact it would no doubt be reasoned that the economic effects neither of the decreased rate of output between 1878 and 1883, nor of the increased rate after 1891, could normally have been felt until after a lapse of several years. Those who hold that the quantitative theory of value is closely circumscribed and limited by other economic influences, would probably object that eight or ten years is a good while to wait before the results of a changing rate of gold production, under the quantitative theory, are visible. They would probably point out that the one sure and tangible way in which such new gold (or the lack of it) will influence prices is through the increase in gold reserves of the world's great banking institutions and the consequent enlarging of the limits allowed to credit operations, and that this result of a rapidly changing rate of gold production is immediate. The cables tell us, every Monday morning, exactly what bank and what market gets possession of the $5,000,000 or so in newly-mined and newly-assayed gold delivered in London by the Cape Town weekly steamer.

Perhaps the truth of the matter lies midway between the two opinions. At all events, the world's very recent experience has taught us that the facilities for expanded and continuous credit, provided by an unusually large movement of newly-produced gold into bank reserves, are utilized, as a rule, for such extravagant undertakings in capitalization and speculation as will repeatedly run beyond even the supporting power of the bank reserves, increased though these reserves may have been by unprecedented gold production. If the rate of annual gold production were hereafter to increase no further, the world's markets might return as a consequence to a normal situation. Not only might the economic embarrassments referred to by the Director of the Mint be mitigated, but the riot of reckless promotion and speculation, which has made up so much of our financial history of the decade past, might give place permanently to sober and serious finance.

Free Library

The Nation

VOL. XCII—NO. 2377 THURSDAY, JANUARY 19, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

READY NEXT WEEK THE SECOND EDITION OF

Mr. JAMES BRYCE'S *important revision of*

The American Commonwealth

with additional chapters and almost innumerable corrections

This exceptionally interesting work has been long demanded, for, the *New York Sun* comments: "It would be difficult to point to a more striking modern example of literary achievement than is furnished by . . . the vivacious interest and permanent value of this revised edition of 'The American Commonwealth.'"

Supplementary notes have been added to the chapters on Merits of the Federal System, The Working of State Governments, and on State Politics; Mr. Bryce has quite made over his American View of Municipal Government to take account of recent developments. Four new chapters on Immigration, the Negro Problem, the New Transmarine Dominions, and Further Observations on the Universities have been added to the second volume. A comparison page by page with the previous edition shows, in addition, almost innumerable minor alterations in the text, chiefly by way of bringing the survey fully abreast of the latest practice, or of replacing earlier illustrations by later and better ones. Statistics of all kinds, of course, have been brought up to date.

"There can be no need of pointing out again the qualities which have made Mr. Bryce's work a classic. Its consummate union of philosophical insight and comprehensive observation leaves it still after the lapse of twenty-five years *a political and social survey of incomparable excellence.*"—*New York Evening Post.*

In two octavo volumes. Cloth, gilt tops, $4.00 *net.*

READY NEXT WEEK VOLUME I. OF THE GREATLY NEEDED

Cyclopedia of Education

Edited by PAUL MONROE, Ph.D.

Professor of the History of Education, Teachers College, Columbia University; author of "A Text-Book in the History of Education," "Brief Course in the History of Education," etc.

To be complete in five large octavo volumes, each $5 *net.*

The men who need it are: All teachers, professional men, editors, ministers, legislators, all public men who deal with large questions of public welfare intimately connected with education—everyone who appreciates the value of a reference work which will give them the outlines of any educational problem, the suggested solutions, the statistical information, and in general the essential facts necessary to its comprehension.

The men who are making it are: Specialists in every department of educational work, chiefly chosen from the American field, but including men competent to write of European experience. Education in Germany is handled by Prof. Muench of the University of Berlin; Education in France, by the Inspector-General of Public Instruction, Paris, etc. The American contributors come from every section of the country and represent the most authoritative and sane specialization.

FIRST TWO VOLUMES NOW READY
THE MODERN CRIMINAL SCIENCE SERIES

This series of translations of the most important works of eminent European authorities on Criminal Science, chosen by a committee of the American Institute of Criminal Law and Criminology, will furnish a systematic and sufficient acquaintance with the controlling doctrines and methods regarding the individualization of present treatment and the study of the causes of crime that now hold the stage of thought in Continental Europe.

BOOKS NOW READY

I. MODERN THEORIES OF CRIMINALITY
By C. Bernaldo de Quiros, of Madrid. Translated from the Second Spanish Edition, by Dr. Alphonso de Salvio, Assistant Professor of Languages in Northwestern University. With an American Preface by the Author, and an Introduction by W. W. Smithers, Esq., of Philadelphia, Secretary of the Comparative Law Bureau of the American Bar Association. 8vo. Cloth, $4.00 *net.*

Señor de Quiros is one of the most eminent of modern Spanish criminologists. He has edited a "Library of Penal Science," and has written another treatise on "Crimes of Violence in Spain." The present work is a concise survey of all the European writers on Criminal Science during the last century. Several hundred are passed in review. It sums up the contributions of each one, aligns the respective schools of thought, and critically places each writer and each theory. It is the best reference handbook for learning the significance of each worker.

II. CRIMINAL PSYCHOLOGY
By Hans Gross. Translated from the Fourth German Edition by Dr. Horace M. Kallen, Lecturer in Philosophy in Harvard University. With an American Preface by the Author, and an Introduction by Joseph Jastrow, Professor of Psychology in the University of Wisconsin. 8vo. Cloth, $5.00 *net.*

Professor Gross is one of the half-dozen most eminent European students of Criminal Science. He has been a criminal magistrate, and is now Professor of Criminal Law at Graz, Austria. He is Editor of the "Archives of Criminal Anthropology and criminalistics," published at Leipzig; and has published numerous books and essays, including a Handbook for Criminal Magistrates (translated into French, Italian, and English). He was one of the first to study the psychological methods of crime-detection.

IN PREPARATION

CRIME, ITS CAUSES AND REMEDIES
By Cesare Lombroso, late Professor of Psychiatry and Legal Medicine in the University of Turin. 8vo. Cloth, $4.50 *net.*

THE INDIVIDUALIZATION OF PUNISHMENT
By Raymond Saleilles, Professor of Comparative Law in the University of Paris. 8vo. Cloth, $4.50 *net.*

CRIMINAL SOCIOLOGY
By Enrico Ferri, Professor of Criminal Law and Procedure in the University of Rome. Translated by Joseph I. Kelly, formerly Dean of the Faculty of Law in the University of Louisiana. 8vo. Cloth, $5.00 *net.*

PENAL PHILOSOPHY
By Gabriel Tarde, late Magistrate in Picardy and Professor in the College of France. 8vo. Cloth, $5.00 *net.*

CRIMINALITY AND ECONOMIC CONDITIONS
By W. A. Bonger, Doctor in Law of the University of Amsterdam. 8vo Cloth, $5.50 *net.*

CRIMINOLOGY
By Raffaelle Garofalo, late President of the Court of Appeals of Naples. 8vo. Cloth, $4.50 *net.*

CRIME AND ITS REPRESSION
By Gustav Aschaffenburg, Editor of the Monthly Journal of Criminal Law and Criminal Law Reform, Heidelberg. 8vo. Cloth. $4.00 *net.*

Send for complete descriptive pamphlet and SPECIAL OFFER for advance subscription to the entire set.

LITTLE, BROWN & CO., Publishers

THE OLD TESTAMENT NARRATIVE
From Genesis to the Maccabees, rearranged in chronological order from the King James Version by Alfred D. Sheffield. With notes and illustrations. $1.50 *net.* Postage 13 cts.
Houghton Mifflin Co., 4 Park St., Boston

HAVE YOU READ IT?
"The best bit of Stevensoniana issued."
—*Rochester Union and Advertiser.*
WITH STEVENSON IN SAMOA
By H. J. MOORS. Profusely illustrated from rare photographs; photogravure frontispiece. 1.50 net; postage 12 cents.
"It is a rare treat to have a vivid picture of his life in Samoa by one who enjoyed his comradeship in all that time."—*Journal of Education.*
SMALL, MAYNARD & COMPANY, Boston

An entirely original presentment of the case against war

The Great Illusion

A Study of the Relation of Military Power in Nations to their Economic and Social Advantages

By NORMAN ANGELL

400 *pages* *Crown* 8vo. $1.50 *net.*

"No piece of political thinking has in recent years more stirred the world which controls the movement of politics."—*London Nation.*

"A book which everyone must read. . . . The author reveals himself as a profound and lucid thinker. . . . We say deliberately . . . this book may in years to come prove to be the Magna Charta of the new time. . . . It is a great achievement and an original and amazing work."—*Public Opinion, London.*

"The Season's Great Novel."—*London Mail*

Howards End

By E. M. FORSTER

Crown 8vo, $1.35 *net*

"Mr. Forster is one of the *great* novelists. His stories are not about life. They are life. His plots are absorbing because his characters are real; he does not create them, but observes them. All will agree as to the value of the book, as to its absorbing interest, the art and power with which it is put together, and they will feel with us that it is a book quite out of the common by a writer who is one of our assets, and is likely to be one of our glories."—*The London Telegraph.*

"The Year's Best Novel."—*London News*

At All Booksellers.

Individualism: Four Lectures on the Significance of Consciousness for Social Relations

By WARNER FITE, Professor of Philosophy in Indiana University, Author of "An Introductory Study of Ethics." Crown 8vo. $1.80 *net;* by mail, $1.92.

CONTENTS:—I. The Conception of the Individual. II. The Individual as a Conscious Agent. III. Individuality and Social Unity. IV. Individual Rights and the Social Problem.

". . . a fairly comprehensive philosophy of social relations, which is both critical and constructive."

***A descriptive circular will be sent to any address upon request.

Educational Aims and Efforts, 1880-1910

By SIR PHILIP MAGNUS, M.P. With Illustration. 8vo. $2.25 *net.*

CONTENTS:—Progress in Elementary Education—Some Problems in Secondary Education—Schemes for Reorganizing London University—The Technical Instruction Movement—Social Changes and School Work—Articles and Addresses—Manual Training in Schools: its Origin and Purpose [1894]—Handwork and Headwork in Elementary Schools: a Forecast [1903]—Handwork in School Life; Domestic Subjects [1903]—Manual Training in Relation to Health [1891]—The Application of Scientific Method to Educational Problems [1907]—Preparatory Training for Higher Education [1905]—London University in Relation to the Empire [1901]—Lectures and Learning [1893]—Some Economic Aspects of the Application of Science to Industry [1903]—Notes on the Training of Industrial Artists [1888].

The International Relations of the Chinese Empire: The Period of Conflict, 1834-1860

By HOSEA BALLOU MORSE, Commissioner of Customs and Statistical Secretary, Inspector-General of Customs, China. With Illustrations, Maps, and Diagrams. 8vo. $6.00 *net.*

Historical and Political Essays

By W. E. H. LECKY. *New and Cheaper Edition.* Crown 8vo, $1.60 *net.*

". . . . A book of considerable value. . . . The biographical papers are of a high order. They contain skilful analyses of the characters of Madame de Staël, Sir Robert Peel, Mr. Henry Reeve, editor of the *Edinburgh Review;* Dean Milman, Queen Victoria, and the Fifteenth Earl of Derby—the last a bit of masterly portraiture. . . . The book as a whole will repay perusal, both for its matter and for its literary style."—*The American Historical Review.*

NEW BOOKS FOR LENT

The Prayer Before the Passion

Or, Our Lord's Intercession for His People

A Study exegetical and practical in the seventeenth chapter of the Gospel According to Saint John. By the Rev. JAMES S. STONE, D.D., Rector of St. James's Church, Chicago. Crown 8vo, $1.50 *net.* [Ready.

The Sevenfold Unity of the Christian Church

By the Rev. ARTHUR C. A. HALL, D.D., Bishop of Vermont. Author of "The Virgin Mother," "Christ's Temptation and Ours," etc., etc. Crown 8vo, $0.75 *net;* by mail, $0.80. [Nearly ready.

The subject of the reunion of Christendom is at this time much in people's minds and hearts and prayers. It is here treated on its spiritual side, not controversially, but devotionally.

The Passion in the Spiritual Life

By the Rev. JESSE BRETT, L.Th., author of "The Divine Friendship," "The Garden of God," etc., etc. With a frontispiece (The Crucifixion—Fra Angelico). Crown 8vo, $0.90 *net.*

Prayer and Practice: or, The "Three Notable Duties"

By the Rev. E. E. HOLMES, Hon. Canon of Christ Church, and of the Royal Chapel of St. Katharine. With an Introduction by the Lord Bishop of London. Crown 8vo, $0.90 *net.* [Immediately.

This is "The Bishop of London's Lent Book for 1911," and deals with questions of perpetual interest: Prayer, Fasting and Almsgiving.

The Church: Her Books and Her Sacraments

By E. E. HOLMES, Hon. Canon of Christ Church, and of the Royal Chapel of St. Katharine. A course of Instructions given at All Saints, Margaret Street, in Lent, 1910. Crown 8vo, $1.00 *net.* [Ready.

Studies in the Passion of Christ

By the Rev. C. H. ROBINSON, D.D., Honorary Canon of Ripon, etc. Crown 8vo, 90 cents *net.* [Immediately.

The Nation

NEW YORK, THURSDAY, JANUARY 19, 1911.

The Week

"Democratic tribulations" are just now a source of great comfort to Republican newspapers. They take up gracefully and as by second nature the rôle of Cassandras to their rivals. Consider how the Democrats are split in New Jersey, shaking in the wind in New York; how Harmon is already called a "traitor" in Ohio, and Foss is making himself disliked and laughed at in Massachusetts. In fact, by a little deepening of the shadows here and there the Democratic outlook can be made to appear so gloomy that Republicans may be exhorted to take heart—and that, of course, is always the main object of gloom in the other party. The Democrats have for fourteen years gloated over the unhappy condition and impending break-up and defeat of the Republican party; and they can scarcely grudge their opponents now a taste of that rather barren consolation of which they have so long had a monopoly.

The pension ring scored another victory last week when the House passed, by a vote of 212 to 62, the Sulloway Pension bill, which, it is estimated, will entail an additional expenditure of $45,000,000 within a couple of years. There were the usual scenes. The Speaker left his chair and delivered, so the dispatches report, a speech characterized by amazing "fire and force." "Whirling around and around on his feet" like a dancing dervish, and waving his arms, he uttered the familiar sentimentalities and drove his sheep before him. Fully forty Democrats joined in the scramble. Why not? Was the bill not certain to pass anyway? And so self-interest and cowardice, with a slight intermingling of sentimentality, carried the day as it has so many times before. This $45,000,000, if really authorized by law, would, of course, completely undo every effort of President Taft to cut departmental estimates. All the savings his Administration can make in the next two years will be swallowed up by this one bill. Already 72 cents in every dollar spent by this great Government go towards wars, past and future. This additional $45,000,000 will take several more cents out of every dollar from the development of the country in the direction of commerce and the arts of peace. It is a bill eminently calling for the veto.

But little attention was given in the press to the speech of Senator Crawford of South Dakota, last week, on the bribery charges against Senator Lorimer. It was, however, both strong and convincing, being one of those demonstrations of willingness and ability to undertake a disagreeable public service which we too easily pass over when we fall to talking loosely of the decadence of Congress. What he did was simply to apply a trained mind and legal skill to an analysis of the testimony in the case, going over the record with the utmost care to discover what was the actual truth disclosed by it. With great power he effectually disposed of the plea too lightly accepted by the Senate sub-committee—namely, that the confessed bribe-takers in the Illinois Legislature were unworthy of belief. Doubtless, argued Senator Crawford, they were all scoundrels, but if there was a mass of unimpeached corroborative testimony and undesigned coincidences bearing out their evidence, then we are forced to believe it true.

There is in the Standard Oil case a matter of fact upon which the two sides are apparently agreed, though they give very different interpretations of its significance. In his argument for the prosecution in the Supreme Court, Mr. Kellogg admitted the truth of the statement made by Mr. Milburn, counsel for the Standard Oil Company, that in recent years the independent oil men had been growing in numbers and importance. But, said Mr. Kellogg, "they have grown because the Standard Oil Company has ceased its methods of persecution through fear of the law." The fact that competition has been able to grow, put forward by the defence as a reason for letting the Trust go on undisturbed, was thus held by the Government to be a reason for further asserting the power of the law. In answer to a question by Justice McKenna, intimating that the Standard was acting like a good Trust, Mr. Kellogg declared that if the power of the Trust is not abused now, it is because of the very proceedings now pending. "But dismiss this suit," he exclaimed, "and I venture to predict that there will not be an independent refiner in the United States within five years."

A broader issue, and one that has more of an economic than a juristic character, is involved in this matter. A chief support of the pro-Trust or pro-monopoly argument in economic circles is the doctrine that in certain great lines of activity monopoly is inevitable as a result of natural conditions, and that any attempt to obstruct this natural process by governmental interference is mischievous. The fundamental answer to this is that such governmental interference as takes the shape of simply giving competition a fair chance will not prevent the monopolizing of an industry to any extent to which the truly natural conditions make monopoly advantageous. The very test whether an industry is marked out by nature for monopoly or not is avoided if we permit the nascent monopoly to enjoy, over and above the advantages inherent in the case, those other advantages which reside in unfair practices. Now, if it be a fact that during the last few years—in other words, during the time that fear of the law has been an active factor in the situation—independent concerns have been showing an increased ability to hold their own against the most powerful Trust in the world, this general argument against the fatalistic position of the pro-monopoly people is vastly strengthened by specific experience.

There is apparently in the minds of those responsible for the resolutions of the National Tariff Commission Association some haziness in regard to the scope which the functions of the proposed Tariff Commission should have. One of the resolutions passed by the Association last week demanded the creation, at the present session of Congress, of a commission "having functions and compensation analogous to those of the Interstate Commerce Commission." Nevertheless, President Taft, in his speech at the dinner given by the Association, took occasion to put an interpretation

on the resolutions as a whole which is very different from what would be drawn from these words. He said:

> You do not desire, if I understand your present resolutions, that these men should fix tariff rates or recommend rates to be fixed. You desire only that they should furnish the correct information upon which the body constitutionally charged with fixing tariff rates may properly act, so that the public may have the truth from the Tariff Commission, and then advise itself how Congress shall have acted with respect to that truthful presentation of premises for its action.

In other words, the President, while strongly in favor of a permanent Tariff Commission, gives no countenance whatever to the idea that any such device can take the tariff out of politics. The tariff is a political question, and it has to be decided by the people, or by those to whom the people entrust the decision of questions of public policy.

Within the limits set by this fundamental consideration a properly constituted Tariff Commission may be made highly useful, especially as a safeguard against the worst abuses of protection. But the idea of its being an instrumentality for settling tariff questions by the routine application of a fixed rule is simply chimerical; and this not only because the acceptance of the rule itself will always be a debatable question of national policy, but also because in the application of the rule there is room for enormous latitude. This talk of difference in cost of production between the United States and other countries sounds very smooth in platforms and campaign speeches, but when it comes to specific instances the thing bristles with difficulties. With what foreign country shall we compare—the one that produces most cheaply or the one that comes nearest to our own conditions? And what conditions in our own country shall we compare with—those that are most favorable or those that are least favorable, or something between? Mr. Taft is quite right in saying that the only thing the Commission could be asked to do is to give information as to the facts—and that itself will be sufficiently difficult.

There was something like a thrill throughout the entire State of New York, when it was known, Tuesday morning, that twenty-five Democratic Senators and Assemblymen had refused to go into the Senatorial caucus controlled by Murphy and Sheehan. Such a display of manhood and independence has not been seen in New York for a generation. The tyranny of the caucus has been so long unbroken, and has been so steadily the sure bulwark of the Platts and Crokers and Murphys, that people had come to think that it never could be shattered. But these Democrats have now shown what can still be done in the exercise of the divine right of bolting. It is to be taken for granted that these men will stand firm to the end against Sheehan. The midnight plottings and secret bargainings of the two or three men who undertook to make plunder of the Senatorship, and to force upon the party a candidate whom his apologists cannot defend without damning him in the act, and whose election would smell to heaven, have been brought to naught by the legislators who would not walk into Murphy's trap.

Woodrow Wilson's inaugural address on Tuesday as Governor of New Jersey will be widely read, not only for his skill and force in expression, but for the grip and sweep of the ideas which he has to express. Confined as it is to State issues, which it discusses with directness and pungency, there is in it a breadth of political philosophy which has the widest applications. Gov. Wilson addresses himself with great plainness to the problems of corporation regulation, but speaks with as much sanity as vigor. People are not to be frightened at great chartered companies with enormous capital. Neither are they to be driven into political insincerities by them. They are, after all, creatures of the State, which is bigger than the biggest of them and can control the work of its own hands. If it has made sad mistakes, and Gov. Wilson frankly says that New Jersey particularly has made sad mistakes, in allowing grants of too great and too unregulated power, these can be corrected. The need is to be clear-eyed about it, to discriminate between things that differ, and to move forward steadily in the effort to safeguard the rights of the people and assert the full power of the State.

The suit brought by the State of Pennsylvania against the politicians who stole six millions of dollars was settled last week for $1,485,000. This probably ends that whole sordid chapter of Quay politics. Aside from the architect, five high officials of the commonwealth were directly concerned in the theft of this money. William P. Snyder, a former Auditor-General, and James M. Shoemaker, Superintendent of Public Grounds and Buildings, are in the penitentiary. Mathues, the State Treasurer, died while on bail, pending an appeal from his sentence to jail. Frank G. Harris, another State Treasurer, and E. B. Hardenburg, a former Auditor-General, who escaped criminal charges through the ever useful statute of limitations, were included among the defendants in the civil suits just settled. The contractor who profited by the corruption is dead. Of $1,485,000 recovered, $187,000 was in warrants which William H. Berry refused to pay when he became State Treasurer. Mr. Berry is entitled to the greatest praise of those who have labored to redeem the State's good name and convict the rascals, but Gov. Stuart also deserves credit for backing up vigorously the prosecutions. Indeed, it is said that every effort was made to settle the case before the new Governor, Tener, took office.

A story comes from Columbus that the leaders of the Ohio Democratic machine, angry over their failure to nominate Chairman Hanley for the Senatorship, are furious with Gov. Harmon and threatening to block the reformatory legislation in which he is interested. There seems to be no evidence that the Governor took any decisive part in the contest, though we imagine that the charge of favoring Mr. Pomerene over Hanley is not likely to do him any harm with the voters of Ohio, even if it should be proved. Still less can he be hurt by any attempt of disgruntled politicians to take vengeance by opposing his efforts to introduce common-sense business methods into the conduct of the business of the State. Any such fatuity is pretty sure to be followed by a procession of would-be Democratic bosses into the same political oblivion which now conceals one Harvey Garber, who came here to New York a year and a half ago and poured forth a tale of woe about the ruin which Gov. Harmon was bringing upon his party by refusing to make appointments desired by the bosses. As a matter of fact, the Democratic majority in the Ohio Legislature pulled itself through, not on its

known merits, but by hanging to the coat-tails of a Governor who had won popularity through his independence. If the majority thus obtained is not wholly devoid of a natural desire to perpetuate itself, the Finleys and Hanleys and Garbers of the machine will have but slight influence with it as against the known wishes of the Governor.

A project that holds out the promise of extraordinary benefit to the colored people is that which has been entered upon by Mr. Julius Rosenwald of Chicago, in the offer he has made through the Young Men's Christian Association of that city. Convinced that the provision for colored boys and young men of such facilities for education and recreation as are furnished by the Young Men's Christian Association organizations in our large cities is an essential need of the race, Mr. Rosenwald offers to give $25,000 toward the providing of an institution of this kind in any community on condition of $75,000 additional being raised, the total of $100,000 to be used for the purchase of land, the erection of a building, and the provision of the necessary equipment; the officers of the Chicago Young Men's Christian Association being first satisfied of the ability of the local organization to carry on the institution when it has been established. The negroes have not as yet, says Mr. Rosenwald, "in their own ranks a sufficient number of people whose means would enable them to establish and adequately equip such institutions, and it is, therefore, the duty of the white people of this country, irrespective of their religious beliefs, to evidence their interest in the welfare of these, their neighbors, by assisting to supply this need." The influence of such a place for physical, mental, and moral improvement, and for recreation and social development, is something which the colored people, in their present situation, peculiarly need and for which they are very far from possessing any substitute.

The American short story has come into its own in Germany. It is interesting to note that this achievement was brought about by what, in Germany at least, must now be regarded as the official method. First, the Kaiser was interested, but not, be it noted, by any specific short story. It is not on record that he has yet read one. But what interested him was the inaugural lecture of Professor Smith about American literature. Next, the German newspapers began the publication of American short stories, starting with O. Henry and Richard Harding Davis. If these prove popular, a regular supply will be arranged for "from among the countless good stories that have already appeared in the United States," but which are "quite new" to the German public.

An early complaint of high prices was uttered by Lord Chesterfield in 1766, when he lamented the increased cost of seats in Parliament. There had been a boom in trade, and rates had advanced. Chesterfield was ambitious for his son, and, on the failure of Chatham's promise of a seat, he went into the market. Here, however, he was unable to find a single bargain. "I spoke to a borough jobber," he wrote to his son, "and offered five and twenty hundred pounds for a secure seat in Parliament, but he laughed at my offer, and said there was no such thing as a borough to be had now, for the rich East and West Indians had secured them all at the rate of £3,000 at least, but many at £4,000, and two or three that he knew at £5,000. This, I confess, has vexed me a good deal." It is a little difficult to decide whether a seat in Parliament for a Chesterfield is to be classified as a luxury or a necessity. In either case, the method sometimes adopted in other fields of forcing down the price by finding a cheaper substitute was doubtless as impossible for a noble lord of the eighteenth century as it is unnecessary for an ignoble politician of the twentieth.

The latest diplomatic flurry in Europe does not seem to contain the promise of long life. It was based upon the fact that Germany and Russia had come to a good understanding, especially as regards certain questions in the Orient. The German Government is to agree to the dominance of Russian "influence" in North Persia, while the Czar's Government is to make no opposition to Germany's railway plans in Asia Minor. On the strength of this, we were told that the *entente* between England, Russia, and France had been broken to pieces by German diplomatic wiles, and that the peace of Europe was endangered. But the statement of the French Foreign Minister to the Chamber went a long way towards dissipating these exaggerated fears. M. Pichon said that France had been kept fully informed about the whole negotiations, Russia having frankly disclosed every step in it to her ally. The same thing was doubtless done in the case of England. Moreover, from Berlin comes the intimation that Germany is as well disposed to come to an understanding with the British Government, as respects Eastern questions, as she was with Russia. It would be easy and natural to obtain German acquiescence in the English sphere of influence in Southern Persia. In that connection, it is of interest that the British note of October 14, requiring the Teheran Government to take measures within three months to secure travel over the southern roads, has not been literally carried out. An extension of time has been granted.

Some surprise was expressed that, at the opening of the Prussian Diet last week, the Chancellor had nothing to say about the reform of the suffrage in Prussia. At the time of the failure of the unsatisfactory Government bill on that subject, seven months ago, it was semi-officially stated that the question was one requiring mature consideration. "It is more important for both the Government and the country," so ran the statement, "that the solution of the problem should be lasting than that it should be speedy." This was taken to imply that a new and better law would be proposed at this session. But it is now suggested that the whole thing must go over until after the expected election of a new Reichstag next autumn. What has that to do with a purely Prussian question? So ask the newspapers that are impatient for the beginnings of this urgent reform. The answer given them is that the Chancellor must wait till he sees what will be the balance of parties in the Empire after the general election. It was a combination of the Conservatives and the Centre against him in the Diet which defeated his last year's measure; but that may be broken up, or changed, if the result of the election is to show, as everybody expects, great gains for the Social Democrats. Yet one cause of their growing strength, as of the general dissatisfaction, is the gross inequity of the Prussian suffrage laws.

AMENDING THE CONSTITUTION.

One hears little nowadays of the possibility of amending the Constitution of the United States. It used to be that when anybody suggested getting over the income-tax difficulty by a Constitutional amendment, for instance, or introducing direct election of Senators, he met with a supercilious reminder that in the course of our history there had been scores, or hundreds, or perhaps thousands of proposals of Constitutional amendments, but that not a single amendment had been made since the first years of the Republic, except those written into it through the arbitrament of the sword at the close of the civil war. That any attempt to procure an amendment was foredoomed to failure, and was worthy only of doctrinaires and dreamers, was the conclusion confidently drawn from this fact, and asserted with an air of superiority and finality. But in the last two or three years there has been a great change; in the face of the rapid progress manifestly made by the income-tax amendment and the direct-election amendment, mere vaticination based on the fact that nothing of the kind had hitherto happened can now make little impression.

The favorable report of the Senate Judiciary Committee on the amendment providing for the election of United States Senators by direct vote of the people, promptly followed, as it has been, by a discussion of the resolution on the floor of the Senate, marks an advance for this proposal beyond what the most sanguine hoped for a few months ago. The amendment may fall through at the present session of Congress, but, if so, its adoption in the near future by a two-thirds vote of both houses, and its confirmation by three-fourths of the States, would be in the highest degree probable. This is so not only because of the character of the Senate as it will be constituted after March 4 next, but also because of the almost unanimous opinion which the country has come to hold on the subject. When the change first began to be seriously agitated, it soon became apparent that, in addition to the normal difficulties belonging to the amending of the Constitution, this particular proposition was going to meet with peculiar obstacles owing to the intense attachment of the Senate to its own traditions and preferences, and also owing to the difficulty of getting Legislatures to vote away their own prerogatives. But both of these obstacles have been steadily giving way to the pressure of public opinion; and as to the latter, especially, it is safe to say that few Legislatures would think for a moment of taking the consequences of rejecting the amendment, in the face of the overwhelming sentiment in its favor.

Nor is the growth of this sentiment due to anything like a wave of popular excitement or emotion. In fact, there has not been at any time any commotion or passion about the matter. It has been simply a case of repeated and flagrant demonstration of the evils of the existing method, and the almost total absence of any reason for ascribing to it counterbalancing benefits. Advocates of the existing system have been driven to the necessity of supporting it either on the ground that it possesses some intangible or symbolic virtue in the way of an embodiment of the idea of States' rights, or on the ground that the amendment is unnecessary because the same end can be reached by a practical nullification of the Constitutional requirement, analogous to what has taken place in the matter of Presidential electors. But it should be noted that nothing short of absolute nullification —such nullification as is provided in the Oregon plan, under which the members of the Legislature are regarded as bound simply to register the popular choice—would serve to get rid of the deep-seated evils. And it is a sound national instinct that prefers straightforward amendment to deliberate nullification.

In addition to the inherent merits of the change, the adoption of an amendment providing for direct election of United States Senators, or one empowering the Federal Government to collect a tax on incomes, would have great value simply as a demonstration of the possibility of amending the Constitution by the method which the instrument itself provides. The extreme form which the doctrine of amendment by interpretation has recently assumed has derived no small part of its vogue from the widespread, though perhaps tacit, acceptance of the view that the people had no other refuge from the restraints of an iron-bound instrument. That a certain amount of change of interpretation must necessarily go on with the change of times no reasonable person will deny, but when it comes to a clear-cut departure, the doctrine that this should be made in any other than the Constitutional way is in the highest degree dangerous. The plea that such a course is dictated by imperious necessity never had any substantial basis. To show that a thing is impossible, or impracticable, it is necessary to be able to say not only that it has never been attained, but also that forces as great as any that could ever be expected have been applied in vain to its attainment. But as a matter of fact there has never been a great national movement in favor of any Constitutional amendment, unless it be these two that are now well advanced on the road to success; and there is more than one matter of mere legislation the attainment of which has involved far greater exertions than have gone into either of these two Constitutional movements. It ought to be a rare and difficult thing to change the organic law of our country; and as long as to do so in a Constitutional way is within the reach of reasonable effort and reasonable unanimity of public opinion, no other method should be tolerated.

FORTIFYING THE CANAL.

Six sound and unanswerable reasons for not fortifying the Panama Canal have been advanced by such men and women as John Graham Brooks, Richard Olney, President Jordan of Leland Stanford University, Ida Tarbell, Jane Addams, and many others, including one of the ablest of our United States judges, George C. Holt. The first alone ought to convince the country that to expend millions for guns and forts at Panama would be a criminal waste. It is a simple reminder that under the laws of war, as fixed by the Hague Conference in 1907, unfortified coast places cannot be bombarded. Warships could not lie off Panama and Colon and shell these towns, because to do so would be to place their crews in the category of those who poison wells and deliberately kill women and children—acts expressly forbidden to the troops of all civilized nations. Lack of fortification would thus of itself become a protection to the canal zone.

The signers of the protest then point out that it was the original intention to

prohibit the fortification of the canal, and this pacific intent was not affected by the failure to mention it in the Hay-Pauncefote treaty. Nor was the Panama Canal proposed primarily as a military undertaking, although the voyage of the Oregon in the Spanish War did focus public opinion upon the desirability of building the inter-ocean waterway. The Suez Canal was neutralized by England, the nation which built it; the Strait of Magellan is neutralized, and the very important Inter-Parliamentary Union declared itself only last year in favor of the neutralization of all inter-ocean waterways. Moreover, as the protestants point out, we have pledged to England by the most solemn treaty obligations that the Panama Canal shall always be open to British warships in times of peace or of war. Again, the whole spirit of fortification is against the modern tendency of settling matters by international arbitration and makes a mockery of President Taft's "impressive declaration that he sees no reason why any question whatever should not be arbitrated." As for the cost, as Congressman Foster has pointed out, it will in all probability be not less than fifty millions of dollars with an annual cost of maintenance of at least five millions.

Naturally, the signers of this remarkable statement do not overlook the question of the denunciation or violation of treaties made both for arbitration and other purposes. This is a stock argument of those who believe in fortification. "Why," they ask, "do you put your faith in treaties when almost every war has been preceded by a violation of treaties? If you fortify the canal, you do not need treaties, and you are safe for all time." To this the reply is that if an international agreement for neutralization should carry with it the penalty of non-intercourse with the offending nation by all the other signatory Powers, there would be an effective check upon any attempted violation of the treaty. Again, that treaties have been broken is no more a reason for refusing to make new ones than the fact that some men and women violate the marriage law is an argument against the contract of marriage. If some treaties have been violated, many others have stood the test of time, notably that far-sighted agreement with England which prevented the erection of fortifications and the housing of large garrisons along our Canadian boundary. What vast sums would have been wasted along that line if the militarists had had their wish!

In his splendid address at the peace meeting in this city on Friday, Congressman Foster, who occupies the highly important position of chairman of the Foreign Affairs Committee of the House, laid stress upon what we owe to future generations in this Panama matter. We are placing upon them, as it is, the duty of paying for the canal, and now some propose to put upon them, too, the cost of fortification and the standing army that is to be banished to the Isthmus. Again, as Mr. Foster put it, to fortify the canal, after having given assurances to Great Britain and the Republic of Panama before ever a spade of earth was turned up there, that the canal would be neutralized, "would be equivalent to saying to a foreign government, You have bound yourselves to observe our rules of neutrality, but we do not trust you, and, therefore, beware of our guns." As for neutralizing and fortifying, too, when has a neutralized territory been violated? Not Switzerland, certainly, amid all the upheavals in Europe; and plainly the excellent militia which Switzerland has was no deterrent in 1870-71. Why is it that such repeated proposals are made for the neutralization of Holland, except that the neutralization of Belgium has so successfully protected that little country from all fear of annexation by either Germany or France? It is unthinkable that any nation would dare in these times to violate neutrality—least of all in the case of such a great work of man as the canal at Panama, which is primarily for the benefit of the commerce of the entire world.

But, whether there is or is not such a danger, the policy of fortification is the policy of reaction and retrogression, and therefore particularly to be shunned by a forward-looking nation like the United States. It gives the lie to our avowals of a desire to be let alone and to live in peace. It means that when the times comes, as come it must, for an appeal to the nations to neutralize the Philippine Islands, we shall be met with suspicion and distrust and contemptuous references to our policy in Panama. In the direction of neutralization and non-fortification, we can only repeat once more, lies the path to fame and glory, as well as humanity, both for Mr. Taft and for his country.

INTERCOURSE WITH BOSSES.

At the funeral of the late Robert Davis of Jersey City a week ago, there was a great outpouring of eminent men. Gov.-elect Wilson was present, as were also many citizens of New Jersey of high position in business and in the professions. One would have supposed that they were paying tribute to the passing of a great man—at least, to one distinguished for philanthropy or for some kind of high attainment or public service. Yet Davis was nothing but a political boss. In private he was doubtless a likable man, kindly and generous and easy-going, but the power in political life which he had, and in recognition of which he was publicly mourned, was won by the ordinary machine methods. During the years of his boss-ship he displayed the usual qualities of his type—cunning, unscrupulousness, the use of offices merely as "plums" and of nominations as a system of rewards and punishments, all to the building up of his own organization and the enriching of himself and his friends.

We refer to the incident only because it suggests some of the difficult questions as regards personal intercourse with bosses. It is obvious that we have to make a distinction between the attitude of a private citizen and that of a public official. The former may feel it at once a duty and a pleasure to testify in every way his abhorrence of a boss. He may absolutely refuse to meet the man personally; and decline to go to a dinner where a Murphy is present just as promptly as he would spurn an invitation to sit at table with a burglar. But, after all, that is a sort of satisfaction which only the individual as such can enjoy. Put him into any kind of official or public relation, and he will have to look at the matter differently. The power of a boss is a fact. We may like it or we may hate it, but it is a thing to be reckoned with. Suppose, for example, that a man is a director of some charitable institution, or deeply interested in a work of public utility or beauty, and that it is necessary to procure some favorable action which can be had only by appealing to a boss—would he refuse to go to see him? Hard-

ly. He would sink his personal feelings in what he would consider the exigency of the cause. His thought of the boss would be just what it was before, but he would stand ready to utilize for good what he believed an evil power, if he could do it without at all compromising his position, or obligating himself to refrain from attacking the evil power on every fit occasion.

This helps us to see how the thing works out in the case of a Mayor or a Governor. Such public officers cannot cut themselves off from all dealings with a boss. He is a part of their problem. He is one of the tools with which they have to work. Approve of him or not, his power is a thing which they cannot blink. So it is that Roosevelt had to have interviews with Platt, Wilson with Smith and Davis, Gaynor and Dix with Murphy. It is possible that a boss might so outrage public decency, or be guilty of so flagrant a betrayal, that an Executive ought to refuse ever to see him again; but under ordinary circumstances, no such duty is indicated. It is not in the mere fact of meetings between elected officials and a boss that there is ground for suspicion or alarm. Such conferences are inevitable, things being what they are; the only question is where they are conducted and in what spirit.

Mr. Roosevelt, when Governor, used to come to New York to see Boss Platt. Their "breakfasts" together became famous, not to say notorious. The explanation given was the Rooseveltian "directness." He would go straight to his mark, even when that mark was in the room of a boss. Besides, it was said, he did not want Platt hovering about Albany. That had a bad look; so he would go to New York and arrange everything with Platt in person—though this, to many, had a worse look. They did not like to see a Governor going to call upon a boss. In Mr. Dix's case, the process is reversed: the boss goes to call upon the Governor. Yet even that may be overdone. It was a suggestive rumor from Albany last week that Murphy's presence there, with his announced purpose to stay on the spot until the Legislature was organized and a United States Senator elected, is not wholly pleasing to Gov. Dix. He seems to feel that it is only of the county of New York that Murphy is boss, not of the whole State, and that it would be better for him to stay within the bounds of his own kingdom.

The question is thus raised of the reciprocal obligations of the boss. Ought he not to cultivate a finer courtesy in his relations with Mayors and Governors? If his presence at any particular time or place is distasteful or awkward, it should seem that he ought to wrap himself in his virtue and retire. Nor should he exact mere formal and ceremonial deference in public, since he can complacently assure himself that the real power is his, whether it is officially recognized or not. And the example of Boss Davis may assure him on one point: in life he may not be honored, but in death he will be. At the funeral, whether political or physical, of a boss, some of us might not care to be present, but we could all say with the New Englander in the story: "No, I was not at the funeral, but I approved of it."

"CORRECTING THE RECORD."

At the present gratifying rate of progress, all the patriotic deserters of the civil war will shortly be provided with the rewards which a grateful republic bestows upon those who are able to pull the right wires. This raises the question how much longer those many other individuals are to be kept waiting for justice, whose past has happened to lie in a field less susceptible to Congressional sympathy. There is, indeed, the sign of a beginning in this direction in the resolution dealing with the fondness for special trains of a public man who was himself not averse to doing what correcting came in his way. Then there is the record which has risen, most untimely, to confront so good a man and so successful an attorney as our Mr. Sheehan. There is just time for the Legislature to set this annoying matter straight. It could pass an act barring all records before 1893, which would be regarded as charity, even if not justice. The most promising attempt in this direction, however, has met unexpected lack of appreciation, and it may be doubted whether the correction that is finally made in the record of Senator Lorimer will be any more pleasing to him than the picture of it which a few cruel men have been making in his very presence.

How much the moral value of the lives of literary men would be increased by this same process, we need only suggest. Why should innocent boys and girls be compelled a single day longer to read of the time so wofully common in the youthful history of Burns, for instance, when he loved, not wisely, but too well, not to say too many? Will any person of intelligence deny that the reasons for such a course in these cases are as cogent as in those which make so successful an appeal to our logic-loving Congressmen? Who can tell how much sooner Poe would have been invited into the cosy precincts of the Hall of Fame if his record had been corrected in the proper way? The consideration gains in force when we reflect upon the possibilities, not merely in the lives of such men, but in their works. For some years Homer's literary repute has been under a cloud. Merely because the legislators of his day possessed the usual amount of knowledge of legislators concerning the institution of copyright, he was prevented from giving to his productions that seal of authenticity which would have effectually precluded the spreading of insinuations regarding their entire originality. We commend to the next meeting of the American Institute of Arts and Letters the gracious task of making the suitable adjustments in Homer's record.

The case of Bacon and Shakespeare is even worse. It is generally agreed that both of these eminent Elizabethans stand in the direst need of this process. Shakespeare's trouble lies mainly in the earlier part of his life, Bacon's in the later part. All that is required for the former is a little correction about a bit of deer-stealing, which no man with red blood in his veins could think for a moment of refusing, and such further items of information as will establish the playwright in London at the proper times and places; and, for the latter, such evidence as will a little more conclusively demonstrate to over-obstinate doubters his ability as a writer for the stage. When one contemplates that this procedure will add to the list of English men of letters another dramatist of the very first rank, one can hardly fail to be filled with enthusiasm for the plan. We would also suggest, as delicately as we may, the need of another application of the process to a part of Bacon's record which it would puzzle even a politician's friends to explain away without this handy means of correction. Something might be done, too, for Dr. Johnson. In

the light of the outcome of the revolutionary war, his pamphlet, "Taxation No Tyranny," is not one upon which his friends can look with pride. To put the matter bluntly, he was on the wrong side, and emphatically and overbearingly so. Surely, no lover of liberty could interpose an objection to having this part of Johnson's record subjected to such correction as would put him right with history. His "Rasselas," moreover, is not so popular as it once was. Would it be anything more than just for some bright young writer of our more gifted day to correct its record? We feel sure that its appearance in the lists of best sellers a few times would restore to it all its old vogue.

The widest use to which correcting records can be put is in the case of letters a man is sorry, for one reason or another, that he has written, or, at least, has mailed. The number of broken friendships that a simple correction of this sort would restore is beyond calculation. In such a cause anything is justifiable, and we accordingly urge upon the very early attention of the Post Office Department at Washington some means by which a letter may be disavowed by its writer. A start has been made in this direction by the business men who are so thoughtful as to append their signatures to typewritten missives only when they are endorsed "Dictated but not read." This, however, strikes us as a little clumsy. There is too much of a suggestion of anticipation about it. In short, it lacks that noble vindication which resides in the legislative phrase, "correcting the record," the final triumph of which will be achieved when the body to which it owes its origin applies the process to parts of its own past.

THE GERMAN MILITARY BURDEN.

In Germany military and naval expenditures are settled for five years by a *Quinquennat*, instead of by an annual appropriation bill. Thus there has just been before the Reichstag a military proposal covering each of the years from 1911 to 1915. It gives no promise whatever that the burden the German peasant is carrying may be reduced within that period of time. Nobody has ever heard in these days of a military man who talked retrenchment. Hence the proposal of the Minister of War involves an additional expense of $2,207,980 for the year 1911 as contrasted with 1910, together with an increase of $4,021,000 for the navy and $332,222 for pensions, or a total increased expense of, roughly, $6,500,000. More than that, according to Col. Gädke, now the foremost writer on German military matters, the permanent increases called for by the bill will amount to $5,450,000 a year by 1915, while the sum of $20,600,000 will be spread over the five years in meeting temporary or non-recurring expenditures.

These increases are chiefly to be credited to actual enlargement of the number of military organizations and naval units. Thus there are to be 108 new machine-gun companies, two more airship battalions, and one automobile battalion, or an increase of 5,479 men, giving a total for the army of 644,000 on paper. But Col. Gädke insists that with the growth of the population the increased number of men available will actually bring this figure up considerably, so that with the navy there will be no less than 714,000 men withdrawn from the pursuits of peace. Startling as these figures are, they seem to be most carefully compiled, and have not, so far as we are aware, been successfully challenged. They include, of course, civil employees and semi-military officials employed by the military establishment, as in the pension department. But the fact remains the same: a great army of men is living in industrial idleness at an expense to the whole nation in 1911 of $355,915,140. For this vast outlay there is nothing of productive value to show. It is "insurance" for national safety, the military men say, and they glory in the fact that if war should be declared, 4,800,000 trained German soldiers could at once be recalled to the colors; and, with all possible reserves, 6,064,000 could confront the enemy. Beside this fact, is it, they ask, of any importance that the German Empire finds itself in grave financial difficulties, without even a well-thought-out plan by which to extricate itself?

For the German public, however, it is highly significant that the peace army of 1871, numbering 401,659 men, has grown in forty years of peace to 714,000, and that apparently there is no possible way of stopping that growth. The increase of population does not lessen the peasant's burden; the army keeps step with the nation's expansion, and the growth of the great navy increases disproportionately the financial cost. Where is it to end, is the question. Germany has long since outstripped France, which cannot by a full million call out as many trained soldiers. Yet her extreme militarists are demanding that her army shall by itself be able to meet any possible combination which may be brought against it, just as the British jingoes insist that their fleet must be on a "three-Power" or "four-Power" basis. They cannot see that already the life-blood of the nation is being drained by the colossal expenditures. As Col. Gädke puts it: "An administration which would seriously urge such a policy ought to be locked up in an insane asylum; for its adoption would mean the certain collapse of our national strength because of exhaustion and anæmia." Even this believer in a great army admits that the German military and naval authorities have neither adequate conception of the necessity of backing up an army with sound finance nor a knowledge that the social, industrial, and economic development of the nation is of more importance in the long run than the steady reinforcement of the army and navy.

If we compare Germany's conditions with those of her allies in the Triple Alliance, we can see even more clearly how heavy is the German burden. Austria and Italy have to-day respectively 379,000 and 256,000 men under arms. Together their troops, in time of peace, number 635,000, in comparison with Germany's peace army of to-day—about 644,000 men. But the average per capita cost in Italy and Austria is but ten marks or $2.50, against twenty-one marks or $4.25 in Germany. Austria and Italy, if they were to withdraw proportionately as many men as has Germany for military purposes, would have together a force of 855,000 men. All in all, this curse of militarism is a form of modern slavery. Men are taken from their homes for one, two, or three years, because the state asserts that some day it may need their lives as forfeits for the ambitions, or desires, or blunders of its statesmen. The whole moral tone of Europe is lowered by its being transformed into armed camps, as every physician and every student of morals knows. Yet there are actually men like Lord Roberts in England, who would fasten similar shackles upon their own coun-

try, while we hear from Washington that our War College students are convinced that we, too, must have universal military service unless we are to be subjugated by "barbarians" in many respects more civilized than ourselves. Hence, it is really refreshing to find a note of protest in so influential a writer as Col. Gädke, or at least a realization that there are other aims in life than preparing to kill. But then he is only a retired officer; the good red blood of the soldier must be thinning in his veins.

A COLLEGE COURSE IN PRINTING.

If, as might appear logical, the arts were rated "fine" in strict accordance with the percentage of those able to understand their technical principles and appreciate their calculated effects, printing would perhaps have to be recognized as nearly the finest of the fine arts. For every hundred who can intelligently look at a painting or listen to the performance of a symphony, there is probably but one who can turn the pages of a well-made book and pass a criticism upon its typographical appearance, and the quality of its paper and impression. Printing, for most persons, and for persons of acknowledged taste at that, is taken for granted, and printed matter, of what sort soever, so long as it is sufficiently legible to serve its primary purpose as a medium of communication, receives scarcely a moment's attention or consideration for its own sake. Much of this same indifference is, it must be confessed, shown by the majority of printers themselves.

Yet printing has a splendid history and a proud record of achievement. Even in this country it had a classic period during the middle of the last century when the books of some American publishers challenged not unfavorable comparison with those of Pickering, who loved to style himself "the English disciple of Aldus." To-day fine printing is largely confined to certain very special purposes, on the theory that well-made books appeal to only a limited class, though we are inclined to think that if the publishers were willing to do a little more pioneer work, this public might be greatly extended. At all events, there is great room for improvement both among the patrons and the practitioners of the art, and in the general taste of the community. It is for this reason that we find interesting and significant the official details of the course in printing at Harvard University.

It is the first course of the kind offered by any higher institution of learning in the United States, and is, we believe, partly the result of the determined effort made for some years by the Boston Society of Printers to procure recognition of the need for the regular education of the members of their own craft in its technique and in the principles of design as applied to it. The plans, however, appear to have been shaped in a broad spirit to apply as well to the needs of the ordinary student as to the specialist in printing. Thus we read of one course offered by the department of fine arts. It consists of lectures on the history of printing. One cannot help thinking with regret of what Harvard's great professor of fine arts, who was an ardent collector, bibliographer, and connoisseur of printing, might have made of such a course with its infinite possibilities for suggesting the relation of typography to allied branches of taste. A more important course falls within the new Harvard Graduate School of Business, and covers history, materials, design, and practice. The technical instruction will offer to the student a "survey of the materials and processes connected with printing—ink, paper, type, printing machinery, etc.—each division of the general subject being in charge of a professional expert." For the second of the two years' course—this, it may be noted, is subsidiary to the general business training—there will be advanced instruction in business practice in printing, involving visits to plants, reports, etc., and probably also in the application of the principles of design to printing—its architectonic, in other words.

Much will depend upon the taste, knowledge, and ability of the instructors in these several branches. But well conducted and harmonized, the combined courses ought to give the student a thorough grasp on his subject as a whole, and fit him to undertake the practice of his craft in an intelligent and enlightened manner. We regard as a good sign the emphasis laid upon the practical aspect of printing, and the acceptance of modern commercial conditions. William Morris viewed with ill-concealed distaste the spectacle of his pressmen with their sticky sheets, and thought longingly of the mediæval scribe with his bottles of red, blue, and black ink. But Morris was a mediævalist, and printing belongs to modern times rather than to the Middle Ages. He also defined the ideal book as one fashioned without regard to the exigencies of commerce. It is doubtful, if we accept this definition, whether an ideal book has ever been conceived, much less executed. Certainly Mr. De Vinne, in his Grolier Club book, "Notable Italian Printers of the Fifteenth Century," showed clearly that those printers sought to conform to the tastes of their contemporaries in a way that would render their enterprises profitable, though they often enough failed in this, and were ruined. Even Morris could hardly have carried on his work at the Kelmscott Press if he had not happened to please others than himself; while the shortcomings of his books prove that, even under the favorable conditions of his experiment, it may be disastrous to enjoy too much freedom from the commercial demands which are often a corrective to extravagant personal eccentricities. Both commercially and mechanically, the best printers that England produced in the nineteenth century, the Whittinghams—men incomparably closer to Morris's craftsman idea than was Morris himself—were not only the leaders in typographic taste and fineness of impression, but in business capacity and in inventive ingenuity as brought to bear upon the mechanics of printing, paper-making, and the rest.

If the Middle Ages left printing the legacy of a noble artistic ideal, the Renaissance emphasized its mission of utility. The two ends which printing may, therefore, with historic justification attempt to serve are beauty and usefulness. These are by no means incompatible; and if at times they have seemed so, this is due in part to the ignorance of the ordinary printer and of his public, but largely also to those revivers of the art who have not been satisfied to draw their idealism from the Middle Ages, but have sought to restore the precise forms of that period as well, without reference to modern standards and needs. It is only through the mastery of a medium and of the current means of production and merchandising, that excellence in any art becomes general.

THE AMERICAN HISTORICAL ASSOCIATION.

LAWRENCE, Kansas, January 6.

The twenty-sixth annual meeting of the American Historical Association, held at Indianapolis, December 27-30, was, on the whole, one of the most successful of recent years. The registrations, including those of the allied societies—the North Central History Teachers' Association, the Ohio Valley Historical Association, the Mississippi Valley Historical Association—very nearly or quite reached the three hundred mark; and, while there was a smaller number present from the East than could have been desired, the attendance was representative of all sections of the country. The cordial hospitality of the people of Indianapolis contributed much to the success of the meeting. Gov. Marshall was himself present Wednesday evening.

It was, perhaps, peculiarly fitting that the meeting should have been held in the Middle West, inasmuch as the presidency of the association for the year fell to Professor Turner, whose name is so closely connected with the study of the West and with a brilliant interpretation of national history from the point of view of the frontier. And this fact was marked, on the opening evening of the meeting, at a dinner given in his honor, by the presentation to Professor Turner of a volume entitled "Turner Studies in American History," composed of special studies by certain of his former students dealing with aspects of western history. The volume, indeed, might be called a symposium on the frontier.

While his students are still occupied with the old frontier, the inaugural address of Wednesday evening might seem to indicate that Professor Turner has himself already taken a new point of view. The address, entitled "Social Forces in American History," maintained that the close of the nineteenth century marks a turning point of fundamental importance in American history. Until after the war, the primary fact in American history was the existence of free land, and the consequent expansion of population into the unoccupied area. The opportunity which free land gave furnished the economic basis for the practical equality which existed, while at the same time it fostered the doctrine of liberty, and contributed to the formation of the peculiar type of aggressive individualism that prevails in America. The ideas of liberty and equality have, therefore, been hitherto inseparable, and have seemed not incompatible. But the exhaustion of the public land, together with the unrivalled natural resources of the country and the rapid application of machinery to industrial processes since the war, has resulted in an unprecedented concentration of wealth and consequently of economic power. The old pioneer society, in which individual liberty was the very condition of economic and political equality, is thus rapidly transforming into a society in which individual liberty works out a separation of classes with divergent interests, unequal opportunities, and unequal possessions. The nation is therefore entering upon a period of conflict between classes which is bringing to light the fundamental opposition between the notion of liberty and the notion of equality; the economic and social revolution now in progress is undermining the traditional conceptions upon which our democracy is supposed to rest; the times, somewhat out of joint, call for a new organization in the realm of practical fact and for a new criticism in the realm of theory. It is significant, however, that in the new alignment of classes both parties profess to hold to traditional principles. The great captain of industry, with his hundred millions, regards himself as the true descendant of the old pioneer; as the back-woodsman exploited the wilderness, he, too, has exploited the unknown resources of his country, and has, by means of an initiative, a resourcefulness, a masterful individuality even greater than that of the back-woodsman, achieved great things in the face of great difficulties. On the other hand, those who seek to control corporate wealth by law are appealing to a tradition equally strong on the old frontier—the tradition of equality of opportunity—and so far from renouncing the doctrine of individualism by timidly appealing to a power outside themselves for protection, they are seeking to use an instrument which they themselves have created—the government and the law—for the preservation of fundamental American principles. This opposition of principles and interests, although now for the first time fundamental, goes far back in American history, and Professor Turner maintained in conclusion that a most fruitful and illuminating interpretation of American history is yet to be made from this new point of view.

It was not forgotten that it is now just a half-century since the beginning of the civil war, and two important morning sessions were devoted to commemorating the fiftieth anniversary of secession. Professor Fish, in a paper entitled "The Decision of the Ohio Valley," exhibited the economic unity of the valley as explaining why the Northwest finally sided with the East. The paper complemented one on the following morning by Professor Dodd, who discussed the effort of Southern leaders to hold the Northwest to the Southern alliance. Professor Corwin, in a closely reasoned paper, maintained that Justice Taney was justified by precedent in entering into the general Constitutional question raised by the Dred Scott case, but that his argument, on his own premises, was ill-reasoned. Professor McLaughlin, in conformity with his well-known views on the nature of the Constitution established in 1789, maintained that the doctrine of secession was at least not older than Webster's doctrine of coercion, and that it developed only in response to the economic and political interests of the South. The Friday morning session was opened by Dr. Angell, who gave, in his usual charming manner, some recollections of a horseback ride through the South in 1850. Professor Thomas showed why the non-slaveholding classes sided with the planters, Professor Boyd discussed the conditions in North Carolina on the eve of secession, and Professor Gerson presented new evidence with respect to the calling of the Montgomery Convention. In the conference of Wednesday afternoon, devoted to American diplomatic history, Professor Callahan produced new material showing that the Southern leaders in 1859-60 were working to obtain additional territory from Mexico, and Mr. Sears discussed entertainingly trade conditions in South America, pointing out that ignorance on the part of American commercial houses put them at a disadvantage as compared with European, and notably German, houses in procuring the markets of that country.

Less time was devoted to European history than to American. At the general session of Thursday evening there was a detailed paper, based upon archives at The Hague, by Professor Catterall, on Anglo-Dutch relations; a suggestive paper by Professor Hazen on De Tocqueville and the Republic of 1848, and one by Professor Larson in which he developed his views with respect to the Danish influence in the Anglo-Saxon period of English history. Prof. Morse Stephens discussed in his entertaining way the historiography of the French Revolution, incidentally apologizing for having been rash enough, in extreme youth, to attempt a history of that great event himself. The three conferences that were held on European history were productive of much fruitful discussion. At the Modern European Conference, Professor Andrews, in a careful and thoughtful paper, presented the advantages and the difficulties confronting American students who expected to offer doctors' dissertations in that field. Those who discussed the paper admitted many difficulties; but seemed to think that Professor Andrews had emphasized them more than was necessary. Those who took part in the mediæval history conference were of opinion that there were still many inviting opportunities in that field, and Professor Haskins pointed out that certain periods of English history were particularly available for American students, inasmuch

as there existed in print a fairly complete body of source material which was easily accessible.

One of the most interesting sessions was that of Friday evening, at which Professor Robinson of Columbia University read a paper on the "Relation of History to the Newer Sciences of Mankind." He prefaced his paper by saying that in what he had to say he was voicing a merely personal dissatisfaction which he had felt for some years with the traditional method of interpreting history, and that he wished to express to others the way in which considerable attention to the "newer sciences of mankind," such as anthropology and comparative psychology, had transformed his conception of history. He understood the great value of much of the work that had been done. He had no wish to transform history into sociology, or to discredit the notion that history must be based upon an accurate knowledge of the past. But he felt that historians were somewhat blindly refusing to profit by the results of other sciences that deal with man, so that historical interpretation was becoming, or was in danger of becoming, scholastic and barren of profitable results. Historians, as a result, were, in a sense, the least historical of scholars; professing to deal with man in the past, they were somewhat open to the charge of knowing much about the past but little about man. The two most important facts about man established in the nineteenth century were the fact that he is descended from the lower animals, and the fact that he has lived on the earth for countless ages; it was significant, he thought, that historians contributed nothing, and, by their method, could have contributed nothing, to this discovery.

Prof. William M. Sloane was elected president for the coming year, Theodore Roosevelt was elected first vice-president, Prof. William A. Dunning was elected second vice-president, and Professors Woodburn and Fling were elected to the executive council in place of the retiring members, Professors Hodder and Farrand. The Justin Winsor prize was awarded to Dr. Edward R. Turner for his essay on the Negro in Pennsylvania. The next meeting of the association will be at Buffalo.

THE MODERN LANGUAGE ASSOCIATION: CENTRAL DIVISION.

St. Louis, December 30.

The sixteenth annual meeting of the Central Division of the Modern Language Association of America occurred at St. Louis during the Christmas holidays. The members in attendance were the guests of the faculty of Washington University and most of the sessions were held at the university buildings. Though somewhat overshadowed by some of the other learned societies that met at the same time in the city and listened to such addresses as that of Dr. Woodrow Wilson, this year's meeting was, nevertheless, interesting and important.

To one who has attended these gatherings year after year, certain changes in the personnel of the attendance and in the nature of the discussions become clearly apparent. One notices, first, the increasing preponderance of young men at successive annual meetings. This is to be accounted for, not by supposing that the teaching positions among the colleges and universities of the Middle West are falling into the hands of immature men, but by the fact that the younger men are more alert than their elders to seize the advantages offered by an opportunity to meet their fellow craftsmen. Secondly, one notices the greater emphasis which is now placed in the discussions upon matters purely pedagogical. Whereas, ten years ago, all the papers read at these meetings were scholarly in the sense that they dealt exclusively with problems of interest only to the scholar, three out of nineteen of the papers read at St. Louis dealt directly with the teaching of modern languages. The address of the chairman, for example, discussed the question whether the standard of efficiency of modern language instruction in the secondary schools can be raised. This was a detailed study of existing conditions, based upon answers received to queries addressed to individuals throughout the country.

Similar questions occupied the attention of the English, Germanic, and Romance departmental meetings that met on Thursday afternoon. Particularly interesting was the report presented to the English departmental meeting by the committee of five appointed last year to investigate the conditions of English composition teaching, in the schools and colleges of the country, with special reference to the amount of written work required, and the handling of it by the teachers. The committee's investigation has been thorough. Letters of inquiry were sent to all the colleges and universities in the country, as well as to the one hundred representative high schools. The answers indicated that the teachers of English composition throughout the country are toiling in a kind of educational sweatshop.

The newly appointed chairman of the Central Division is Professor Hubbard of the University of Wisconsin. Since next year's meeting will be a union meeting with the Eastern section and no separate business meeting will be held by the Central Division, Professor Hubbard will serve for two years.

E. C. B.

NEWS FOR BIBLIOPHILES.

The third part of the Edmund Clarence Stedman collection, which will be sold by the Anderson Auction Company on January 24 and 25, afternoons and evenings, contains more of value than either of the two preceding parts. In the Poe material are two very interesting letters, one to Dr. Snodgrass of Baltimore, editor of the Baltimore *Visiter*, and the other to Joseph M. Field. There is also a rolled manuscript of Poe's, sixty-four lines, defending him from a charge that he had plagiarized Keats's "Endymion" in his "Ulalume," and quoting stanzas from the latter and from "Lenore." Among the Poeana are several volumes by that curious master of rhythm, Thomas Holley Chivers, and two poems in his manuscript. A series of six fine letters of A. C. Swinburne, written to Mr. Stedman, in which he freely criticises the poetry of Bryant, Lowell, Longfellow, Emerson, and Whittier, is notable. The series of books of James Whitcomb Riley is a long one, and almost all are presentation copies, several having inscriptions in verse. The Whitman collection begins with the rare first edition (Brooklyn, 1865) of the "Leaves of Grass," and includes a number of presentation copies and several manuscripts. Undoubtedly the rarest book in the library is Richard Henry Stoddard's "Foot-Prints" (New York, 1849), his first volume of verse, the entire edition of which, with the exception of six copies, is said to have been destroyed by the author. This copy was one presented by the printer, in 1888, to Mr. Stoddard, who in turn gave the pamphlet to Stedman. The autograph manuscript of James Thomson's "The City of Dreadful Night," written on sixty-two pages, in two memorandum books, is another notable item. Long series of the writings of William Sharp (both under his own name and that of Fiona Macleod), William Watson, William Winter, Professor Woodberry, Dr. Van Dyke, Charles G. D. Roberts, Stephen Phillips, Sir Gilbert Parker, and other contemporaries of Stedman, many with inscriptions or letters, are included, as is also a large number of Stedman's own books and manuscripts.

On January 23 the Anderson Auction Company will sell a collection of autographs, among them two of Robert Burns's letters to Clarinda, signed "Sylvander"; twenty-two letters from Charlotte Brontë to Miss Nussey; several letters from Hawthorne to Zachariah Burchmore; a fine Dickens letter, etc.

On February 9 to 16, Sotheby, Wilkinson & Hodge will sell the collection of the works of George Cruikshank made by Capt. R. J. H. Douglas. This collection is, perhaps, the finest ever brought together, surpassing those of Mr. H. W. Bruton and Dr. Truman, the first sold by Sotheby in June, 1897, the second in May, 1906. The books are, for the most part, in the original covers, Capt. Douglas having given great attention to state and condition. The set of Grimm's "Popular Stories" (1823-26) is in the original boards, uncut, with labels and correct advertisements. Ireland's "Life of Napoleon Bonaparte" (1823-28) is in the sixty-four original numbers. There are two sets of "The Humourist" (1819-20), one in the original boards, described as the finest copy known; the other in morocco. "The Holiday Grammar" (1825), an exceedingly

rare item, is said to be the finest copy in existence, and a similar claim is made for the set of Comic Almanacs, 19 volumes (1835-53), which in ordinary second-hand condition is comparatively common. The first editions of Dickens's "Sketches by Boz" and "Oliver Twist" are in cloth, as issued, but the much rarer later issues in parts of these two works are also included. The collection of separate prints, caricatures, lithographs, wood-cuts, broadsides, etc., 367 lots comprising the last two days' sale will first be offered as a lot; but, if the fixed upset price (not given in the catalogue) is not obtained, the lots will be offered separately.

The Howard Willets collection, destroyed by fire a few years ago, was probably the most extensive collection of Cruikshankiana ever brought together by any American collector. A very remarkable collection of drawings and prints (extracted from books, but generally without the text) was that of John B. Gough. This is now in the library of M. C. D. Borden. The more famous works, as well as the works of famous writers embellished with Cruikshank's plates, are sought for by many collectors, but few, like Bruton, Truman, and Douglas, attempt to procure every book or pamphlet containing an illustration by Cruiksbank or every separate print which he made.

Correspondence

MILTON AND DU BARTAS.

To the Editor of The Nation:

Sir: The letter of Dr. Baskervill (*Nation*, December 8), comparing certain passages of Milton's "Lycidas" with some in Skelton's "Colin Clout," reminds me that the Rev. Charles Dunster published a little volume in London in the year 1800 giving instances of what he regarded as reminiscences in all Milton's early poems of his previous reading in Sylvester's translations from Du Bartas, and the other verses printed in the same volume with "The Devine Weekes." The parallels noted by Mr. Dunster in the case of "Lycidas" and elsewhere are not suggestive of plagiarism, but of the way in which mental impressions of childhood may work out in later years. The "Lycidas" examples are as follows:

Ivy never sere—"Lycidas."
Bays never unleaved—Sylvester ("Eden").

Some melodious tear—L.
(To the Universities) Lend your learned tears—S. ("Monodia").

Opening eyelids of the morn—L.
See th' eyelids of the morning—S. ("Job Tri.").

Ay me! I fondly dream—L.
Ay me! that Death o'er virtue, etc.—S. (Mon.)

The fair guerdon when we hope to find—L.
The guerdon of his glorious pains—S. (3d Day)
Bears in itself itself's rich guerdon—S. (4th Day.)
Smooth-sliding Mincius—L.
Smooth-sliding floods—S. ("Eden").

(Cam's) mantle hairy and his bonnet sedge—L.
(Jordan's) flood lay'd on his mossy bed,
And pensive leaning his flag-shaggy head—S. ("Captaines").
(Of two keys) The golden opes—L.
She (Nature) wears a golden key—S. (Capt's).

The iron shuts amain—L.
Charging poor mankind amain—S. ("Furies").

That dread voice is past That shrunk thy streams —L.
His dreadful voice did cleave the . . . deep —S. (3d. Day).
Swells and shrinks the seas—(Same Day).

Flowrets of a thousand hues—L.
A semi-circle of a hundred hues—S. ("Ark").

Mild whispers use Of . . . gushing brooks—L.
The stream's mild murmur as it gently gushes —S. (3d Day).

Mr. Dunster also comments upon the employment of the word "use" in the last of the above examples, asserting that it was not employed in the sense there given it by any other predecessor than Sylvester, in whose verses it is often to be found.

It occurs to me likewise that Sylvester's apostrophe to England, inserted by him in "The Devine Weekes," Second Day, is a probable inciting source of St. Peter's address in "Lycidas." At any rate there is more than a resemblance of spirit and tone between them. Wanting some lines at the ending of the apostrophe, it is (except the word "of" in the 15th line, corrected from "if") *literatim* as follows:

And wanton England, why hast thou forgot
Thy visitation, as thou hadst it not?
Thou hast seen signs, and thou hast felt the rod
Of the revenging, wrathfull hand of God.
The frowning Heav'ns in fearfull Sightes forespoke
Thy Roman, Saxon, Dane, and Norman yoak:
And since (alas!) unkinder wounds then those,
The Civill rents of thy divided Rose:
And, last of all, the raging Wolves of Rome,
Tearing thy limbs (Christs Lambs) in Martyrdome.
Besides Great Plagues, and grievous Dearths which (yerst)
Have oft the Sinnews of thy strength reverst.
But thou, more faulty, more forgetfull art
Then Boyes that fear but while they feel the smart:
All this is past; and Thou, past feare of it,
In Peace and Plenty, as a Queen doost sit,
Of Rods forgetfull, and for Rest ingratefull
(That, sottish Duiness: This a sin most hatefull)
Ingratefull to thy God, who all hath sent;
And thy late Queen, his sacred Instrument,
By whose pure hand, he hath more blessed Thine
Then yerst his owne Choyce-planted Hebrew Vine:
From whence he look't for Grapes (as now from thee);
That bore him Crabs: Thou worse (if worse may be):
That was destroy'd, the wilde Boar entred in.
England, beware; like punishment, like sin.
But O! what hoots, or what availes my song
To this deaf Adder, that hath slept so long,
Snorting so loud on pillowes of Security
Dread-less of danger, drowned in Impurity;
Whose senses all, all over-grow'n with Fat,
Have left no door for Fear to enter at?
Yet once again (deer Countrie) must I call:
England repent; Fall to prevent thy Fall.
Though thou be blinde, thy wakefull watchmen see
Heav'ns Irefull vengeance hanging over thee
In fearfull signes, threatning a thousand Woes
To thy Sinn's Deluge, which all over-flowes.
Thine uncontrold, bold, open Athëism:
Close Idol-service: Cloaked Hypocrism:
Common Blaspheming of Gods Name, in Oaths:
Usuall Profanin⁓ of his Sabbaoths:
Thy blind, dumb, Idol-shepheards, choakt with steeples,
That fleece thy Flocks, and do not feed thy Peoples:
Strife-full Ambition, Florentizing States:
Bribes and Affection swaying Magistrates:
Wealth's Mercy-less Wrong, Usury, Extortion:
Poore's Idleness, repining at their Portion:
Thy Drunken surfets; and excess in Diet:
Thy Sensuall wallowing in Laseivious Riot;
Thy huft, puft, painted, curld, purld, Wanton Pride
(The Baud to Lust, and to all Sinns beside)
These are thy sinnes: these are the signes of Ruin.

Theron Wilber Haight.

Waukesha, Wis., January 2.

AMUSEMENT OF COLLEGE STUDENTS.

To the Editor of The Nation:

Sir: The relative drawing-power of various forms of amusement was recently tested at the University of Illinois. The statistics were not at all startling, until a resourceful reporter, by supplying imaginative references to the Bard of Avon and chorus girls, and the decadent taste of college men, touched up the plain tale with varnish of a certain shade. The original statement, though less diverting, may be worth an accurate record.

Questions were submitted to 948 students, about one-fourth of whom were young women. Patronage of the regular drama was checked on a list of nine plays, virtually the entire autumn offering of both syndicates in the local theatres. The list included the names of J. E. Dodson, Otis Skinner, and Maude Adams, and the titles of popular successes like "The Fourth Estate." None of the plays was more antique than "What Every Woman Knows," and all belonged, as the students themselves would say, to the "classy," rather than the classic, school. Nevertheless, 35 per cent. of those questioned had attended no one of these plays.

Musical comedy in some form had drawn nearly 60 per cent. About the same number had more or less regularly visited the local vaudeville house. Moving-picture shows had attracted but 35 per cent. Fifty-nine students only, or one in every sixteen, had indulged in no form of theatrical entertainment during the present season; while two in every three professed hearty interest in the theatre. That the great popularity of high school theatricals is fostering this interest is suggested in the fact that 60 per cent. of the students have themselves appeared in plays.

By way of comparison, the questions tested recent attendance on certain other forms of diversion or education. The results: Dances, 53 per cent.; concerts, 51 per cent.; lectures, 63 per cent.; sermons, 75 per cent.; athletic contests, 80 per cent.

These figures, which speak for themselves, seem a fair indication of our students' taste and interest. The degree of interest in the theatre suggests the amount of influence brought to bear upon college men and women by this medium. The direction of that interest is, perhaps, a more important educational problem than is generally recognized.

Urbana, Ill., December 30.

WILL AND SHALL ONCE MORE.

To the Editor of The Nation:

Sir: Most school grammars, and some more pretentious works, declare, as an ultimate fact, that the English future indicative is formed with the auxillary *shall* in the first person, *will* in the second and third. At best, this seems capricious, and hard to parallel elsewhere. Certainly, the reasoning mind asks for causes, for origins. As a matter of fact, shall and will never change, or exchange, their well-defined meanings. Each has one clear force in all persons.

Let us begin with a bold paradox. English has no future indicative. No language should have one. The mood of positive statement has no real contact with the fu-

ture—the realm of the utterly uncertain. Past and present tenses (do, did; tut, tat; facit, fecit) are rational distinctions of present and past realities: future realities swim not within mortal ken.

Many languages show a consciousness of this truth. In Homer the future is frequently indistinguishable from a subjunctive. The first person remained so in Attic Greek. Exactly the same is true in Latin for most verbs (regam, audiam, faciam), while the favorite and seemingly accurate "future perfect active," in every verb of the language, is five times out of six identical with the perfect subjunctive. Fecerit is "he is going to have it done," or "he *may* have it done"; no one can decide which. There is, in truth, no difference. Our vision stops at present expectation. Again, futures are noticeably perishable. Such common verbs as "I eat, I drink, I come," had none in Attic Greek, using instead older present forms. In modern Greek all forms of the future have fallen out: and curiously enough the subjunctive formation substituted for it gains an important logical distinction, which Plato's speech never attained. One Attic verb, at most, could distinguish a specific action, in future time, from a repeated or habitual one. But every peasant now feels the difference between θέλω νὰ φάγω, or ὑὰ φάγω (I'm going to eat a certain meal), and θὰ τρώγω (I am going to continue the eating habit).

English has lost an extremely useful verb, the German *werden* (become, get to be). Its last dying breath in our speech is perhaps Scott's "Woe worth the chase," which might be rendered "Weh werde der Jagd." The loss is painfully felt when we try, first, to express the passive voice. The interminable wrangle over "This house is being built," the attempts to substitute "is a-building," etc., make us sigh for the curt clear "Dies Haus *wird* gebaut," perfectly distinct from "*ist* gebaut" (is already builded).

So again when we attempt to face in full confidence the future. We have entirely lost the German device "Ich werde lieben" (I am getting to the loving). The safest and most accurate form really is: "I am going to love," expressing present tendency or progress in the given direction: (Amaturus *sum*).

What, then, are will and shall (wollen and sollen)? The original meaning of each is clear. They do not encroach on each other. Neither is equivalent to the lost *werden*. *Will* indicates desire, *shall*, compulsion. *Will* states the mental attitude of the subject, his readiness for any action proposed: usually *wish* (to) is a close synonym. *Shall* (I am obliged, it is required of me) indicates a resistless pressure, presumably of moral or cosmic force, from some source outside the subject. Thus, "I shall die," confesses the power of a universal law acting even upon the ego, the organism that perceives the law and defines its application. "I will die" indicates cheerful assent, if not active aid, to the same result. Now, it happens that we occasionally wrest both from their proper functions, misapplying them to a mere future or expected occurrence. Under these conditions only a plea in mitigation can be offered: choose along the line of minimum error, of least misunderstanding.

"I will die," declaring the willingness of the ego to be destroyed, contains a maximum of misstatement, and that in a matter on which ego is better informed than any other. Hence "I shall die" is less misleading, though "I am to die," "I am going to die," "I expect to die" is far more accurate.

Conversely, "thou shalt die," "he shall surely die" has inevitably, ever since Cain's day, a most dangerous connotation. Each man knoweth best his own heart. Hence the grim hint is also heard, that the speaker is inclined to help out the inexorable law, to enforce it on the other man. That is, "Abel is to perish by a force outside himself" instantly suggests allusion to that force most familiar to the speaker: viz., his own heart and hand. So I say, more safely, "he will die." Probably that is untrue. Abel, presumably, wishes to live; but meantime he can speak for himself, and this pronouncement is less dangerous than the other. A wiser reticence, a keener logic, would stop at "he is (*going*, or *about*) to die."

The unlucky foreigner who, sinking, cried: "I will drown, no one shall help me," did not mean "I wish to drown, nobody is permitted to help me." But neither did he mean "I am destined to drown, no man is willing to save me": though that is what we bid him say in amendment. ("I shall drown, no one will save me"—Ich soll ertrinken, niemand will mich retten.) Better far if he uttered his sincere conviction: "I'm going to drown, nobody's going to save me" ("Ich werde ertrinken, niemand wird mich retten.") That is, having lost *werden*, it is slovenly of us to use *wollen* or *sollen*, knowing that neither is right.

We have, then, no colorless and positive future, and should have none. *Will* and *shall* have one meaning apiece, which they never interchange. But the loss of *werden* is the severest our language has suffered, enfeebling and bewildering our logical faculties as to two large categories: passivity and futurity.

If a practical rule for the actual use of these auxiliaries be desired it is: Use *shall* and *should* for *actions* not controllable by the subject's will; *will* and *would* for actions under his control. When in doubt use going to, about to. Thus in an "impersonal" idiom. "It shall rain" *e. g.*, is, of course, absurd. "It will rain" was right, logically, as long as "it" was felt to be "the Divine power," just as the early Greek said, "Zeus rains, lightens, thunders," etc. It can now only be explained as a reminiscence, and is slightly incongruous, because the word *will*, whether verb or noun, implies, always, a conscious subjective activity.

WM. C. LAWTON.

Scranton, Pa., January 4.

THE SOURCES OF "IVANHOE."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent who, in his report of the meeting of the Modern Language Association, comments on Dr. Wolff's paper, uses too strong a term in calling Scott's numerous but infinitesimal borrowings from Sidney's "Arcadia" for his "Ivanhoe" an offence. The incidents borrowed from the "Arcadia" concern mostly the events at Torquilstone Castle, and the actual amount borrowed does not compare with that borrowed by Shakespeare, for example, for his "Romeo and Juliet." It would be a rash man who should call the dramatist's act an offence.

It is also worth while to point out, since the fact seems to have escaped notice, that what is perhaps the most thrilling incident of the siege of Torquilstone—the fall of the castle through a traitor's setting on fire a heap of fuel within the castle, the description of the spread of flames and smoke, and the desperate struggle of the besieged against fire within and foes without—is taken not from the "Arcadia" at all, but from the siege of Kildrummy Castle in Barbour's "Bruce" (iv, 85-158), a work which five years before "Ivanhoe," Scott had used as the source of his "Lord of the Isles." In both cases, the besiegers are aware of the treachery, but the besieged learn of it in the midst of the fight. In both cases, the besieged rally, defend themselves stoutly against their perils, and for a time succeed in beating back the assailants. What appealed to Scott's imagination must have been the graphic description of the fire itself, and the picturesqueness of it. I will not beg space to insert a "deadly parallel"; but only quote Barbour:

> Na mair may na man fire sa cover
> Than low or reik sall it discover;
> Sa fell it here, for fire all clear
> Sune through the thick burd can appear,
> Ferst as a sterne, syne as a moyne,
> And well bradar thair-after soyne,
> The fyre out syne in blasis brast,
> And the reik rais richt wonder fast.
> The fyre o'er all the castle spred,
> Thair micht na fors of men it red.

If we compare this with Scott's "smouldering and suffocating vapor, eddying in sable folds," and his account of the spread of the flames, we shall see how easily the vivid picture of the "Bruce" may have remained in his mind for five years, to be used as need required, along with the "Arcadia" and an infinity of other "sources," in what was essentially an original transmuting into life in the great novel.

In an age when "The Divine Fire" appears unchallenged within a few years of "The Story of an Untold Love," it is worth inquiring against what Scott "offended" in borrowing a situation from the "Arcadia" as a portion of a skeleton frame upon which to mould his living characters.

Finally, it is only fair to Dr. Wolff's predecessor in this field, to call attention to an article in *Modern Language Notes* for May, 1907, pp. 144-146, by Robert T. Kerlin, then graduate student at Yale, now professor at the Virginia Military Institute, Lexington, Va. His paper, "Scott's 'Ivanhoe' and Sidney's 'Arcadia,'" anticipated most of Dr. Wolff's parallels.

H. N. MACCRACKEN.

New Haven, January 5.

ENGLISH TRANSLATIONS OF THE ILIAD.

TO THE EDITOR OF THE NATION:

SIR: In your issue of December 1, the reviewer of Cumming's recent translation of the Iliad says that it "is hardly such as to warrant a hope that it will not take its place with the forty or so unsuccessful attempts at hexameter translations which the author tells us have already appeared in print." That this is a statement far wide of the mark, so far as the number of hexameter English translations is concerned, is shown by the following list of English translations of the Iliad, only four of which are attempts at the classic hexameter, and one other which is a sort of

nondescript hexameter in rhyme. The list, with the meter employed in each, is as follows:

George Chapman, 1612, rhymed iambic heptameter; John Ogilby, 1660, heroic couplet; Thomas Hobbes, 1672, rhymed iambic pentameter—alternate lines rhyming; Ozell, Broom, and Oldisworth, 1714, heroic couplet; Alexander Pope, 1715-1720, heroic couplet; James Macpherson, 1773, prose; William Cowper, 1810, blank verse; A Member of the University of Cambridge, first six books only, 1828, prose; William Sotheby, 1834, heroic couplet; A Graduate of the University of Oxford, 1841, prose; T. S. Brandreth, 1846, blank verse; William Munford, 1846, blank verse; W. G. T. Barter, 1854, Spenserian stanza; Charles W. Batcman and Roscoe Mongam, 1862, prose; T. S. Norgate, 1864, blank verse; Earl of Derby, 1864, prose; Philip Stanhope Worsley, 1865, Spenserian stanza; Ichabod Charles Wright, 1865, blank verse; J. Henry Dart, 1865, hexameter; John Stuart Blackie, 1866, rhymed iambic heptameter; Sir John Herschel, 1866, hexameter; Charles Merivale, 1869, rhymed iambic heptameter; W. G. Caldcleugh, 1870, blank verse; Thomas Foster Barham, first book only, 1871, hexameter; J. G. Corderey, 1871, blank verse; Francis W. Newman, 1871, unrhymed iambic heptameter hypercatalectic; William Cullen Bryant, 1886, blank verse; C. B. Cayley, 1877, hexameter; H. Hailstone, 1881, prose; Andrew Lang, Walter Leaf, and Ernest Myers, 1883, prose; W. C. Green, 1884, blank verse; Arthur S. Way, 1886, rhymed hexameter: John Purves, 1891, prose; Theodore Alois Buckley, 1893, prose; Samuel Butler, 1898, prose; Edgar Alfred Tibbetts, 1907, rhymed iambic hexameter, the third foot having an extra syllable.

To this list should be added the great name of Dryden, who translated the first book in heroic couplets.

From this it is seen that the proportion of hexameter translations to all the others is pitifully small; and may we not add that it ought to have been even smaller, seeing that English hexameters seem to be impossible?

The above list is complete so far as my own knowledge of the subject extends. It may very well be that others can be added to it. EDWARD ROBESON TAYLOR.

San Francisco, December 14.

"NICKNAME GOD'S CREATURES."

TO THE EDITOR OF THE NATION:

SIR: The able paper on "Spenser and the Earl of Leicester," by Prof. E. A. Greenlaw of Adelphi, in the current (September) number of the *Publications of the Modern Language Association*, suggests a plausible solution of a crux in "Hamlet." In Act III, 1, 151, Hamlet, attacking through Ophelia the follies of Court ladies, exclaims: "You jig, you amble, and you lisp, and *nickname* God's creatures." The italicized word is rendered "give wrong names to" by Clark and Wright; "miscall," by Rolfe; "misname," by the New Dictionary. None of these renderings seems to the most recent editors, such as Sprague, to satisfy the demands of the context; nor does the Variorum offer any solution.

Professor Greenlaw shows that at Elizabeth's court it was a whimsical custom to give courtiers the names of animals. The Duke d'Alençon wrote himself the Queen's "ape," Leicester was the "lion"; Burghley, a "fox"; Hatton, her "sheep." The complete code is given in "Hatfield House Papers," II, p. 448. No doubt this affectation, given the august sanction of the Queen, was followed to its extremity by those that had only got "the tune of the time"; and must have excited the disgust of Shakespeare. Interpreted in this light, the passage would mean: "You misuse the names of God's creatures (*i. e.*, in your affected Court speech)."

This interpretation accords well with the only other occurrence of the word in Shakespeare ("Love's Labour's Lost"): "You nickname vertue; vice you should have spoke." B.

New Haven, December 20.

TOM PAINE'S NOSE.

TO THE EDITOR OF THE NATION:

SIR: If it is not too late to renew a trivial subject, I should like to add the following to the lore of noses displayed some weeks ago in the *Nation*. In the first of the "Salmagundi Papers" the author has had occasion, because of the likeness of color, to join together Mr. Jefferson's breeches and Tom Paine's nose. Here is the note:

As for the proboscis of Paine, "I shall secure him to a nicety," said Jarvis, when he was about to take the bust of Paine, now in the New York Historical Society, "if I can get plaster enough for his carbuncle nose." Dr. Francis, who relates the anecdote in one of his interesting historical sketches which he has given to the public, also furnishes a couplet sung by the boys in the street:

Tom Paine is come from far, from far;
His nose is like a blazing star!

Literature

A NEW TRANSLATION OF DON QUIXOTE.

That Imaginative Gentleman, Don Quijote de la Mancha. By Miguel de Cervantes Saavedra. Translated into English by Robinson Smith. New York: E. P. Dutton & Co. $3.50 net.

Some twenty-four years ago, when an English translation of "Don Quixote" was known to be in preparation by A. J. Duffield, Father Sbarbi, the genial collector and author of the "Refranero General Español," devoted one of the volumes, the sixth, of his great collection to proving the "untranslatableness" of Cervantes's work. Unfortunately Sbarbi's volume did not convince Mr. Duffield, whose laborious version appeared in 1881, and has never been reprinted. More successful were the translations by Ormsby (1885) and H. E. Watts (1888), and now comes Robinson Smith with the fourth of the modern translations.

There have been six other more or less independent English translations of "Don Quixote," besides a large number of abbreviations and *refacciamenti* of previous versions, among which may be classed Miss Smirke's (1818), to accompany her father's illustrations, and E. Ward's translation (1711) into Hudibrastic verse. Those by John Phillips (1687) and Charles Henry Wilmot (1774) have deservedly never been reprinted. The four that are left have gone through many editions and constitute the stock versions. The poorest of these, Motteux's (1700), has been the most popular and has recently received a new lease of life by being included in Everyman's Library. Jervas's (generally written Jarvis, 1742) is much better than Smollett's (1755), which owes much to Jervas's and can hardly be regarded as an independent translation. Owing to the fame of the author, Smollett's version long enjoyed an undeserved popularity. The first English translation (1612, and, second part, 1620), by Thomas Shelton, is still the most interesting, and is the only one that is itself an English classic. It is fairly accessible, being included in the Tudor Translations, Macmillan's Library of English Classics, Harvard Classics, and in the edition of Cervantes's complete works in English now in course of publication at Glasgow and London.

Robinson Smith's translation, in the one handy and beautifully printed volume, is brought within its present compass by large omissions. The omissions in the prose are: the two intercalated stories of the first part, five chapters in all; the episodes growing out of the story of the Captive, four chapters; the story of the goat-herd, Eugenio, one chapter, and of Cardenio, more than two chapters. There are also some minor omissions caused by the above extensive ones. The dedications of both parts are omitted, as well as the prefatory verses of the first part. Nearly all the poetry of both parts is omitted, and where it is absolutely necessary to render it, a condensed version is given. The translator says in his preface: "The short stories in Don Quijote, which prove a stumbling-block to many readers and which Cervantes himself practically acknowledges (II. 3, 44) interfere with the unity and flow of the main narrative, have been omitted, together with some of the poor poetry, but the translation is not therefore to be considered abridged or expurgated. Rather it may be contended that here the reader will find the true consecutive narrative for the first time." Something might be said for the omission of the story of the "Curioso Impertinente" (referred to by Mr. Smith as "The Impertinent Paul Pry"); but the story of "The Captive," while not autobiographical, throws so much light on Cervantes's life in Algiers that it is a pity to lose it. In regard to the episodes in general, it may be said that they are absolutely characteristic of the fiction of the time and that a "Don Quixote" without them is incomplete and incorrect. The omission of the poetry (unless possibly the prefatory verses) is even less excusable. Cervantes was not a great poet, but his verse is at least as good as that of most of his contemporaries, and, besides, like the episodes, is characteristic of the work.

Far more serious for the reader is the entire absence of explanatory notes. "Don Quixote" is the most national and local of all works of fiction; but, like all great classics, the most cosmopolitan. It is filled with innumerable references that are absolutely unintelligible to the reader without a note. Sometimes, but very rarely, Mr. Smith inserts the meaning into the translation: p. 44, "It isn't difficult to find such an interpreter there, and had I sought one that could speak the older and better language of Hebrew, I shouldn't have been disappointed." The word "Hebrew" is meant, but is not expressed in the original. Sometimes the literal translation is unintelligible: p. 537, "or do I but break my head?" (Shelton, "or do I talk idly?"). Sometimes the similar word conveys no meaning, as "catholic" on pp. 577 and 597, "catholic in health," "Rocinante not very catholic."

Mr. Smith's text is that of the Academy, 1819; but he follows Hartzenbusch in transposing the theft of Dapple in the first part from the twenty-third chapter, where it is found in the second impression of 1605, to the twenty-fifth chapter. In the difficult passage, I, 19, the excommunication speech is put into the mouth of the bachelor (as in the first impression of 1605), but the translator is still obliged to rearrange that text by omitting one of the departures of the bachelor and the words, "Olvidabaseme de decir," as well as some others. It would have been much simpler to follow the text of the second impression, 1605, which puts the excommunication speech in Don Quixote's mouth and involves merely the omission of the bachelor's second departure. As to the unseemly rosary of I, 26 (first impression, 1605), we like to think that the author himself corrected the text in the subsequent editions. Mr. Smith prefers the "shirt-tail" rosary.

In regard to the translation itself a few points of general interest may be mentioned first. Mr. Smith is, we believe, the only translator who turns "ingenioso" into "imaginative" and makes his title read, "That Imaginative Gentleman," etc. This is undoubtedly nearer to the true meaning than the idea embodied in the English word "ingenious," but this term has been consecrated by long usage and may well be kept, especially when a Spanish scholar like Sbarbi professes his profound ignorance of the meaning of the original. Mr. Smith's "Knight of Sorry Aspect" is more correct than Shelton's "Ill-favoured Face," or Smollett's and Ormsby's "Rueful Countenance," and more pleasing, we think, than Watts's "Rueful Feature" (in its old English meaning). We should have preferred the form Don Quixote throughout the work; it was the original Spanish form, and it is a pity it was changed. The new translation is also marred by the excessive use, outside of conversation, of the colloquial contractions he'ld hadn't, couldn't, wouldn't, didn't, won't, etc., and by the forms 'twere, 'twas, etc. There are three styles in Don Quixote: that of the ordinary narrative and large parts of the knight's conversation in the prose of the period and with few archaic forms or words; the imitation of the style of the romances of chivalry; and Sancho's colloquial and proverbial style. There is no need of using in the first category an antiquated English style, but this has been the pitfall of the translator; here Duffield met his doom. Mr. Smith, too, has erred in this respect, as may be seen by a few examples of many: p. 5, "brook no tarriance" (no quiso aguardar mas tiempo); p. 14, "leech" (maestro); p. 19, "since it sorted to thee" (te cupo en suerte); p. 23, "stories that sorted with his situation"; p. 21, "swinges" (palos) and "swinging," which are favorite words with the translator; p. 25, "greater cantle of the world" (en gran parte de la tierra); p. 35, "shan't fault through me" (por me no falte); p. 110, do me not this scath" (*sic*) (non se me faga tal desaguisado), another favorite word.

The translator is generally correct in his rendering of individual words, but in one instance, at least, is most unhappy. Don Quixote was mad, but not idiotic, yet Mr. Smith many times (pp. 151, 153, 318, 345) translates "loco" by "idiot," "locuras" by "idiotic pranks," and "locura" by "idiocy"; once he uses the archaic English "fondness." Not infrequently he employs, very needlessly, colloquial expressions and slang: pp. 16, 546, "slating a peasant neighbor of his," "slating him for that post"; p. 64, "rib-roasted (aporreado); p. 143, "pebble-tattoo," (el golpe guijarro); p. 151, "head-raps," "head-knocks" (calabazadas); p. 157, "kicked his hands in the air" (dió dos zapatetas); p. 157, "see you throw a fit or two" (que vea siquiera una locura), etc., etc.

The proverbs and proverbial sayings of Sancho are, in general, excellently rendered. It is a pity that Mr. Smith on the famous occasion of the adventure of the Fulling Mills translates Sancho's "Peor es meneallo" by "Talking will only make it worse"; on the other hand, when the same proverb is used again, p. 215, we have "Stirring will only make it worse." One or two other matters may be mentioned in conclusion: the "buttons," p. 197, were the wooden plugs or corks in the wine-skins which the knight took for giants; Cervantes in the first edition of 1605 has the basin (*alias* Mambrino's Helmet) broken to pieces by the galley-slave, and Mr. Smith correctly translates "'till 'twas nothing but bits"; but as the basin later turns up simply dented, the edition of 1608 corrects "la hizo casi pedaços," and it would have been better to adopt this reading.

The introduction consists of an interesting examination of some of Cervantes's literary sources. The writer's pen slipped, however, when he speaks of "the second part, written ten years after the first and when the age of our author bordered on fifty." Cervantes was sixty-eight, when the second part appeared in 1615. The translator cites Morel-Fatio's article on the mysterious "duelos y quebrantos" (rendered "paunch and penance" by Mr. Smith), but apparently has not seen the exhaustive discussion of the question in Don Clemente Cortejon's great critical edition (Vol. III, Madrid, 1907, pp. xxlv-lxx), where it is suggested that "duelos" is a popular disguise of "dólichos" (dólicos), a kind of bean. The book is beautifully printed in type which it is a pleasure to read. But there are too many misprints, a number of them in proper names: Astriada (Austriada); Caroles (Caroleas); Circongílio (Cirongílio); Gónzalo (Gonzalo), and many others. There is no index, properly speaking, but lists are given of the adventures, incidents, letters, stories, subjects, and persons. It may be of interest to know that in the exhaustive list published by Soravilla in the *Revista de Madrid*, 1876, six hundred and sixty-nine persons are registered, of whom only sixty-two are women.

CURRENT FICTION.

Jean-Christophe: Dawn, Morning, Youth, Revolt. By Romain Rolland. Translated from the French by Gilbert Cannan. New York: Henry Holt & Co.

The six hundred pages of the present work are presumably little more than half of the French edition, in which there are three additional parts. It is also stated that "Jean-Christophe," if the public so desires, will be followed by two more works with which to round out a trilogy. Hence this English translation may be regarded as a sample asking for a specially serious judgment. The book will probably be taken, at first sight, for a very full realistic account of a musical genius from the day of his birth to the time when, at twenty years of age, he is compelled by an act of rebellion against the military to flee from his country; he is last seen taking the train for Paris, where his experiences are recorded in the three parts not yet translated.

The plot is not worth mentioning, since the action is fragmentary and episodic, with only that slight unity which must result from following the thread of a single life. Sheer artlessness this method, we believe, has been pronounced in France, which, confident of a mission, disarms and possesses. The method needs to be examined. It differs entirely from what is generally

called realism, in that it never presents anything like a full cross-section of the hero's life at any given time, and also in the fact that character and action are not related to each other in a natural way. These peculiarities can be illustrated best together. Although the setting remains almost constantly the same, new persons keep appearing, and old ones, when once they have served the author's purpose, disappear for great stretches of time, if not forever. Even of Jean's two brothers we get no accurate picture. The younger returns momentarily from oblivion to steal away the hero's mistress when it is desirable that this chapter in Jean's life shall close. Previously the youthful Frau Sabine, whom the reader has seen but a moment, is stricken dead of a trivial cold after she has stirred Jean with first desire. And Uncle Gottfried, the peddler, passes like Pippa and changes events with a word. A student of Tolstoy, M. Rolland has failed to grasp Tolstoy's way of editing. He presents a series of incomplete scenes, which are all too obviously created to carry and crystallize spiritual action; action does not grow inevitably out of character and setting.

The result is what might be expected. Robbed of a natural framework, the inner life, no feature of which seems to the author too trivial to mention, loses any real meaning and sorely lacks interest. Imagine this method applied to the intangible realities of Becky Sharp or Diana, and the futility of Jean-Christophe becomes apparent. The author is not a novelist, he is a psychologist, though it must be said that he has uncommon power to phrase the most transitory sensations. On this spiritual side, the hero's relentless search, in defiance of all conventions, for what he conceives to be the truth, carries one back to the early days of German romanticism.

The Rules of the Game. By Stewart Edward White. New York: Doubleday, Page & Co.

It is the day of the forest ranger in Western fiction. That glamour which once surrounded the prospector, and later the cowboy, has now shifted to the hero of conservation. We have not yet noted the arrival of this picturesque figure upon the boards of the practical stage; but that apparition is to be expected at any moment. Mr. White disclaims anything actionably photographic in the events and characters of this story; but he frankly admits that "Plant and Baker and all the rest are only to a limited extent fictitious characters. What they did and what they stood for is absolutely true." The action takes place at the time when the work of the forest ranger had not yet been transferred from the Land Office to the Bureau of Forestry. The objects of a real forestry service were only beginning to be apprehended by a few citizens. Dishonesty and idleness were the rule among the rangers: a condition of affairs for which the spoils system was chiefly responsible. Here and there, however, throughout the rank and file of the service, were men who felt the dignity of their task in guarding the public domain. That part of the Sierras in which the action takes place is under the jurisdiction of a corrupt supervisor —cousin of a magnate at Washington, and therefore free to use his local authority for his own gain. A few of the rangers under him have a real feeling for their work, but they do their best without encouragement.

Into his region comes the hero of fiction, the young Yale halfback without whom civilization and romance would nowadays labor under a sad disadvantage. His father owns a huge tract of woodland in these mountains. Bob Orde is sent there to learn the lumber business, but does not know that the land is to belong to him some day. He is singularly ignorant at the outset, not only of lumbering, but of Western methods in general. There is trouble at once with the corrupt supervisor of forests, Plant, and Orde conceives a contempt for the service which is shared throughout the region. But conditions change. Plant is killed by one of his victims. Soon after the Forestry Bureau is given in charge of the rangers. The upshot is that Orde is converted, enters the service as a ranger, and after much stirring adventure becomes a private citizen again only in order to take charge of his father's lumber-tract in the name of good forestry. Orde, in spite of his thews and feats, is a little wooden throughout. The most real and striking figure in the story is in some ways the most preposterous—Baker, the water-power magnate—with his extraordinary dialect, his complacency, his unscrupulousness, his incredible, and yet not unparalleled, skill at the money game. The tale is told in the most leisurely fashion, and drags a little now and then; but it is one of the best among recent American stories of its type.

Second String. By Anthony Hope. New York: Doubleday, Page & Co.

This story of brilliant Harry Belfield's fall from the pedestal on which the people of his native Meriton had always placed him, is told with the interest of plot, character-drawing, and clever dialogue which we expect from the author. There is just enough psychological analysis to gratify the modern craving for scientific truth, and not enough to dull the zest of the narrative. The variety imparted to the tale by the several groups of personages in it, touching one another at only one point, gives it a largeness of movement that is one of the marks of far greater novels. The little world of Meriton, long Harry's; that other world there, in which Jack Rock, with his hearty loyalty to Andy Hayes, is the centre, the gay London sets, with their glimpses of Meriton through the eyes of Harry and Andy, until they, or part of them, come into more direct acquaintance with it: all these are vividly drawn, and without violation of essential unity, form the many-sidedness of the story. There may be more of romance than of reality in the details of the associations among the individuals of these diverse social classes, but the audience for which the book is intended will not quarrel with that.

The Spread Eagle. By Gouverneur Morris. New York: Charles Scribner's Sons.

Mr. Morris is about the neatest and cleanest of our short-story writers, and the present collection is in his best vein. He is not concerned with the tragedies of poverty or wealth, or with the sentimentalities of a morbid pity. But he knows the honest things of life, and its prizes of affection and its pains of loss. "The Spread Eagle" is a story of international relations which ends on a note of hilarious Americanism. The other stories are all just good amusement.

LAFCADIO HEARN IN JAPAN.

The Japanese Letters of Lafcadio Hearn. Edited with an Introduction by Elizabeth Bisland. Boston: Houghton Mifflin Co. $3 net.

We have already, in reviewing the "Life and Letters" published by Mrs. Bisland in 1906, expressed our high regard for Hearn's correspondence, and this third volume, giving the letters to Basil Hall Chamberlain, with a few to W. B. Mason and Hearn's Japanese wife, fills out what was the weakest part of the earlier volumes—the impressions of Hearn in Japan. Hearn was a romantic, and a good many readers will still think that the truest expression of his romantic nature is to be found in the letters written from Cincinnati and New Orleans. But these Japanese letters are extraordinarily interesting. Here we see that strange mixture of scientific metaphysics learned from Herbert Spencer with the most fantastic interpretation of the Japanese belief in the ghostly indwelling of the past in the present—a mixture that at first seems strange, although it is, in fact, a perfectly legitimate synthesis of the two divergent tendencies, springing from a common source, that went to make the scientific and the romantic spirit of the nineteenth century.

Besides the main philosophical theme of the letters, which in itself well repays consideration, there are innumerable striking bits of description, or literary criticism, or native psychology,

or biographical reminiscence. The style still shows some uncertainty in regard to the use of "will" and "shall" and other niceties of language; this uncertainty clung to him from earliest associations and from his life in America; but otherwise he possesses a marvellously flexible instrument of expression. In criticism the most notable passages have to do with the various books of Pierre Loti, and with Hearn's perception that these books, and indeed the whole school to which they belong, were a product of the nerves:

> You remember what I wrote you long ago about my belief that his genius must expire with that natural blunting of the nerves which comes with the passing of youth. He says so himself touchingly in his little preface—*"déjà autour de moi, tombe une sorte de nuit."*

With this should be coupled the keen *aperçu* in regard to the romantic identification of truth and beauty. "They [the romanticists] all sowed a crop of dragon's teeth," he says. "Preaching without qualification the gospel of beauty—that beauty is *truth*—provoked the horrible modern answer of Zolaism: 'Then truth must be beauty!'"

In description the most notable letter—a really extraordinary piece of writing which will be remembered from its appearance in the *Atlantic Monthly*—is that (March 6, 1894) in which he comments on the beauty of various racial tints and on the contrast between the Oriental and the Occidental eye. We must give a few lines from this latter contrast, though they may already be familiar to the reader:

> The eyelid is so very peculiar that I think its form decides—more than any other characteristic of the Far Eastern races—the existence of two entirely distinct original varieties of mankind. The muscular attachments are quite different, and the lines of the lashes—indeed, the whole outer anatomy.
>
> One might ask mockingly whether to Japanese eyelids could be applied the Greek term *charitoblepharos*. I think it could. There is a beauty of the Japanese eyelid, quite rare, but very singular, in which the lid-edge seems double, or at least marvellously grooved, and the effect is a softness and shadowiness difficult to describe.
>
> However, it seems to me that the chief beauty of a beautiful Japanese eye is in the peculiar anatomical arrangement which characterizes it. The ball of the eye is *not* shown—the setting is totally hidden. The brown, smooth skin opens quite suddenly and strangely over a moving jewel. Now, in the most beautiful Western eyes the set of the ball into the skull is visible—the whole orbed form and the whole line of the bone socket—except in special cases. The mechanism is visible. I think that from a perfectly artistic point of view, the veiling of the mechanism is a greater feat on nature's part. (I have seen a most beautiful pair of Chinese eyes, that I will *never* forget.)
>
> I don't mean to make any sweeping general rule. I only mean this: "Compare the most beautiful Japanese or Chinese eye with the most beautiful European eye, and see which suffers by comparison." I believe the true artist would say "neither." But that which least shows the *machinery behind it*—the osteological and nervous machinery—now appears to me to have the greater charm. I dare say such eyes as I speak of are not common; but beautiful eyes are common in no country that I have ever visited.

Of Mrs. Bisland's introduction to the present volume we can speak only with reserved praise. It contains many admirable things in regard to Hearn, and the general intention to counteract the influence of the book "Concerning Lafcadio Hearn," published in 1908 by one whom Hearn himself calls "a smart Yankee doctor in Philadelphia," is eminently proper. The tone of that book was deplorable, and its argument was, in part at least, utterly misleading. The thesis that Hearn's character and literary style depend almost entirely on his visual defects is demonstrably absurd, as a little knowledge of literary history and, indeed, as the fragment quoted above will show. But in attempting to remove the mischief of that book Mrs. Bisland falls, we think, into the opposite extreme. The opening pages of her own earlier volumes, "The Life and Letters," give no such impression of an "atmosphere of wealth and refinement" as she would now throw around Hearn's childhood. In her endeavor to lend stability to his character she goes, in our judgment, too far in denying his vacillating attitude toward the Japanese. "Having written two volumes of his first impressions and delights in the land of his adoption," she says, "one sees the enthusiast stretch himself after the long, cramping task, and exclaim with whimsical heartiness, 'D——n the Japanese!'" As a matter of fact these letters corroborate the view that Hearn, despite his insight into the imaginative life of the people, never felt at home in Japan, and vacillated constantly between a personal attraction and repulsion. Toward the end the note of weariness and the desire for change become very strong. The romantic nostalgia was, in fact, deep-rooted in his nature, and he could never anywhere have been anything but restless and ill at ease. Mrs. Bisland, moreover, goes far beyond the bounds of editorial partiality when she speaks of these letters as "greater than the self-revealment of Rousseau's 'Confessions.'" They may indeed "be valued as one of the great human documents, one of the great human portraits of literature"—although even such language as this seems to us a little too strong—but they contain, it need scarcely be said, no such greatness, whether angelic or diabolic, as has made of the "Confessions" a power in history. But let the last word be one of praise. We have here a volume of letters of unusual interest, a book that must be read for years.

The Battle of the Wilderness. By Morris Schaff. Boston: Houghton Mifflin Co. $2 net.

Gen. Schaff, at the time just out of West Point and holding a staff position in the Army of the Potomac, had the best preparation and opportunity for witnessing the battle he here describes. He was at close hand in many critical moments, always a keen and intelligent observer and active participant. His memory of what he did and saw is clear, and his narrative is absorbing and instructive. We must say that the form of Mr. Schaff's presentment is a marvel, discursive to the last degree, mingling things small and great, fact and poetry, and exuberantly tropical. Grant and Lee advance, and, lo! the ghost of Stonewall Jackson also walks and talks at length, a perambulation which we think the official records do not authenticate. Weird spirits are in the camps and on the firing-line, in particular a "cowled and gloomy figure, the spirit of the Wilderness," which takes a hand in the game, to the perplexity of the flesh and blood players. A corps advances to attack, and we are on tiptoe for a great manœuvre, but Mr. Schaff's friend Smith on the skirmish line has his cap knocked off by a scrub-oak. We wait to hear what Smith says to the scrub-oak, and what the oak says to Smith; for scrub-oaks, dog-woods, and azalias talk to one another and to the soldiers. The huckleberry bushes ring bells, now for joy, now for requiem. Mine Run and the Rapidan gurgle articulately to the sentinels and to each other; and far away in the North and South, rivers, hills, and stretches of country are equally sympathetic and vocal. There are indeed tongues in trees, books in the running brooks, and sermons in stones.

As to important strategic conceptions, there is only one to which we take exception. "The cowled and gloomy figure," the Wilderness, has, it seems, a high moral sense, and is troubled because Gov. Spottswood, in pre-revolutionary days, employed slaves in mining and timber operations within its area, an offence which the South continued. To punish the South the cowled figure inflicts two stabs, the first at Chancellorsville, where the Wilderness arranges that Stonewall Jackson shall be struck down by his own men at the moment when, as the spirit conceives, he is about to bring Hooker to destruction; the second stab a year later, when Longstreet, about to destroy Grant, is struck down in his turn in the same place and manner. Thus the Cowled Figure imposes upon the South grewsome discipline for desecrating its area. Now as to all this, we doubt whether the Wilderness had a right idea of how things were going those May days in '63 and '64. We have heard a high military authority argue that Stonewall

Jackson, when struck down, was on the point of involving, not Hooker, but Lee, in destruction. The course of his charge would have carried him presently against the First and Fifth Corps, under Reynolds and Meade, veteran and well-commanded troops eager for an opportunity—when, outnumbered as he would have been, with his divisions in great confusion, Jackson could only have encountered disaster. The Cowled Figure perhaps would have done better to let Jackson alone as he rushed onward. So too as regards the second stab: it is a very gratuitous "might have been" that Longstreet, if unwounded, would have hurled Grant back across the Rapidan, to which perhaps just as good a "might have been" could be opposed. All together, taking Mr. Schaff's showing, the Wilderness does not appear well in this transaction. A high-purposed and wide-awake American jungle ought not to have so botched its work. What the South got out of it was in Chancellorsville a splendid victory, and a year later the brilliant initiation of that extraordinary campaign through which Lee so long kept Grant out of Richmond. Indeed, we suspect our author has been imposed upon, and that the Cowled Figure all the time was a warm Southern sympathizer.

However, Mr. Schaff's estimate of men and events is in general excellent. While his fancy is a bit riotous, we believe we like it all. We applaud the writer who, while framing a military treatise, can at the same time make it a new "Alice in Wonderland." The gentle reader (and we are of the gentlest) confronts with serenity these swarming tropes, as Alice confronted the mock-turtle and the jabber-wok. More than this, the reader again and again finds his soul kindled by the grace and power with which a most tragic event is pictured. A broad, impartial sympathy enfolds foe as well as friend. We are scarcely less concerned for the one than for the other. There was a momentous point in doubt and it had to be fought out. South and North were perhaps at their best in the Wilderness, and their virile prowess finds here a kindly and competent celebrant.

Lion and Dragon in Northern China. By R. F. Johnston, M.A. (Oxon.). With map and illustrations. New York: E. P. Dutton & Co. $5 net.

The author of this volume has so well fulfilled the expectation aroused in his introductory chapter that we are willing to forgive its romantic and rather meaningless title. What that title denotes is the leased region of Wei-hai-wei, where the lion has consented to lie down for a time and take charge of the dragon's property. Not much is said of the lion's business there, though it is frankly acknowledged to be anomalous. The British, having disbanded their Chinese regiment, govern it without friction, the people being persuaded that their Emperor has for reasons of his own

> temporarily entrusted the administration to some English officials, and will doubtless decide in his own good time when this arrangement is to be rescinded. . . . The long and the short of the matter is that the Chinese of Wei-hai-wei acquiesce in British rule because their sovereign, as represented by the Governor of Shantung, shows them the example of acquiescence; but if diplomatic troubles were to arise between Great Britain and China, and the command, direct or indirect, were to go forth from the Governor that the British in Wei-hai-wei were no longer to be treated with respect, a few days or weeks would be sufficient to bring about a startling change in the direction of anti-foreign feeling among the inhabitants of the leased territory. Incessant troubles, also, would suddenly and mysteriously arise on the frontier; the magistrates of the neighboring districts, notwithstanding all their past friendliness, would become distant and unsympathetic; difficulties internal and external would become so serious and incessant that it would be no longer possible to administer the Territory without the presence of an armed force.

The main value of the book lies in its studies of the social organism of a typical community of old China, as yet untouched by any of the Western influences that are quickening life in her great commercial centres. As a magistrate, Mr. Johnston naturally turns first to the topic of litigation. In the courts of Wei-hai-wei no lawyers are allowed, and cases are pleaded by their principals, as elsewhere in China. It would appear from this account that, so far as procedure is concerned, justice is generally obtained, the main difficulty in native courts being the corrupt judge. Litigants tell their story with ability, while the freedom allowed in conducting a cause supplies some dramatic effects unknown in Western law courts. Informal scenes transcribed from the author's note-book reveal clearly the moral and intellectual qualities of the people, and afford useful data for an estimate of national character. They emphasize, it seems, abstract ideas of justice and reason, obedience to parents and the authorities, and an attitude of docility and weakness before acknowledged authority. As to the charge of falsehood commonly brought by Europeans against the Chinese, the author has this to say:

> What constitutes one of the gravest difficulties from a European point of view in settling civil disputes between Chinese is that the plain unvarnished truth is seldom presented, even when a recital of the bare facts would be strong enough to insure a favorable judgment. Yet I am far from wishing to imply that the Chinese are naturally liars. An inaccurate statement unaccompanied by an intention to deceive does not constitute a lie; and many such statements habitually made by Chinese do not and are not intended to deceive other Chinese to whom they are addressed. That they often deceive a European is no doubt a fact: but the fault lies with the European's want of knowledge and experience of the Chinese character, not with the Chinese, who are merely using forms of speech customary in their country. Why should a Chinese be expected to alter his traditional way of saying things merely because it differs from the foreign way? I am not convinced that a Chinese intentionally deceives or tries to deceive his own countrymen—that is, lies to them—much oftener than the average European deceives or tells a lie to his neighbor.

This is rather a nice point—for argument. But we are not convinced from anything Mr. Johnston tells us that the Chinese ever try and live up to an ideal of perfect truthfulness. He bears witness to their well-known integrity in business transactions, and advances the interesting theory that their commercial honor is based upon the accountability of every individual to his family. Repudiating a debt involves no sense of sin, in the Christian sense, but a "loss of face" that may cause the debtor the anguish of alienation by his clan—a more effective guarantee of rectitude than the loftier ideal which is professed but not always attained in the West. There, as elsewhere, a wholesome custom does more than the code to make for honesty, for "Chinese law does not and could not indeed go as far as local custom in settling questions that directly or indirectly concern the honor of a family." Mr. Johnston bases his conclusions in this matter upon instances drawn from a peasant community, and peasants are pretty honest wherever there is an old and stable society; but it is also a fact that the rich and educated in China appear to be just as scrupulous as countrymen about their commercial integrity, though they may be masters of deception in other ways. The probable explanation, we think, is found in a shrewd perception of the value of credit in business transactions, and their knowledge, gained from centuries of experience, that in order to maintain credit promises must be invariably observed.

The contrast between the family and the individual as bases of society is shown by comparing the conditions of land tenure with our own. China is not communistic, as is sometimes stated; her system seems to stand between the two extremes of agrarian communism and individual proprietorship. Land there is owned just as it is in America, but a whole village may be in the possession of a single family, no member of which is able to use or dispose of his property regardless of the wishes of his relations. If one desires to sell his lot, he must perforce accept any bid offered by an influential relative which is regarded as fair by the clan after open discussion, the theory being that it is contrary to the interests of the family that any part of its real estate should pass into the hands of an outsider. It

follows from this that a son cannot easily be deprived of his inheritance, and that freedom in bequeathing property is severely restricted; but whatever its hardships, the author is convinced that the system makes for order in society and accounts for the complete absence of pauperism in the region where he lives. Yet he cannot have failed to observe a welter of paupers in other places in China where he has been. They abound in all the great cities and in every region where famine or floods may have pushed the agriculturalist over the starvation line—a fate from which their patriarchal system does not save them.

But while differing from him in some of his conclusions the American reader who knows anything at all about China must recognize in Mr. Johnston's book a great advance over the ordinary work on that country, and in some respects a real contribution to our knowledge of Chinese institutions. There are chapters on women, folk-lore, burial customs, and religion which are full of carefully sifted information obtained at first hand by a broadly-read observer. His evident dislike of the Christian missionary propaganda suggests the explanation that, like Lafcadio Hearn, he may have himself become a convert to the faith of the people whom he so admires. If so, it is probably because he is determined to see only the best side of the national character; but whatever his prejudices there is abundant justification for his attempt to show that there is "much fundamental soundness in many of China's social institutions, much that it is to the interest of China herself and of the whole world to respect and conserve."

My Memoirs. By the Princess Caroline Murat. New York: G. P. Putnam's Sons. $3.75 net.

Joachim Murat, son of an inconspicuous innkeeper, for services rendered on the memorable 18th Brumaire, received the hand of the youngest sister of Napoleon in marriage, commanded the cavalry at Marengo, became grand admiral, Prince of the Empire, Grand Duke of Berg and Cleves, and finally King of Naples. Suffering disastrous defeat at the hands of the Austrians in his ambition for further power, he lost his army and his throne, was captured and court-martialed by order from Naples, and executed on the 13th of October, 1815, after obtaining his last request, a bath perfumed with a bottle of eau-de-Cologne. A son of this football of fortune, Napoleon Lucien Charles Murat, drifted in his exile to the United States, where he married Miss Carolina Georgina Fraser and established his home at Bordentown, N. J. Here, in 1833, was born his daughter Caroline, the author of this volume of memoirs. The downfall of Louis Philippe, in 1848, ended a happy American girlhood by calling the family back to France, a journey of nearly a month, since a sailing vessel was chosen to obviate the greater expense and uncomfortable crowding of "one of Mr. Cunard's paddle boats." Her father was soon chosen to the legislative chamber from the Department du Lot, and in 1849 was sent as Ambassador to Italy, a position which did not prove pleasant and was soon abandoned, possibly, his daughter thinks, because of his latent claim to the throne of his unfortunate father at Naples. Upon his return he was disgusted and annoyed to learn that (in his daughter's own words), "I had allowed myself, and had been allowed, to dance myself into an engagement with the Baron de Chassiron." But it was easier to overcome her father's objections than to comply with the necessary legal formalities. The records of her birth in New Jersey had unfortunately been burned in a great fire at Trenton, and it was only after two witnesses had been brought from America that she was sufficiently identified to allow proceedings to go on. Still another than her father did not approve this marriage. Miss Howard, mistress of Louis Napoleon, remarked to a friend: "This little fool would have been Empress of the French if she had had the good sense to wait—the only unmarried princess in the family. And such a match would have had my approval."

From 1848 to 1870 she found the pleasures of life many and sweet—"the years when I really *lived*, when each day brought some new pleasure, some fresh excitement, a wished-for jewel, a sentiment, or a caprice. The days when the first thought in the morning was, 'What shall we do to-day to amuse ourselves?' the last thought, 'How shall we amuse ourselves to-morrow?' In a word, the days of the Empire—days of glory, of luxury, of love, of folly. . . . Who thought of a future? Who dreamt of a reverse? . . . Who could foresee 1870?" But 1870 came, with its rude shattering of all this gayety, its rough-and-tumble flight to England, followed by the death of her husband in 1871, her marriage with Mr. Garden during the same year, and then more than thirty years of a life which, in its separation from the scenes and companions of her former happiness, was never other than a bitter exile. "Thirty long years have passed over my head since then," she writes, "bringing great blessings, great joys, great happiness; sorrows, too—grief for the loved ones lost; yet through them all, deep down in my heart, night and day, there is a voice that whispers with a sadness that knows no words, and I stretch out my arms as if they were wings and could carry me over the seas, back to France and years that can never return." Had there been no revolution of 1848 she might easily have grown up into a happy and loyal American woman, but her English marriage came too late for her to adapt herself to English modes of thought and feeling.

It was at the suggestion of one of her few English friends, Robert Leighton, that she undertook, late in life, to put the memories of this varied career on paper for future publication. She was a woman of strong impulses, and the thoughts of her heart, bitter as they sometimes were, were not softened in their transition to the written word. Her own death came before arrangements for publication had been made, and Mr. Leighton, who prepared the manuscript for the press, did not feel at liberty to tamper with the text, notwithstanding his conviction that if she had seen her own words in the printer's proofs, certain unduly harsh and unkind criticisms would have been softened or omitted. In expressing this opinion, however, he specifically excepts her bitter statements concerning the Empress Eugénie. "I doubt," he says, "if she would willingly have withdrawn or qualified any of them."

She was not by nature a politician, and the reader will find his interest in her memoirs along social rather than political or historical lines. The Frenchwoman's characteristic inability to withhold a good story because of its unconventionality, is not wanting, and her own friends, such as her aunt, the Princess Mathilde, are occasionally the victims.

The volume is a beautiful piece of book-making. Among the illustrations is a picture of the old Murat home at Bordentown, reproduced from a painting by Princess Caroline herself. A reproduction from Giraud's portrait of the Princess Mathilde is another. The index is so incomplete as to be a mere annoyance rather than a help.

Essays Modern and Elizabethan. By Edward Dowden. New York: E. P. Dutton & Co. $2 net.

The essays in this volume are as follows: Walter Pater; Henrik Ibsen; Heinrich Heine; Goethe's West-Eastern Divan, with many original translations; Goethe's Hermann and Dorothea; Cowper and William Hayley, from unpublished sources; An Eighteenth-Century Mystic, based on a manuscript autobiography of Charles Hector, Marquis St. George de Marsay; Some Old Shakespeareans, from the manuscript notebooks of Isaac Reed; A Noble Authoress, based on an unpublished manuscript of the Countess of Winchilsea's poems; Is Shakespeare Self-Revealed? a counterblast to Sidney Lee; Shakespeare as a Man of Science, light on Elizabethan science for the special benefit of the Baconians; Elizabethan Psychology, in-

structive discussion of a pseudo-science; The English Masque, and Elizabethan Romance.

Some fifteen years ago in the introduction to his "New Studies in Literature" Professor Dowden quoted Sainte-Beuve's perplexed remonstrance with the Zeitgeist for transforming the old-fashioned epicure of culture, "who inhales the spirit of things, and takes only what may suit his taste," into the conscientious, laborious, and exhaustive natural historian of letters. "Epicurism of culture," Sainte-Beuve had exclaimed, "how much I regret you, even while I combat you, and while I forswear you." Mr. Dowden's temperamental epicurism in letters is tempered by a sense for certain responsibilities. Like Arnold, he considers it the critic's business to keep a current of fresh ideas circulating freely from nation to nation. He is concerned, too, with the evolution of critical form and method. And the various papers in this volume drawn from unpublished material suggest that he has felt the latest breath of the time-spirit. In the main, however, he has always thrown his influence on the side of the epicures of culture. He belongs to that elder generation of scholars who did not look upon the Bower of Bliss as a botanical garden, but as—in short—a bower of bliss; who were book-lovers rather than bibliographers; who thought of their quartos and folios as constituting their library, not their laboratory. University professor though he is, he has remained untouched by the prevailing scientific asceticism.

It is the virtue and the defect of the interpreter to identify himself with the object interpreted. Professor Dowden seldom speaks with the peculiar illumination and suggestiveness of a convert who has become an apostate. While he is speaking, he is usually a convert. Frequently he conveys his feeling about a work of art, rather by a chameleon-like reproduction of its charm than by an analysis of it. The essay on Pater, for example, with which the volume opens, is extremely sympathetic; so sympathetic, in fact, that one can scarcely tell where Pater ends and Dowden begins—the tone, temper, vocabulary, phrases, are Pater's. In the chapter on Elizabethan romance this assimilative gift is perhaps more legitimately exercised. Professor Dowden attempts to give in two pages a taste of the voluminous fictions of the Euphuists and Arcadians:

> For my own part, were I in Arcady, I should sigh with longing despair for some vanished princess, who had bought her a neighbouring cottage and a flock of sheep; her tresses should be like the honey-colored hyacinth, her brows like the mountain snows that lie on the hills, her eyes like the gray glister of Titian's gorgeous mantle, her alabaster neck like the whiteness of her flocks, her face, need it be said, like borders of lilies intermixed with roses; and I should swear there is no benign planet but Venus, no God but Cupid, no exquisite deity but Love.

Professor Dowden's interpretative virtue, however, is best displayed in his three essays on German subjects—Heinrich Heine, Goethe's West-Eastern Divan, and Goethe's Hermann and Dorothea. Here again one cannot always be sure whether the "good things" are Dowden's or only his skilful paraphrases of Goethe's and Heine's. The point of departure for the first of these papers was Matthew Arnold's famous epigram—"that smile was Heine"—"a graceful fantasy," comments Dowden, "but no true criticism." Since Arnold's memorable strictures on the "Life of Shelley," now nearly a quarter of a century ago, Professor Dowden has let no occasion slip for setting the elegant and august arbiter right. Revenge here takes the form of a study of Heine, with the thesis that "it is Heine's special characteristic that he expressed a multiplicity of the moods of the world-spirit." "He was a nightingale that had made a nest in the old periwig of Voltaire"; his romantic egoism was held in control by his irony, by his sense of artistic form, and by the playing off of one faculty against another.

Our higher institutions of learning recognize by "information courses" and "research courses" two aims in advanced literary study, though most of them express in divers ways their conviction that devotion to the asceticism of scientific research is the nobler aim. At the University of Dublin, a third aim is apparently recognized and defended by Professor Dowden—not to accumulate old facts, nor to discover new ones, but to enrich and develop the whole character by appropriating eclectically the experience of which literature is the record. A vigorous revival of the Goethean ideal in this country would greatly enliven the discussion.

Notes

The first volume of "The American Year-Book" is promised by D. Appleton & Co. for publication February 1. The work aims to provide a record of the events and the progress of the preceding year in every department of human activity, with special stress on American affairs. It is prepared under the supervision of S. N. D. North, recently director of the American census.

"Cliff Castles and Cave Dwellings of Europe" is a book by the Rev. S. Baring-Gould on the rock-dwellers and troglodytes of Europe, which is to be brought out shortly by Seeley & Co.

Kegan Paul is issuing extracts from G. K. Chesterton's prose and verse in the form of "A Chesterton Calendar."

Fisher Unwin is publishing in his Modern Travel Series a cheap edition of E. J. Banfield's book, "The Confessions of a Beachcomber."

The Yale University Press will hereafter publish the following five volumes of Yale lectures on the Responsibilities of Citizenship, which hitherto have been in the hands of the Scribners: "American Citizenship," by David J. Brewer; "The Citizen in his Relation to the Industrial Situation," by the late Rt. Rev. Henry C. Potter, D.D.; "Freedom and Responsibility," by Arthur Twining Hadley; "The Citizen's Part in Government," by Elihu Root, and "Four Aspects of Civic Duty," by William H. Taft.

The same press will issue shortly: "The Making of America," by Lyman Abbott; "Industry and Progress," by Norman Hapgood, and "The Records of the Federal Convention of 1787," edited by Prof. Max Farrand of Yale.

Houghton Mifflin Co. will bring out in the spring "The Origin and Growth of the American Constitution," by Prof. Hannis Taylor.

Allan F. Westcott, instructor in English in Columbia University, discovered last summer, in the British Museum, a manuscript containing more than sixty poems by James the First, King of England, not half of which have yet been printed. A number of the unprinted poems refer to political events in Scotland; others are sonnets and lyrics written to Princess Anne of Denmark at the time of her marriage. Mr. Westcott expects to publish the manuscript with notes and an introduction.

Georges Ohnet has entered the field of the historical novel. He is about to publish his "Pour tuer Bonaparte."

The author of several works on the Jews, Baron David de Gunzburg, died recently at St. Petersburg, at the age of fifty-three.

The city of Louisville has decided, by a recently passed ordinance, upon the fixed policy of appropriating $25,000 annually for the establishment and maintenance of an academic department in the university of that city. The university is stiffening its entrance requirements, and in general its standard of education. To remove its public school system from under the influence of politics, Louisville has also procured the adoption by the last Legislature of a new educational charter.

The English "Who's Who" for 1911 has come to us from the American agents, Macmillan, in the sixty-third year of its issue. With only four pages of obituary and with a gain from last year in the grand total of pages of nearly one hundred, it is clear that the progress of fame is much more than holding its own.

For the first time in fully a quarter of a century there is an increase in the number of graduates of the secondary schools of Germany who propose to devote themselves to the study of theology. Notwithstanding the phenomenal growth during these years in the university enrolment, there has been a dearth in candidates for the ministry. Now the "Blätter für Gymnasialwesen" reports that of the 1,498 graduates of the secondary schools during the year 1909-10 there will be 369 students of theology, 213 of medicine, and 211 preparing for the army. Owing chiefly to the warning of the minister of justice against

the crowding of the legal profession, the law department in the universities will be much smaller than usual.

"The Story of Gösta Berling," translated from the Swedish of Selma Lagerlöf by Pauline Bancroft Flach, has been reissued by Little, Brown & Co., now eleven years since the first edition, handsomely illustrated with twenty-nine pictures from drawings by Georg Paul.

We have allowed six volumes of Scribner's Memorial Edition of Meredith to accumulate on our desk. These are: Volume XXI, containing "Farina," "General Ople," and "Tale of Chloe"; Volume XXII, containing "The House on the Beach," "The Gentleman of Fifty," and "The Sentimentalists" (the last-named being a comedy written, in part, probably forty years ago, and now arranged, but not otherwise changed, by J. M. Barrie); Volume XXIII, "Miscellaneous Prose," including the famous essay "On the Idea of Comedy"; Volumes XXIV, XXV, and XXVI, "Poems." The illustrations include a portrait of Meredith at the age of sixty-eight, several reproductions of pictures that appeared in first editions, and photographs of the various forests from which the poet drew his inspiration. There remains only the critical and bibliographical volume to complete the edition.

"Hawthorne's Country," by Helen A. Clarke (Baker & Taylor), is emphatically a gift-book. Bulky and handsome, adorned with a very pleasing frontispiece in color, somewhat more garishly reproduced on the decorative cover, and profusely illustrated with rather commonplace photographs, it appeals chiefly to the eye. The text consists of many extracts from Hawthorne's novels, tales, and note-books, pieced together with amiable comment and so arranged as to emphasize consecutively the various localities associated, now with his life, now with the scene of some one of his works.

The Putnams have done well to reissue separately the essay on "The Authorized Version and Its Influence," by Prof. Albert S. Cook, which was written for Volume IV of "The Cambridge History of English Literature," and to which the *Nation* has already devoted some space in its account of that volume. The essay as it now appears has been slightly extended, as well as freed from the curious punctuation adopted by the editors of "The Cambridge History." The opinions which are advanced in it on the literary value of the Bible have not failed to arouse some discussion both at home and abroad. Since the author has bestowed more attention upon the study of the Bible than most scholars who are not professedly engaged in Biblical criticism, the quality of decision in his utterances will probably continue to challenge the interest of various classes of readers. His note of optimism regarding the necessary continuance of the appeal of the Bible to the English-speaking race will bear comparison with the tone of the essay in which Prof. Henry B. Swete makes a synthesis of the Cambridge Biblical Essays.

It is a land of contradiction and confusion which Irene A. Wright describes in "Cuba" (Macmillan). In her ten-year residence on the island, part of the time as newspaper correspondent and special agent of the Cuban Department of Agriculture, she gathered valuable material concerning social and economic conditions, which, however, is presented in the form of disconnected impressions. Of the people in general she says:

> No attempt at a nation could be more inadequate than this one; weak, corrupt, vacillating, and shortsighted, and yet, in its component individuals these very vices become urbanity, generosity, leisurely nonchalance toward essentials of the present and possibilities of the future—restful and charming qualities that please, in acquaintances and friends.

Miss Wright believes that Americans made a mistake when they provided the Cubans with a ready-made government and left them to their own devices. She asserts that fully three-fourths of the soil of the island is owned by foreigners, resident or absent, who, by payment of high import duties upon merchandise, support "the most expensive government on earth," and pass the burden over to the consumer, who, "although he is Cuban in part is not in the majority the Cuban office-holding class. He is instead the Cuban of the country, the petty planter, tobacco grower, charcoal burner, pig herder, perhaps, and humble wage-earner in hamlet and small town, in whose name that fabric of government stands which is crushing the life out of him." She gives a fairly dreary picture of the guajiro (the countryman), who has no incentive to exert himself and no market for his products, even if he were to cultivate the idle land. Her remedy for his and other of Cuba's ills is a closer economic relation with the United States, which, she believes, must involve a "thorough change in the shape of Cuba's government."

Joel Cook's "The Mediterranean and Its Borderlands" (The John C. Winston Company; two volumes, illustrated) is a superficial compilation. The Albaicin, at Granada, that extraordinary gypsy quarter, is mentioned merely as a poor quarter, the Generalife, with its lovely villa and unique view, is barely mentioned. Tiberius lords it criminally over Capri in approved legendary fashion. We hope nobody will take the Amalfi road hoping to go nearly to the end of the Sorrentine peninsula. These omissions and commissions are typical.

In the year 1900 Bertram Dobell announced the discovery of the poems of Thomas Traherne, and in 1903 he published them in a volume which, with the companion volume of "Meditations," forms one of the most notable additions to literature of recent years. Now, in the British Museum (Burney MS. 392) there has been found the "Poems of Felicity, containing divine reflections on the native objects of an infant ey, by Tho. Traheron B. D., Author of the Roman Forgeries and Christian Ethics." This has been provided with a few notes and an introduction by H. J. Bell, and literally reproduced in a slender volume by the Clarendon Press. The manuscript is in the hand of the poet's younger brother Philip, and was evidently prepared for the press, though, for some reason, not printed. A considerable number of the poems are in the manuscript used by Mr. Dobell, and present variations of form which offer rather a neat problem. Do these variations represent corrections made by the poet or by his brother Philip (who was himself a poet in a small way), or do they go back to an older text from which Mr. Dobell's was a correction? Mr. Bell is of opinion that Philip, in preparing the volume for the press, did not scruple to alter the text, especially in the direction of "correctness," though by so doing he sometimes substituted a tame conventional word for one more daring. Perhaps the comparison is easiest in the poems in heroic metre, and in these Philip's text shows omissions of couplets that depart most radically from the newer taste of Queen Anne's time (Philip lived into the eighteenth century), and displays a tendency also to diminish overrunning and multiply the full stops at the end of couplets. Of the poems now printed which are not in Mr. Dobell's volume, none is of the first importance, or adds essentially to our knowledge of Traherne. Lovers of Traherne will treasure this addition to his works, but, knowing how much greater he was in prose than in verse, they will wish it might have been a reprint of the rare "Christian Ethics."

The fortieth anniversary of the Third Republic was a fitting occasion for a general survey of what has been done in France by the present régime ("France Under the Republic," Scribner). For such a task Prof. J. C. Bracq had a special advantage. A native Frenchman, who has lived out of France since 1871, he has been better able to follow its progress from the perspective of a foreign residence. On the other hand, he has been slightly hampered in his endeavors to be objective by national and religious prepossessions. The first part, however, with its statistical and documentary information on the material advance and expansion of the country, will be found very valuable for reference. As a résumé of France's intellectual, artistic, and literary contribution to the world's output during the last four decades, the second part is acceptable, even if the lists of names and works are far from exhaustive. But the author's special interest centres obviously on religious and social problems, which he has treated fully, and to which he has brought frankly his republican and Protestant points of view. While the conditions and circumstances leading up to the anti-clerical campaign of the Republic are set forth with great detail, some of its extreme consequences might have received a more complete and, perhaps, a severer treatment. The chapter on the teaching of moral and metaphysical principles in the public schools needed as a counterpart a full account of the recent developments of neutrality, as shown in the debates of last winter. It is amusing, also, to note how M. Bracq, in order to emphasize the foolishness of the church's hostility to disestablishment, paints in blackest colors the despotic features of the Concordat to which, nevertheless, French Catholics seemed cheerfully resigned. Although some of the author's statements, judgments, or temperamental outbursts may draw a smile, his accent of sincerity will inspire confidence. Still, the polemical character cannot help weakening such a book of information: Why attribute Waldeck-Rousseau's resignation to the abuse of his enemies, when his quick demise showed how much his health was then undermined? Why repeat the conventional untruth about "justice" being the supreme

concern of *both* parties in the Dreyfus case? Again the uninformed reader is led to infer that the clergy was alone to enjoy a reduction from military service, whereas all university graduates shared the exemption. As for the list of office-holders, which is given as 440,000 in 1906, it might have been fair to add that, with the municipal and departmental officers and the officers of the army, the total reaches 915,000. While Gallicisms in such a book are unavoidable, slips in French proper names are not; they are far too numerous. As for the index, it could easily have been made more complete. In spite of these flaws, M. Bracq's book fills a real want, and ought to supplement or correct the metaphysical dissertations on the French nation already on the market, as well as serve as an elementary text-book for the benefit of news gatherers, foreign editors, or special correspondents.

The investigations of Haddon and others in New Guinea are supplemented by Dr. C. G. Seligmann in his "Melanesians of British New Guinea" (Putnam). This region is a closely packed jumble of dialects and customs. The basis of the population is held by Seligmann to be Papuan, on which has been superimposed a Melanesian immigration, the latter element being the superior. Of the two sections, the Eastern and the Western, the latter is the more advanced, having some agriculture and a tribal organization with chiefs; the Eastern has no tribes, only small groups, with a peculiar system of "linked" totems (four or five totems in every group), but no ceremony for increasing the supply of the totem object. Throughout the region there is some artistic decorative work; there is the usual apparatus of magic and sorcery, with vague spirits, but without gods proper and with no visible worship; souls are recognized, and in some places there is veneration of heavenly bodies. The people appear to belong in the lowest stratum of known humanity. Seligmann states that he has set down only what he has himself observed, or what he has heard from persons familiar with the natives and believed to be trustworthy authorities. His volume of 750 large pages gives a great mass of details that will be useful for working up the history of the obscure Papuan peoples.

Like Nuremberg's, the hand of the Scottish Border has gone through every land, and to write its history means the history of all Scotland and of a great part of England. It is "A land of romance" for Jean Lang (Dodge Publishing Co.), and for every Scot beside. Its stubborn race has made good in the wide world even as they kept the border in the old days for the king and for themselves and left a record of blood and flame and tears. It was no beautiful life but a strong one, one whose mortal things must touch the mind, and of it all this book tells the tale. It is a telling of singular candor and fairness and with open eyes for all the changing tides of history. If its Arthur is the Arthur of the Eildon Hills and wins his twelve battles between Tweed and Forth, the coming of Hadrian and the holding of the great Wall by the legionaries are more sober history, and the saints who came later left a far deeper imprint; St. Ninian is even yet commemorated in the bit of apple ringie which the old Scottish countrywoman still often picks on Sunday and carries to church in her Bible. After the saints came the monks—and strangely companied with them we have the wizards, Michael Scott of Balwearie and Thomas of Ercildoune—and then a centurial hatred was opened and a type of life fixed with the war of independence. But the astonishing fairness of the book is greatest in the yet later days when Montrose and Richard Cameron, the reivers and the Covenanters, all have their meed of praise. Perhaps this had to be that the glory of the Border folk might not be abated, for all were good men of their hands. So ballads of the riding days, of Mary and of Charlie, of Otterburn and Philiphaugh, ring through its pages beside the moorland wail of Martyrdom and the later lament of Stevenson and of all other Scots in exile, "Blows the wind today, and the sun and the rain are flying." It is a book to be read gratefully, full of gallant dreams and old memories, and its six photogravures have all the magic of the round gray hills and the dun waters.

Prof. A. H. Tolman's "Questions on Shakespeare" (University of Chicago Press), promises to be, not only one of the most comprehensive, but also one of the best, manuals of its sort. Of the two volumes already completed the first consists of an introduction to Shakespearean study in general as well as to this particular set of studies. It contains a summary of Shakespeare's language and versification, together with a carefully selected bibliography of texts, editions, commentaries, biographies, and the like. The second volume, with which the proper object of the work actually begins, covers the earlier histories and comedies and the poems so-called, exclusive of the sonnets. The questions are of several varieties: general questions, intended to bring out a broad appreciation of the play in its more literary and human aspects; questions on the particular acts and scenes, intended to awaken an understanding of special points of importance; and finally questions on the several characters, on the sources, on the text itself. On the whole the questions are singularly free from the pedagogical twang and the scholastic triviality which too frequently characterize this kind of literary inquisition. Further, they are interesting; and at the same time that they require the student to do his own work, they put him in the way of all necessary information and material.

Prof. Gustav Wustmann, who died recently at Leipzig in his sixty-seventh year, was a philologist and historian; in his "Allerhand Sprachdummheiten" he tried to simplify the German language.

The Rev. James Anderson of Dyce, Aberdeenshire, died a fortnight ago. Under the name of "Fergus MacKenzie" he wrote "Cruisie Sketches," "The Humours of Glenbruar," and "Sprays of Northern Pine."

The death is reported of William Baker, for many years head master of Merchant Taylors' School, a writer on the Church of England, and a translator of the classics.

The Rev. Joseph Elias Hayne, D.D., M.D., a colored minister, physician, and author, died last Saturday, aged sixty-two. He was born in slavery, in Charleston, S. C., and served all through the civil war as commissary sergeant in a regiment of volunteers on the Union side. After the close of the war, he graduated from Atlanta University, and later studied theology at Harvard. He was the author of "The Negro in Sacred History," "The Black Man in Natural History," and other works.

The death is reported, in his sixty-sixth year, of Henry Burr Barnes, head of the publishing firm of A. S. Barnes & Co., and for some time editor of the *International Review*.

Science

The Sub-Antarctic Islands of New Zealand: Reports on their Geo-Physics, Geology, Zoölogy, and Botany. Edited by Prof. Charles Chilton, and published by the Philosophical Institute of Canterbury (Christchurch, N. Z.)

The four or five groups of small sub-Antarctic islands belonging to New Zealand might seem too insignificant to reward scientific research. Yet a number of expeditions, isolated or collective, have landed on these unpromising isles since Dumont d'Urville initiated the work of exploration. He was followed by Commander Wilkes of the United States Exploring Expedition (who, however, landed on only one of the groups), and he again by Sir James Ross of Antarctic fame. Since then single individuals, like T. W. Kirk and Dr. Cockayne, have been dropped on one or more islands and have reaped a harvest of new biological facts. The latest expedition, thoroughly equipped with a large staff of qualified scientists and handsomely subsidized by the Government of New Zealand, visited every one of the islands so recently as November, 1907, and the results of their observations have just been embodied in two admirably got-up and profusely illustrated volumes in large quarto. They are the work of more than a dozen naturalists, who felt that such inquiries must be pursued on the spot by the study of living specimens, but they have been supplemented with the disquisitions of eminent European specialists. Edited by Professor Chilton, the various monographs and discussions have been coordinated, and the different lines of investigation brought to a focus, in a manner that will command the attention of all who are interested in the problems that circle round the distribution of species.

The work is fittingly introduced with an historical sketch of the islands by R. McNab, lately Minister of Lands in New Zealand, and the highest living authority on the subject. Mr. McNab relates how old officers of Capt. Cook, such as Bligh and Vancouver, made the earlier discoveries, and that they and the rest were successively placed on the map between 1788 and 1810 by the captains of the small sealing-craft (many of them American, whose logs Mr. McNab has

examined in the archives of the Essex Institute, Salem, Mass.), which, in the early part of the nineteenth century, scoured the ocean to discover seal-rookeries.

The primary object of the expedition was the extension of the magnetic survey of New Zealand to the sub-Antarctic islands, but it has made considerable additions to our knowledge of both the flora and the fauna of the islands. These have been described in a valuable series of monographs, where the notable results of the dredgings, especially in the Foraminifera, are carefully recorded. Three of these monographs particularly strike the reader. A masterly and exhaustive study by Dr. Cockayne opens up to naturalists a new world of trees. The late Sir James Hector was perhaps the first to bring back an account of the extraordinary rata forest of the islands. Now we have it minutely described and vividly illustrated. It consists of three species, which reveal a remarkable adaptation to the environment in their semi-prostrate habit of growth and their network of aërial roots. Seen from a distance, the forest is close and homogeneous, with a dull-colored top covering the whole, and indeed it resembles rather a mass of shrubs than trees. As one gets nearer one observes that the flat or undulating roof is pierced by upward-growing branches. Seen from within, the massive prostrate or semi-prostrate trunks of the southern rata, or *Metrosideros lucida*, sometimes travel closely along the surface of the ground, while others form natural bridges over the deep depressions of the forest-floor. From these spring branches distorted in every conceivable way, often twisting themselves into a complete tangle. Ultimately, out of this rigid mass certain branches shoot upwards like normal trees and rise to a variable height. Each of these has its network of twigs and leaves, which furnish scarcely a glimpse of light, as they come together and form a flat, continuous roof. The sensations of the explorer the present reviewer can judge of from the remembrance of the feelings experienced in a bit of dense virgin forest in New Zealand, where the absence of light and air and the smell of decay engendered an oppression that enabled him to understand the religious awe of the Romans or the old Germans in the primitive forest.

The "geotropic tendency" thus singularly shown is found elsewhere, as in certain willows on the west coast of Wellington province in New Zealand. In fact, it is not a geo-tropic tendency at all, but is the natural result of a moist climate (there is daily rain in the sub-Antarctic islands) and constant high winds. Nowhere is the direct action of the environment, so dear to Herbert Spencer, more plainly exhibited.

We might follow these explorers of new ground up the mountain-side, and perceive the same law of adaptation in operation. Only on the flat is the weird rata forest to be seen. Higher up is the mountain scrub, which is only the rata forest reduced to insignificance by the more extreme conditions, especially the greater wind-pressure. Higher still, the Danthonia meadow thrives where even scrub will not grow.

Some instructive excursuses delineate characteristic features of the sub-Antarctic flora. We note the greater wealth of coloring than in the New Zealand flora, the selective power of water-saturated soil on the formation of bogs, and the influence of animals on vegetation. The effect of the occupation of the ground by penguins is the complete or partial destruction of the plants growing there. Then the penguins abandon the spot, and the richly manured soil is ready for fresh plant-colonization. A rapid growth of successive species ensues.

A monograph by T. F. Cheeseman, *facile princeps* of New Zealand botanists, reviews the bearings of the plants brought from the islands on the problems of distribution, and gives an exhaustive analysis of the sub-Antarctic flora. In its characters and affinities he sees nothing more, in the main, than a repetition of the New Zealand flora, as modified by long ages of isolation, and (he forgets to add) the persistent influence of a peculiar environment. But he cannot deny—he expressly states—that there are two other elements not thus accounted for, an endemic and a Fuegian element. Whence did these come, and how? He admits (with all of the monographers) a former land-connection with New Zealand, belonging to far-back geological ages, when there was a succession of immigrations from the northern islands. He is disinclined to allow the existence of an Antarctic continent, or, at least, he affirms that it is not necessary to assume that there was any land-connection between that continent and the sub-Antarctic islands; and he altogether disbelieves in a land-connection with any part of South America. How, then, did the Fuegian element arrive in sub-Antarctica? Drifting sea-weed, carrying seeds, will, he thinks with Schenck, explain the comparatively few plants of foreign origin.

Professor Chilton, on the other hand, considers, with Beddard and Benham, the former existence of an Antarctic continent, with a northward and eastern extension, to be almost demonstrated, and that not in the Jurassic epoch, as Hutton maintained, but perhaps in Eocene times. He rejects Dahl's "relict" theory, according to which the unexplained elements in the flora are the surviving remnants of species developed in the northern land-masses, but driven south by stronger species, and there preserved. He believes that the greater elevation of the land in the Auckland Isles, in comparatively recent times, would suffice to establish a land-connection, leaving a distance of only 550 miles of comparatively shallow water between Cape Horn and Graham's Land. The geological observers come in aid of this view. They have discovered that the Auckland Isles passed through a glacial epoch, and they have there found rocks that belong to a continental area. Even in the earlier stages, they conclude, the great basaltic outpourings of which the chief mass of the Isles is formed were never submarine.

The Scribners have surrendered to the Yale University Press the right hereafter to publish the Silliman Lectures, viz.: "Electricity and Matter," by Prof. J. J. Thomson; "The Integrative Action of the Nervous System," by Prof. Charles S. Sherrington; "Radioactive Transformations," by Prof. Ernest Rutherford, and "Experimental and Theoretical Application of Thermodynamics to Chemistry," by Dr. Walter Nernst.

Mexico occupies the larger part of the *National Geographic Magazine* for December, and to many readers the description of the marvellous ruins of Mitla, product of the Stone Age, with the beautiful illustrations, will be a revelation. There is also an account of a trip across the Isthmus of Tehuantepec, and an interesting statement of the rich agricultural possibilities in the tropical part of the country. The general manager of the Associated Press, Melville E. Stone, shows convincingly the present danger arising from race prejudice in the far East, and Guy E. Mitchell gives noteworthy facts in regard to the growing industry of making briquets out of coal dust—an industry which virtually creates something out of nothing.

The seventh annual meeting of the American Breeders' Association will be held at Columbus, O., February 1, 2, and 3; the association will be the guest of the National Corn Exposition.

Drama

"Judith Zaraine," by the American dramatist, C. M. S. McLellan, which had been awaited with a certain amount of sanguine expectation, proved a great disappointment in the Astor Theatre on Monday evening. It is a purposeful piece, dealing vigorously though rather confusedly with the relations between labor and capital, and preaching a sound message of mutual good will. But it is so overladen with talk that the characters themselves seem mystified by it, while the action is delayed and obscured beyond all reason. Judith is a strong and well-drawn personality. She is an enthusiast, who believes that a future Utopia for the working man may be obtained by the self sacrifice of existing sufferers. She knows that the rebellious strikers in Minetown—over whom she has gained a strange ascendancy—are suffering through no fault of their own, having simply been thrown out of work by the success of a rival con-

cern, and she knows that they must be obliterated in any conflict with the military sent to subdue them, but she nevertheless exhorts them to resistance to the bitter end, that their slaughter may provoke public sentiment in behalf of the feeble poor against the powerful rich. David Murray, the capitalist originally responsible for the whole situation, visits Minetown as a reporter, and soon learns to sympathize with Judith with regard to the substantial injustice with which the rebels have been treated. But he perceives also that they are hopelessly wrong in the eye of the law. He devotes his energies, first to inducing Judith to persuade the men to lay down their arms—promising that they shall be righted—and secondly, to preventing a military attack, which he effects by threatening a public exposure of the private history of the Colonel. After some violent and cheap melodrama he succeeds in restoring peace and prosperity in Minetown, but is repelled by Judith, who still holds to her views and regards him simply as an opportunist, who has used his power to benefit the few but has done nothing to help the race. In the end, however, he converts her by arguing that her true duty is to abandon ideals which can result in no immediate benefit at all events, and to unite with him in working for such practical benefits as are within the reach of his power. Reduced to this skeleton the plan of the piece appears tolerably plain and direct, but in actual representation, meaning and action and characters were involved in perpetual fogs of harangues and discussions. Lena Ashwell furnished a strong, impassioned, and consistent sketch of the ardent Judith, but the other players were not able to distinguish themselves.

Percy MacKaye's play, "The Scarecrow," was presented in the Garrick Theatre on Tuesday evening, and was received with more favor, perhaps, than might have been expected. It is not at all representative of his best work. Originally described as a tragedy of the ridiculous, it is now entitled "a fantastic romance," which is also a misnomer. Fantastic it certainly is to a somewhat excessive degree, but it is neither tragic nor romantic. The conspicuous weakness of it lies in the illogical effort to impose a serious and sentimental issue upon a foundation of fantastic and satirical farce. There is good fooling, with amusing satire, in the first act, in which the witch's familiar demon animates the Scarecrow, which she hopes to use as the instrument of her revenge upon her old seducer. The piece might have been conducted coherently and merrily along these lines, but the whole thing becomes grotesque and futile, when it is assumed that the mannikin may be capable of independent emotions and of acquiring a soul by virtue of self-sacrifice. The play collapses from the moment that it begins to hint at some more serious purpose than a little fun with the humors of witchcraft. The quaintness of the story and the ingenuity of some of the stage apparatus may win temporary popularity for the representation, but the piece will add nothing to Mr. MacKaye's reputation.

The centenary of Alfred de Musset's birth was celebrated at the Comédie Française with a success which proved that, in spite of what has been said to the contrary, it is not true that he has gone entirely out of fashion. Three performances were given, including six of his plays and what amounted to a recital of the four "Nights." These last naturally do not lend themselves to the stage, and the illusion produced was far from complete. Still, Albert Lambert fils, in the "Nuit de mai," expressed, in a manner perfect in its simplicity, a good deal of the poignant sincerity of Musset's feeling. Some of the other impersonators of the poet—including even the great Mounet-Sully—spoke the lines in a fashion that might almost be called ranting. They certainly gave one the impression that they were declaiming the poetry, instead of merely thinking it aloud, as they were supposed to be doing. If Madeleine Roch, the Muse of the "Nuit d'août," had been cast with Lambert, the result would have been extraordinarily good. Their conceptions of the spirit of the poems were identical; and she, besides, was a Muse radiant enough to tempt any one to rhyme.

Of their kind, it would be difficult to find anything more perfect than two or three of the best of Musset's little plays. It is curious to note that the first one he wrote was an utter failure. It was given only once, at the Odéon, amid much hissing. He then resolved to do nothing more for the stage, but continued to write plays for his own amusement. After some time the Comédie Française discovered them, and they were produced "almost against his will." His philosophy is not profound, if indeed he can be said to have any at all. What there is of it is summed up in "On ne badine pas avec l'amour," where Perdican says that, however false and vain men and women may be, however base the world, there is still one thing worth while: love. How much sympathy the French have for that ideal, how close it comes home to them, was evident from the sudden, violent burst of applause that followed this speech. The same idea is expressed in the "Caprices de Marianne"—the price one pays for trifling with love, and the bitter lot of those who disregard it. Marianne, a sort of angel of indifference, has nothing but the coldest rebuffs for her lover, until it is too late, and they are both lost. The final scene is almost Shakespearean in its sudden, complete inevitable tragedy.

Music

The Art of Singing. By William Shakespeare. Boston: Oliver Ditson Co. $2.

Opera Stories. Henry L. M. Mason, author and publisher. 50 cents.

Instead of contending, as most writers of vocal instruction books do, that he has discovered a new way of teaching the art of song which will make the works of all his predecessors obsolete, Mr. Shakespeare wins the intelligent reader's sympathy at the outset by declaring that his aim has been not to write anything new, but simply to make an intelligible and useful record of the old truths concerning this art. He hopes that his remarks may result in bringing his fellow professors of singing more generally to the discussion of questions in a natural way—to the study of that which is absolutely known concerning the human voice—in place of debating those difficult physiological problems in relation to which there are few settled facts to go upon. Not that he overlooks the physiological side entirely. There are in his book pictures of the chest and ribs, the vocal cords, the muscles of the tongue, to illustrate some of his directions for correct singing; but he avoids those anatomical details which burden a student's memory without helping him in any way.

The pages on the management of the breath are models of lucidity and contain many valuable hints, including suggestions of exercises for acquiring the best method of respiration. No less clear are the explanations of defects responsible for such shortcomings as "throaty" "nasal," "frontal," and "colorless" singing. The last named, which results in sounds of a bleating and silly character, is caused by the corners of the lips being pulled back and down, and by the general rigidity of the lower lip, tongue, and jaw. Sometimes the "colorless" or "white" voice (*voix blanche*) thus produced "is not unlike the utterances of the half-witted, and the face of the singer assumes an inane smile."

To this connection between the appearance of the face and the sound of the voice Mr. Shakespeare recurs in several places (pp. 22, 28, 42), and they constitute probably the most important paragraphs of his book in these days, when almost as much is expected of operatic artists in the way of facial expression as of singing. Patti used to sneer at the idea of practising before a mirror, which, she maintained, resulted only in grimaces (*singeries*); but she was wrong. Lamperti used to speak of the eye as "the mirror of the voice," and Mr. Shakespeare, after referring to the eye-muscles and their uses, remarks:

> Thus by its extreme sensitiveness the expression and mobility of the face may be said to depend on the method of using the voice, for a soft expression of the eye can never be accompanied by a hard expression of the voice. . . . The pleasing appearance observed in the folds of the lower eyelid is brought about by raising the cheek; this adds joy to the smile initiated by the raising of the corners of the upper lip. Rigidity of the vocal organs on starting or changing a note is often betrayed by the blinking of the eyelids. All this proves the wisdom of the old masters in recommending the use of a mirror during practice. . . . The expression considered by the old Italian school as the highest test of the freedom of the face, tongue, and throat, was that of a smile. The voice should be capable of conveying a smile. . . .

More than one-half of the 201 pages of this volume are devoted to exercises in musical type, and there are some concluding observations answering questions that constantly present themselves to pupils, such as how best to practise, how long a time and how many times a day, what range of voice,

and what degree of force should be used in singing.

To the important matter of distinct enunciation Mr. Shakespeare devotes less attention than it deserves. Operas as well as song recitals would be much more popular if the audiences could hear the words distinctly. It is largely because they cannot that there is such a surprising demand for books containing the plots of operas. Every year there is a new volume or two of the kind, while the older ones appear in new editions. The latest collection comes from Boston. Mr. Mason's "Opera Stories," however, though a home-made by-product of the Boston Opera, can be used without indiscretion in other cities where opera flourishes; indeed, it is likely to have more readers in New York than in Boston, where the operatic repertory is comparatively slender and ill-proportioned. Mr. Mason gives the stories not only of all the standard works in the Metropolitan list, but of the novelties. "The Girl of the Golden West" is here, and so is "Königskinder." "Ariane et Barbe Bleue," "Ysobel," and Victor Herbert's first grand opera, "Natoma," are included, actually before their production. Cincinnati is not forgotten, with its "Paoletta," nor Rome, with "Malbruk," Leoncavallo's latest. Why "Alceste," "Don Carlos," "Elaine," "L'Etolle du Nord," "Messaline," "Les Troyens," "La Vie du Poète" are in the list is not clear. Mr. Mason's laudable desire to use as few words as possible sometimes (notably in the case of "Königskinder") results in inaccuracies; but most of the "stories" are well told, and this collection may be commended to all who, having no time to read the libretto, wish to gulp down the necessary information in condensed form.

John Lane has published "The Oldest Music Room in Europe: a Record of an Eighteenth Century Enterprise at Oxford," by John H. Mee.

Fred. S. Converse's symphonic poem, "The Mystic Trumpeter," is presented this week at Queen's Hall, London, by the new Symphony Orchestra.

Art

In "Porcelain and How to Collect It" (Dutton) Edward Dillon furnishes a scholarly manual drawn from his larger work on porcelain. Technical lore of the potteries is set forth at greater length than in many similar manuals for collectors, the information concerning the chemistry of the glazes of various periods being particularly copious and valuable. Mr. Dillon is a partisan of the limited palette of metallic oxides, with which the Chinese porcelain makers created their world of brilliant and harmonious colors. He holds that "of the additions made of recent days only one is of any great importance to us. This is the green made from chromium." His statement concerning the kilns at Kingte-chen, that "What we know of the manufacture is chiefly derived from the admirable letters (1712 and 1722) of the Jesuit missionary, the Père Entrecolles," should certainly be modified, now that Dr. Bushell's translation of the "Tao Shuo," or "Description of Pottery," by Chu Yen, has been published. Personal acquaintance with American museums and private collections, which Mr. Dillon regrets he has not yet made, might conceivably lead to his altering or amplifying certain statements, as, for example, those about the porcelain of Korea which, doubtless because so little of it is seen in England, is rather summarily dispatched. In the main, however, Mr. Dillon's researches have covered a wide range very thoroughly. He avoids—no doubt wisely—any explanation of the decorative motives of the Oriental porcelains on the ground that such exposition is meaningless if the reader does not already understand the religions, history, and social life of the far Eastern nations, and needless if he does. The relative inferiority of the Japanese in porcelain, which all must admit, is interestingly shown to be due to the circumstance that it was only the older Chinese whom the potters of Hizen and Imari thought it worth while to follow. "What is less generally understood," Mr. Dillon says, "is that as a whole this imitation is confined to the artistic work (this applies to literature also) of the earlier Chinese dynasties. With the fall of the Ming dynasty the history of China closes in Japanese eyes." The chapters devoted to European porcelain cover familiar ground without marked originality of treatment.

"Hand-Loom Weaving, Plain and Ornamental," by Luther Hooper (Macmillan), is severely practical, a text-book of workshop processes. It is the seventh of the admirable series of technical handbooks edited by W. R. Lethaby. The primary object is "to inform the student of hand-loom weaving of the best methods of preparing warps, fitting up looms, and making or selecting the various appliances necessary for the work, as well as inventing, planning, and weaving plain and ornamental webs." Valuable instruction in the treatment of design as an essential part of good workmanship is also included; the author believes heartily in proper ornamentation "as a language addressed to the eye; it is pleasant thought expressed in the speech of the tool." There is, obviously, place for such a manual in this country, as well as in Great Britain, where, in various districts, hand-loom weaving is still an important industry. Learners at our textile schools, as at Philadelphia, Lowell, and New Bedford, might certainly profit from so thorough-going an exposition of the ancient processes by which the most beautiful of all textile fabrics have been produced. Amateur weavers are likewise becoming numerous. Ancient hand-looms have been withdrawn from garrets, set up, and oftentimes reproduced for use in schools, colleges, social settlements, and institutions for the neurasthenic, insane, and blind. For the purposes of the teachers and students of this revived art, whose educational and artistic possibilities are now under exploitation, Mr. Hooper's book is singularly well timed. It has technical perspective. It goes far beyond the very simple processes which underlie the interesting but somewhat amateurish weaving seen at current exhibitions of the arts and crafts, and unfolds in a precise, easily intelligible fashion the methods of weaving elaborate damasks, brocades, brocatelles, and other fabrics which were well made long before the invention of the Jacquard loom took commercial weaving out of the class of handicrafts. Mr. Hooper is an enthusiastic student of old textiles, in his own and other people's collections. Many examples of these he has personally reproduced on the hand-loom with evident skill and good taste.

"The Orestela of Æschylus as Illustrated by Greek Vase-Painting," the thesis presented by Hetty Goldman, the successful candidate for the Charles Eliot Norton Fellowship in Greek studies for 1910-11, has been issued as a reprint from the "Harvard Studies in Classical Philology." Miss Goldman's thesis, both in firmness of grasp and minute scholarship, belies the view as to male sovereignty in this field, which is still conventionally held, in spite of the fact that, nearly two hundred and fifty years ago, Madame Dacier wrested classic laurels from her eminent husband. We can only point out here that Miss Goldman attempts to appraise the part played by imagination in Greek vase-painting, and especially to ascertain the extent to which Greek artists, after the middle of the fifth century, clung in their Æschylean vases to the scenes of the trilogy. The "Choephori" and the "Eumenides" alone offered, in her opinion, stage pictures that tended to impress themselves powerfully upon the imagination of the vase-painter, although she regards it possible that archæological search may disclose the existence of vases dealing with the story of the "Agamemnon." She maintains that the vases that have so far come to light served mainly ornamental purposes in the homes of the wealthy, and that there is nothing to suggest that the vase-painter had witnessed a performance of the play he was asked to illustrate, though he doubtless knew of it in a general way. That "the treatment of a myth by a popular dramatist may cause the vase-painter to identify certain general types with the particular story," and that "some such thing happened in the case of the scene in the 'Choephori' in which Electra and Orestes meet at the tomb of their father," are among the contentions of the thesis, which in all its parts is supported with much spirit and ingenuity. Miss Goldman is now pursuing her archæological studies in Greece.

Knighthoods have been bestowed upon Sidney Colvin, George Frederic Warner, and George Laurence Gomme.

In the past few weeks a number of French artists have died. Gustave Colin, who lived to be eighty-three, was a pioneer in setting forth the artistic possibilities of the Basque country, and was a member of the Barbizon School. Eugène Jean Boverie, the sculptor, is dead at the age of forty; he will be remembered for the monument of Camille Desmoulins in the Palais Royal. Paul Lucas, painter, was a member of the Société des Artistes Français; he was eighty years of age. Ernest Paul Brigot, aged seventy-four, had painted landscapes

and still-life subjects. Edouard Lœvy was in his fifty-fourth year; he was a book illustrator and miniaturist.

Miss Mary Kollock, landscape painter, died in this city a week ago, at the advanced age of eighty-eight. Her chief productions include Black Mountain, Lake George; Road to Mount Marcy; Old Woman Spinning; Road in Normandy; Italian Brigand; Early Morning in the Mountains; The Old Fiddler; Under the Beeches, and Glimpse of the Catskills.

The death is announced of Joseph Bishop Pratt, the mezzotint engraver, who was born in 1853.

Finance

SENATOR ALDRICH'S BANKING PLAN.

In the personal note, transmitted on Tuesday to the Monetary Commission along with his proposal of a plan for new banking legislation, Senator Aldrich himself points out that the plan is thus far purely his own, and not an official proposal of the Commission; that it is tentatively submitted as a basis of discussion, and that he does not expect the immediate approval of it, or "that any formal action will be taken upon it." Formal and final action by the Commission would indeed be scarcely practicable at this time, and action by this Congress is out of the question. The Commission as a whole has not yet officially considered the problem. It has not yet begun its public hearings of bankers, business men, and economic experts, and will probably not begin them for several weeks. Meantime, there remain barely six weeks more of life to the present Congress, whose attention will be abundantly occupied with pressing routine legislation during that time.

Mr. Aldrich has nevertheless taken the wise course in the matter. It has for some time been obvious that nothing at all could be done until some definite proposal was before the Commission, and the Commission's chairman was the proper person to submit it. With such a plan before the commissioners and the public—not as a vague and general proposition, but as a scheme worked out in detail—it is possible for discussion, both of underlying principles and of particular provisions, to begin. Even if the plan were to be disapproved as a whole, it would at least be known exactly what was disapproved and what was the natural alternative.

Mr. Aldrich's plan has been described in the dispatches as abandoning the Central Bank expedient; but this hardly states the matter rightly. The name of Central Bank is carefully avoided; but the "Reserve Association of America," the title given to the proposed central organization, is endowed with the usual powers and responsibilities of a European Central Bank. It differs from foreign institutions of the sort in the provisions for ownership, control, and administration, and in this respect embodies a compromise between the Central Bank theory in its usual form and the so-called theory of "zone administration," whereby banking operations in a given geographical district would be supervised and facilitated by independent organizations of the national banks in that district. Senator Aldrich would mark out fifteen of such districts in the United States, in each of which the national banks of that district, members of the Association, would choose a board of directors for that particular branch association. Each of these boards would choose one member in the directorate of the national association, and as that directorate would number forty-five, this vote would select one-third of the national directorate.

These directors, together with six fiscal officers of the government (including the elected governor and deputy-governors of the Association), and with twelve other members chosen by branches on the basis of stock holdings by individual banks in the national association, would constitute a full majority of the central board. The remaining directors would be chosen by the board itself from the business men of the country. The executive committee of the board (which would naturally conduct the organization's affairs) would consist first of the governor and the two deputies, all to be chosen by the President of the United States from names submitted by the board, next of the Comptroller of the Currency ex-officio, and then of five other members named by the board.

This scheme of organization is the salient feature of Senator Aldrich's plan. In other respects, it follows the well-known lines of the Central Bank expedient. For the Association's capital, something like $300,000,000 is suggested. National banks are to subscribe for it and hold it. Dividends are to be 4 per cent., with equal division of surplus profits between the Association and the government. The central organization is to hold the national government's cash balances and accruing revenues; manage all government disbursements; rediscount commercial notes and bills for national banks; fix and publish for such rediscount, from time to time, a rate uniform throughout the United States, and, in general, perform the functions usual to a Central Bank. It will accept no deposits save from the government and the banks, and will pay no interest on those deposits.

Such, briefly outlined, is Mr. Aldrich's proposition, which touches only in a very tentative manner on the banknote circulation problem—merely suggesting that the central organization take over surrendered national bank circulation, and that it may issue, under certain tax limitations, circulating notes of its own, covered, one-third by lawful money and two-thirds by United States bonds or commercial paper subject to discount under its other charter provisions.

As thus outlined, Senator Aldrich's plan would undoubtedly provide machinery for the work performed by European central banks in regulating the money market, allaying convulsive movements in the field of credit, and relieving actual panic, with the tendency of such times towards money hoarding, bank runs, and exhaustion of reserves. The question to which the Commission and the outside business community must now address itself is whether the machinery described will operate most effectively and advantageously, or whether there are alterations or substitutes which will better perform the task. There is practical unanimity of opinion, in competent quarters, regarding the need for better organization of our banking system.

The Central Bank is the simplest form of such organization, and we are able to study its workings in other markets and communities. In all such communities the power of the central institution and of its immediate management is very great; it would possibly be greater in this country than in any state of Europe. If the American people can be convinced that this power will be exercised in all respects independently of the selfish machinations of politics and finance—that the central banking organization would, like the Bank of England for example, be quite as much a restraining influence as a co-operating influence in the money market—the plan for an institution of the sort would undoubtedly meet with a large measure of public favor. The problem in this regard, indeed, is not so much one of control through ownership or voting power as of domination through financial pressure and outside banking influence. The application of Mr. Aldrich's proposal to these considerations will no doubt engage the attention of the Commission at its public hearings.

BOOKS OF THE WEEK.

THE LADY

By EMILY JAMES PUTNAM.
(Crown 8vo. Illustrated. $2.50.)

"Brilliant and entertaining papers, making together a masterly study of the lady, her origin, history, and essential meaning. . . . Under democratic conditions, the world may demand a sturdier fibre in the female sex, but the departing lady, once loved, cannot be forgotten."—*The London Nation.*

LETTERS of JOHN DONNE

Edited, with notes, by CHARLES E. MERRILL, Jr.

This limited edition is the first **verbatim et literatim** reprint of a notable book (almost lost to students for some 250 years), that enables us to realize the identity of the poet and the saintly Dean of Walton's admiration.

(600 copies. On hand-made paper. Small quarto, old-style boards, slip case, frontisp. portrait.)

STURGIS & WALTON CO.
31-33 E. 27th St., N. Y. C.

A NOTABLE ART BOOK.

The Golden Age of Engraving

By FREDERICK KEPPEL.

8vo, 550 pages, 263 illustrations, cloth, $3.50 net.

Autograph Edition, 300 copies signed and numbered by the author. Full boards, boxed. $7.00 net.

In this book Mr. Keppel brings together his life-long experience, and surveys the whole field of engraving from Dürer to Pennell.

PORTRAIT CATALOGUE.—Our new Portrait Catalogue, containing 33 portraits of authors, will be sent free on request.

The Nation

VOL. XCII.—NO. 2378 THURSDAY, JANUARY 26, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

AN IMPORTANT BIOGRAPHY

The Life of Oliver Goldsmith

By F. FRANKFORT MOORE

Author of "The Jessamy Bride," "A Georgian Pageant," etc., etc.

One volume, 8¾ in. x 5¼ in.; green cloth, gilt, $3.50 net.

Hitherto Biographies of Goldsmith have been based largely on Boswell's references in his "Life of Samuel Johnson." It has puzzled a good many people to comprehend how the man who showed such lovable humanity, such sympathy and such wisdom in his writings could have been the despised butt of the society in which he moved. Mr. Frankfort Moore courageously questions this time-honored idea, and shows that Boswell was consistently jealous of Goldsmith, and sought in every way to vilify and traduce him, both with tongue and pen. Goldsmith's life, seen from this new point of view, is a very different and a very much more understandable thing. Mr. Moore is well known as an authority on this period of English social life, and particularly on the Johnson group of writers. He has made out a very strong case, and incidentally written a delightful book.

READY IN FEBRUARY

THE NEW ARNOLD BENNETT BOOK

Denry the Audacious

By ARNOLD BENNETT

Author of "CLAYHANGER"

$1.35 *net.*

The advent of Arnold Bennett into the field of contemporary story-tellers is unmistakably an event of real importance. He is to-day recognized as one of the foremost novelists.

Mr. Bennett's last novel, **"CLAYHANGER,"** has been hailed by The North American as *"A great novel. . . . . So great that it throws into the shadow all the novels of the last decade."*

His new "Five Towns" book is in a lighter vein—and shows a side of life less serious than some of his previous work. Denry, himself, is a person of prodigious enterprise and not likely to be forgotten.

29 Inches of Space are given to a Work which Includes the Sum of Human Knowledge in 40,000,000 Words

Orders Should Be Registered Well in Advance

The printing of the new edition is now well advanced, and delivery to the earliest subscribers will begin soon. In view of the great demand for the work (more than 7,500 orders having already been received), it is evident that the ability of printers and binders to turn out complete sets in sufficient quantities to meet the requirements will be put to a severe test during the next few months. Delivery in all cases will be made according to priority of application, a rule from which there will be no departure. Intending subscribers should for this reason register their orders well in advance.

THE ELEVENTH EDITION OF
The ENCYCLOPAEDIA BRITANNICA

the first volumes of which are now coming off the press (simultaneously in England and America) is *the last word* in the art of assembling and co-ordinating *the facts of science, history, art and life*. The experience of all former makers of encyclopaedias has been profited by, their mistakes have been studied and avoided, their omissions have been noted and corrected.

A NEW METHOD INVENTED.

TO accomplish this result *an entirely new method* had to be invented, and something very like genius was needed to conceive and carry out that method—the kind of genius which is born of practical imagination and intelligent patience. When the necessary organization had been found and the old methods bad been revolutionized, it took eight years and nearly a million and a quarter dollars to bring the Encyclopædia Britannica to the form in which it is now offered to the public. Yet such is the perfection of the new method that *the 29 volumes* are practically *of a uniform date*—the year 1910.

FAULTS OF FORMER EDITIONS.

THE last completely new edition, the Ninth, was a very great work, the product of great minds, the fruit of great traditions and splendid intentions. But apart from the fact that it is now woefully out of date, it had serious drawbacks and grave faults. Its publication extended over many years; it was not issued as a whole, but was written and published volume by volume, the first volume in 1875, the last in 1889, while 11 supplementary volumes (constituting, with the 9th Edition the so-called 10th Edition) were issued in 1902. Thus the information given under the letter A was many years old when the matter falling under the letter Z was written. This gave rise to contradictions and inconsistencies and prevented the attainment of that *congruity and coördination which are such striking features of the new edition*. Then, too, in the Ninth Edition, a great deal of useful information was buried and practically lost. This came of the general method formerly employed in the composition of the Encyclopædia Britannica and other publications of the kind. What really amounted to a text-book on a certain subject was thrown bodily into the work, and if a reader wanted to refer to some matter which formed part of that large subject he had often to search patiently but without result through pages of text. The new method has changed all that. The editors have succeeded in combining *comprehensiveness with brevity, exhaustive exposition of major subjects with the greatest facility of reference* in the case of minor ones.

A COSMOPOLITAN POINT OF VIEW.

ONE other fault which was justly found with the old Encyclopædia Britannica was that its point of view, being essentially British, did not satisfy Americans. *That reproach certainly cannot be laid against the new Britannica:* it is *a work of international scholarship to a degree never before realized*. The 40,000 articles in the encyclopædia have been written by some 1,500 contributors. Every article is the work of a first-hand authority, irrespective of whether he happened to live in Great Britain or her colonies, in the United States, France, Germany, Japan, or any other civilized country. *For the first time*, too, in the history of the making of encyclopædias *really adequate editorial control has been exercised*. The whole of the manuscript has been continuously under the view of a large staff of editors. Every contributor was enabled to work with a thorough knowledge of what his colleagues were doing, and a *unity of method was thus ensured* which will be vainly sought in any other work of the kind.

BULK PROBLEM SOLVED BY THE USE OF INDIA PAPER.

THE volumes of the 9th edition were 2½ inches in thickness. For most persons their size militated greatly against their usefulness. The old cumbrous volumes are now to be superseded by thin, light, flexible volumes 1 inch thick, printed on opaque and strong India paper. (The new edition is also being printed, for those who may prefer it, on ordinary book paper, similar to that used for the Ninth Edition.) In the India paper impression, the volumes of the Eleventh Edition, though containing nearly 1,000 pages each, will be as easy to hold as a novel or pamphlet. Bound in flexible leather covers, a volume may be doubled back, cover to cover, without injury, held in one hand, and so read in comfort. The usefulness of the Encyclopædia Britannica will therefore be multiplied to an incalculable degree.

IMMEDIATE APPLICATION ADVISABLE.

IN view of the magnitude of the printing and binding (29 vols. of 960 to 1060 pages each), the Cambridge University Press is desirous that all who are interested in the new Encyclopædia Britannica should as soon as possible be in possession of full particulars concerning the work, for its issue in two forms (India paper and ordinary paper) renders it imperative that orders for paper, printing and binding be given in good time, and upon an accurate forecast of the demand in either form and in the various styles of binding. ***To those who apply at once, in advance of publication, there is offered a great advantage in price, for such advance applications will be accepted at the rate of $4.00 a volume (cloth) or $4.25 a volume for India paper instead of $7.50, which will be the ultimate price of the new edition in its cheapest form, as it was the price at which the volumes of the 9th edition were originally sold. Leather bindings*** (full sheep, flexible, and full morocco, flexible) are now correspondingly low in price.

Illustrated prospectus (40 pp.), 56 specimen pages on India paper, 4 specimen plates, and form of application showing the special advance terms, will be sent by return of post if the reader will write name and address below, tear off this corner, and post to

Cambridge University Press,
Encyclopaedia Britannica Department,
Na. 4. **35 W. 32nd St., New York.**

Name _____

Address _____

Note—Those who possess copies of the 9th edition of the ENCYCLOPAEDIA BRITANNICA (now out of date) are requested to advise us of the fact (giving name of publisher and number of volumes), and if they wish to purchase the new edition, will be informed how they can dispose of their old editions at a fair valuation.

THE NEW MACMILLAN BOOKS

A Cyclopedia of Education

Volume I ready this week

Edited by PAUL MONROE, Ph.D., Professor of the History of Education, Teachers College, Columbia University, Author of "A Text-book in the History of Education." "A Brief Course in the History of Education," etc., etc.

An exceptionally important work, since there has been, until now, no work of reference from which teachers, school superintendents and principals, editors, ministers, public officials, or others who have to deal with matters touching education, could secure accurate, up-to-date statements of fact, outlines of problems, and the accumulated experience of hundreds of special students. The contributors, chiefly American, are chosen from among the soundest, sanest specialists in educational practice and theory. *To be complete in five volumes, each $5.00.*

Mr. James Bryce's The American Commonwealth

This thoroughly revised and greatly enlarged new edition, with new chapters, of the standard classic on American government is amply maintaining the preëminence of the well-known work.

The New York Evening Post, after commenting on the added material and almost innumerable minor alterations which bring the book abreast of the latest practice, adds: "Its consummate union of philosophical insight and comprehensive observation leaves it still a political and social survey of incomparable excellence." *In two octavo volumes, gilt top, $4.00 net.*

Dr. Henry Fairfield Osborn's The Age of Mammals

The author is Vertebrate Paleontologist of the U. S. Geological Survey, Curator of the Department of Vertebrate Paleontology of the American Museum of Natural History (also President) and Professor of Zoology in Columbia University.

A most successful attempt to share with the general reader the results of the absorbing and rewarding research work of the specialist. Dr. Osborn has refused to sacrifice accuracy or fulness of treatment to ease of reading, but, on the other hand, has deftly arranged his text so that the merely popular reader of scientific tastes, fascinated by the panorama of developing life, may pass over entirely the documentary part of the work—or return to it in the second reading which the book is certain to receive.

Illus. with exceptionally interesting photographs, maps, etc. Cloth, 8vo, $4.50 net.

Mr. Herbert Croly's The Promise of American Life

"The most profound and illuminating study of our National conditions which has appeared for many years."—*Theodore Roosevelt in The Outlook.* *Cloth, $2.00 net, by mail, $2.14.*

MISCELLANEOUS NEW BOOKS JUST READY

Unitarian Thought By **Ephraim Emerton**

Professor of Church History in Harvard University.

A clear statement of the Unitarian position in relation to the more important topics of modern Christian speculation. *Just ready. Cloth 8vo, $1.50 net.*

Social Adjustment By **Scott Nearing**

The author is known as one of the most suggestive, thought-stimulating and clarifying writers on present-day economic questions. *Just ready. Cloth 8vo, $1.50 net.*

Rural Hygiene By **Henry N. Ogden**

Professor of Sanitary Engineering, Cornell University. A new volume in the Rural Science Series. *Just ready. Cloth 8vo, $1.50 net.*

READY NEXT WEEK

Mr. Jack London's *striking stories* **When God Laughs**

By the Author of "The Call of the Wild," "Burning Daylight," etc. *Cloth, $1.50.*

The Basal Beliefs of Christianity By **James H. Snowden, D.D.**

Author of "The World a Spiritual System." *Cloth, $1.50 net.*

New Testament Theology By **Henry C. Sheldon**

Professor in Boston University. A vital analysis exceptionally clear and thoroughly tested. *Cloth, $1.50 net.*

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, JANUARY 26, 1911.

The Week

President Taft's speech on the fortification of the Panama Canal shows how even such a man as he is can be overcome by the military obsession which infects the air at Washington. The original idea of an Isthmian canal is now in danger of being entirely forgotten. It was to be a great highway of commerce, a new triumph and pledge of peace; but suddenly it has become exclusively a part of our coast defences, a military instrument, a thing to fight over. From the single fact of the Oregon's voyage from the Pacific in 1908 we are to infer that our entire national conception of the canal, up to that year, is to be thrown over, and that we are to think of it as simply a site for guns and the scene of battles. And how do the militarists meet the argument that the neutralization of the canal in peace and in war can be effectually guarded by solemn international treaties? Why, by cynically replying that such treaties are not worth the paper they are written on; that every nation, including our own, stands ready to violate its plighted faith! Such is the view of human nature, such the idea of national honor, which militarism would make our daily food. It will next be telling us that every member of the Hague Tribunal ought to have a knife in his boot, and a revolver handy, so as to be fully "prepared" when the throat-cutting and the shooting in the back begin.

"Abuse of the power of political organizations in the past has resulted in a popular distrust of them and of those in authority in them, particularly of those wielding their centralized power to such an extent as to earn the characterization of 'bosses.'" This cold and philosophical statement on the boss system as a whole occurs in Attorney-General Wickersham's recent address to the State Bar Association at Syracuse; and it was entirely proper in the connection in which it occurred. But at the same moment there was going on in Albany an exhibition of boss rule which makes such a sentence seem more like a quotation from some historian writing a hundred years after than from a contemporary. Not "distrust," but disgust and indignation, is what honest men feel when they think of the power of Murphy and his detestable machine. To break that power, to fight unremittingly and uncompromisingly for the wiping out of the disgrace of it, is the paramount duty of every citizen of New York.

Secretary Nagel, at the dinner of the American Hebrew Congregations, spoke with great earnestness and with evident sincerity of the need of better provision for dealing with individual cases of immigrants whose right to enter the country is challenged. For the hardships, often amounting to cruel injustice and inhumanity, inflicted on so many of these people, the Secretary said he did not blame the immigration officers personally, but the defectiveness of the system. The officers are overworked, they are often completely overwhelmed by the crowd of arrivals, and they have to dispose of the cases mechanically. "We need," said Mr. Nagel, "competent boards and enough boards, who can, as a good judge should, be appealed to by the individuality of every alien instead of falling into the rut of merely asking the specified questions." The cases disposed of by a mechanical enforcement of sweeping rules, in instances where every consideration of humanity and good sense alike cries out against their application, are a reproach to our Government as well as a grievous and cruel wrong to the individuals concerned.

Senator Cummins took on Saturday a splendid stand about the latest proposed ship subsidy. The pending bill he declared to be "based upon an unsound principle applied in an unscientific and unintelligent way." This could hardly have been put better save by saying that it is a scheme to make all the American people pay the deficit in operation of a commercial enterprise, which, however sentimentally desirable, is economically not to be justified. Senator Cummins was not to be headed off by the bugaboo of foreign labor on American ships from wisely advocating the abolition of the antiquated registry laws Grover Cleveland denounced three decades ago. Like Mr. Cleveland, he would have foreign-built ships admitted to American registry, even if manned by foreigners. Of course, this was rank treason to Senator Gallinger, who is careful to forget that all our yachts and many of our merchant vessels are largely manned by foreigners. But Mr. Cummins stuck to his guns, pointed out that no American laborer would lose his place by what he proposed, and again blurted out the truth by saying that most Americans cannot be induced in any way to go to sea, there being much more profitable work to be had ashore. The world does, indeed, move when a Republican from a rock-ribbed Republican State has the courage to puncture the good old party subsidy fallacies.

Those Republicans who had been getting so much comfort out of Murphy had their own "dose" on Saturday. The election of Boss Barnes of Albany to the Chairmanship of the Republican State Committee kicks over the entire campaign of the party in this State last year. The heroic struggle with the Old Guard and the appeal for support on the ground that the old corrupt methods and leaders had been definitely cut loose from, are abandoned in a twinkling. And there was not even a fight against the reënthronement of the Republican boss. Oyster Bay was dumb. No talk of a bolt against this Republican "regularity." Barnes's election was made unanimous, even though the *Tribune* is frank to say that "more than almost any other Republican, Mr. Barnes has been distrusted" by the independent voters. The result is manifestly as disheartening to decent Republicans as is the swinish rush of Murphy for the spoils to decent Democrats.

Senator Root's eminence in the profession will lend great weight to his clear-cut and radical pronouncement on the subject of the present overgrown code of procedure in New York State as one source of the intolerable delays of justice which have in recent years attracted so much attention. And, as the following extract shows, Mr. Root did not hesitate to carry his criticism to its logical conclusion:

We have been pursuing the policy or at-

tempting to regulate by specific and minute statutory enactment all the details of the process by which, under a multitude of varying conditions, suitors may get their rights. Such a policy never ends. . . . I submit to the judgment of the profession that the method is wrong; the theory is wrong, and that the true remedy is to sweep from our statute books the whole mass of detailed provisions and substitute a simple practice act containing only the necessary fundamental rules of procedure, leaving all the rest to the rules of court. When that has been done the Legislature should leave our procedure alone.

But whatever benefit might be gained by the abolition of an unwieldy and overloaded code, the needed radical improvement will not be effected unless a judicial tradition is built up that makes for the obtaining of substantial justice by reasonable and expeditious methods. To the attainment of this end nothing is more essential than the procuring of high ability and absolute independence in the judges themselves.

That the controversy in the American Museum of Natural History has been settled by the peaceful retirement of Dr. Bumpus to accept another position is a cause for congratulation. The situation there was intolerable from several points of view, and the long-existing friction under Dr. Bumpus has done considerable harm—more, perhaps, than the managers realize. We are well aware, of course, that the museum has gone ahead; that under the recent supervision of the acting director, Mr. Townsend, the attendance has been the greatest in the museum's history, and that in the department of anthropology some of the heavy losses caused by Dr. Bumpus's control have in a measure been made good. It is also true that the future of the institution is brighter than before, for, as we understand it, this episode has caused a reëxamination of the rights and duties of the scientific staff as well as of the officers from president down, with the result that much of a clarifying nature has been accomplished. The fact remains, however, that a great deal more must be done to obtain the full confidence of experts, particularly in the anthropological field, for they have seen men of national renown lost to the museum by reason of regrettable friction and methods of administration which have been scientifically indefensible. We sincerely hope that that is all over now; that the time is near at hand when rich anthropological collections will no longer go to other cities and other museums because their owners, citizens of New York, would not entrust them to the Natural History Museum or to its scientific staff.

Vermilion County, Illinois, is achieving the kind of notoriety that has made Adams County, Ohio, infamous. The statement that 2,500 of the 7,500 voters in Danville, the county seat and residence of Speaker Cannon, have been regularly purchased, would be incredible if it did not come from the State Attorney's office. For there is no such explanation here as there is for the Ohio community. Danville has long been a railway centre, with its full share of industrial and financial enterprise. Nor is it possible to place the blame upon the hordes of ignorant coal-miners, who are an important part, numerically, of the county. They doubtless contribute their part of the corruption, but in the Speaker's own "silk-stocking" precinct a member of the Republican organization is quoted as saying that there are seventy-five purchasable votes, including that of a minister. That the Soldiers' Home is "the first place a candidate heads for" is more painful than surprising. In one respect the Illinois community is behind the one in Ohio. There seems to be little disposition upon the part of the prosecuting officers to go a step farther than they are forced to go. It is to be hoped that they will be compelled to change this attitude. Finally, the cynical observer will note that the chief reliance for putting an end to the traffic seems to be, not law or public sentiment, but only the fact that it is becoming too expensive an operation.

The vote in the New Jersey Senatorship contest showed that ex-Senator Smith was so hopelessly beaten that his withdrawal was no great surprise. In New Jersey, too, it would be infinitely better if the State should be but half-represented in the Senate than misrepresented by a corporation Senator of his type. Such fighting in the open as Gov. Wilson forced on the Senatorship is a very demoralizing procedure for a politician of the Smith type. If he cannot arrive on the scene of action with the votes he needs in his pocket, he is all at sea—his arguments usually being of the kind best suited to midnight conferences. Being destitute of anything except a selfish purpose, he knows not how to adjust himself to a situation which calls for something else than bargaining, swapping, and the pledge of future rewards. Gov. Wilson has every reason to be pleased over the result. His rousing of the conscience of the State made Smith's defeat possible.

Senator Lodge's reëlection was primarily due to the fact that no Republican of prominence could be got to stand against him for the Senatorship. One after another begged to be excused. Up to the last moment it was evident that Speaker Walker could have defeated Lodge, had he permitted the use of his name. But he refused it. Then, too, the campaign against Lodge by Gov. Foss plainly had the effect of consolidating the Republican vote in the Legislature. Members were artfully plied with the argument that it would never do to let a Democratic Governor dictate to Republicans. The fact that two Democrats finally voted for Lodge was not in itself decisive of the result, but indicates the resources of the Lodge machine. The result is, of course, a great triumph for Senator Lodge, but also a serious warning. No Massachusetts Senator ever had so plain a proof forced upon him of the unpopularity both of his personality and his methods. There is a tacit recognition of this in the very statement that Lodge has issued, in which he promises hereafter to strive to render "service to the country and to the State which they will deem worthy of a Senator from Massachusetts."

A new standard of modesty, and of scientific balance of mind, is set for spiritual media—or is it mediums?—by Mrs. Gove of Boston. She is apparently on the eve of giving the world the most important information it has yet received of the nature of the future life, and yet she warns us that in regard to the actual source of that information she cannot give an absolute guarantee. That the phenomena are "genuine," she tells us, "there is absolutely no question"; but she is not "sure as to their origin." Some hidden force moves her fingers, but possibly that force has some latent spring in her own mind. It is a thousand pities that this uncertainty should

exist, for the revelations we are about to get through Mrs. Gove's trances would be of priceless value if, in addition to their being "genuine," we could be quite certain that they emanated from the spirit of Mrs. Mary Baker G. Eddy. Beginning with the statement that the departed leader now finds that, while in the flesh, she was mistaken about many things pertaining to the future life, the subsequent communications ought to be of surpassing importance. However, we shall be thankful for even these semi-guaranteed revelations if they but fulfil the condition of being interesting.

Indications are multiplying that the old-fashioned way of becoming a poet by reading Blackstone, or of entering the church by the stage-door, is to be so far superseded that the coming generation will feel only scorn for such wavering. Harvard is to offer in its Summer School a course in choosing a vocation. Now, for the Vocation Bureau in Boston, whose chief is to conduct the course, we have nothing but praise, knowing that it has helped many a poor fellow to see within himself an undreamed-of capacity for profitable, even pleasurable, employment. We approve, too, of the lectures on the professions which were given by representative men last year in the Harvard Union. It is possible that this new course is to be confined to the Summer School, where it will unquestionably be of much value. But we fear the worst—that in some form or other it will soon find itself in the regular college curriculum, and that boys disillusioned prematurely by the humdrum to which they must look forward will refuse to make choice of any career whatsoever. Let science rub off the glamour from the past if it can; to tamper with a boy's vision of his future is perilous.

It is probably too early to say that the result of the decision in favor of the Interstate Commerce Commission in the "Jim-Crow" car matter disposes of this kind of race discrimination. Judge Sanford of the United States District Court in Tennessee has simply decided that the Commission may compel interstate carriers to furnish the same accommodations for the same money to blacks as to the whites. That this was already done was claimed by railways and papers in the South—until the Commission ordered that it must be. Then the railways admitted that there was discrimination in accommodations by attacking the right of the Commission to issue any such order. Now, the Commissioners say that if the railways do not obey their order, they will be compelled to do away with the Jim-Crow car altogether. Indubitably, the railways will carry the case to the Supreme Court; if there the decision should be against them, they will doubtless be compelled by public sentiment, in the present temper of the South, to give the accommodations ordered and thus preserve the Jim-Crow car. We heartily wish it might be abolished for all time, as a manifestation of prejudice and racial hatred utterly out of place in a democracy. The true remedy for what are obviously trying conditions is the establishment of the European system of several classes of accommodation at varying rates, just as there are now Pullmans and day-coaches. No one who has not had to travel in the ordinary Jim-Crow car can, we are sure, have any conception of what decent colored people have to suffer every day at the hands of Southern railways.

Poetic justice has triumphed in the Senatorial contest in Tennessee. Not only is Mr. Lea, the Senator-elect, a lawyer of repute, but he is the leader of the Fusionists and the founder and publisher of the *Tennessecan*, of which ex-Senator Carmack was the editor when he was killed. By taking the gavel at the critical moment in a disorderly convention, Lea brought about the nomination of Gov. Patterson, only to break with him subsequently on the prohibition issue. It was the outcome of that struggle, the murder of Carmack, and the pardoning of his assassin by Gov. Patterson, with unconcealed contempt for the Supreme Court of the State, which brought about the upheaval in the November election. The victory of the Fusionists seemed to be in peril of losing its finest fruit, however, when the Legislature went into a deadlock, first over organization, and then over the selection of a Senator. But Mr. Lea's election brings the wheel full circle.

Alderman and university professor, Charles E. Merriam, who is the head of the Chicago Commission on City Expenditures, in announcing his candidacy for the Republican nomination for Mayor, issues a platform. Its most notable feature is the declaration that "systematic and persistent attempts to secure economy and efficiency in the public service would save the city millions of dollars and result in vastly improved service." The so-called Merriam Commission has shown widespread waste, inefficiency, and corruption, and has pointed out appropriate remedies. "If I were Mayor of Chicago," Professor Merriam declares, "I would put these recommendations into effect, and would devise and execute ways and means for securing a better return than is now obtained for the public money expended." He urges the creation of a bureau of public utilities for putting into effect the provisions for the protection of the public in the city ordinances relating to gas, telephone, electricity, and traction service, together with the conferring upon the city by the Legislature of additional power over public service corporations. Chicago will choose her Mayor in her own way, but it is pleasing even to read of a candidacy based upon something like principles.

The Paris *Temps* comes out squarely for the admission of women to the Institute. It recognizes the conflicting elements of the problem: on the one side, regard for tradition—"where would tradition find its last refuge if not in the Institute?"—and, on the other, love of progress and of justice. But it proceeds to point out that the "immutable tradition" which it appeared to the Institute "altogether discreet" to respect even while it left to each of the five Academies the liberty of electing its own members, would, if maintained rigorously, be sufficient to deprive an unquestionable genius of a legitimate sanction. No considerations foreign to pure scientific worth, it contends, ought to find asylum in the Institute, at least in the Academy of Sciences. Claims of candidates ought to be examined without prejudice of sex or of political opinions. It is a noble example that a free thinker like Berthelot, a skeptic like Renan, a believer like Brunetière, and *un religieux* like Father Schell, should be able to be neighbors in all liberty. On the day when passions and parties take possession of the illustrious company, warns the *Temps*, it will have lost its prestige.

THE REPUBLICAN PROGRESSIVES.

In the list of eminent Republicans who on Monday signed the declaration of principles of the newly organized National Republican Progressive League, one is at first surprised not to find the name of the most eminent of them all. It might have been expected to lead all the rest. But a little reflection will show why Mr. Roosevelt did not openly join the movement. In the first place, it is almost avowedly anti-Taft. That is instantly recognized by the Administration. But Col. Roosevelt would not wish to array himself against the President, as do the others. Furthermore, it may be that he was not even asked to do so. These Western Republican Progressives have shown every disposition of late to set up for themselves. They do not feel that they exist by grace of Oyster Bay. If it is a question of a leader, they are fully confident of being able to produce one—or a half-dozen—out of their own number. Even so, we should think that they would have been glad of a statement from Mr. Roosevelt to the effect that he was heartily with them in so far as their proposals were patriotic and feasible, and provided that they did not take on a sectional and futile aspect, it being always understood that, while not going too far, they yet displayed courage tempered by common sense, and were neither foolishly rash nor timidly prudent.

There can be no mistaking the political significance of the new League so long talked of and now actually launched. It means that the nine Senators and thirteen Representatives, with the five Western Governors, who have signed the declaration of principles do not propose to acquiesce in President Taft's renomination without a fight. This injects an unexpected element into next year's Presidential contest. There is, of course, no talk of a split in the Republican party, or of a possible third-party movement; these Progressives all call themselves Republicans, and doubtless intend at present to abide by the will of the majority as expressed in the National Convention. But they will not suffer the contest to go by default. Under either Senator Cummins or Senator La Follette they will make a vigorous canvass for the nomination, and the President's friends will have to get out and go to work for him. That this will be done, the Washington dispatches make wholly clear. The situation in 1912 may not be unlike that in 1892. In the latter year, President Harrison at first took the position that he would accept a renomination if it came to him as a matter of course and without a struggle, but when the time came he was found ready to make an eager fight for the control of the National Convention. It appears now that the friends of President Taft will be forced to do something of the same kind.

Just why this new movement within the Republican party should be so frankly anti-Taft does not lie on the surface. Ostensibly, the President is for most of the things that the Progressives stand for. The members of the League would not, of course, admit that they have any personal animus against Mr. Taft. They would not have the impression go forth that they are acting as they do simply because they do not like Mr. Taft, though the reason why they cannot tell. Their objection goes deeper. Conceding, as they must, that the President has expressed sympathy with most of the policies which they advocate, and has done much to further them, they would probably say, if they told the whole truth, that what they desire is not merely support, but support in a radical spirit. These men are all radically-minded. They are working for something like a political revolution. But a revolution requires fervor and noise and a willingness to smash things; and President Taft, though he has done many radical things, is not a radical man. It is his placid conservatism of disposition that, no doubt, chiefly repels these Western disturbers of the party peace. They do not find Mr. Taft a kindred soul; his aversion to many of them has not been concealed. Hence the inevitable break.

Turning to the programme of the Progressive League, we find it occupied partly with the machinery of politics. It would have popular election of United States Senators. The direct primary it would extend even to the nomination of delegates to the National Conventions. In the States, at least, it would see the initiative and recall established, and thoroughgoing laws against corrupt practices put upon all the statute-books of the States. These measures are all described as aiming to restore, or at all events purify and enlarge, "popular government." But progressive "legislation" is also in the minds of the Leaguers, though here they are pretty vague in their account of what they seek. For example, "the revision of the tariff in the interest of the producer and consumer" may be interpreted Progressively, but it may also mean simply the old humbug over again. We should like more precision. Will Senator Cummins, for instance, commit himself to the statement that the duty on wool and woollen goods is outrageously high, as well on the "producer" of wool in Iowa as on the "producer" of clothing in Rhode Island? On these and other matters, the Progressive League will have to be much more definite when issues come to be really joined; but as their movement stands to-day, it has in it the possibility of exciting political changes and also of great public good.

MORE MILLIONS FOR RESEARCH.

Mr. Carnegie's latest gift brings the endowment of the Carnegie Institution up to the magnificent total of $25,000,000. The annual income of the Institution will therefore be a million and a quarter—an amount which, at a date not very far back in the past, was regarded as quite adequate to form the entire endowment of an ambitious university. With this great sum at its disposal, the Institution is in a position to encourage research upon a scale that, only a few years ago, seemed beyond the dreams of those interested in the advancement of knowledge. How far we have gone along this path in a short period can best be realized by recalling one or two circumstances.

It was about the year 1870 that the need of greater encouragement and more material support for scientific research began to attract marked attention in England and this country. In neither of the two great English-speaking countries were the universities organized in such a way as to make research an important feature of university activities, except in so far as it was carried on by a few individual men of genius or of exceptional energy or devotion; but the splendid progress of science that marked the third quarter of the nineteenth century had aroused an enthusiastic and general interest in science. In the early issues of the English journal *Nature*, which was founded at this time, there were many

pleas for the "endowment of research"; and on this side the water many will remember the interest that attached to the generous gift made by Tyndall a few years later, when he devoted the proceeds of his American lecture tour to the foundation of a fellowship in physics. From that $15,000, the income of which was to help some budding scientist to train himself as an investigator of physical problems, to Mr. Carnegie's $25,000,000 is a far cry; yet there was less than thirty years between the establishment of the Tyndall fellowship and the founding of the Carnegie Institution. In the interval, however, besides the enormous acceleration of the pace in general, and especially of the scale of expenditure upon this as upon other objects, there had taken place a radical change in our university system; the creation of the Johns Hopkins University in 1876 had introduced into this country the idea of the university as an institution in which, as in the universities of Germany, teaching and research go hand in hand. Scattered all over the country there have now been for a number of years universities in which, in every department of knowledge, investigation is being carried on upon a generous scale; and when Mr. Carnegie, about ten years ago, undertook to supplement the country's resources in this direction, he decided not simply to add one more institution to those already in existence, but to supply something that the universities could not undertake.

Broadly speaking, there are two main channels into which, from the beginning, it has been designed to turn the fructifying stream that was to flow from the new Institution. Undertakings of such character as to require the expenditure of larger sums of money than are otherwise available, or as to require considerable expenditure continuously for a long series of years, were to be made possible by it; and men of exceptional gifts, for whose special encouragement the arrangements of universities offer no natural or no adequate provision, were to be discovered and enabled to carry on their investigations. For many reasons, it is natural that the development of the work of the Institution has been mainly along the former line. It is comparatively easy to find specific objects well worth pursuing, and requiring for their pursuit more abundant equipment than has hitherto been supplied; it is a task of great uncertainty, and attended with many embarrassments and even drawbacks, to single out exceptional personal merit and trust to this to justify the promotion of effort in a direction marked out by the individual's aspiration or insight, rather than by any preconceived purpose of the authorities of the Institution. As a matter of fact, therefore, the Institution's resources have been chiefly expended upon the systematic promotion of a certain number of great lines of research, and upon the publication of extensive works which, but for its aid, could hardly have seen the light. Of the large undertakings that have been carried on by it, and through which there have already been made highly important additions to the sum of human knowledge, the most notable are those in astronomy and geophysics, and the magnetic survey of the earth carried on by the non-magnetic ship Carnegie; but the scope of the continuous work carried on by various permanent departments of the Institution includes subjects as various as botany and experimental evolution on the one hand, and economics and history on the other.

The impetus which such powerful aid must give to the promotion of knowledge in itself and of its practical applications requires no dwelling on. The example set by the Carnegie Institution, and by the somewhat kindred establishment founded by Mr. Rockefeller for the promotion of medical research, has, within a few weeks, been taken up in Germany upon the initiative of the Emperor, and will there assuredly bear rich fruit. But it should not be regarded as a word out of season to refer to that factor in the advancement of knowledge which holds an indefeasible preëminence over all apparatus, however costly, and over all organization, however perfect or far-seeing. There are obstacles to human vision, whether physical or mental, which cannot be removed without the expenditure of vast amounts of ordinary labor, and that labor cannot be had without a corresponding expenditure of money; but the cardinal advances must still be made, as they have always been made, through the agency of superior minds. It is still to the devotion of single-minded lovers of the truth, the untrammelled development of individual talents, and the insight of a great genius making its appearance from time to time, that we shall have to owe the penetration of the deeper secrets of nature and the illumination of the profounder problems of human society. All honor to those who help to remove the ever-increasing difficulties that the huge complexities of modern research place in the path of the scientist and the scholar; but let us not forget that it was not by superiority in apparatus, but by something quite different, that a Copernicus or a Galileo, a Newton or a Faraday or a Pasteur, wrested from nature her great secrets.

FRANCIS GALTON.

Of men that die at a very advanced age it is often remarked that they have survived themselves; their death being to all but a small circle the first intimation that they had still lingered on the stage. In the case of Francis Galton precisely the opposite is true. So fresh do his more recent contributions to scientific thought and general discussion appear, and so active had he been to the last in his distinctive province, that it is difficult to think of him as close to his ninetieth year. He was more than sixty when he brought out his work on "Human Faculty," which was packed full of interesting and novel suggestions and investigations, which introduced the word and the idea of "eugenics," but which perhaps left its widest impression on the popular mind through its invention and utilization of the idea of composite photography; and he had passed the age of three score and ten when his work on "Finger Prints" led to the general adoption, for purposes of criminal identification, of this remarkable method, the origination of which, however, he never claimed. The human interest, as well as the originality and fertility of his ideas, gives one an instinctive feeling that they belong to a man who has not passed the meridian of life. In reality, however, Galton was one of the last survivors of the Darwin-Wallace generation—of that extraordinarily impressive group of scientific men which includes the names of Spencer, Huxley, and Tyndall, and of whom Wallace alone now remains.

From a biographical standpoint what would strike one most about the career of Sir Francis Galton would be the re-

markable variety as well as duration of his activity. He made his first contributions to knowledge, and won his first distinctions, in the field of African exploration. He was honored with the gold medal of the Royal Geographical Society as early as 1853; and his story of his African observations and experiences not only furnished important physiographic and meteorological data, but contains one of the most interesting accounts of savage life in the English language. But while his interest in travel and in what may be called the descriptive side of the observation of mankind never failed, yet what gives special interest and by far its greatest importance to the work of Galton is not its variety, but the unity of all of that long series of writings and researches of which his "Hereditary Genius" was the beginning. In that work he marked out for himself, and for a fairly numerous and very able school of followers, a special province in the great field opened up by his illustrious kinsman, Charles Darwin; and, whether related or not to questions of evolution or inheritance, all of his work since that time bears the same stamp. Precision is its keynote; it was almost the source, and was the first important exemplar, of that host of investigations which has brought under the sway of mathematical measurement and mathematical theory so many questions of human faculty that had previously been largely abandoned to vague conjecture.

When "Hereditary Genius" made its appearance in 1869, there must have been many upon whom its fascinating pages produced something like the effect which Buckle's brilliant generalizations had exercised on young and ardent minds at a somewhat earlier time. But the impression was more lasting, because the foundation was more solid. To find a question like that of the distribution of rare personal endowments capable of truly scientific discussion on a mathematical basis was a refreshing surprise; and to those who, with a little knowledge of mathematics, read the appendix, the revelation of the agreement between observed anthropometric facts and the predictions of mathematical theory must have given a thrill of romantic delight. This, to be sure, was merely a reproduction of the results obtained by Quetelet; but, taken in connection with the intensely interesting subject matter of the book itself, it acquired quite new significance and gave promise of rich developments. Of these developments Galton's own works, especially the "Natural Inheritance," have given a fine example; they are to be found in a mass of other investigations, among which those of Karl Pearson are the most remarkable.

While it is only specialists who can be expected to go into the refinements of these methods, it might possibly have been hoped that the spirit of works like "Hereditary Genius"—which in the main can be read with facility by any intelligent person—would to some extent raise the general level of thinking upon subjects of like nature. And it may be that such a consequence has, in some measure, taken place; perhaps, after all, there are fewer people who go to either of the two false extremes in regard to statistical questions than there were half a century ago. The majority of mankind, however, are probably as prone as ever either to regard a question of great complexity as capable of settlement by the citation of half a dozen figures in a statistical table, or incontinently to reject any conclusion based on statistics because "you can prove anything by figures." And it must be confessed that in another aspect there is danger that researches of the Galtonian type, however meritorious from a strictly scientific standpoint, may actually be the breeders of serious error in minds insufficiently trained to the proper consideration of the largest questions of human life. We refer particularly to the doctrine of eugenics, which bids fair in some quarters to run a course not unlike that which the doctrine of the conservation of energy and the doctrine of the survival of the fittest went through when the tree was green. The lesson that the average mind finds it so hard to learn is that science has reached the limit of its domain when it has said that such a cause tends, and in such a degree, to produce such an effect. That this knowledge may be most useful in the guidance of conduct none would assert more strongly than ourselves; but to forget that it is only one factor in that guidance is to incur danger and encourage folly. Knowledge comes, but wisdom lingers; and science without wisdom is a delusion and a snare.

HARVARD'S NEW ENTRANCE TESTS

It was certain that when Harvard decided to attack the problem of adjustment between high school and college, the solution, however partial or tentative, would receive careful attention. The question was whether the university would choose to give ear to the chorus of complaint and protest going up from those who had among their tasks that of preparing candidates to meet whatever might lie in wait for them at the university portals. For, to Harvard, unless numbers were to become a motive, the problem could hardly loom so large as to the head of a school who found himself with a boy or two on his hands, looking to him to get them past the entrance requirements. Two considerations, nevertheless, have come to be of such weight that, for her own sake, the university has altered her system of entrance tests. While she may not have been losing large numbers of students in the abyss that has been widening between college and the public schools, those whom she has been keeping out are of the type for which she particularly exists, and, as a most undesirable counterbalance, many of the sort which have no business within any college walls have found it easy to creep in.

The present system of entrance requirements prescribes that a candidate must pass examinations in subjects which will give him a total of twenty-six "points," each of about thirty subjects offered for his selection having its weight in those terms. Now, unless a given high school course has been planned with the specific object of enabling its students to procure the twenty-six "points," a very good student may find it impossible to get into the university except with a handicap of "conditions." And if a parent, unversed in modern educational arrangements and somewhat aghast at a threatened waste of years of ambitious effort, asks why the preparatory school course has not been planned to avoid such a catastrophe, he will be met with the reply that the school must shape its course for the majority of its pupils, who are not going to college. This leaves the faithful student in precisely the same category, in reference to his college education, with the loafer. The latter can, as he has demonstrated, resort to any one of a

number of efficient "cramming" institutions, which will do for him, in their own peculiar way, what the public or private school has not done.

The new Harvard plan strikes at the root of the difficulty by taking into consideration the candidate's record in his preparatory school. It "goes behind the returns." The prospective freshman must present an official statement from his school, showing in detail the subjects he has studied, with the ground covered in each, the amount of time he has given to each of them, and the quality of his work. Such certificates will be accepted only from secondary schools whose course has been approved by the college. An approved course must extend over four years and concern itself mainly with languages, science, mathematics, and history. What this provision will do for the loafer, or for the student of small mental calibre, is as obvious as is its justice for the other kind. The second half of the admission requirement is a series of examinations, not, as now, chosen from a total of about thirty, but fixed at four: English; Latin for candidates for the A. B., French or German for candidates for the S. B.; Mathematics or Science; and one other, at the option of the candidate, from a short list, including, if not already taken, Greek, French, German, History, Mathematics, Chemistry, and Physics. This simplification in the scope and "weighing" of the examinations, however, is not their most radical or important alteration. For the devisers of the new system have been so acute and courageous as to attempt to lay hands not only upon the student but upon those who sit in judgment upon him. Not only are advanced questions to be given, in order that the student may tell how much as well as how little he knows, but the marker must have before him a copy of the candidate's school record, and, *mirabile dictu*, give, not merely a grade, but a full statement of his opinion of the paper! The candidate's final record will thus be made up, in part, of the written opinions of four men. The committee on admission, a new body taking the place of both the present committee on admission and the committee on admission examinations, will then satisfy themselves, from the record as a whole, whether the candidate is desirable.

In the entire arrangement, there is no more significant provision than the final one:

> To make certain that the examinations reasonably meet the conditions of course of study and instruction in the high schools, there is to be a committee of three school teachers for each subject in which examinations are held. These committees will be asked to present in writing each year their criticisms of the examinations set in the year before, and to make suggestions regarding methods and standards of marking. To facilitate this advisory action, they are to be allowed to look over marked examination books.

With this provision, it really matters little whether the rest prove satisfactory or not. The oldest university in the country has officially recognized the desirability of a *rapprochement* between the forces of secondary and higher education. If these particular requirements do not meet the situation, some can be devised that will. On their face, however, the new regulations are admirable. There is no "letting down of the bars," but, on the contrary, a simplification without sacrifice that is in thorough keeping with the new insistence upon high scholastic attainment.

MEDIOCRITY IN LITERATURE.

The successful manager of a newspaper syndicate, a part of whose business it is to purvey serial stories, was asked not long ago what were the qualities that found favor in the eyes of his public. He made various answers, but finally, when pinned down to the question exactly what was the indispensable element, the very quintessence that must never be missing, his reply was brief and to the point. "Mediocrity," he said, and no word more. And he meant it, too. Nor did he consider it a hard saying, as one who should confess that the taste of the middle classes was middling bad. The first thing to bear in mind is that he was speaking of fiction; and sad experience shows that in that there are worse things than mediocrity. In a time when so many daring ventures are tried in novel-writing, so many extremes of brutality and lubricity attempted, there may be a sort of comfort in discovering that the majority of readers feel that they go safest *in medio*.

Nor does it follow that those who read commonplace books have commonplace minds. Tell me what you read and I will tell you what you are, has not yet been erected into an axiom. It is true that university extension lecturers and literary hortators urge us to read only the world's great books, so that our minds may in the process become great. But there is always a serious doubt whether even these counsellors of perfection take their own advice, and it is certain that they do not expect others to do so. They probably give it on Goethe's theory that the safety of offering advice lies in the certainty that it will not be followed. It is all very well to tell us that we ought to spend our nights with Plato and our days with Dante, but life is not wholly made up of heights and abysses; we all of us like a good macadam road to travel on occasionally, and the mediocre books furnish it.

"What are the young people of England reading?" lately asked the Headmaster of Eton. He might also have asked what their elders were reading, and one answer would have pretty well fitted both questions. The same queries put to the young men and women in American colleges would have yielded much the same result. No tremendous amount of reading is done at all, and the bulk of what is done consists of current newspapers and periodicals, novels temporarily in vogue, with now and then a venturesome dash into poetry or drama or biography. But does this prove that the minds of the readers are hopelessly dull, and never will pass on to better pasturage? Observation answers no. A great deal of this perfunctory and rather low-grade reading is done for the sake of information: finding out what is going on in the world, getting some idea of the work of science and invention, following social and political developments, and discovering what people are thinking about and writing about. A course of magazine reading may not be very elevating, intellectually, but it is instructive. The habit of reading the novels of the day may not furnish a training in style or taste, but it at least gives one an idea of what are the tendencies in romance. And if one is able to ride swiftly over this macadam road without letting his mind become macadamized in the process, he may bear away a certain amount of useful knowledge, with a sense of having touched elbows with the world about him, while all the time having a surplusage of energy where-

with to bend his faculties to worthier and more fruitful reading.

There is a perpetual interest, but there is always a danger of drawing fallacious inferences, in asking what college boys are reading. As a rule, and leaving out their "prescribed" reading which they usually hate, it will be found that they read contemporary writers. Lucky boys who had Thackeray and George Eliot and Lowell and Holmes for contemporaries! Lucky, too, those later ones who had Meredith and Stevenson and Howells. If to-day it is Chambers and London and Oppenheim who catch the eye of undergraduates, blame them not overmuch. As old Thomas Fuller said that he would have praised God more melodiously if God had given him a better voice, so the college youth of to-day might say that they would read less mediocrity in literature if the literature of their time were not so mediocre.

We hold no brief for mediocrity in letters or anywhere else, but it is well not to blind ourselves to its uses. If it be cynically said that the chief usefulness of mediocrity is in showing us what to avoid, the reply may be made that, in thousands of cases, mediocrity has the precise effect of driving its votaries to better things. Even mediocre reading may create the habit of reading, and then there is no telling where it will strike out. A certain kind and amount of mediocrity will spell satiety, and thereupon the wearied mind, seeking variety, will use the now acquired instinct of reading to explore literature of more value. From overmuch reading of newspapers, it will pass on to magazine articles; from those to books; and from cheap and dull books to those which feed the intellect and lift the spirit. This, at any rate, is the observable experience of many who begin in mediocrity but early graduate from it. At first, the commonplace writer appeals and is popular because, as John Hay said of J. G. Holland, no ideas are advanced except those that are familiar to the average reader and he greets them in print as old friends whom he is mighty glad to see. But the desire for new acquaintances and wider experiences is strong in the heart of man, and the little that he has learned of mediocrity may spur him on to excellence.

FRENCH FICTION.

PARIS, January 16.

The Goncourt Academy of Ten and the women's academy that has gathered around the illustrated review, *La Vie Heurcuse*, are by way of influencing French literature, in particular French fiction, by their prizes. Both seek for their prizes in the year's novelties, which means that the prizes go to the young to whom the world is still new.

The women have given their prize this year to novelty in matter, "Marie Claire" (Fasquelle), by Marguerite Audoux, a self-trained sempstress, whose book bears all the marks of self-revelation. It is copy from the real life of a pensive soul with eyes to see the world around her. It was sure to be novel, having all the qualities of news for the general reading public, which does not easily think and see for itself. The wit who is kept by the one-cent *Matin* newspaper to hit off the daily foibles of Parisians—who ought therefore to utter the thoughts which arise in the ordinary man—sets down "Marie Claire" as a *complainte somnifère*. He would probably say the same of any and all the touching annals of the poor. In reality, the book is lucid, delicate, full of right reason, and, as Octave Mirbeau, who discovered and imposed it, says, with the style of great authors running through it. If the women had not given it their prize, the Ten, among whom one woman, Judith, daughter of Théophile Gautier, has just been seated, would have given it their own reward. The friends of the author sempstress exalt her musical ear. It is not wonderful that she should catch up that fast disappearing glory of French writing—language rightly sounded—for Cicero, who dealt in it, puts the source and criterion of all eloquence in the impressionable ear—*Aurium judicium superbissimum*. It is worth knowing that the favorite authors of Marguerite Audoux are Chateaubriand—"Atala" and "René," both of which are *vieux jeu* for the Jeunes who do not win prizes—and Maeterlinck, because he loves mystery. Whether the Paris sewing-girl, who awakes to find herself famous, will be able to utter herself again remains to be seen. "My first feeling was like a great criminal—I had become celebrated too quick." The money of her prize allows her to rent another room next her single attic chamber, where she will have more facilities to write.

The women's academy, with its usual cautious conservatism, has chosen in past years for its laureates writers who had already received safe recognition. The Goncourt Ten have not been so wary. Of all their prize-winners, none has yet earned a sure place in literature; and the public has regularly learned of their existence from the prizes suddenly bestowed on them. This year the Goncourt prize goes to Louis Pergaud, a primary school teacher of the provinces, for a jungle book of the French forest, "De Goupil & Margot" (Mercure de France). Goupil is the Fox and Margot is the Magpie; and between them are Nyctalette the Mole and Fuseline the Marten Weasel, and many others, including Miraut the Dog, with all their comedies and tragedies due to imperious loves and hates and famine and the general struggle for life. The stories are not from La Fontaine, nor yet from Kipling, but, like Br'er Rabbit, from the humane fund of a primitive people touched by French romance. The author has observed closely Nature red in tooth and claw with ravin; but his scientific reading has not trained his ear and taste as well as the authors of the sempstress. His Mole "shudders beneath the formidable hand of instinct"; his Weasel "sees with all the sub-conscious energies of her being"; but both have more human interest, more literature, than their formulas.

Two other of the new books by the young which were considered for the Goncourt prize are stamped with the mark which the Goncourt brothers endeavored to impress on their academy. "Par Aventure" (Bernard Grasset), by Léon Lafage, uses the hypersensitized Parisian mind of its author, with its lasting background of his native south, to build up a French novel from the rival loves for a Paris actress of two boyhood friends. One has made a name as a Parisian playwright; the other has lived on in his ancestral lands with his mother, far from the Parisian crowd. The latter wins the lady, because he is the more substantial man; but she will act the title rôle of the other's new play in that Gallo-Roman amphitheatre of Orange where much of the book's scene is laid, where the two men had nourished their youth sublime.

"Nono" (Plon), by Gaston Roupnel, is nearer to the jungle. It is told largely in the rough talk of the Burgundy peasant who, with others of his kind, thinks and is articulate only when he drinks or is upset by other elementary emotions. This book, too, bears the marks of patient, loving observation. The scanty dialect is French, and easily followed. Custom, which is the second nature of all men, guides and controls curiously the thoughts and resultant feelings of these crude humans in their morals and immorals, with natural feeling on the right and charitable side, devoid of Puritanism, while in such a primeval world survival there could be no place for Pharisaism. The three generations of women, guilty, innocent, and simply selfish, who successively do their best to break Nono's heart—his wife, daughter, and granddaughter—are all upborne by him when the vital struggle becomes too harsh for them. Their accounting reaches deeper than man's

judgment. When the inarticulate mountaineer refuses to remain with the company that derides the fugitive wife before her abandoned husband and little daughter, who begins to understand; when the woman, aged and in want, reappears in the village—Nono decides his case of conscience for himself. "Will that woman always stay here now?" demands the motherless granddaughter. "Yes," answers Nono peacefully, and to the woman who weeps—"Don't cry. See, we have everything to be happy—the little girl, wood in the shed, pork in the barrel, wine in the cellar—and our love will be surer than when we were young. Don't cry—we haven't suffered in vain."

Of course, America is not France, where only married women read novels. Some of these animals, like the peasant Nono, like all "Latin" peoples whose utterance follows sense without delay or reserve, speak of things which, as Rowland Hill's young Welsh preacher said of damnation, it is not polite to mention. The Latins, like the older preacher, say the word and "ask no pardons." From the literary point of view, that of human interest, the rude talk of Nono, and the Fox balked of his love by the bell which cruel men have attached to his neck, and the romantic dreams of the sempstress, are all on a higher plane than the sharp, clean-shaven, strained expression of Léon Lafage, the most Goncourtized and least successful of the four writers: "The air is thin, the oblique light analyzes Mount Ventoux."

With "Malencontre" (Calmann-Lévy), by Guy Chantepleure, we turn from the new to the perennial light of gentle, everyday romance. It is now sixteen years since this writer, a man, had his first book, "My Conscience in a Pink Gown," crowned by the French Academy; and his second, "Betrothed in April," had the same honor. He has not written too much in these years; this is his ninth book; all have reached the more than moderate success of a dozen or a score of editions, more enduring than the hundred thousand of sensational best sellers whose public vanishes with the sensation. This new volume is the journal of a woman of refined nature, whose love did not run smooth, until she saw clearly through all misunderstandings, which, of course, are a little loftier than those which we of the middle-class majority are in the habit of encountering along our life's way. "Au Vent de la Vie" (Calmann-Lévy), by J. d'Or Sinclair, is obviously from a French naval officer like Loti; but he has read a deal of English, although his book realizes many English ideas about the French novel. With the true love that holds him to his native land, there is the sailor's wife in every port, which would not be much as reading if it were not for the minute descriptions of sea-going life in between. The book ends with the hero's last thoughts as he is washed overboard and drowns.

"Au Pair" (Armand Colin), by a quite new writer, H. Celarié, has for its subtitle "A French Woman in Germany." Her first experience is in German Poland; her second in Mecklenburg. The stories are pleasant and suited to all readers. They really form, in their relation of the intimate details of daily life, a very high class of travel-book, far superior to Marcel Prévost's "Monsieur et Madame Moloch," which also tried to present the impressions made by German life on a French mind and heart. In this case the impressions are kindly, charitable even, yet brought out in delightful relief in the clear language of a society woman whom chance has obliged to look out for herself. The book is worth putting alongside Miss Thackeray's "Story of Elizabeth," wherein some of us learned, in a past age, something real about real French men and women.

S. D.

NEWS FOR BIBLIOPHILES.

The story of the illustrators of the first edition of the "Pickwick Papers" is well known to collectors—how the work was begun by Robert Seymour, who, after etching the seven plates contained in the first two numbers, committed suicide; how he was succeeded by R. W. Buss, described by the publishers as "A gentleman already well known to the public as a very humorous and talented artist," but with so slight a knowledge of etching that the two plates which he made for number iii were suppressed and appeared in only the earliest issue of that number, and, lastly, how Hablot K. Browne ("Phiz") was employed to make substitute plates for the discarded ones by Buss, and to continue the work.

In 1849 Mrs. Seymour printed privately "An Account of the Origin of the Pickwick Papers," full of bitterness and containing many false statements, but contending, and with some justice probably, that the series of "Papers" were actually originated by her husband. The original of this pamphlet is exceedingly rare. A reprint was published in 1901. That Buss prepared an account of the affair, giving his grievances and a defence of himself, is not so well known. The original manuscript of this document was acquired some years ago by Frederick R. Halsey of this city, and through his kindness we are permitted to describe it. It is a quarto blank book, bound in half leather, and containing 125 pages, including a number of drawings and photographs. It is dated on page 114, "1872, March 2nd," and signed "Robert Wm. Buss." The manuscript begins:

Many years ago, in fact at the commencement of Dickens' brilliant career as a novelist, it was my misfortune to be temporarily in connection with Messrs. Chapman & Hall and through them with Charles Dickens.

In justice to myself I feel called upon to explain the whole affair, as some few points for the first time are spoken of, with which, not merely the publishers, but Dickens himself as well as the public were and are unacquainted.

The narrative begins with an account of Seymour's early life. Buss's statements as to his parentage do not agree with those given in the Dictionary of National Biography, but this is of small moment now. He was without book education and his knowledge of drawing was picked up by himself. By 1836 he had acquired a considerable reputation as a humorous illustrator, and was doing work for many publishers, among them Chapman & Hall. In the words of Buss:

He repeatedly spoke to them about a scheme he had for a long time had in his mind that was to publish these cockney scenes he had prepared and to work them up as a "Club of Cockney Sportsmen," while the illustrations were to be tacked together with some comic letter-press, so as to form a book.

After considerable time and frequent mention of the subject, Chapman & Hall paid some attention to Seymour's suggestions and looked over the collection he had made. Upon this, Messrs. Chapman & Hall considered the matter as settled, and began to think of some author who would accomplish their object satisfactorily. The work was proposed to Leigh Hunt, and declined by him, and then to other known men who wrote light articles for the magazines, but not one of them seemed to enter with cordiality upon the proposal.

Buss then tells of the purchase by Chapman & Hall from the assignees of Macrone, of the remainder of Dickens's "Sketches by Boz," and continues:

On Seymour's next visit to the above publishers, they bearing in mind the "Cockney Club," presented a copy of the volume to him and asked him to read the book and give them his opinion as to the capability of the author, Charles Dickens, then only heard of under the nom de plume of "Boz" to work up the idea he had so long entertained.

Upon Seymour's return home he found a party of convivial friends to whom he read aloud selections from the "Sketches by Boz." They were unanimous in their opinion that the author of those stories was the man to write the text for Seymour's pictures. Arrangements were therefore made for the publication of the sketches and text, and the first number, with four plates, duly appeared. Then Seymour shot himself in the head with his fowling piece, leaving three etchings ready for No. 2. "At the time," again quoting Buss, "it was a very difficult thing indeed to find a designer of humorous subjects capable of etching them on steel. With the exception of George Cruikshank, there was really no artist-etcher of his own designs to be found, for the style of illustration was, with the single exception alluded to, a novelty, in fact, the range or fashion for etching had not then set in." To fill the want, John Jackson, the wood-engraver, recommended Buss to Chapman & Hall and Mr. Hall visited him and urged him to undertake the work. Then, in Buss's own words:

Taken by surprise at the application, I told him I had never in the whole course of my life held an etching needle in my hand, and that I was entirely ignorant of the process of etching as far as etching was concerned. He assured me it was very easy to do, and that, with my talent, I was sure to succeed. On my hesitation he urged me still more to try and help them in the hour of need, hinting that, of course, due consideration would be shown towards the want of practice in etching. Situated thus, urged by Hall, feeling complimented by my friend Jackson, and sharing the public sympathy in poor Seymour's fate, besides which was my great admiration of the talent shown by Dickens, whose work as Boz I had from the first sketches in the *Morning Chronicle* held in great esteem,

I consented to put aside my picture, and devote my whole time to the acquiring the peculiar touch for etching and getting practice in biting-in the design on the steel plate.

Mounted in the book before us are upwards of a hundred pen and ink sketches, some slight, others more elaborate, done at this time by Buss to acquire facility in the use of the etching needle. Also, in the book is inserted his first attempt at an etched illustration. The volume once contained the original drawings for several Pickwick illustrations, but these are now replaced by photographs.

Drawings of the two plates by Buss which were published in No. 3 were submitted to Chapman & Hall and declared to be satisfactory. On account of the limited time and his lack of experience, the two illustrations were etched on the steel plate by an "engraver friend" and a pencil memorandum in the margin suggests "Mr. Adcock." For these two illustrations, Buss received "the wretchedly ridiculous sum of thirty shillings for the two designs, the etching, biting-in, finishing, the steel plate, and the cost and trouble of proving." Mr. Hall assured him that this sum was what they had paid Seymour, and Buss adds: "I can only say that I do not wonder at Seymour or any other unfortunate devil of an artist blowing out his brains, if he had any, after such an experience of publishers' pay." Buss had intended to continue the work until "a curt note from Messrs. Chapman & Hall informed him that they had placed the work of illustrating Pickwick in the hands of Mr. Hablot Browne."

There is much more of reminiscence and complaint, with some commendation of other publishers for whom Buss had worked. It is well known that among the artists who made application for the position of illustrator for "Pickwick" was W. M. Thackeray. With Buss's account of Thackeray's capabilities as an illustrator, we shall close our extracts from his interesting manuscript:

Thackeray had practised etching for some years, he having taken lessons of my friend, William Rae, an engraver and print seller, at Cambridge, while Thackeray was an undergraduate. Thackeray's style of design being founded upon a study of the works of Bunbury, an amateur caricaturist of a past generation, had no originality whatever, and was quite unsulted to succeed in the steps of Seymour, for the great popularity of Pickwick had introduced a fashion, for popular art has its fashions much the same as bonnets and gowns, and this fashion began with Seymour and, after a time, scarcely any book was published without light touchy etchings of subjects founded upon actual scenes and actual men and women.

Correspondence

THE INCOME TAX.

To the Editor of The Nation:

Sir: Now that the political hurly-burly's done and the battle's lost and won, and this year of grace is at its last gasp, may I crave your indulgence for the airing of a question which greatly troubles my spirit? The question, tersely put, is this: Has New York in general gone clean daft, or am I the sole surviving fossil of a palæozoic age? And the point which marks this regrettable parting of the ways is the proposal to amend the Federal Constitution, in order to enable Congress to levy an income tax. From the absence of all mention, one might infer that our country had never been blessed with such a tax. Yet we had one in the sixties and seventies, voted in the direful stress of the civil war. After lingering ten or fifteen years, it expired by limitation, passed into oblivion, along with such other curios as the one-cent stamp on matchboxes and *carte-de-visite* photographs; the photographs may still be seen in rural albums. And verily no one wasted tears over the demise; on the contrary, it elicited a subdued but heartfelt "Thank God!" For of all forms of extracting money, an income tax is the most oppressive, the most inquisitorial. Was not I, in those youthful days, when I barely earned my weekly board, summoned before a deputy collector and put to oath that I did not enjoy an income above—was it two thousand, or was it three? *De minimis non curat lex.*

And now, after forty years of constant prosperity, of peace unbroken, save by the brief episode of the Spanish fight—one can scarcely call it war—we are asked to vote for an income tax all over again, and this time to stay and be a thorn in our sides forever. Whether the war tax was passed upon by the Supreme Court, I do not remember. I believe it was not. At any rate, it was a war measure, taking its place by the side of the suspended habeas corpus writ. In such a war, many measures were inevitable. But the proposed new tax is to be formally voted constitutional. The powers of Congress are to be declared unrestricted.

Our forefathers studied taxation thoroughly. The War of Independence was fought, in the main, upon questions of taxation. The makers of the Federal Constitution disliked and *distrusted direct Federal taxation,* for they knew that it would *impair the resources of the individual States and throw the door open to sectional legislation.* Hence the personal restriction which we are asked to abrogate.

The new income tax proposal has all the earmarks of sectional and class legislation. It is a manifestation of the rankest Bryanism. It is aimed by the South and Southwest against the Eastern and Middle States, because they are "capitalist." And it is a crude attempt to "get even with the rich."

I am not eager to defend the rich; they are quite able to take care of themselves. I have known many a millionaire who evaded the war tax, just as the opulent citizens of Ohio are at this day skilful in dodging the tax on personal property. Besides, we are to remember that an income tax is not restricted to the very rich, not even to the rich. Every income tax ever invented hits all persons above the grade of weekly or monthly salary. It bears hardest upon teachers in the large cities, upon college professors, clergymen, and, in general, upon all who live by fixed incomes. The practising lawyer and doctor may escape, in part, at least, for their incomes are scarcely to be determined with exactness. And can any collector determine the income of a stock-broker or a banker? But the salaried men and women cannot escape; their income is a matter of public record.

Am I indulging in imagination? Nothing of the sort. I am speaking out of direct personal experience of the war tax. How many professional men, my own father among them, struggling with the high prices of those days, were mulcted of a fraction of their pittance, while rich acquaintances, flitting from hotel to hotel, absent on yachting and other trips at well-chosen seasons of the year, went scot free!

No, spare us the inequity, one may even say the iniquity, of an income tax. Better consider the experience of England. For over a century Parliament has "simplified" its budget problems, has tided over each threatened deficit "by adding a penny to the income tax." The measure has passed into a proverb. Only now, it is no longer a penny, but a shilling! The fixed-income classes are on the verge of degradation, for they are completely at the mercy of a "collective wisdom" which—in Carlyle's shrewd metaphor—mistakes the "rudder of government" for the "spigot of taxation."

In sober truth, we Americans appear to be shutting our eyes to the first principles of finance. We appear to believe that the more we expend through taxation, the better off we are. We ignore the very nature of taxation, which is at bottom nothing more nor less than taking away a man's money. True, there is always supposed to be some compensation or equivalent for the money. Well, *is* there any equivalent for this tax upon income?

By way of answer let us consider the record of Congress for the last twenty-five years. In vain have Democrats and sober-minded Republicans protested against growing extravagance. Each session has outdone its predecessor, until the billion-dollar Congress has become a matter of course. Nothing could be sharper than the denunciations of Republican extravagance by our Governor-elect in his recent campaign. Yet in the same breath Mr. Dix proclaims himself in favor of the income tax. Were his denunciations, then, aimed at Congress in general, or only at a Republican Congress? For both parties have shaken hands in this depletion of the national treasury; witness the pension bills, the army and navy appropriations, the river and harbor bills, the defeat of the parcels post service. Alas, the question is not one of a Democratic Congress versus a Republican, it is a question of any and every Congress. Our representatives have ceased to be lawgivers, and become money-spenders. For example, my representative (?) in Congress during his service of eight years has introduced three post office building appropriations, upwards of one hundred private pension bills, and there his record ends. Yet he has been reëlected and his services lauded *ad nauseam.* This is a big country of ours, therefore, let the outgo be bigger and bigger. At the very moment when a most conventional Republican President calls halt and threatens veto, the Pensions Committee is gravely pondering a fresh bill swelling the mad debauch to the tune of uncounted millions. Verily, men may come and men may go, but pensions go on and grow on forever!

I have mentioned our Governor-elect. The candidates for the national Senatorship are not a whit more consistent. Listen to Mr. Shepard:

I am [in favor of the income-tax amendment]. Whether or not at a given time

an income tax should be actually levied *depends upon the financial necessities of the government.* I should never favor levying any tax where the money was not needed—where *the result would merely be to swell the treasury surplus* and to encourage extravagance, jobbery, and demagogy. I should hope, however, that tariff burdens on the industries of the country might be so reduced as to make an income tax proper.

Now for Mr. Sheehan:

I believe the Federal government should have power to impose an income tax, for at times it may be essential to our preservation as a nation, but we should be *wary of the attempts* that will be made to make such a law a *cloak for further governmental and political extravagance.*

The italics are mine. Of course, one is loath to cast a slur upon two such candidates, one prominent in theoretical, the other in "practical" politics. Between the two men, my sympathy—on this point, not on any other—goes out rather to the "practical" man, for he seems to have a clearer glimpse of the "nigger in the woodpile." But are not both utterances ingenuous after the manner of Simple Simon? Who is to decide upon the *financial necessities?* Congress. Who is to be *wary* of making the tax a cloak for extravagance? Congress. The same Congress that has needed no cloak for extravagance in the past quarter century. We are to check Congress, forsooth, by placing within the grasp of Congress the most effective instrument of boundless extravagance. Neither Mr. Shepard nor Mr. Sheehan can name the Congress (since the days of President Cleveland) that has evinced the feeblest desire to economize, the Congress that has not gone from bad to worse. If Congress is ever to learn economy, it will learn the lesson only through the *curtailment* of its powers of taxation. As soon as our "collective wisdom" discovers that it has only seven or eight hundred millions to spend, just that soon it will cease to talk of billions. Were an income tax created, two-thirds of the sum would be collected in the city of New York, with Boston, Philadelphia, and Chicago thrown in as feeble seconds. Why then should the Legislature of New York so much as consider the measure? Above all, why should any man feel it his patriotic duty to devote any portion of his income, be it large or be it small, to the well-being of deserters and bounty-jumpers, of wily widows and drunken camp-followers and mule-drivers? Or even for the magnification of an army that can scarcely preserve its vitality, of a navy whose ships after ten years are fit only for the junk heap or for target-practice?

It surprises me inexpressibly to observe that not a single Democrat of eminence has raised his voice against the income tax as an additional encroachment of the Federal power upon the State. I was brought up in the belief that the Democratic party was founded upon the clear demarcation of rights. Yet now Democratic foxes vie with Republican wolves in howling in the wilderness. This is one more proof how deeply Bryanism and Rooseveltism have infected all parties. What is the sense of protesting against Federal interference while heaping up the means of interference?

At any rate, let us rest assured that with *decent economy* there will be enough money for all rational expenditures, even should the *tariff be pruned severely.* The assumption that an income tax is the only means to tariff reform is the crassest sophism ever flaunted. And as to future wars and future patriotism, let the future take care of itself. Not a nation in the world dreams of touching this republic, so mighty, so self-supporting. The only true preparation for war is home thrift. X. Y. Z.

December 31, 1910.

THE RHODES SCHOLARSHIPS.

To the Editor of The Nation:

Sir: The unfortunate controversy over American Rhodes scholars at Oxford started last fall by the *Daily Mail* has been echoed widely in the American press. On the whole, the arguments unfavorable to the scholarships have been fairly met, and most critics who have any first-hand knowledge of Oxford agree that the Rhodes men from America have benefited by their stay at Oxford, and that Oxford in turn has been benefited by their presence. The controversy is none the less unfortunate because it has disseminated much misleading information, and has emphasized rather the difficulties than the opportunities of Americans at Oxford. Difficulties there undoubtedly are. The newly arrived Rhodes scholar feels that no one understands him. Worse, that no one cares to understand. Soon, however, he realizes what the American papers have failed to realize, that his difficulties have nothing to do with the fact that he is a Rhodes scholar or an American. Colonials, Germans, Scotchmen, even Englishmen who have not come from one of the big schools in close touch with the university, are all just as friendless, lonely, perplexed, and neglected in their first few weeks. If an American wishes to make friends at Oxford, he must not expect people to try to understand him; he must make an effort to understand them, joining in their games, making himself familiar with their ideas, and, without unduly thrusting himself forward, seize every opportunity of making himself one of them.

As to the opportunities which Oxford offers, very few Americans realize how many subjects are taught, and taught well. They know that Oxford is famous for the classics, but not that the Classical School, or "Greats," as it is called, includes not only Greek and Latin literature, but ancient history and philosophy; nor that the History School, though newer, is quite as good as the classical and quite as popular; nor that there is excellent instruction in countless other departments, including such unexpected subjects as forestry, anthropology, and Oriental languages. The range of subjects is wide, and each department is in itself elastic. The student is not bound by courses; he may develop his field in the direction of his tastes. Instruction is individual, not collective, and therefore much freer and more personal. The great value of Oxford education, especially to an American, depends, however, not so much on the excellence or variety of instruction as on the attitude toward scholarship. For high attainments are recognized not only by the faculty, but by the undergraduates and the public. There is none of the feeling so common in America that university standards are not a true criterion of intellectual ability. It is not necessary for English professors to write articles proving by statistics that excellence in studies increases the chance of success in after life. In England the relation between scholarship and later success is so obvious that no one questions it. Consequently it is looked upon as not only admirable, but normal, that men should try for honors; all kinds of men compete for scholarships and prizes. Scholars are not specialists, a class apart. There is no contrast between student and athlete, "grind" and "sport." The man who works hard is not cut off from his fellows, but shares fully in their ordinary activities and sympathies. For this reason the life of the research student is far more agreeable than at an American or a continental university.

Another advantage of Oxford over the universities of other countries is its close relation to public life. It is assumed in England that men who have enjoyed a university education are peculiarly fitted for politics. Oxford and Cambridge are directly represented in Parliament by two members each, elected by resident masters of arts, and the House of Commons is very largely recruited from university men. It is not at all uncommon for men to be elected to Parliament within five years of graduation, and many undergraduates take an active part in Parliamentary campaigns, canvassing and making stump speeches. In the last election among the Oxford men who stood for Parliament were the present senior proctor and an undergraduate at Jesus College. The greatest men in England are glad to speak at the Oxford Union or at the dinners of university political clubs.

Whatever else an American Rhodes scholar may learn in his three years at Oxford, if he grows to understand and adopt the English attitude towards scholarship and public service (one might add, parenthetically, the English attitude toward sport), his time has been well spent. F. S.

Balliol College, Oxford, January 9.

THE HERRING FISHERIES IN NEWFOUNDLAND.

To the Editor of The Nation:

Sir: The absurdities and incongruities of the American protectionist tariff are palpable enough, but they have never yet been shown in such a humorous way as this last solemn decision by the General Board of Appraisers in New York, that the winter herring fishery carried on in Newfoundland's inner waters by British fishermen in British boats and with British nets is an American fishery. The only thing about it American is the fact that the fish are paid for in American money. This is the text of the decision:

While none of these fish were actually caught by the manual labor of Americans, still the opportunity, funds, place, and appliances necessary for the operation to be carried on were furnished by an American with American money. The whole enterprise was conducted and carried on by an American who was responsible for the operations. The law was intended, in our judgment, to favor operations carried on by Americans in this way and to encourage the taking of fish in the treaty waters. We are of the opinion, therefore, that this plant, carried on, fostered, and maintained as it was, should be held to be an American fishery, the products of which should be admitted to the United States free of duty under the existing law. The protests are therefore sustained.

The Americans who come down to the

west coast of Newfoundland every autumn and winter, sixty-five to seventy sail, are all short-handed, having crews of only seven or eight men. They are simply fish carriers, not fishermen. They never catch a fish, but moor in the harbors and buy their herrings from the Newfoundlanders. They are treated as any other foreigners. They have to enter and clear at the Colonial Custom House and pay duties. These same herrings carried in British vessels have to pay the enormous duty of three-quarters of a cent per pound—far more than the intrinsic value of the fish. It is monstrous that over ninety millions of Americans should eat dear fish for the sake of a few Gloucester men whose fishermen are nearly all foreigners. Two large American fish firms are going to erect establishments in the colony for the handling of our products; they evidently anticipate reciprocity in the near future. D. W. PROWSE.

St. John's, Newfoundland, January 17.

BACON'S SPIRIT SPEAKS THROUGH THE NATION.

TO THE EDITOR OF THE NATION:

SIR: You publish in your correspondence columns this week (page 61) a communication of supreme significance to all genuine Baconians, like myself. Will you permit me the space to draw attention to this discovery, by noting its chief features, every one of which is important in settling the Shakespeare-Bacon controversy favorably to us?

(1.) The communication was upon a difficult line in Shakespeare's "Hamlet," in which the extremely curious phrase "nickname God's creatures" occurs. I need scarcely point out how significant this passage becomes when we realize that Bacon here means to imply that he is writing under his "nickname" or pseudonym, Shakespeare.

(2.) The communication was not only mailed from New Haven, a significant place, and the cradle of Baconian theory, but it was signed by the single but significant letter B.

(3.) At once we ask ourselves, "Can there be an acrostic concealed here?" What do we find? The very first word of the communication proper is SIR, the first part of Sir Francis Bacon's name, as we all know.

(4.) Starting from "Sir," and selecting the most difficult acrostic method of all, namely, spelling downwards in either direction on initial letters of words, we spell FRANCIS, beginning at "follies" and ending at "sheep." Both of these words are of the utmost significance. For of course Bacon could not but look on such trifles like "Hamlet" as mere "follies" and a waste of time from his own really important work in life, namely, the career leading to the Lord Chancellorship, and the seat on the woolsack, or "sheep." Hence the double reference to Bacon's life here is not only significant, but prophetic.

(5.) But this is not all. Continuing to spell downwards from "sheep" on all initials, either right to left or left to right, we spell, as we should, NOCAB, or Bacon backwards; and we arrive with the last letter at the B of the signature of the writer. The acrostic is, therefore, perfectly keyed, and upon significant words. Any reader of the *Nation* may prove the truth of all this.

VERULAM.

New York, January 19.

HAWTHORNE'S SMOKING.

TO THE EDITOR OF THE NATION:

SIR: Perhaps some of the students of Hawthorne have been curious to know how much of a smoker the famous romancer was. I, for one, being more or less addicted to the habit—and always having hoped that he was one who allowed himself a similar pleasure—was very much surprised when, long ago, I read in Julian Hawthorne's "Hawthorne and His Wife" (Vol. I, p. 87) that "during his lifetime he smoked something like half a dozen boxes of cigars."

In a forthcoming auction sale there is to be sold a letter of Hawthorne's that proves Julian Hawthorne's statement entirely erroneous. The letter, dated April 7, 1851, reads in part:

> Do you [Zachariah Burchmore] deal in cigars? If you meet with any good ones, at a reasonable rate, I should like to have you reserve a quarter of a thousand for me. . . . I smoke occasionally, and the above mentioned quantity would be about a year's supply.

DANIEL EDWARDS KENNEDY.

Literature

TOLSTOY.

The Life of Tolstoy. By Aylmer Maude. 2 vols. New York: Dodd, Mead & Co. $6 net.

In order to interpret adequately for English readers the greatest writer of Russia, a genius who was intensely national in the type of his mind and yet cosmopolitan in his sympathies and catholic in his appeal, a biographer would need a rare combination of various talents. He must be a literary critic, familiar with the great novelists at least of Russia and of England, for, whatever else he may have been, Tolstoy was a supreme master of prose fiction. In order to view Tolstoy's philosophical, æsthetic, ethical, social, and religious teachings in something like a correct perspective, he must be familiar with the general tendencies of modern European thought and able to discuss them independently. For, original as were Tolstoy's opinions, and whimsical as his contradictions of established doctrines sometimes appear, he was a man of wide culture, familiar with the thought of Germany, France, and England. The biographer must further have a special knowledge of Russian literature and of the streams of speculation that swept over the country in the central years of the last century, when Tolstoy was in his formative period. And, finally, he must have some skill in literary construction, so as to present in clear, unified form the details of his excessively complicated and difficult subject.

Tried by these standards, Mr. Maude's two bulky volumes are found sadly deficient. Their author shows small reading in fiction, whether Russian or English; one searches in vain for any illuminating comparison of Tolstoy with other great writers of imaginative prose. In his vast work of more than 1,100 pages Mr. Maude labels one chapter, of twenty-three pages, "Works: 1852-1878," and in it discusses, partly by means of quotations from other critics, "Childhood, Boyhood, and Youth"; "Sebastopol Sketches," "The Cossacks," "War and Peace," and "Anna Karenin," to say nothing of minor stories and sketches, while he devotes a chapter of thirty-six pages to Tolstoy's brief career as a schoolmaster, and one of forty-six pages to a summary, with incidental comment, of his short book, "What Then Must We Do?" He mentions Tolstoy's enthusiasm for different European thinkers, such, for instance, as Rousseau and Schopenhauer, but gives us hardly a hint of what Tolstoy's own doctrines may owe to his reading. He glances in the most perfunctory way at the philosophy of history that is incorporated in "War and Peace," though it is not only interesting in itself and in relation to the novel to which it is attached, but is decidedly important for a full understanding of the ethical and social theories that, next to Tolstoy's own remarkable personality, are the chief subject of this whole biography. Russian literary influences on Tolstoy fare little better. The biographer says truly (Vol. II, p. 9): "No one who studies the matter can help seeing how deeply and permanently his [Tolstoy's] trend of thought has been tinged by Slavophil ideas and feelings," and remarks that "some one will no doubt some day write an essay" on this topic; but he himself attempts no more than a short paragraph. Mr. Maude's whole book is extremely diffuse, abounds in digressions on his own rather commonplace views of the world in general, and is saved from chaos mainly by a fairly strict adherence to chronological order.

Yet, despite all these drawbacks, this "Life of Tolstoy" is a valuable and in many ways an illuminating biography. Mr. Maude is an Englishman who received part of his education in Moscow and who lived for more than twenty years in Russia. Hence he has a native appreciation of the general contrasts between Russian and English society that enables him to understand sympathetically many of Tolstoy's ways of thought which might seem strange to foreign critics of far wider literary training. In all his work he rightly emphasizes the note of the following passage:

> The detachment from the real business of

life in which young Russians grew up, and the comparative isolation in which they lived on their country estates, explain the extremely radical conclusions often arrived at by those of them who wished to make the world better. Chain a man to the heavily laden car of social progress, and he can only advance very slowly, though any advance he does accomplish represents much effort and is of practical importance. Detach him from that car, and he may easily and pleasantly fly away on the winds of speculation to the uttermost realm of the highest heaven, without its producing any immediately perceptible result on the lives of his fellow-men. . . . It was because he [Tolstoy] grew up in a detached and irresponsible position that the state of his own mind and soul were [*sic*] to him so much more important than the immediate effect of his conduct on others, and the same cause led him to remain in ignorance of lessons every intelligent man of business among us learns of necessity. [Vol. I, p. 56.]

Mr. Maude, while resident in Russia, fell under the spell of Tolstoy's religious teachings, and in 1887, according to his own account, became personally acquainted with his master, with whom he always remained in the most friendly relations. He became a member of the Brotherhood [Tolstoyan] Colony at Purleigh in Essex, did good services as a translator of important works by Tolstoy, and aided in the migration of the Dukhobors to Canada. Under the stress of actual experience, his confidence in the Tolstoyan doctrines as a force that would regenerate the world weakened and disappeared. Yet, though his faith in his prophet declined, his love and admiration for his friend continued in full force. Hence in this book he partly compensates for his lack of philosophy by many shrewd and common-sense comments on the Tolstoyan system as applied to practical life, and he more than atones for his inadequacy as a literary critic by the understanding with which he portrays Tolstoy's personality. Even in his style, he has learned much from his master; he writes with ease and simplicity, and with a delightful abundance of concrete illustration.

Mr. Maude has apparently drawn on all the available Russian sources for the facts of Tolstoy's life. Considerable portions of his work have been revised by the Countess Tolstoy or by Tolstoy himself, so that its accuracy may be generally relied on. In his later chapters he gives copious accounts of his own acquaintance with Tolstoy and his family, and so furnishes an independent source of information. In dealing with the difficult subject of Tolstoy's family relations during his later years, he displays real tact and delicacy. One may hope that in a later edition he will add a chapter dealing with the closing days of Tolstoy's life and with the tribute paid to the great man by the Russian nation.

The great charm and excellence of this biography, that which will give it a permanent place in literature, whatever more penetrating studies of Tolstoy's work may later appear, is its powerful, sympathetic portrait of Tolstoy the man, with his bubbling enjoyment of life around him, with his passionate temperament, which, in youth, led him into all sorts of excesses, with his haunting Puritan conscience, with his scorn of compromise, which was apt to pass into cantankerous opposition to established institutions and accepted ways of thought, with his quick, child-like sympathy for each individual man and woman, with his eagerness to serve his fellow beings with the very best that was in him. This personality Mr. Maude reveals not so much by direct exposition as by extracts from letters and diaries and by countless personal anecdotes. We quote, in conclusion, sentences from the writer's final estimate:

> Tolstoy is an example, and a very splendid example, of the knight-errant type that trusts alone to God and to its own right arm. If we are not able, and perhaps do not even wish, to revert to that type, . . . let us at least recognize its heroism and its beauty. . . . There are few great men whose lives it would be possible to lay bare before the public, with such full assurance that by perfect frankness one will not diminish the respect and affection in which they are held by mankind. . . . His genius, sincerity, industry, courage, endurance, and tenacity; his marvellous intuition, extraordinary capacity for observation and artistic reproduction; his devotion to the service of truth and goodness; his self-abnegation; his concentration upon the most vital branches of human thought, and his unparalleled capacity for making his meaning plain and his feeling attractive, mark him out as by far the greatest and most interesting man alive. Of modern men who have stimulated the thoughts and consciences of their fellows . . . Tolstoy is so much the first, that one forgets to ask who is second. [Vol. II, pp. 648-650.]

CURRENT FICTION.

Round the World in Seven Days. By Herbert Strang. New York: George H. Doran Co.

It is farewell indeed to the glories of Jules Verne, who only a generation ago was held to be the most delightfully absurd of dreamers, in his "Round the World in Eighty Days." That record has been many times beaten, in fact, and is now dismissed to the limbo of imaginative feats outdone by this new forecast. Our age is in the habit of (more or less perfunctorily) rebuking its own pride of progress by the reminder that there is nothing new under the sun. But there is one department of human activity in which our progress has been more than a history repeating itself—the department of rapid transit. Thousands of years ago two legs gave way to four legs. After that the world made no advance till a short century ago. It is the mail coach, with its stupendous pace of fifteen miles an hour, which typifies for De Quincey the Glory of Motion. A few years later Mrs. Carlyle gasps at the speed of her train, traversing England at thirty miles: "It is more like flying," she cries. During the next half-century the speed of the locomotive was pushed up to sixty and seventy miles an hour. Then, so few years since, the motor-car arrived, and carried the speed limit of the race another twenty or thirty miles an hour toward the elimination of space. We recall Henley's triumphant apostrophe of his Mercedes, as the incarnation of speed. And now it seems not unreasonable to suppose that within a few years the aeroplane will establish a new standard. Will that, too, be merely a new starting place?

The writer of "Round the World in Seven Days" has anticipated the next step. He has but to fancy an aeroplane with an engine so powerful and durable that it is able to make and hold a speed of two hundred miles an hour; a machine so perfected as to be in no more risk of disablement than the best modern automobiles. This once imagined, the journey round the world in a week is a mere matter of geography and arithmetic. The author's difficulty has been to make the feat more interesting than so many laps round a track. He has had the discretion to avoid the time-worn impulse of the wager. The hero, a lieutenant in the British navy, undertakes the journey on the spur of the moment, in order to rescue his father, a geologist, who has been cast away among cannibals in the Solomon Islands. Smith is on leave from his ship, and must report in a week for duty. By dint of bringing his hero to the earth's surface now and again, the author succeeds in infusing something of variety into the performance of a feat which would otherwise be fairly monotonous. A conflict with some African gun-runners, a narrow escape from ambush by pigmies, the rescue of a maiden from a burning ship, are breaks in the itinerary.

Tales of the Tenements. By Eden Phillpotts. New York: John Lane Co.

The reader will be relieved to find that the title of this book does not mean that Mr. Phillpotts has again achieved the relatively unsuccessful in straying abroad for his material. The "tenements" of the present sketch are the familiar peasant holdings under the tors of Dartmoor. The persons are of the peculiar rustic type which now is as well known to us as the Scottish rustics of Barrie, or the Wessex yokels of Hardy. Some old names reappear. The action, as usual, shifts from cottage to tavern and back again. But the writ-

er is more successful than heretofore in dealing with the comic aspects of his Dartmoor life. The humorous discursions in his longer tales have not seldom seemed irrelevant and even impertinent—episodes deliberately introduced for the purpose of lightening the strain of the sombre main narrative. In short, the real humor of Mr. Phillpotts has seemed to abide in the loftier ranges of the Comic Spirit. Several of the present sketches handle the material of broad comedy with lightness and spontaneity. In "The Wise Woman of Walna" and "I'll Do It If You Will," the fun is particularly dry and droll. The latter tale has to do with an old couple whose perpetual quarrelling culminates in a suicide pact, their common breach of which brings about a reconciliation. The delightful whimsicality of this and most of the other stories in the collection is due largely to the fact that they are all told in that moor-country speech, of which this writer is a master—as if the story-teller were a crony of his *persona*. An unusual number of volumes of short stories have been published this season, but we do not recall one of them which can fairly be compared to this in the qualities which distinguish sincere work from mere sale-work. The book deserves a place on the shelf beside "The Whirlwind," "Children of the Mist," and "The Three Brothers."

Alongshore. By Stephen Reynolds. New York: The Macmillan Co.

In "A Poor Man's House," not long ago, this writer recorded one of those experiences undertaken in a spirit partly sociological, partly adventurous, partly literary, which during the past half-century has brought close to us peoples and modes of life blandly disposed of fifty years ago by the polite as "low." Borrow and Melville and Josiah Flynt are milestones along the way. Mr. Reynolds has been making a study of the English 'longshore and its human beings, with the heightened self-consciousness of our day, yet in a spirit not unworthy of Lavengro. His subject, all one as he feels it to be, is here treated from a somewhat fresh angle. "In 'A Poor Man's House,'" he says, "the sea was a background for people; here people are in the background; are a part, so to speak, of the scenery." The people are chiefly the same—Jim and Tony, the fishermen, and old Benjie, the real 'longshoreman; and it must be confessed that they are still of chief importance to the reader. In such chapters as Tides and the Beach, Winds and Waves, and the like, Mr. Reynolds is successful in suggesting the peculiar atmosphere of his chosen scene. This is the shore of an obscure east-coast fishing village, a village without harbor, where the boats must be small enough to be hauled up on the beach, or even to be lifted clean over the sea-wall in heavy storms. Fishing in such craft is an antiquated and uncertain means of earning a living. The difficulties of marketing even a good catch add to the fisherman's troubles. Mr. Reynolds lived with these people as an equal, and shared their labors with the usual reward of discovering very much in them to admire and to love. If his attitude toward them is self-conscious, it is quite free from condescension. Even the shiftless beachcomber is found to have his virtues. The writer's best merit is to have succeeded in catching, and in the main sharing, the point of view of his shore-folk. He is not without his dreams of improving their economic status. He has his theories as to the means of procuring better market conditions; and in an appendix is printed a paper describing a style of motor-boat designed for use by harborless fishermen. Luckily, he is content to leave his people their 'longshore customs and morals.

Everybody's Lonesome. By Clara E. Laughlin. New York: Fleming H. Revell Co.

A fanciful and pretty story with a moral which is embodied in the title. The heroine, Mary Alice, is a shy and not particularly attractive country girl, with dreams. She has a city godmother—a travelled and cultivated godmother who rescues Mary Alice in the nick of time, takes her to the city (the author has a low opinion of rural life) beautifies her, and endows her with a secret which transforms her from a shy, awkward country girl to a self-possessed young person of social charm. At the moment of her transformation she meets a young man—*the* young man. He is something of a personage, but she does not know it, and is attracted to him by his evident loneliness. He goes on his way. Mary Alice and the godmother fare to London, where the girl is happy (social success involving happiness), and where she tells the King her secret out of pity for him. But when she presently meets the young man, she will not tell it to him. Of course she does in the end.

"The more you live," she cries, when the fit hour arrives, "the more everything helps you to believe the secret and to feel the brotherhood it brings."

He looked guilty. "I don't deserve to know the secret," he said. "But——"

"But I'm going to tell you," she declared, "so when you're far away from what you love most, or when you're with people you think are different from you and don't understand, you can remember . . . and you've no idea how it helps until you've tried—that *everybody's lonesome.* That's the Secret."

ROMAN IMPERIALISM.

The Roman Empire: Essays on the Constitutional History from the Accession of Domitian (81 A. D.) to the Retirement of Nicephorus III (1081 A. D.). By F. W. Bussell. New York: Longmans, Green, & Co. 2 vols. $9 net.

"The forms of government which are commonly classified as absolute monarchies," says Professor Bury, in his notable lecture on the Constitution of the Later Roman Empire, "have not received the same attention or been so carefully analyzed as those forms which are known as republics and constitutional monarchies. There is a considerable literature on absolute monarchy considered theoretically, in connection with the question of Divine Right, but the actual examples which history offers of this kind of government have not been the subject of a detailed historical study." At the very moment at which these words were spoken, Mr. Bussell's work, which rendered them at once obsolete, was on the point of appearing.

Our author has apparently had some trouble in finding a suitable name for his essays. That which appears as a page heading throughout the two volumes—Constitutional History of the Roman Empire—has been rightly dropped from the title page. No one must expect to find here constitutional history in the ordinary sense of the term. What we really have is Reflections on Imperialism Suggested by the Study of the Last Thousand Years of Roman Government. The central purpose of Volume I appears to be to note the relations successively established between the Roman emperors and the expert or permanent officials by whom they were surrounded. The dominant idea of Volume II is to trace the long drawn out conflict between the civil and the military authorities for the control of the autocrat. The method followed in the former is, in the author's definition, subjective or didactic, in the latter objective; and on page 18, he maintains that "the *objective* and the *subjective* treatment of history form two essentially separate departments of the scholar's activity; yet they should be united in the enquirer, though they must not operate at one and the same time." It is possible that the "general reader and modern politician," for whose use "these essays and the retinue of appendices" were written, will find this separation of data and comment satisfactory. But this class of readers in America will be well-advised to begin with Volume II—omitting part ii on Armenia and its Relations with the Empire, which would be more properly at home in the *Byzantinische Zeitschrift*—and to proceed to Volume I only when the facts there enumerated are well in hand. Indeed, it is to be regretted that Mr. Bussell has

not given his hypothetical reader a chance to begin with a third volume containing not so much the common measure of "the four great English historians—Gibbon, Finlay, Bury, and Hodgkin"—as a new, modern conception of the political, social, and economic history of Byzantium. The professional historian, who is likely, in our opinion, to pay most attention to this work, will be greatly annoyed to find that Mr. Bussell has omitted deliberately what he not inaptly calls the "leaden sediment of footnotes."

"Historians of Byzantium," says a caustic, modern critic, "write with ink not blood in their veins." Those who have labored over Schlumberger and the late lamented Krumbacher will appreciate the point of this deadly epigram. It all but reaches Mr. Bussell. In his writing, adjectives fall like snowflakes at the beginning of a storm. True they always land fairly and squarely on substantives, but these are jarred by the impact and blurred by the accumulation. What saves him is "the signal merit of British historians—a large canvas and sympathetic if subjective coloring." He is qualified to interpret the Roman Empire with understanding and insight by wide knowledge of actual government and a critical attitude toward modern visions and expedients. For universal suffrage, representative institutions, parliamentary or "debating society" procedure, the regimen of expert commissions and permanent officials, the socialistic conception of public control, the shams of democracy, he has no enthusiasm whatsoever. His sole positive belief seems to be in the "good nature, the honesty, and the kindliness of the average man" now and at all times. The most hopeful institution of the present is the kingship. It was the only possible order of the state in the thousand years of which he treats. As the Senate of Augustus decayed, the bureaucracy grew. The Romans demanded that their emperor should actually rule. Hence, when at the time of the later Severi he became a puppet in the hands of women and officials, they struggled till they put a real ruler in his place. A conflict was inevitable between stability and efficiency of government. The device of a *shogunate* was tried later on, but the result of the military *patriciate* in the West was the destruction of the state altogether, and the opening of the field for the mediæval struggle of the army and the church. In the East, the civil order, with its corollary, the reign of law in public and private affairs, survived, and first in the time of Justinian, and again and again thereafter, asserted its authority over both the clergy and the soldiers. Eventually, in the time of the outgoing Macedonian dynasty, resort was again had to a *shogunate*, in order to preserve the hereditary family from its own incompetency, but all the while the feudal idea of government was working its way into Asia Minor and Constantinople from Armenia, till finally with the family of the Comneni the civil state was eliminated and the condition of western Europe prevailed in the East.

Mr. Bussell has given us a very important work. It can be neglected by no one who would comprehend the historical significance of Rome and the real life of the Byzantine Empire.

Panama and the Canal To-day. By Forbes Lindsay. Boston: L. C. Page & Co. $3.

A comparison of this book with the book Mr. Lindsay produced on the same subject four years ago affords evidence that the canal is actually approaching completion. His former work was filled with projects and promises, with discussion of the rival plans for lock and sea-level construction, and with defence of the Administration against its journalistic critics. About the country and people outside the zone there was very little, for the good reason that very little was known. In the present volume prophecy has been largely displaced by history, and speculation by description. Mr. Lindsay gives us some chapters of the romantic history of the Isthmus in the days of the buccaneers, besides telling of the various efforts that have been made to cut through it from the time of Emperor Charles V to that of President Taft. In the account of what has been accomplished in the way of canal construction the photographs showing the giant stairway at Gatun and the deep cut at Culebra are more impressive than the statistical tables.

The most original and valuable feature of the book is the portion describing the agricultural resources of Panama, especially the Chiriqui region to the northwest of the Canal Zone, which the author traversed as far as the capital, David. This comparatively level and open country is soon to be made accessible by a railway from the city of Panama, and under the new land laws is open for settlement to Americans on the same terms as to natives, in unlimited tracts suitable for agriculture or cattle-raising. The government of Panama has recently authorized the appropriation of $10,000,000 for this railway, and surveys have been made.

The appendices give the Hay-Bunau Varilla treaty with Panama, but not the Hay-Pauncefote treaty, which is of greater interest now on account of the proposal to fortify the Zone. The bibliography includes many of the more important reports, books, and magazine articles on Panama, but there are no references to the original narratives of Spanish days, although these are interesting reading to everybody who has not outgrown his love of pirates. Mr. Lindsay announces in the preface his determination to stick to the use of the word "Panaman" instead of "Panamanian." He is undoubtedly right, but almost universal usage on the Isthmus is against him, as well as the United States government, which is complying with the dictates of the people, as it did in the celebrated case of Puerto Rico versus Porto Rico. Mr. Lindsay is himself not consistent in his spelling. We find the two islands off the city of Panama referred to as Tobago, Taboga, and Tavoga; and Tavogilla, Tovagilla, and Taboguilla.

Congressmen visiting the Isthmus have, according to the author, shown themselves to be grossly immoral and absurdly ignorant. The anecdote he gives as evidence for the latter charge, though amusing, is not convincing. He quotes "the major" as explaining the need of locks by saying, "You see, the tide in the Pacific rises twenty feet higher than that in the Atlantic," and the "astonished legislator" as replying, "You don't say! How often does that happen?" We share the astonishment of the legislator. There was a maximum amplitude of 20.6 feet on October 2, 1909, and a minimum amplitude of 5.6 feet on March 6, 1910, in the Pacific tides, while the maximum amplitude on the Atlantic is less than two feet. But how often, and how, does it happen that the Pacific rises twenty feet higher than the Atlantic, or, rather, when did "the major" say such a thing?

Greek Athletic Sports and Festivals. By E. Norman Gardiner. New York: The Macmillan Co. $2.50 net.

The history of the four great athletic festivals in Greece, their development and slow decay, is told in detail by Mr. Gardiner, who here expands the numerous articles that he has published from time to time in the *Journal of Hellenic Studies*. In Germany Jüthner's "Antike Turngeräthe" is the modern authority on these subjects, but in English Mr. Gardiner has no rival. The story of the Olympian Games, as we review it from their legendary foundation, or more safely, from 776 B. C., when they were reorganized and began to furnish historical documents, down to their abolition by the Emperor Theodosius at the end of the fourth century A. D., is a reflection of the history of the Greeks. There we see working their undying communal jealousies which on occasion could turn the sacred precinct into a battlefield; their racial exclusiveness gradually breaking down before the invasion of interests from the East, till the last Olympian victor, in 385 A. D., is an Armenian prince, an hereditary foe; the outstripping of the mother country by her colonies with their victors and treasure-houses, the humilia-

tion of Greece by Rome, when Nero won all the events for which he chose to enter and repaid the servile judges by the gift of Roman citizenship. Olympia, though by her position she lay out of the path of the storm of Greek politics, became every fourth year the real centre of every variety of Hellenic ambition. The town of Elis was given over to athletics as Bayreuth to music. Her public buildings were all connected with the games, her agora was a training-ground, and the year preceding the games was devoted to preparation. The judges had to take a course of instruction for ten months on the spot. For three years out of every four it must have been a dreary place to live in, and Polybius tells us that there were country gentlemen living hard by who never set foot in their chief city. Women, with the exception of the priestess of Demeter, were apparently excluded from the games, a curious state of things in those Dorian surroundings. Mr. Gardiner thinks this may have been due to some religious taboo inherited from "the earlier, non-Greek race," rather than to any sense of decorum. Yet they were allowed to enter their horses for the races and to set up statues for their victories. We talk of the brutality of modern athletics, but in the Greek pankration, a mixture of boxing and wrestling, nothing was forbidden except gouging out the eyes. An automobile race seems to offer less excitement than a chariot race in which forty chariots enter and only one escapes collision and reaches the goal. In the famous race described in the "Electra" of Sophocles ten chariots compete and all but one are wrecked. Then, as now, athletes and spectators loved the "bright eyes of danger." In vain did a professor here and there like Xenophanes, or a poet like Euripides, protest that "my wisdom is better than the strength of men and horses." Those who fear to see our universities degenerate into schools for athletes might reflect that at Athens a professor had to invade the gymnasium and bid for the attention of his pupils in the intervals of physical exercise, and that he succeeded so well that those gymnasia were virtually converted into universities.

Mr. Gardiner points out that athletic vase-painting disappears just before the Peloponnesian War, and that this coincides with the abrupt cessation of athletic poetry which began with Simonides and ends with the death of Bacchylides in 440, B. C. In the latter half of the book he discusses the varied activities of the stadium, the hippodrome, the gymnasium and palæstra. The most important chapters are those that deal with the pentathlon and the pankration. More than once we are warned against the misleading statements of Liddell and Scott, who, unlike Mr. Gardiner, were content to accept without question the most superficial literary evidence for athletic etiquette.

The illustrations, chiefly from vase-paintings, are numerous and well reproduced. We have noted only one error of fact. The papyrus of Bacchylides was not discovered by Grenfell and Hunt, as is stated on page 109. It was obtained, like nearly all the important classical finds of last century, through the agency of the devious Arab, whose interest it is not to disclose the localities where such treasures are to be found.

Lincoln and Herndon. By Joseph Fort Newton. Cedar Rapids, Iowa: The Torch Press. $3 net.

The investigations of William H. Herndon constitute the chief part of our knowledge of the life of Abraham Lincoln during the first fifty years of his existence. Mr. Newton's book is a survey of Herndon and his relations with Lincoln, its occasion being apparently to vindicate Herndon's fidelity to his chief and also to the truth of history. We are told on page 155 that Herndon once brought into their office a "Life of Edmund Burke," which he tried to induce Lincoln to read, but without success. "Lincoln dipped into it, but soon tired of the eulogy which he said could not be a true story of any man, since it robbed him of all human faults." This criticism lies against sundry biographies of Lincoln, including that of Nicolay and Hay, but not against that of Herndon. On the other hand that of Lamon, the materials for which were purchased from Herndon, is unreasonably censorious and forbidding, for reasons which will appear later. The number of new facts in Mr. Newton's book is small, but it includes a correspondence between Herndon and Theodore Parker running through the period 1854-1859, when the seeds of the civil war were germinating and Lincoln was finding his way and preparing himself to take part in it.

Herndon was born in Kentucky in 1818. His father moved to Illinois and settled in Springfield, where he acquired some distinction in politics and was elected State Senator while Lincoln was a member of the lower house of the Legislature. The younger Herndon was sent to Illinois College at Jacksonville, the head of which institution was Dr. Edward Beecher. Under such tuition, he grew to be, in the estimation of his parent, "a d—d Abolitionist pup," and was withdrawn from the blighting influence before graduation, but not soon enough to effect a cure. After leaving college, he became first a clerk in Joshua Speed's store, and later a law student in the office of Logan and Lincoln, and later still, a partner of the latter. It was not a very promising firm and never became a very prosperous one, since neither of the members had any real enthusiasm for the law. What kind of man Herndon was, Mr. Newton tells us thus:

> He was an excellent student and became an able attorney, but he seems never to have liked the law. Herndon was a strange mixture of extremes, complex where Lincoln was simple; a man of no personal dignity, yet gifted and lovable; one moment telling yarns that smelled of the barnyard; given to escapades of sentiment, yet withal sagacious and astute; impetuous and impulsive, but honest, sincere, and loyal. By nature an enthusiast, a colorist, and a radical, he embraced at one leap all the social reforms from the abolition of slavery to the right of woman suffrage. That was temperament. All through his career after it had a beginning he had a hard fight with the drink habit, with many victories and occasional bitter defeats, a battle which Lincoln watched with never-failing pity.

Mr. Newton gives a review of the stirring events following the repeal of the Missouri Compromise, including the Lincoln and Douglas joint debates of 1858. One of the peculiarities of that period was the episode of cross-purposes inside the Republican party, when its leaders in the East, including Seward, Greeley, Henry Wilson, and Anson Burlingame, favored the reëlection of Senator Douglas because he had turned against President Buchanan on the issue of the Lecompton Constitution. The Republicans of Illinois declined, with some asperity, to follow such advice. Several letters passed between Parker and Herndon on this subject and they agreed perfectly that, although Douglas might be a great help for the moment, he was not to be trusted under all circumstances.

A letter from Henry Wilson to Parker, dated Washington, February 28, 1858, now first published, pictures Douglas's state of mind at that juncture more distinctly than any of his biographers have done. Wilson said:

> I say to you in confidence that you are mistaken in regard to Douglas. He is as sure to be with us in the future as Chase, Seward, or Sumner. I leave motives to God, but he is to be with us, and he is to-day of more weight to our cause than any ten men in the country. I know men and I know their power, and I know that Douglas will go for crushing the Slave Power to atoms. To use his own words to several of our friends *this day* in a three-hours' consultation: "We must grind this administration to powder; we must punish every man who supports this crime, and *we must prostrate forever the Slave Power*, which uses Presidents and dishonors and disgraces them."

After the victory of Douglas in the Senatorial election, Theodore Parker predicted that his triumph at home would give him sufficient prestige and power to split and ruin the Democratic party, as it did two years later at Charleston.

Collectors of Lincolniana have been puzzled to account for the chilling tone

of Lamon's life of Lincoln, which purported to be the work of an intimate associate and close friend of the President. One of Herndon's letters touches this subject, and makes of it one of the curiosities of literature. Lamon bought his raw materials from Herndon for $2,000. He then placed them in the hands of Chauncey F. Black, who wrote the book—Herndon says "quite every word of it." Black was the son of J. S. Black, Buchanan's attorney-general, and was, like his father, a Democrat of the hard shell variety. He was an able man, of good literary culture, but his political bias unfitted him for the task of writing a sympathetic biography of Lincoln. Its tone was coldly critical, perhaps unconsciously so. The publishers, James R. Osgood & Co., of Boston, sought to discard some of the objectionable matter, and actually cast out an entire chapter descriptive of the last four months of Buchanan's Administration. Considering the facilities at Black's disposal for writing such a chapter, it would be an interesting thing to have now. Lamon consented to this abridgment, whereupon he and Black parted company. The book fell flat from the press in 1872. The latest use made of it was to supply material for a very depressing estimate of Lincoln's career, in the form of an address before a camp of Confederate veterans at Richmond, October 29, 1909, by Hon. George L. Christian.

Whatever lack of sympathy may have been shown by Lamon, or Black, or Christian, the author of the book under review is under no such bias. Although the son of a Confederate soldier, Mr. Newton is an ardent admirer of Lincoln. A minor error in the book is the frequent mention of "W. C. Whitney" as the author of a "Life of Lincoln" and of "Life on the Circuit with Lincoln." It should be Henry C. Whitney.

The Buccaneers in the West Indies in the XVII Century. By C. H. Haring. New York: E. P. Dutton & Co. $3.50 net.

Mr. Haring's valuable book, which was presented as a thesis to the Board of Modern History of Oxford University to fulfil the requirements of the bachelor of letters degree, is much more than a conventional recital of those buccaneering exploits which have engaged the attention of a host of writers, ancient and modern. By searching hitherto neglected manuscripts and printed documents in England, France, and Spain he has been able to put to test the accuracy of the "traditional sources" —Exquemelin, the Jesuits, and other familiar narratives—and reveal the policy pursued by the French and English governments toward the sea rovers, besides showing their connection with the history of the English colonies in the West Indies. In doing this he has entered a new field and made an important contribution to the literature of the subject, without losing sight of its romance.

Beginning with a review of the Spanish colonial system, for whose ideals he has a good word, Mr. Haring goes on to show how the Spanish crown, by aiming to concentrate and monopolize the commerce and riches of the new world, slowly sapped the prosperity of Spain herself. He says:

> The Spaniards of the seventeenth century, by persisting both at home and in their colonies, in an economic policy which was fatally inconsistent with their powers and resources, saw their commerce gradually extinguished by the ships of the foreign interloper, and their tropical possessions fall a prey to marauding bands of half-piratical buccaneers.
>
> Although struggling under tremendous initial disabilities in Europe, they had attempted, upon the slender pleas of prior discovery and papal investiture, to reserve half the world to themselves. Without a marine, without marine traditions, they sought to hold a colonial empire greater than any the world had yet seen, and comparable only with the empire of Great Britain three centuries later. By discouraging industry in Spain, and yet enforcing in the colonies an absolute commercial dependence on the home country, by combining in their rule of distant America a solicitous paternalism with a restriction of initiative altogether disastrous in its consequences, the Spaniards succeeded in reducing their colonies to political impotence. And when, to make their grip the more firm, they evolved, as a method of outwitting the foreigner of his spoils, the system of great fleets and single ports of call, they found the very means they had contrived for their own safety to be the instrument of commercial disaster.

From the cattle hunters or "boucaniers," of Hispaniola and Tortuga, who smoked flesh in a "boucan," after the manner of Caribbee Indians, there originated the crews of corsairs who, with other restless spirits, "found the attractions of coursing against the Spaniards to be irresistible." With the conquest of Jamaica by Cromwell's expedition in 1655, and the settlement of the Windward and Leeward Islands, new impetus was given to contraband trade, and soon the Caribbean was dominated by powerful fleets of buccaneers, upon whom it was impossible to put effective restraint. The vacillating attitude of the English government toward the freebooters, the effect of their depredations upon the relations between England and Spain, the various exploits of Sir Henry Morgan and lesser leaders—all are treated at length by Mr. Haring, and with a wealth of detail.

At last the inhabitants of Jamaica reached the conclusion that in the encouragement of planting, and not of buccaneering, lay the premanent welfare of the island, and the reduction of the corsairs began forthwith. Even the rapacious Morgan, who now held public office, was zealous in punishing his old associates, and those who refused to return to civilized pursuits became out-and-out pirates to their ultimate downfall. Mr. Haring points out that after all the foreign merchants who freighted the Spanish-American fleets suffered more than did the Spaniards by the activity of the buccaneers.

> If the policy of the English and French governments gradually changed from one of connivance or encouragement to one of hostility and suppression, it was because they came to realize that it was easier and more profitable to absorb the trade and riches of Spanish America through the peaceful agencies of treaty and concession, than by endeavoring to enforce a trade in the old-fashioned way inaugurated by Drake and his Elizabethan contemporaries.

Notes

Putnam's list of announcements includes: "The Return," a story of the supernatural, by Walter de la Mare; "Criminal Man According to the Classification of Cesare Lombroso," summarized by his daughter, Gina Lombroso Ferrero, and "In the Time of the Pharaohs," by Alexander Moret.

Charles Livingston Bull's "Under the Roof of the Jungle" is in the hands of L. C. Page & Co.

Mitchell Kennerley will bring out in the spring "The Forging of Passion Into Power," by Mary Everest Boole.

"Flowers from Mediæval History," by Minnie D. Kellogg, will be issued in February by Paul Elder & Co.

A book which undertakes to treat the question of the will in simple, untechnical language is "On Freedom," by G. Locker Lampson, M.P., which will be issued shortly by Smith & Elder.

Lord Monkswell is publishing with the same house an account of "French Railways."

Chatto & Windus have in hand "Lay Morals and other Essays," by R. L. Stevenson, which is composed almost entirely of work not heretofore available outside of the "Edinburgh" and "Pentland" editions.

Among the spring books announced by the Century Co. are: "When Half-Gods Go," by Helen Reimensnyder Martin; "The Dweller on the Threshold," by Robert Hichens; "Miss Livingston's Companion," a love story of old New York, by Mary C. Dillon; "An Ardent American," by Mrs. Russell Codman, and "John Sherwood, Ironmaster," by S. Weir Mitchell.

Doubleday, Page & Co. announce a new novel by Ellen Glasgow, entitled, "The Miller of Old Church," and "813," by Maurice Leblanc.

Richard G. Badger announces the following books for mid-winter and spring publication: "The Way of the Gods in Japan," by Hope Huntly; "Edgehill Essays," by Adrian Hoffman Joline; "Stories from the Old French Chronicles," by Robert D. Benedict; "The Story of the Soil," by Cyril G. Hopkins; "The Girl that Disappears: The Real Facts of the White Slave Traffic," by Gen. Theodore A. Bingham, ex-police

commissioner of New York city; "The Ladies' Battle," by Molly Elliot Seawell; "Sense and Nonsense of Christian Science," by Leon C. Prince, Ph.D.; "The Career of the Child," by Maximilian P. E. Groszmann, Ph.D.; "The Individual and Society," by J. Mark Baldwin; "Public Hygiene," by Thomas S. Blair, M.D.; "St. Paul's Friendships and His Friends," by Carl Hermon Dudley; "The Favorites of Henry of Navarre" (in the Favorites of the French Court series). The new fiction includes: "A Knight of the Golden Circle," a story of the copperhead conspiracy, by U. S. Lesh; "A Winter Romance in Poppy Land," by Una Nixson Hopkins; "The Makin's of a Girl," by Emma E. Meguire; "The Dawn Meadow," by Grace A. Dennen; "A Wild Rose," by Clara Viola Fleharty; "The House of Unfulfilled Desire," by Harlan P. Rowe, and "The Man with the Scar," a Christian Science story, by Warren and Alice Fones. A new book of poems down for immediate publication by this house is "The Rape of Hallowe'en and Other Verse," by Henry P. Spencer.

From the interminable small talk of Pepys's "Diary" E. F. Allen has made a selection of passages, for the most part quite brief, which he brings together under the title of "Red-Letter Days of Samuel Pepys" (Sturgis & Walton). The selections are arranged in chapters with such headings as Mr. Pepys Has Perilous Experiences, Mr. Pepys Is Gregarious, Mr. Pepys at the Play, etc., so that we do not get so much a consecutive view of his life as a series of glimpses into his character.

In 1900 W. H. White, under his better known name, "Mark Rutherford," published a small volume of miscellaneous reflections and character-sketches with the convenient title of "Pages from a Journal." Henry Frowde now brings out a second edition of this book, and in uniformity with it another volume containing "More Pages from a Journal." The sketches and critical and descriptive passages in this new instalment are in the same vein as those in the predecessor; but Mr. White has added to these a section of "Notes," or *Pensées*, with a flavor of wise sobriety and sad sincerity not common in collections of this sort. Their tone, as indeed the tone of the whole book, is closer to that of "Private Papers of Henry Ryecroft" than to anything else we think of. They lack the final charm of Gissing's writing, but they are of the same school.

Those who desire to see English become the world-language will find cause for gratification in the latest issue of Murray's "Oxford English Dictionary" (Frowde). Between T and Tealt, where Samuel Johnson recorded 220 words, Murray records 3,491. The augmentation from Latin and Greek sources is slight, but barbarians have swarmed in from every quarter of the globe—Irish, Gaelic, Turkish, Hindi, Singhalese, Chinese, Japanese, Javanese, Tongan, Peruvian, Woloff, Bechuana, etc. If the door is kept wide open, ultimately we should have in our own dictionary the two or three hundred words necessary in exchanging calico and beads for gold and diamonds with any nation of the earth. From an uncommercial point of view, of course, the older immigrants are the more attractive. "Tabby," for example. This very domestic-appearing word was the Arabian designation of a quarter of Bagdad famous for its manufacture of divers colored silks and cottons—a quarter named after 'Attab, the great-grandson of Omeyya. "Tabby" appears in English literature in the first half of the seventeenth century as the general term for striped taffeta silks. In the same century, "tabby" is applied to a striped or brindled cat. In the eighteenth century, to an "elderly maiden lady." Somewhere in the line the lexicographer rather timorously conjectures a left-handed alliance between the descendant of the Arabian 'Attab and Tabitha. The sense development of this word is in striking contrast with that of another old Arab, "tariff," which came in the sixteenth century, meaning a "multiplication table," and has remained essentially unchanged to the present day. The most astonishing sense development is exhibited by the common word "take," a verb of Norse origin, which appeared shortly after the Conquest, displaced the Old English "niman," and showed more capacity for work and for breeding idioms than almost any other word in the language. Forty columns of the Dictionary are required to display its uses. The sentence, "Who took it to thee?" in which "took" is equivalent to its opposite, "gave," is perhaps the most singular illustration of its aggressiveness.

The random reader will find this section rich in piquant bits of "Kulturgeschichte." "To tar and feather," for instance, is set down as a punishment sometimes inflicted by a mob, "especially in the United States." Offhand, one might conjecture this ingenious custom to be indigenous to the piny domains of Judge Lynch. Then, of course, one recalls the courtesies received by Skipper Ireson at the hands of the women of Marblehead, and certain vivacities of colonial Massachusetts. George III, in his conversation with Thomas Hutchinson, after the latter's return from America, appeared ignorant of the terms of art. "I see," says King George, "they threatened to pitch and feather you." To which the scrupulous Hutchinson replies, "*Tarr* and feather, may it please your Majesty." But tarring and feathering was no mere provincialism; it had the highest ecclesiastical and even royal sanctions. James Howell, in a letter of August 26, 1623, tells of a "boisterous Bishop of Halverstade," "that, having taken a place where there were two Monasteries of Nuns and Friers, he caus'd divers featherbeds to be rip'd, and all the feathers to be thrown in a great Hail, whither the Nuns and Friers were thrust naked, with their bodies oild and pitchd." And the practice extends back into the hoary antiquity of Richard I, who by an ordinance of 1189 established it as a punishment for theft in the navy. In the illuminating article on the Chinese word and thing, "tea," the choicest quotation is from the diary of that gourmet of sensations, Pepys, under the date September 25, 1660: "I did send for a cup of tee (a China drink), of which I never had drunk before." A hundred years later this Oriental luxury was penetrating the Western wilderness along the Ohio River in a boat loaded with "wine, *caudevie*, tea, orange juice, powder, gunshot"—strange cargo for our hardy pioneers! (See Illinois Historical Collections, Vol. V, p. 36.) The richest collection of American quotations is to be found under "Tammany," the Indian chief, friend of Penn, and tutelar saint of Pennsylvania, who gave his name to the "Society of St. Tammany," organized in 1790, with a constitution declaring that it is "founded on the true principles of patriotism, and has for its motives charity and brotherly love."

In the fourth edition of Paget Toynbee's "Dante Alighieri" (Macmillan), the first four parts, dealing with the history of Italy in the thirteenth century, Dante in Florence, Dante in exile, and the Dante tradition in portrait and in anecdote, reappear without substantial alteration. The fifth part, which deals with Dante's works, is considerably enlarged. The "Vita Nuova" and the "Convivio" are analyzed chapter by chapter, and full summaries of the Latin works are given. The treatment of the "Commedia" is relatively very slight. Several appendices are added, one containing a translation of the letter of Frate Ilario, another some extracts from letters from Seymour Kirkup regarding the Bargello portrait, and another a chronological list of early commentaries on the "Commedia."

To add another English translation of Benvenuto Cellini's well known autobiography to the four which already existed may seem like putting a fifth wheel to the coach; especially when one of the four was the work of John Addington Symonds. Nevertheless, "The Life of Benvenuto Cellini, a new version by Robert H. Hobart Cust" (Macmillan), justifies itself. In the first place, these two handsomely printed volumes are generously illustrated with excellent reproductions of the artist's handiwork, and these are the more opportune since Cellini has not yet found his way into any of the cheap series of monographs on artists. Mr. Cust's main justification, however, is that he has translated from a more trustworthy text of the original than his predecessors had at their disposal—the critical edition published by Baccl in 1901; and, further, that he has followed the original with far greater faithfulness than they deemed necessary, or, indeed, possible. If his rendering has not the grace and smoothness of Symonds's polished language, it has a flavor of its own which distinctly suggests the original; and, in spite of its following closely the Italian idiom and the many loose and illogical constructions of the impetuous sixteenth-century artist, it does not read like a translation. In short, Mr. Cust makes this very human document extraordinarily alive in its English dress, and brings a reader who knows no Italian into the very atmosphere of Cellini's style. Not content with mere faithfulness in rendering, the translator often quotes the Italian text in justification or explanation. Many details which were either mistranslated or omitted in the earlier versions, here appear in their proper form; of slight importance in themselves, they add to the accuracy and the color of the work. Furthermore, Mr. Cust does not forget that Cellini was an historical figure and an artist; the text is fully annotated and supplemented with names, dates, and critical discussions. Of very great value are the bibliography of Cellini, extending to nearly 300 numbers, and the list of his works of art. There is also an excellent index. In regard to the bibliography, we note that while, as stated, the version in Everyman's Library is by Miss

MacDonnell, the former edition in Everyman's was a repyrint of Thomas Roscoe. It is to be hoped that Mr. Cust will carry out his announced plan of translating and editing Cellini's treatises on art. In the meantime, in spite of the readable qualities of the older versions by Nugent (1771) and Roscoe (1822), and the manifold merits of those by Symonds (1888) and Miss MacDonnell (1903), we think that Mr. Cust's translation is to be preferred, both by the student of art-history and by the reader who wishes to come close to the personality of Cellini.

One who seeks in "The Essence of Religion" (Houghton Mifflin), by the late Prof. Borden Parker Bowne, some new light on the problems of philosophy will turn away disappointed. The book is not philosophical nor even theological, but essentially practical and religious. It is a collection of sermons and has little to do with either metaphysics or Biblical criticism; yet every one who reads it sympathetically will find it dominated by a wholesome and helpful outlook upon life, and will take from it new encouragement for upright and hopeful living. The sermons bear such titles as these: "The Supremacy of Christ," "Religion and Life," "The Church and the Kingdom of God," "Prayer," etc., etc. The keynote of the book is struck especially well in the sermons entitled, "Righteousness the Essence of Religion," and "Obedience the Test of Discipleship." Says the writer:

> We are not called upon to be religious. We are under no obligation to be religious; there is nowhere any commandment to have religion. We are called upon to be righteous and to fear God and keep his commandments. . . . Many persons are found who claim to have religion, but it is no security for right living. They have religion, but you cannot trust them. . . . We shall always be exposed to this sad caricature, if not hypocrisy, until we see that in Christian thought there is no such thing as having religion apart from righteous living, or that true religion in God's sight is nothing but righteous living in the love of man and God.

Those who have known how great a force for righteous living and for pure religion Professor Bowen himself was, will be glad to see this postscript to his writings, coming as it does in the form of a farewell word to his friends.

It is natural that the volume of the Highways and Byways series (Macmillan) dealing with "Cambridge and Ely" should give the lion's share of space to the university. The Rev. Edward Conybeare, already known for several books on Cambridgeshire, has treated this part of his subject with full knowledge and a fair sense of the picturesque and interesting. It cannot be said that a university town lends itself quite as readily to the manner of this series as do the counties where the fancy roams more freely; nor is the country about Cambridge as rich in literary and romantic associations as many other parts of England. But there is enough of such interest to give the present volume fair standing in a series that has been sustained with extraordinary continuity of excellence. The Cathedral of Ely almost divides the book with the university. The illustrations, by Frederick L. Griggs, are capital, save in a few instances which lack clearness of outline.

"A History of Hatfield, Massachusetts," by Daniel W. Wells and Reuben F. Wells (published under the direction of F. G. H. Gibbons, Springfield, Mass.), has little to distinguish it from the myriad other local histories already in existence. The author utters some exalted platitudes as to the proper conduct of a scholarly historian, and then proceeds in his work to violate them. The genealogical and antiquarian work appears to have been well done, but of the evolution of Hatfield's social, economic, political, or religious institutions, in any scholarly sense, there is no thought. Certain men moved there, certain men fought the Indians, and a later generation fought in the Revolutionary war, but the things that grew and continued from generation to generation are unnoted. In this, as in so many of the New England local histories, one is led to think that the town enjoyed a long Rip Van Winkle sleep from the Revolutionary to the Civil war. After leaving the Colonial period, the local events are assumed to have no importance unless they bear upon the national history. Though the style is generally sober and plain, the author introduces the glowing phrases of orators and poets into the text, and stops the forward movement of the story by insignificant anecdotes, like that of the man who led his horse up the tavern stairs and could not get him down again. The "human interest" in Indian attacks is also sadly overworked. The most valuable part of the work for the general student is the original material, which seems to have been carefully copied from the local archives.

H. Noel Williams's "Madame de Montespan and Louis XIV," which was originally published in 1903 as an elaborately illustrated quarto, now appears in a less expensive form (Scribner), with a single portrait serving as frontispiece. The work remains, after seven years, the only complete and accurate account in English of the most famous and most magnificent of all French royal favorites, being based upon the latest historical researches, particularly those of M. Ravaisson, editor of the "Archives de la Bastille." That scholar, together with M. Funck-Brentano and others, has succeeded in unravelling utterly the mystery of the sinister and unsavory poison cases which smirched Louis XIV's court with so terrible a scandal. The monarch believed he had silenced forever the accusing tongues that connected Madame de Montespan with the *empoisonneurs*, when he caused to be burned in his presence the incriminating documents containing the depositions of the most dangerous witnesses. But enough evidence has survived to complete the case against his mistress, and to reveal her whole career, so far as it is concerned with the winning and holding of the king's affections, in a far different light from that in which it is presented by earlier and less well-informed historians:

> Recent research has established beyond all reasonable doubt the fact that, so far from being the unwilling victim that so many writers would have us believe, Madame de Montespan laid her plans for the subjugation of *le Grand Monarque* with as much deliberation as did Madame de Pompadour for that of his successor.

But, on the other hand, Mr. Williams argues that, once in power, neither she nor any of her rivals—not even Madame de Maintenon, whose responsibility for the Revocation of the Edict of Nantes he discredits—was able to exert any political influence comparable to that wielded by the great favorite of the later monarch. In thus keeping the reigns of government in his own hands, and, as he himself once phrased it, carefully distinguishing between "the tenderness of a lover and the resolutions of a sovereign," Louis is exonerated from the worst form of culpable weakness in his attachments which, moreover, are redeemed by a certain romantic element absent from those of his base and sensual successor.

Bernadotte Perrin, since 1909 professor emeritus of Greek literature and history in Yale, has made an early use of freedom from the routine of teaching to issue a companion volume to his "Plutarch's Themistocles and Aristides," published nine years ago. In its preface he announces that it is to be followed, if his sight is spared to him, by a third book containing "Plutarch's Nicias and Alcibiades," the whole to form a work in three parts to be entitled "Six of Plutarch's Greek Lives." The present volume is a translation with historical notes of the great biographer's "Cimon and Pericles." It is preceded by an introduction in which the history of the wonderful fifty years covered by the public activity of the two statesmen is sketched, and detailed specifications are given of the sources used directly and indirectly by Plutarch. The translation is throughout accurate and felicitous, the notes adequate and unpedantic, the introduction clear and scholarly. Nothing further could be reasonably demanded of the author, or, for that matter, of the publishers (Scribners), who have made the book look as if it had been printed in England. The only person with a right to complain is the Chæronean himself; for though six halves make in this case a whole, it is not a whole with which the parallel biographer would have been satisfied. To his whole a Roman Life was always essential. Students of history, moreover, for whom Professor Perrin is more particularly writing, would like to be shown to what extent Plutarch chose or forced his materials in the interest of the parallelism he sought to establish. A study of the "Pericles-Fabius Maximus" pair from this point of view would be especially helpful. Of the version of the Funeral Oration of Pericles made by Professor Perrin it will suffice to say that it is less eloquent but more faithful than that of Jowett.

"Complete Auction Bridge" (Lippincott), by "Hellespont," fully justifies its title, for it not only contains the laws of the game, but goes into the question of declarations in detail; explains the system of bidding, the lead in declared trumps and no trumps, the general play of hands, and the strategy of the game. There are also notes on the various modifications in original leads, making the work valuable to experts as well as to beginners.

E. Ashmead-Bartlett's "Passing of the Shereefian Empire" (Dodd, Mead) is entertaining journalism, not to be taken too seriously. Once, at any rate, he had extraordinary luck, but unfortunately was not in a position to make use of it to the full. He was one of the first in 1900 to go to Fez and to meet Mulai el Hafid when Mulai had just taken up his court there, and he lived in Fez for some months on as intimate terms with the Sultan as one who spoke no Arabic could well enjoy. He used

his eyes, too, and drew his conclusions with very picturesque results, but he was manifestly at the mercy of his interpreters. He also obtained a mining concession, the financial terms of which he was thereafter unable to meet. But happily we hear very little of that and get instead a vivid picture of new old Morocco. He also saw Casa Blanca after its destruction, and went through the little war that followed. This gives an opening for a disquisition on the present condition of the French army and thence on European politics—to be taken for what it may be worth. A similar experience in 1909 with the Spanish army during the campaign in the Riff gives a similar opportunity. But, throughout, a quite creditable objectivity is maintained, and a mass of probably very trustworthy facts is communicated in a readable form. Again the enormous waste in the use of modern ammunition is brought out clearly and the large possibility still open to daring cavalry. The twenty-eight photographs are all good.

Against the welter of contradictory rumors on the stability, progress, and general trustworthiness of the new government of Turkey, there is ground for solid satisfaction in the first annual report of the Jerusalem Society for the Prevention of Cruelty to Animals. For that society was started in 1909 by the Jerusalem branch of the Committee of Union and Progress, has a very largely native membership, keeps in close touch with the local government, and has on its committee of management such local authorities as the president of the municipality, the commander of the gendarmerie, the director of police, the officer of public health, and the municipal veterinary surgeon. This is a cheering contrast to the horrible stories which have come recently about the doing away with the street dogs of Constantinople, in which the genuinely Moslem fear of taking animal life and indifference toward animal suffering were only too evident. Were they not all, as to suffering, in the hands of Allah? But here horse and donkey drivers have actually been fined and their animals sent to hospital, and fowls must be carried in baskets and not swung primitively by the feet. Of especial value have been the constant kindness and support of the Mayor, a genuine reformer of one of the oldest Moslem families of Jerusalem and a descendant from the Prophet. So, even though the first instigation to all this may have come from without, there can be no question that with the Young Turks a new spirit and energy have entered Moslem society and are slowly transforming it.

David Graham Phillips, the novelist, who was shot in Gramercy Park on Monday, died the following day, in his forty-fourth year. His writings include: "The Great God Success," "Her Serene Highness," "The Fortune Hunter," "Old Wives for New," "The Fashionable Adventures of Joshua Craig," and "The Hungry Heart."

From Heidelberg comes word of the death, in his sixtieth year, of Prof. Heinrich Welzhofer, historian. Important among his writings are: "Untersuchungen über die deutsche Kaiserchronik," "Algemeine Geschichte des Altertums," and "Thukidides und sein Geschichtswerk."

Sara C. Bull died in Cambridge a week ago. She wrote a life of her late husband, entitled "Ole Bull—A Memoir."

Science

The Big Game of Africa. By Richard Tjader. New York: D. Appleton & Co. $3 net.

Mr. Tjader gives to his readers a pleasing and profitable series of popular natural history talks on the finest of the animals of British East Africa. These he illustrates with stories of his own adventures in the hunting field, and with photographs made on the spot. In addition to his own observations, the author includes bits of adventure and animal lore told him by residents of the game regions, both white and black. Separate chapters are devoted to the lion, the elephant, giraffe, hippopotamus, Cape buffalo, rhinoceros, leopards and cheetahs, hartebeest and zebra, the larger antelopes, and such smaller species as monkeys and pigs, birds and reptiles. Along with this there are chapters on the missionaries, on photography, the safari, outfits and routes, firearms and natives. Finally, there is an appendix which contains a vocabulary of the Swahili language, with exercises.

Mr. Tjader was at some pains to test the vision of the rhinoceros, with the conclusion that "it is really not as bad as is generally believed." He demonstrated, by repeated trials, that the rhinoceros sees a hunter plainly at distances varying from 70 to 175 yards. He believes the animal to be the most dangerous of African game, as one never knows exactly what it will do. The gnu, according to the writer,

> is as inquisitive as he is curious-looking. In places where he has not been much hunted, whole herds will gallop up to within two or three hundred yards, to view the hunter and his party. . . . Their bounds and leaps and "sham fights" are most amusing to observe. Sometimes the bulls will go down on their knees, fight, and lock horns for awhile, and then dash away again with the rest of the herd, switching their tails and kicking high up in the air. All of a sudden the whole company swings around like a well-drilled cavalry troop, and again faces the hunter.

The hunter, it seems, is more than a match for any of the wild animals when he uses the Maxim gun-silencer and "a very superior telescopic sight," a soundless rifle leaving the game absolutely no chance. With three shots, at a distance of 675 yards (measured), the author killed a leopard; and from first to last the animal was totally unaware of the presence of its arch-enemy, or of the nature of the wounds that it received from the first and second bullets. One rifle shot, fired without the silencer, would have been sufficient to send the animal scurrying to cover with nothing worse than a wounded foot.

It is to be wished that the author of this volume had devoted more study to some of the groups of big game treated in his volume. He recognizes the existence of but one species of African elephant, of which there are at least three or four well-defined forms. Of giraffes he says: "The only marked difference between the two species is in the shape of their heads, or, rather, the number of horns." As a matter of fact there are at least four well-defined species of giraffe, three of which—the Nubian, reticulated, and blotched—are so strikingly marked by their color patterns that the species can be recognized at a distance of two hundred yards or more. But on the whole, Mr. Tjader is to be commended for the industry that has impelled him to bring together and publish such interesting and useful information. A good index adds much to the value of the book.

The Putnams promise for February "The History of New Testament Criticism," by F. C. Conybeare, and "The History of Anthropology," by A. C. Haddon.

The degree of doctor of science, *honoris causa*, is to be conferred upon Professor Hale, director of the Solar Observatory of the Carnegie Institution, Mount Wilson, California.

The new movement for the encouragement of gymnastic exercises, more particularly in urban public schools, along lines of small resistance, finds pleasant expression in the little book of Dr. Luther H. Gulick on "The Healthful Art of Dancing" (Doubleday, Page & Co.). This is an effort to give some idea of what has been already accomplished and how much more may yet be done, with incidental outlooks into the physiology and psychology of the subject, making, however, fortunately no very great demands on the mind of the casual reader. There are numerous illustrations, exceedingly well reproduced, which show how the practical problems of this kind of instruction may be solved, and also giving an idea of the good results attainable. To some it may seem that there is a marked touch of effeminacy in all this work which rather weakens the appeal, but the more thoughtful reader will find abundant reason for the conviction that this line of training, if it be shorn of frills and kept within bounds, has possibilities of helpfulness that ought not to be neglected. Not the least useful part of the book is the appendix with a list of suitable dances and many books about them.

A third volume has appeared of Paul Herrmann's "Island in Vergangenheit und Gegenwart" (Leipzig: W. Engelmann), the first two volumes of which have been mentioned before in the *Nation* (December 26, 1907, pp. 537-8). It gives an account of the author's second trip to Iceland in the year 1908, this time first round the coast by a steamer and afterwards through the western districts and the inhabited interior of the country. The volume has all the good qualities of its predecessors, and can be recommended to any one seeking information about the island or planning to visit it. It is well illustrated and is provided with indexes, which make it useful as a book of reference.

"Primitive Psycho-Therapy and Quackery," by Dr. R. M. Lawrence (Houghton Mifflin Company), is an entertaining compilation which smacks of scissors and the good old commonplace book of an earlier day. It treats of amulets and charms, of temples and relics, of the royal touch and medicinal music, and of many other things that have been found therapeutically valuable for the removal of the ills that flesh is heir to or has otherwise acquired. The main thesis of the book is that the efficacy of such things is to be sought in the region of suggestion and the subconscious. Dr. Lawrence tells his story well, and reinforces it with frequent quotations and numerous references. Few of these indicate any special research concerning the problems under examination, or any systematic effort to go very far back towards the original authorities, the *Transcript*, *Courier*, and even the *Herald* of Boston figuring as sources equal to the best. It was, of course, a bedevilled memorandum book that led him (p. 232) to attribute to Osler the remark that knowledge comes but wisdom lingers. Quackery, declared to be more flourishing than ever, receives a good deal of attention. Curious and not altogether convincing is the view, quoted with evident approval, that the charlatan will be hampered in the practice of psychotherapy because the subconscious mind is likely to reject his evil suggestion. An appendix contains brief sketches of ten "noted irregular practitioners" in which the line between the charlatan and the mystic is not sharply drawn. The casual reader would hardly infer that many at the present day hold views concerning Paracelsus and Van Helmont quite different from those here presented. Mesmer appears in the body of the book, but his character is not made very clear. It would be interesting to know what Dr. Lawrence would say about Hahnemann.

Sir Francis Galton, writer and explorer, died last week in London. He was born at Birmingham, England, February 16, 1822; was educated at King Edward's School, Birmingbam, the Medical School of King's College, London, and at Trinity College, London, where he graduated in 1844. Two years after his graduation, he set out for the Upper Nile, which at that time was almost unexplored. He went far beyond the temples and upper cataracts, penetrating to the Sudan. The interest which this journey awakened in England and the enthusiasm which it quickened in the young explorer induced him to undertake exploration in South Africa. In company with J. C. Anderson, he landed an expedition at Walfisch Bay in August, 1850, and was engaged in exploring Damaraland, now German Southwest Africa, until January, 1852. This expedition was fertile in discoveries. He came upon the Ovampo race, a partly civilized agricultural people, and reported for the first time upon the whole region lying between Lake Ngami and the seacoast and 18 minutes 23 seconds south latitude. He soon turned his attention to meteorology, and devised methods which served as the basis of our present weather maps. He propounded the theory of anticyclones, which underlies the present system of weather forecasting, and at various times put out inventions having to do with meteorologic reckoning. He became expert in handling statistics, and the facility which he so derived he put into practice in his subsequent anthropological studies; he invented a system of composite portraiture and various means of psychological measurement. In a paper which appeared in the Proceedings of the Royal Society on "The Law of Ancestral Inheritance," he undertook to place the study of heredity on a quantitative footing. He was a consulting editor of *Biometrika* since 1902, and continued to write almost up to the present. Latterly he gave himself somewhat to the study of eugenics. In 1905 he established a laboratory for that purpose at University College, under the authority of the University of London. His works include: "Tropical South Africa," "Art of Travel," "Meteorographica," "Hereditary Genius," "Human Faculty," "Natural Inheritance," "Finger Prints," "Finger-print Directory," and "Memoirs of My Life."

Drama

From almost every point of view, except the spectacular, the production of L. N. Parker's English version of Rostand's "Chantecler" in the Knickerbocker Theatre, on Monday evening, was a failure. It may be doubted whether, in any circumstances, it would have been possible to reproduce in translation anything like the real literary quality of this highly artificial and fantastic piece, with all its verbal eccentricities and abundance of peculiarly French allusion. But with intelligent management some justice might have been done to its more notable dramatic, poetic, and declamatory passages, and a fairly good impression afforded of its general motive and its humorous and satirical qualities. As it is, the real play can scarcely be said to be presented at all. The mechanism is exhibited without any effective suggestion of the inspiring soul. A fatal and incomprehensible mistake was made when the part of Chantecler, which is of heroical male fibre and was originally written to provide the amplest scope for the superb declamatory powers of Constant Coquelin, was given to Maude Adams, who was plainly unfitted for it by her physical and artistic limitations. Along certain lines of eccentric comedy she is an actress of remarkable charm, but in the part of Chantecler she was hopelessly out of her proper element and her failure in it was emphatic and deplorable. Such opportunities as the delivery of the ode to the sun, the ecstatic confession to the Hen Pheasant, and the scenes attending the death of the Nightingale passed for little or nothing. Nor did the general representation denote much intelligent comprehension of the spirit or symbolical significance of the work, while the dialogue of Mr. Parker was of somewhat common order. The lack of competent direction was evident on all sides. Rarely, if ever, did the performance rise above the level of spectacular pantomime, and ordinary spectators might marvel whence the play had derived its great reputation. But the stage mechanism and the scenery, understood to be copied faithfully from the French models, were all that could reasonably be desired. It was only where there was a demand for insight and initiative that the failure was absolute.

"L'Habit de Mylord" (vaudeville), by Sauvage and Leris; "Dieu Merci, le Couvert est Mis" (comedy), by Léon Gozlan; "Commes Elles sont Toutes" (comedy), by Charles Narrey, and "La Somnambule" (vaudeville), by Scribe and Delavigne, are to be added by Alston Rivers to his series of plays suitable for acting at schools or in reading classes.

An elaborate naval and military pageant will form a part of the ceremonies celebrating the coronation of King George.

On February 1 Richard Badger begins the issue of "Poet Lore Plays," forty titles of which are ready, and which include works by contemporary European dramatists, among them Maeterlinck, Synge, D'Annunzio, Hauptmann, Strindberg, Sudermann, Björnson, Gorki, and Echegaray.

Fred Terry and Julia Neilson are preparing to produce "The Popinjay," by Boyle Lawrence and Frederick Mouillot.

The London Stage Society promises for its next production a triple bill, consisting of "Pride of Life," by Ashley Dukes; "The White Raven," by George Calderon, and "The Passing of Talma," by Arnim Friedmann and Alfred Polgar, translated by H. A. Hertz. "The New Players," a dramatic society, announce a performance of Oscar Wilde's "Salome" as he wrote it, at the Aldwych Theatre, on the afternoon of February 21.

Frederick Whelen, the chairman of the London Stage Society, is to start a repertory theatre in London. When a house has been obtained and a permanent company engaged (room being left for special engagements for particular parts), he will produce plays each of which is to have a run of four weeks only. He has already several new plays, including one by John Galsworthy; and Bernard Shaw and Granville Barker have promised him the right to revive any of their already acted plays. "Major Barbara," "The Doctor's Dilemma," and "The Voysey Inheritance" are to be among the earlier fixtures. Popular prices will be charged. Mr. Whelen declares his enterprise to be commercial, not philanthropic, but professes faith in the existence of a great body of playgoers willing to support plays of superior quality.

At the St. James's Theatre, London, rehearsals have begun of A. E. W. Mason's new play, "For the Defence," which Mr. Alexander will produce next month. The first act is laid in India, but the piece bears no relation in subject to Mr. Mason's novel, "The Broken Road," and is not, in fact, a play of Indian life at all. There is only one Indian character in it, and he is a servant. Nor, though Mr. Alexander will play the part of a barrister, who is also a member of Parliament, is the play political. There are only six characters that count, and these will be played by Mr. Alexander, Ethel Irving, Alfred Bishop, Sydney Valentine, Leslie Faber, and Marie Linden.

F. R. Benson and the Shakespeare Memorial Governors have made their arrangements for this year's Shakespeare festivals at Stratford-on-Avon. As last year, there are to be two festivals, the first from April 17 to May 6, when Mr. Benson and his company, assisted by players from London, will give performances in the Memorial

Theatre, and April 23 will be celebrated, as in former years, by a floral procession to the church, the unfurling of the flags of all nations, old English sports, and other attractions. Then, from July 22 to August 19, there will be a second festival, specially adapted to teachers, students, and others who are unable to be present in the spring. Here, again, there will be daily performances in the theatre or in the open air, and the object of the governors to make this a distinctively folk festival will be carried out by means of demonstrations of folk songs and dances, classes, and lectures in folk art, morris dances, children's singing games, and so forth. There will be spinning and weaving lessons also, physical culture classes, excursions, lectures, and much other material for a four weeks' festival. Special arrangements about fares, fees, board and lodging (there is a scheme under consideration for a camp), and other details have been made. All details may be obtained from the general secretary to the Festival Association, Stratford-on-Avon.

"The Redemption of Evelyn Vaudry" is the drama selected by Liebler & Co. for the tour of Olga Nethersole, which will begin in a few days. This play is the work of Henri Bernstein, author of "The Thief," etc. The English adaptation has been made by Louis N. Parker.

There is indisputable strength both of a literary and dramatic sort in the five-act tragedy "Judith," by Martin Schütze (Holt), but it is a work of most unequal quality, in which many imaginative passages, of real poetic value, are buried amid much turgid, violent, labored, involved, and essentially melodramatic stuff. The piece has little or none of that adaptability to actual stage purposes which marked the "Hero and Leander" of the same author, the amount of dialogue being out of all proportion to the incident, although there are some powerful emotional situations for the leading characters and good opportunities for spectacle. But the most obvious criticism, perhaps, to which it is exposed is that it presents a Judith so radically different from, and in many respects so inferior to, the heroine of the original legend. The Apocryphal Judith, with her serene faith in the divinity of her mission, her lofty patriotism, and her unwavering resolution, is a far more tragic, inspiring, and consistent figure than this distracted woman, in whom the love of the patriot and the zeal of the inspired prophetess are eclipsed by an ungovernable passion for the oppressor whom she has set out to destroy. Mr. Schütze's Judith falls in love with Holofernes at first sight, as he with her—she becomes his affianced bride—and thereafter she is the prey of emotions, somewhat luridly expressed, in which patriotic fervor, distrust of the Almighty, and her sense of loyalty to her lover, alternately predominate. In the end, indeed, realizing the imminent peril of her countrymen, she, in a kind of delirium, accomplishes the murder, but in circumstances which savor as strongly of gross treachery as of fanatical self-devotion. And the impression of conscious guilt upon her part is confirmed, not only by her arraignment of Heaven, after the deed—on account of the savage duty imposed upon her—but by her expiatory suicide upon the body of the dead Holofernes. This is not the story, of course, of Judith of Bethulia, nor an improvement upon it. The gain of a few scenes of passion—however attractive they might prove theatrically—does not compensate for the loss of dignity, consistency, and prophetic significance in the central character—tragedy is converted into romantic melodrama. The evidences of ability in the work are no more conspicuous than the lack of artistic restraint.

A woman who has slowly worked her way up into the foremost rank of German writers is Frau Elsa Bernstein, who writes under the pseudonym Ernst Rosmer. Her first dramatic products were modern problem plays. Close upon the appearance of "Die versunkene Glocke" she published the *Märchendrama* "Königskinder," which was played in English some years ago by Martin Harvey, and the opera made of it by Humperdinck has been given at the Metropolitan Opera House. But the ambitious author does not shrink from the hazard of writing plays on familiar classical subjects, and to her "Epaminondas" and "Nausikaa" she has lately added "Achill" (Berlin: S. Fischer). The action of this three-act tragedy in blank verse is firmly knit and is full of genuine dramatic vitality. The play opens at a critical moment in the siege of Troy, and the first act closes with the promise of Thetis to invoke the aid of Zeus in behalf of the Greeks. The second act reaches a tremendous climax in Achilles's outburst of grief on beholding the body of Patroclus, and the final scene of the drama with Thetis waiting for her son to step forth from his bridal chamber, and receive the deadly arrow of Phœbus, is very impressive. The language is throughout dignified and euphonious.

There are signs that the vogue of Sudermann in Germany is waning, while in England and America it has, fortunately, never been firmly established. It may be doubted whether the translation, by Archibald Alexander, of the three one-act plays collectively called "Morituri" (Scribner) will tend to enhance Sudermann's fame in this country. Mr. Alexander's version, though faithful and intelligent, contains a good many halting lines, such as,

> Since thou hadst yet a long time to serve as one of the humblest, wert thou already a ruler.

To dull the point of Sudermann's language is to rob him of his greatest strength. But the three dramas are far from enjoyable in the original, though none equals in grossness "Margot," one of the four one-act plays previously published, under the general title of "Roses," in this series of Sudermann's productions. Inventive skill and dramatic power there are in all his work, but whether his characters masquerade in the pseudo-Gothic simplicity of "Teja," or the affected rococo garb of "The Eternal Masculine," or stand forth in the degenerate militarism of "Fritzchen," it is ever the strident voice of modern naturalism that is heard. "We have for some years," said Sainte-Beuve, "been very sensible of what is called force, power. Often, when I have hazarded some critical remark on a talent of the day, I have been met with the reply: 'What matters it? This talented writer has power.' But what kind of power? Let Joubert answer for me: 'Force is not energy. Some authors have more muscle than talent.'" Germany is beginning to recognize that while her modern prophets of naturalism have abundant muscular force, the energy of her Schillers and Goethes has, on the whole, produced more lasting results.

Music

The Romance of a Great Singer: A Memoir of Mario. By Mrs. Godfrey Pearse and Frank Hird. London: Smith, Elder & Co.

Tenors used to be proverbial for their vanity and their stupidity in general (*bête comme un ténor*), but there were exceptions, and conspicuous among these was Count Don Giovanni de Candia, who, under the stage name of Mario, held the world spellbound by his voice for thirty years. In commemoration of the centenary of his birth (October 18, 1810), one of his daughters has written this record of his career, which bears out her claim that "few lives have been more romantic than Mario's," and shows also how he anticipated the modern ideal of a tenor which Wagner had in his mind and which Jean de Reszke fully embodied. From his earliest years his greatest interest was literature. Books in various languages filled his shelves, and the general aspect of his apartments was such that a visitor wrote it would be difficult to say whether the owner was a student, sculptor, painter, musician, woodcarver, or archæologist. He ransacked the British Museum and other libraries for materials for a history of music which for a long time he intended to write.

His archæological studies were carried on in the same places, and they resulted in the advancement of historic accuracy not only in the opera house, but in the theatre. In his day scant attention was paid to this matter, but he insisted that every detail of a dress should be correct; he made collections of pictures of costumes, and it was from his sketches and directions that his own costumes were made. Mrs. Pearse asserts that it was Mario's costumes that showed Henry Irving what could be done if the same spirit were applied to a whole play, "and thus Mario may be said to have been the indirect inspirer of those wonderful stage pictures with which Sir Henry Irving made the Lyceum Theatre famous." However this may be, it is certain that Mario anticipated modern operatic methods by the attention he paid to acting, and in this he was aided by his wife, Grisi, who was, after Pasta's death, the leading operatic soprano. Her impersonation of Leonora in "Il Trovatore," for instance, differed from that of other vocalists in that they, in the prison scene, would simply walk down to the footlights and sing without any attempt to realize the dramatic situation, whereas Grisi would wander round the stage despairingly, as though seeking to dis-

cover from which part of the prison walls came the voice of her lover. "She clung to the tower and sang the thrilling passages in answer to Manrico with gestures and expression which kept the audience spellbound."

It was Fannie Elsler who, by caricaturing the way Mario walked, first showed him his own defects as an actor; and hard study, together with his wife's example, produced results which made the London *Times* declare that to see and hear Mario in the "Huguenots" was "to hear singing like Rubini's and to see acting like Edmund Kean's." He also paid more attention than singers had done before him to the text, which he always studied before he did the music; and if a translated libretto did not suit his fastidious taste, he made one for himself. Before ordering his carriage for the opera, he usually tried his voice by singing the runs in "ail' idea di quel metallo" from Rossini's "Barber of Seville" in different keys and working up to the highest note. Otherwise he indulged in practices which most singers would have considered fatal to their chances of success. He smoked incessantly, and one evening would have appeared on the stage in the second act of Faust with a cigar in his mouth had not a scene-shifter noticed his absent-mindedness and snatched it from his mouth before the audience saw him. He insisted that smoking prevented him from catching cold or sore throat. In Spain, his devotion to tobacco met with universal sympatby; in Barcelona, the audience begged him to smoke on the stage while he was singing; and on the night of his benefit the stage was covered by his admirers with cigars of the most expensive brands. Another bit of Spanish local color in the admiration he aroused was that the day after his début at Madrid the celebrated toreador Cuchares, at the beginning of a bull fight, called out: "I shall kill the first bull in honor of the great tenor Mario!" whereat a tumult of cheers and applause came from the audience.

Probably the strangest fact in Mario's romantic career is that although he was born in Sardinia, and all but seven of the fifty or more operas in his repertory were Italian, and although his triumphs extended from Barcelona to St. Petersburg, he never sang in public in Italy. This was owing to a promise he had made his mother before he adopted the stage for a profession. At that time stage folk were not received in society on the European continent, and the news that he intended to become an opera singer so perturbed King Charles Albert that he sent a member of the Sardinian Embassy in Paris to urge him to abandon the plan. Fortunately great pressure was brought to bear upon him on the other side, conspicuous among those who urged him on being Meyerbeer, who not only gave him lessons, but wrote special airs for him to be inserted in his operas. His father never knew he had become an opera singer, but died unaware that the young tenor whose name was on all tongues was his own son.

While appealing chiefly to music lovers, this memoir also contains much to attract readers who are interested in the political life of Italy in the days of Garibaldi and Mazzini. There are amusing anecdotes of personal experiences in various lands, including one in Russia, where Mario dared to defy the Czar, who ordered him to shave his moustache and beard for appearance in a short play or leave the country. The tenor left, and thus got the reputation of being the only man who had ever dared to defy this emperor—Nicholas I, who subsequently committed suicide, after the reverses in the Crimean war. It is from anecdotes told by Mario himself and from old diaries that his daughter has mainly gathered the story of his life. His letters, many of them from eminent men and women, and other documents were destroyed by himself deliberately, lest anything in them give offence to any one.

New York, after all, is not deprived of its second opera this season. Oscar Hammerstein has gone to London, building himself a new opera house with the $750,000 the Metropolitan directors paid him for closing his Manhattan to grand opera. But his leading artists have been in this country all winter, winning fame and financial success, first in Chicago, and now in Philadelphia. Being affiliated with the Metropolitan, they are invited once a week to show what they can do in the Broadway house. A series of ten performances was opened on Tuesday with one of the most brilliant performances on record of Massenet's "Thaïs." It was as if Mr. Dippel had simply taken Mr. Hammerstein's company and transferred it to the other house. The indefatigable Cleofonte Campanini was at the helm as of yore, and the leading parts were impersonated by old favorites—Mary Garden, Maurice Renaud, Charles Dalmores, Clotilde Bressler-Gianoli, Gustave Huberdeau. The chorus and orchestra were new, and both were excellent. The audience was one of the season's largest and most enthusiastic, showing that there is for French opera as great a welcome here as for Italian and German, provided it is equally well done. Paris itself has never heard "Thaïs" with a cast equalling Dippel's. Next Tuesday, Charpentier's "Louise" will be sung with Hammerstein's original cast, excepting the late Charles Gilbert, whose impersonation of the Father will probably never be equalled.

According to reports, the musical critics of Dresden are to pass by unnoticed Strauss's "Rosenkavalier," which is produced this evening, because they were not given the libretto at the general rehearsal.

The president this year of the Congress of the International Society of Musicians, which will meet in London from May 29 to June 3, is A. J. Balfour.

Bach's "Passion according to St. Matthew" is to be given in Westminster Abbey by the Bach Choir on the evening of February 17.

Some attention has of late been paid to Icelandic music by writers on the history of music; of particular interest to them has been the peculiar Icelandic two-voiced songs (*tvisöngur*). The study of the subject was, however, impeded by the fact that no collection of Icelandic popular songs was available. At last such a work has been published at the expense of the Carlsberg Fund in Copenhagen. The author, Rev. Bjarni Thorsteinsson, has been collecting the material for some twenty-five years both from early manuscripts and from people in Iceland. The book is rather bulky, containing nearly a thousand pages, and if a more critical method had been applied it might have been considerably shorter and even more uscful. Nevertheless, it is an important work on account of the rich material brought together.

Art

THE WINTER EXHIBITION AT THE ROYAL ACADEMY.

LONDON, January 9.

Of late the Royal Academy has been glad to seize upon any reasonable excuse to escape from its winter burden of old masters. This year the excuse is the recent death of four Academicians and one Associate, to a representative exhibition of whose work the winter exhibition is devoted. The Academicians are W. P. Frith, who now seems to belong to so remote a past that, though he died only the other day, he has become something of an old master himself, if a very little one; Sir W. Q. Orchardson, for whose pictures one has long had the habit, in current Academy exhibitions, of turning for relief from the prevailing vulgarity and commonplace; John M. Swan, the fine draughtsman and sympathetic student of animals; and Robert W. Macbeth, who, of the four, seems the most curiously old-fashioned, as the painter ever must who in his time relies upon methods and manners that are but a passing fashion. The Associate is David Farquharson, a painter of large landscapes of no particular distinction or marked personality.

The exhibition is the more interesting for opening while the Post-Impressionists are still at the Grafton, and still attracting crowds to worship or to laugh. When I wrote of their show I could not, nor could anybody, have anticipated the excitement they would make in a town seldom stirred to emotion by any display of art, good or bad. But an animated correspondence in the *Morning Post*, followed by animated correspondences in other papers and by lectures and by caricature and by I hardly know what, has dragged Post-

Impressionism into notoriety in London just when it is beginning to be forgotten in Paris. Whatever one may think of it as a movement, or a phase, or a pose, whether or no all the men now grouped together have any right to the name of Post-Impressionists, one thing is certain: they are independent in the sense of not being academic, and their work is supposed to be the result of the struggle to express an individuality, though a genuine individuality is always strong enough to express itself without a struggle. The work at the Academy, on the other hand, comes from men who adhered to academic standards at least to a sufficient degree to win academic honors, though the adherence may not have killed whatever individuality they possessed. And the comparison is not the less suggestive because as many as two of the artists represented at Burlington House are among the most distinguished members a not very distinguished Academy has been able to claim for some time past.

The critic is apt to sneer nowadays at the name of Frith. It is somewhat Frith's own fault. He himself wrote that it had been with him a toss-up whether he should become an auctioneer or an artist, and the gibe this brought from Whistler has stuck to him to this day—Whistler's witticisms had a way of sticking. But Frith's work, though by no means great, has its qualities. He had the power of observation, and to a number of his pictures there is now attached the same historic value that gives an honored place in national galleries to the pictures of many of the lesser Dutch and Flemish masters. The most famous of all, The Derby Day, which already belongs to the nation and hangs in the Tate Gallery, is not included in the collection. But two others are which have almost the same fame and are almost as characteristic: Ramsgate Sands, now catalogued as Life at the Seaside, and The Railway Station, both dating back to the fifties and both packed with such careful and elaborate detail that, judged by them, Frith seems more thoroughly Pre-Raphaelite in method than any one of the Brotherhood. As a record of the life of the period, of the scenes, people, customs, fashions, they are quite amazing, and they reveal a technical knowledge in which few of the present generation can equal the man they affect to despise. The paint is as fresh as if it were laid upon the canvas yesterday. But the work has the inevitable defect of its accuracy and elaboration. The two paintings are records, but not pictures, and their excellence is obtained at the expense of design, pattern, color, concentration; in a word, of the finer qualities of art. In The Railway Station, Frith evidently made one determined effort to concentrate the interest, to arrange his minute memoranda into a design. The eye is attracted at once to the group of bride and bridesmaids who, in their bridal finery, make a space of light a little to the right of the centre of the composition. But once the eye strays from this group, it loses itself in a chaos of figures and colors and lines, until all one can do is to begin at left or right of the canvas and thence follow group after group, anecdote after anecdote—children being sent off to school, a man being arrested, an old lady clinging to her dog, and so on, and so on—just as if one were reading it all in a book. Art is sacrificed to the record, and what this means is all too plain when Frith, knowing nothing at first hand of the subject to be recorded, and therefore no longer able to rely upon his own observation, painted the sort of historic anecdote in vogue in the early Victorian period: the subject against which the younger men of the day with anything in them were so quick to revolt. His Hogarth brought before the Governor of Calais as a Spy, King Charles the Second's Last Sunday, and Pope Makes Love to Lady Mary Wortley Montagu are here as reminders of Frith's banality at his worst, and they would justify, if nothing else could, the reaction against early Victorian ideals. But though the collection does not transform Frith into a great master, though it leaves no doubt as to his limitations, most certainly it convinces one that Frith, putting down conscientiously in honest prose on canvas what he knew and saw and understood to the best of his technical abilities, which were by no means small, is of infinitely more value to the world than he could have been laboring self-consciously and defiantly to evolve in his work an individuality that did not belong to him. I venture to predict that The Derby Day and The Railway Station will survive when more than one tortured, distorted canvas of the painter who would be an independent at any cost will long have been forgotten.

With Orchardson it is another matter. He was distinctly and in every way a finer artist than Frith, though I am less sure that he comes as triumphantly out of such a one-man show of his work as is virtually now given at the Academy. He shares one small room with Frith, he fills by himself all the large third gallery and almost all of the fourth, and a series of his drawing hang in the water-color room. Most periods of his career are represented, and to many people it must come as a surprise, as I confess it did to me, to find how scrupulously he essayed to carry on the Victorian tradition at the start. One or two of his early canvases in the room with the Friths might pass for the older painter's work. But he grew out of this stage, as Frith never did, and, as I have known him now for years at the Academy, he grappled with problems of atmosphere and light and color with which Frith and the true Victorians were never concerned at all. And he brought to his study a refinement, a subtlety, that is anything but characteristic of British art throughout the larger part of the nineteenth century. It is no wonder that each picture he exhibited at the Academy stood out with such distinction—made such a hole on the walls. But to collect so many of his pictures together seems, to me anyway, to emphasize the fact that, however hard he grappled, he found but the one solution to his problem. There is a sameness, a monotony, in his work which is more apparent in a collection of his paintings than could be felt when only two or three are scattered among those of many other men. There are critics who think that time has dealt kindly with the yellowish tone he gave to everything he painted, whether portraits or domestic and historic dramas, but enough of it still is left to explain how much more he relied upon convention—convention it was, though of his own evolving—for his effects of atmosphere and light and color, than upon nature. Again, I cannot help feeling at the Academy more strongly than ever before how much more sympathetic and penetrating was his interest in still life than in human beings. His masterpiece, the beautiful Master Baby, unfortunately has not been lent to the present exhibition to prove that this was not always the case, but the scarcely less beautiful Sir Walter Gilbey has, and it is an admirable example of the character, the charm of color, the dignity, he could give to a portrait. But the feebleness almost, to which his mannerisms could lead him, is only too plainly apparent in the large and empty Four Generations, Windsor Castle, 1899, in which the pictures on the wall, the busts on the mantelpiece, the flowers in the little prince's hands, are most delicately and charmingly rendered, with appreciation of their forms and character and envelope of atmosphere, while the little prince, his father the present King, Edward VII, and Victoria are but puppets awkwardly grouped who fail to keep any pictorial place whatever in a beautifully painted interior. Royalty, it is true, seems to paralyze the modern painter, but other pictures in the collection show that sometimes lesser figures than the royal family, if they did not altogether paralyze Orchardson, presented serious difficulties to him. His best-known anecdotes—for anecdotes they were—Le Mariage de Convenance and The Rift within the Lute, have not been procured for the exhibition, probably because they are owned abroad, but there are many others to explain my meaning. Take two of the largest and most ambitious, first exhibited at fairly recent Academies, so recent, in fact, that a description would now be

unnecessary. All I want to point out is that in The Young Duke, with its many figures, and The Borgia, with its grim tragedy for subject, the figures and the tragedy are of the least importance artistically, and that the beauty is in the exquisite painting of the paint and glass and flowers, of the fine linen and gorgeous costumes, in the truth of atmosphere, in the success with which all the detail is kept within this atmosphere, in the harmony created out of many and sometimes discordant elements. Orchardson could not altogether outgrow the Victorian influence. His figures had to tell a story, the meaning had to strike the public at a glance by exaggerated gesture, dramatic violence. They could not form an essential part of the picture, like the satin-robed, tranquil ladies of Terburg or the homely, peaceful housewives of de Hooghe, simply because the composition, the color scheme, required them there to fill a certain space. But all the same, Orchardson did find something to say, and managed to say it in his own language, without being driven first to protest against academic restrictions.

The large series of drawings by Swan would be a more unexpected revelation of his powers had not a smaller, but equally fine, series been shown last spring in the International Exhibition at the Grafton Gallery. In the Academy, as in the International, there are a few beautiful nudes, but the drawings are mainly studies of animals—memoranda of movement, notes of a pose—made for his own use, as the old masters made their memoranda and notes, and not as the new masters make theirs for immediate exhibition and applause. They betray no self-consciousness, no struggle after a startling expression of individuality, no endeavor to shock or surprise or impress anybody. But they are full of character, and full of beauty, in line and form and suggestion of color. The greater number are done in chalk on tinted paper, upon which the daughtsman has depended largely for his effects. The drawings show Swan to have been a far more vigorous artist than he often seems in his paintings. It is as if, when he was painting his pictures, he could not quite forget the Academy and the Academic point of view. There is less freedom, character is sometimes sacrificed to the sort of subject the Academy is supposed to demand, color is sweetened. When the picture is frankly nothing more than a large and elaborate study of his tigers or leopards, his bears or lions, it retains more of the vigor, the directness, and the expressive line of the drawings; there are smaller canvases like the little Piping Fisher Boy—a little brown nude stretched upon a rock, bending over the blue water—that have real charm of color and design and feeling; while many who thought they knew Swan's work well must be astounded at the strength and dignity of his portrait of Matthew Maris—just the head and shoulders—recalling as it does in treatment some of the old Dutch portraits. But when all is said, there is no question that Swan's reputation would be less were he remembered only by his paintings. For him perhaps it would have been a gain had he sought in them for a more individual manner of expression. But he may have felt less the necessity for it since he could allow his individuality free play in other mediums. Not only are his drawings here, but a number of his bronzes: pumas, polar bears, running or drinking leopards, lions, in which the expressive, nervous, personal line of the drawings is retained and the movement admirably suggested, the pose full of dignity. As a painter he had not the refinement of Orchardson, but as an artist he had more force, more vitality, a keener sympathy with nature.

There is not much to say of Macbeth and still less of Farquharson. Macbeth was a follower of Fred Walker and Pinwell, without the charm or originality of either. Fred Walker's work often suffered from limitations which he might possibly have overcome had he lived, but, as it was, the characteristics least desirable in him were borrowed by his imitators, and with them became tiresome affectations. He had a trick of thrusting upon his figures a pose they could not have taken naturally, which even in his own canvases often tends to melodrama, and this trick was exaggerated by Macbeth, whose figures, whether gathering potatoes or crossing the ferry at the close of day, whether fishing in the mill stream or perched on top of a hay wagon, seem no better than the posing laborers of the romantic stage. Peasants as Millet painted them, laborers as Meunier drew and modelled them, will live for all time because they are real, true to nature and to life. But when there is no life, no truth, peasants and laborers on canvas must pass with the other fashions of their day from which they sprang. Some of Macbeth's etchings are also included, but none of his copies of pictures (except of his own) which were his best.

A show of this kind naturally will not create any particular excitement. It is no more than a re-echo of the Academies of many years, with nothing in it to overthrow old idols or set up new ones, nothing new to reveal to the most unobservant public, unless perhaps it is the distinction of Swan in his drawings and the unsuspected weakness of monotony in Orchardson when his life's work can thus be reviewed as a whole. It is not within the Academic fold that protests are uttered and revolutions inaugurated. But it is interesting to be reminded at this juncture, when London critics have gone mad over Post-Impressionism and are busy talking nonsense about it, that even within the fold artists endowed with their own portion of individuality manage to find some outlet for it. Revolt is healthy, but it cannot create genius where genius does not exist, nor does a fine struggle always produce a fine result. The pity is, that at the Academy, with its narrow ideals, bad taste, and hopelessly conservative policy, men of talent like Swan and Orchardson are in a sad minority. But then, neither are all the men so inaptly grouped together as Post-Impressionists at the Grafton Gallery rivals of Manet and Van Gogh. N. N.

Finance

OPENING THE FINANCIAL YEAR.

The month of December ended with a visible display of gloom and discouragement on financial markets. The old year had brought, on the whole, little but disappointment. Prices on the Stock Exchange had, it is true, moved up to a substantially higher level than that reached in the midsummer decline, and even commodity prices, at the end of 1910, averaged higher than at the end of November or at the end of July. But the effort to bring about another "boom" had failed, on the stock market, on the grain market, and on the cotton market. The "election rise" had turned out wholly deceptive. All the uncertainties which were before us in December were still before us when January had begun.

In the opening weeks of January, the usual heavy movement of currency from interior markets to the New York banks occurred; the surplus reserve of the Associated Banks rose from $6,100,000 on December 31 to $39,200,000 on January 21; a $32,000,000 excess of loans over deposits, at the end of December, was transformed in three weeks to a $20,000,000 excess of deposits over loans; rates for demand loans fell from 7 per cent. to 2½, and time money rates from 4 to 3½. There was also a very decided quickening of interest in the market for investment bonds. All this, however, had been anticipated and was taken for granted, even in the forecasts of November and December. But foreign money markets continued firm. The Bank of England failed to make the usual January reduction in its discount rate. When, last Tuesday, New York City's new $60,000,000 loan was offered, that 4¼ per cent. issue was subscribed at an average price slightly below 101, a price which was less by ⅜ of 1 per cent. than a similar loan commanded in the sale of last March, and ⅝ below the best price subsequently bid in the market of 1910. Meantime, such important industries as steel and copper continued dull and lifeless, and railway earnings reported in January showed a large decrease from a year ago.

Nevertheless, the four past weeks have witnessed an unquestionable revival of financial cheerfulness. Professional speculators take little pleasure in seeing values go up to-day and down again to-morrow, even if the verdict at the end is that the market is "firm." But to the outside world, this firmness is the interesting fact, especially as it comes on top of a four or five point rise, since New Year's Day, in the really active stocks. It gives the community at large a chance to breathe freely; and if the thrills of enthusiasm or dismay which so rapidly followed one another in 1909 and 1910 are missing, there is at any rate a vague sense that for the present, the financial markets have reached equilibrium.

When, moreover, one considers this complacent attitude of the Stock Exchange in the light of the dismal forebodings of the last week of December, there is a sense of having emerged into a new atmosphere. The mere fact that no one talks either of a coming boom or of a coming crash is a novelty, and the contrast with a year ago is impressive when one recalls the hysterics which then prevailed, and in which large financial interests participated, regarding the tragic influence of the Supreme Court deliberations over the Anti-Trust appeal cases. Decision was only possibly impending then; now it is certainly at hand; and yet the very people who ran excitedly up and down Wall Street in January, 1910, lamenting the fate of American business when the court should have decided, are to-day indulging merely in idle curiosity as to how the justices will divide. If any one wishes to know why well-balanced people find it difficult to take Wall Street seriously in its moods of excitement, that is the explanation.

By way of making the inverted comparison complete, a provocation for financial pessimism was provided this month which did not exist last January—a group of small banking institutions came to grief in New York city. The newspapers drew up their panic headlines; described the midnight conferences in the style of 1907; wondered whether we should not have another panic, and hailed the earthly providence which set everything right at the moment when hope seemed to have vanished. But the emotions were not at all convincing. Nobody was frightened. Even the prophets who hinted darkly at coming panic, when the markets were falling last July, went about their business this month unconcernedly. The clearing-away of the rubbish of rotten banking was a trifling incident, and in itself a desirable thing. The truth of the matter was, that the whole community had come to understand what was the trouble of a year ago, and understanding it, knew that the mischief, so far as the Stock Exchange was concerned, had been corrected by the great liquidation of 1910.

Usually, the stock market goes through a process of this sort some time in advance of the similar process in trade and industry at large. In the olden time, it was apt to be expected that when the Stock Exchange was through with its convulsion, general industry would enter on an even more violent collapse. Things do not happen in quite that way nowadays, because industrial affairs are not conducted in the sensational style of the Wall Street market. But of crude ideas and extravagant conceptions, industry has had its share. The wheat crops which would never feed the American community again; the cotton which spinners would have to buy at 20 cents, or at any price dictated by the New Orleans political economists; the copper which needed only to be piled up in sight of Europe to force the foreign consumer to buy it at the producer's price, and in general, all the notion that supply and demand could be just as well matched by holding back commodities on margined bank loans as by finding consumers for them—these were the mental vagaries which in the walks of trade paralleled the numerous follies of Wall Street in its own domain. In due course, when a similar lesson has been administered, industry will settle down to the calm and rational attitude at present occupied by finance.

Perhaps it would not be going too far to say that the fortunes of banking reform legislation, on the basis of Senator Aldrich's plan or of anything like it, will depend very largely on the manner in which our powerful capitalists conduct themselves and use their power over credit institutions, during the next two years. There is no reason for wonder that the scheme for a central bank was virtually refused a hearing by the public at large, in years when that public had before its eyes the spectacle of great financial interests so far dictating the policy of our greatest fiduciary institutions that the trust fund was poured, in an unceasing stream, into Wall Street promotion and speculation. That power was not even exercised in every case through ownership; control of men was as ready a means of accomplishing such ends as control of capital stock.

There was undoubtedly a valid argument for a central bank, based on those very circumstances—the argument that only such a dominant institution, free from selfish and speculative entanglements, could stop such performances with the funds of other institutions, or at any rate put a stick in the wheel of the machinery. The central bank performs precisely this useful function in Germany and England. But the general public, which had seen great insurance companies dragged into operations of the market, and even the Federal Treasury coerced into helping ambitious financiers out of a scrape caused by their own excesses, could hardly be expected to entertain absolute confidence that the management of a central bank would shut the door upon them.

One reason why this week's outline of a central bank plan has been received with a larger measure of interest and approval is that people are gradually beginning to hope that the era of speculative high finance, on the scale of 1901 and 1906, is near its end. The impression may be premature, but it cannot be denied that there are many signs of an altered spirit. The very personalities which are now coming into sight in control of large affairs are evidence of such a change, and it is no inconceivable result that before many years our financial markets will be frankly declaring, contrary to the usual rule, that the younger generation embodies the conservative influences in finance, as distinguished from the older. It is perhaps too early yet to be confident of fundamental change and reform in this regard; but it is not too early to point out the weighty influence which a recognized change of the kind would have on the public attitude towards banking problems.

Two Notable German Texts

Howard's Lessing's Laokoon

Edited by WILLIAM GUILD HOWARD, Assistant Professor of German in Harvard University. clxviii+470 pp. 12mo. $1.50.

Kuno Francke, Harvard University: Professor Howard has, in my opinion, put the study of Lessing's *Laokoon* in our universities for the first time upon a sound and comprehensive basis.

W. H. Carruth, University of Kansas: It is a much needed and thorough piece of work. I congratulate Professor Howard on his selections and on all his critical and supplementary apparatus. It is one of the best edited text books put out by an American scholar.

O. E. Lessing, University of Illinois: The commentary I consider one of the greatest achievements of German scholarship in this country in recent years. It is a truly admirable piece of work upon which both the publishers and the author may be heartily congratulated.

Lewisohn's German Style

By LUDWIG LEWISOHN, Instructor in the University of Wisconsin. xxix+215 pp. 12mo. 75 cents. Annotated selections from Luther, Lessing, Goethe, Heine, and Nietzsche.

H. C. G. Brandt, Hamilton College: It is an original book in every sense of the word. And what a fine Reader it will make! The author's English is excellent. He knows English literature too. The book is a guide to the literary study of the masters of German prose—Luther, Lessing, Goethe, Heine, Nietzsche. The 200 pages of extracts contain their very quintessence. Do not be shocked by the name of Nietzsche. It is not his ethics and philosophy that is urged upon you, but his style brought up on Aristotle, the Bible and Luther. The general introduction of sixteen pages contains an historical outline and a definition of style. Each author has a separate, short and analytical introduction with keen characterization of his style.

Professor Marie F. Kapp, Smith College: While there are a few things that I should have liked simpler—as it is a text book for undergraduate students primarily, and somewhat fuller in regard to the author's conception of aesthetics influencing their style—less of Luther and Nietzsche, a different one from Heine, for instance from his *Rabbi v. Bacharach*, from the wonderful first part of it, and a selection added from our German historians, especially from Treitschke; yet, just as it is, this new contribution to our German work is a most grateful one—an excellent beginning along a new line in text books. Unwise to criticise at all, since that is easy, while to do this work—and so well—is rare work.

THE FIRST GREAT CANADIAN
The Story of Pierre Le Moyne, Sieur d'Iberville.
By CHARLES B. REED.
The first complete study of the most conspicuous French Canadian of his day. Illustrated from rare prints.
Cr. 8vo. $2.00 net.

NOW READY NOW READY

THE AMERICAN YEAR BOOK

FOR 1910

Prepared under the care of a supervisory Board consisting of accredited representatives or members of THIRTY-FIVE GREAT NATIONAL LEARNED SOCIETIES.

DR. ALBERT BUSHNELL HART, Harvard University, Chairman.
DR. S. N. D. NORTH, Formerly Director of U. S. Census, Managing Editor

The American Year Book records the events and progress during the year in every department of human activity, with especial stress on American affairs. It has been the aim of the editors to reach the highest point of authority and accuracy. All the departments have been handled by experts The work is arranged with the idea of serving the busy man who wishes his information to be compact and absolutely reliable.

Its 882 closely printed pages provide exact information on scientific, historical, literary, sociological, economic, and kindred subjects; concise national and international statistics; a chronology of notable events; a select bibliography; and a variety of tabular matter. A full subject index thoroughly analyzes the contents. The volume is easy to handle—only five by eight inches, and about two inches thick. The price is $3.50 net.

OTHER IMPORTANT NEW APPLETON BOOKS

Railway Traffic and Rates

By EMORY R. JOHNSON, Professor of Transportation and Commerce, Author of "American Railway Transportation," etc., and GROVER G. HUEBNER, Instructor in Transportation and Commerce, University of Pennsylvania. *8vo, cloth, 2 volumes, $5.00 net.*

These volumes are written primarily to meet the demand of railway officials for authentic information regarding traffic services and rate systems. It is the result of years of study. It is written in a concise and clear style, and is a manual that will be of daily assistance to railway officials, and will be useful to government officers, university students, and all writers upon transportation questions.

Egypt: Ancient Sites and Modern Scenes

By G. MASPERO. *Profusely illustrated. 8vo, cloth, gilt top, $4.00 special net.*

In this volume Professor Maspero gives us a collection of charming word pictures of Egypt, in which history and archæology are made to blend with scenes of to-day, and the past is linked to the present. No living Egyptologist has such a command of facts as Professor Maspero, and no other writer on the land of the Pharaohs has such brilliant literary gifts and so picturesque a style.

Up the Orinoco and Down the Magdalena

By H. J. MOZANS. *18 illustrations. 8vo, blue cloth, gilt top, rough cut edges, $3.00 net.*

The record of an experienced traveler in the little frequented parts of Colombia and Venezuela. The author, for the most part alone, followed the unbeaten paths, took a long time for his journey, and had ample opportunity to study the people, the country, the birds, and animals and flowers in an intimate way. He had many hazardous experiences.

The Reminiscences of Rosa Bonheur

Edited by THEODORE STANTON. *Illustrated with reproductions of paintings and many sketches. Cloth, gilt top, rough cut edges. $3.00 net.*

"There is so much in this book that even in a column I cannot begin to touch upon all its good things. The letters of Rosa Bonheur in themselves would make a most entertaining book. Mr. Stanton's translations are so well done that they do not read like translations. The volume is illustrated with twenty-four full-page pictures and fifteen line drawings. It is one of the most meaty and readable biographical works of the year—a fascinating personality presented by a competent and conscientious hand."—Edwin L. Shuman, in *The Chicago Record-Herald.*

The Place of History in Education

By J. W. ALLEN, Professor of History, University of London. *12mo, cloth, $1.50 net.*

The author shows that the study of history possesses other values than the mere cataloguing of past events; and that it is worthy of a prominent place in any educational system.

The UNITARIAN ADVANCE

A MONTHLY MAGAZINE OF PROGRESS IN RELIGION

GEORGE H. BADGER, *Editor*

YOU have always taken it for granted, no doubt, that a religious magazine must necessarily be heavy, dull and uninteresting—though good!

Some religious magazines are just that. We aim to make THE UNITARIAN ADVANCE different.

We believe that Religion can be made the most interesting thing in the world,—if you have the right sort of religion: eager; up-to-date; virile; not a thing of cant, but a reality; not an echo of old-time dogma, but a live-wire of tingling progress.

CHIEFLY: are you not interested to have the world progress in reason, justice, truth and freedom: to have religion made human, rational, honest to the core, manfully invigorating, not thinly and softly sentimental, but stalwartly enthusiastic, kindling, and dramatic in modern zest of progress?

Well, that is what THE UNITARIAN ADVANCE is concerned with. Why not have a part in its enterprise?

One Dollar a year; three months for 25c.

RECENT BOOKS

THE HIGHER EDUCATION AS A TRAINING FOR BUSINESS. By HARRY PRATT JUDSON.

A careful discussion of a vital educational problem. Sober, sensible, and practical, it is as far as possible from the one-sided treatment which the question commonly receives. *56 pages, 12mo, cloth; postpaid 55 cents.*

PRAGMATISM AND ITS CRITICS. By ADDISON W. MOORE.

This is the clearest and most satisfactory summing up of the controversy that has yet appeared. Even the most technical matters are presented in such a way as to be intelligible to anyone who is genuinely interested in the movement. *294 pages, 12mo, cloth; postpaid $1.36.*

THE MEANING OF SOCIAL SCIENCE. By ALBION W. SMALL.

Outlines a plan of coöperation among the various types of specialists in social science. Its keynote is the proposition that the main business of social science is to be the agent of all men in finding out the meaning of life. *320 pages, 12mo, cloth; postpaid $1.62.*

PROCEEDINGS OF THE BAPTIST CONGRESS, 1910

The practical, live questions of religious belief and everyday practice are here discussed with a frankness and freedom almost startling. The contributors stand high among the influential men of the denomination. *218 pages, 8vo, paper; postpaid 58 cents.*

FIRST TWO VOLUMES NOW READY

THE MODERN CRIMINAL SCIENCE SERIES

This series of translations of the most important works of eminent European authorities on Criminal Science, selected and edited by a committee of the American Institute of Criminal Law and Criminology, will furnish a systematic and sufficient acquaintance with the controlling doctrines and methods regarding the individualization of present treatment and the study of the causes of crime that now hold the stage of thought in Continental Europe. *Now ready:*

I. MODERN THEORIES OF CRIMINALITY

By C. Bernaldo de Quiros, of Madrid. Translated from the Second Spanish Edition, by Dr. Alphonso de Salvio, Assistant Professor of Languages in Northwestern University. With an American Preface by the Author, and an Introduction by W. W. Smithers, Esq., of Philadelphia, Secretary of the Comparative Law Bureau of the American Bar Association. 8vo. Cloth, $4.00 *net.*

Señor de Quiros is one of the most eminent of modern Spanish criminologists. He has edited a "Library of Penal Science," and has written another treatise on "Crimes of Violence in Spain." The present work is a concise survey of all the European writers on Criminal Science during the last century. Several hundred are passed in review. It sums up the contributions of each one, aligns the respective schools of thought, and critically places each writer and each theory. It is the best reference handbook for learning the significance of each worker.

II. CRIMINAL PSYCHOLOGY

By Hans Gross. Translated from the Fourth German Edition by Dr. Horace M. Kallen, Lecturer in Philosophy in Harvard University. With an American Preface by the Author, and an Introduction by Joseph Jastrow, Professor of Psychology in the University of Wisconsin. 8vo. Cloth, $5.00 *net.*

Professor Gross is one of the half-dozen most eminent European students of Criminal Science. He has been a criminal magistrate, and is now Professor of Criminal Law at Graz, Austria. He is Editor of the "Archives of Criminal Anthropology and Criminalistics," published at Leipzig; and has published numerous books and essays, including a Handbook for Criminal Magistrates (translated into French, Italian, and English). He was one of the first to study the psychological methods of crime-detection.

IN PREPARATION

III. CRIME, ITS CAUSES AND REMEDIES.
By Cesare Lombroso, late Professor of Psychiatry and Legal Medicine in the University of Turin. 8vo. Cloth, $4.50 *net.*

IV. THE INDIVIDUALIZATION OF PUNISHMENT.
By Raymond Saleilles, Professor of Comparative Law in the University of Paris. 8vo. Cloth, $4.50 *net.*

V. CRIMINAL SOCIOLOGY
By Enrico Ferri, Professor of Criminal Law and Procedure in the University of Rome. 8vo. Cloth, $5.00 *net.*

VI. PENAL PHILOSOPHY
By Gabriel Tarde, late Magistrate in Picardy and Professor in the College of France. 8vo. Cloth, $5.00 *net.*

VII. CRIMINALITY AND ECONOMIC CONDITIONS
By W. A. Bonger, Doctor in Law of the University of Amsterdam. 8vo Cloth, $5.50 *net.*

VIII. CRIMINOLOGY
By Raffaelle Garofalo, late President of the Court of Appeals of Naples. 8vo. Cloth, $4.50 *net.*

IX. CRIME AND ITS REPRESSION
By Gustav Aschaffenburg, Editor of the Monthly Journal of Criminal Law and Criminal Law Reform, Heidelberg. 8vo. Cloth. $4.00 *net.*

Send for complete descriptive pamphlet and SPECIAL OFFER for advance subscription to the entire set.

SECOND EDITION

John Brown: A Biography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning, and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

FIRST EDITION EXHAUSTED IN 7 WEEKS.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.
$5.00 *net.* *Postage* 26 *cents.*

HOUGHTON MIFFLIN COMPANY
BOSTON NEW YORK

The Nation

NEW YORK, THURSDAY, FEBRUARY 2, 1911.

The Week

The passage of the Tariff Board bill by the House is another personal victory for President Taft, for to him, it is admitted, the success of the measure is due. It was not obtained without a hard fight, and the Democrats split, as usual, the next Speaker voting and working for the bill, on the ground that the aspect of the measure had been changed by an amendment giving the House the power to specify the subjects that the Board shall investigate. Mr. Clark was emphatic, however, in saying that this position of his in no wise affected his desire for the immediate consideration of a tariff reform bill after March 4 next. This is the proper position to take. The Board will undoubtedly acquire some interesting facts—provided foreigners and our manufacturers are willing to tell the exact truth about their industrial conditions—but it rests entirely with Congress whether it will or will not utilize those facts. As a standing admission of the wrong done to this country by the tariff-making of the past, the Board will also serve a useful purpose. But the time ought speedily to come when the people of this country will not be lulled into false security by the Tariff Board or by any other device, but will insist on the abandonment of a policy which is based on favoritism and special privilege and could not be rendered equitable by a thousand boards or commissions.

Judge Baldwin does not assent to Mr. Roosevelt's view of either the facts or the law, involved in their controversy, but now declares himself satisfied that his critic was sincere and devoid of personal animus. The matter originally in dispute was confessedly intricate, and though we still think that Mr. Roosevelt did not grasp the reasoning which led Judge Baldwin to make the decision he did in the Hoxie case, there is a great deal of force and of justice in what he says of the state of the law which made such judicial decisions necessary. This has been publicly admitted by Judge Baldwin himself, who has advocated a reform of the law of employers' liability. Federal legislation has been passed to cure, so far as it can, the old defects, and in many States efforts have been and still are made to put the workman's right of compensation for injuries on a more enlightened and just basis. On this main question, Mr. Roosevelt is in line with humane opinion; and if he had made his campaign utterances as guarded and reasoned as this letter, little fault could have been found with him.

The development of the Public Service Commission idea goes on apace. In Massachusetts, for instance, the two most interesting pieces of legislation at present are a bill calling for direct nominations up to the office of Governor and a Public Service Commission bill enlarging the powers of the present Railroad Commission. This has long been one of the best in the country, being considered the model, unless first place should be given to Wisconsin's. Now, however, it is found that the Commissioners are overworked and are without adequate power; hence the present measure which would confer upon them about the same control of public utilities as is now vested in the two New York State Commissions. In Maine, too, the new type of commission is at hand. The Democratic caucus has declared in favor of one composed of five members, as in New York. It is not only to supplant the present Railroad Commission, but is to have supervision over all other public-service corporations and the power to regulate rates. It must be a particular source of gratification to Justice Hughes to see this rapid spread of the commission idea. If there are any Democrats at Albany who are planning a backward step by attacking the plan in this State, they had better take note how strongly the tide is running against them all over the Union.

Whatever change of attitude has taken place, on the part of the Canadian Government, in the matter of trade agreement with the United States, is plainly due to the increasing demands made by the farmers of Canada. It was not so long ago that the authorities at Ottawa professed themselves indifferent on the subject. The time had gone by, they said, when reciprocity with the United States could be of moment to Canada. The Dominion had become self-sufficing. Figures showing the great expansion of Canadian manufactures and commerce were adduced with a proud national consciousness, and it was argued that a protective régime and the bounty system, combined with tariff preference for British goods, had made Canada forever independent of the United States, industrially and commercially. But it has been dissatisfaction from within more than pressure from without that has led the Government to take a different view. In his travels through the Western Provinces last summer, Sir Wilfrid Laurier found an active spirit of revolt against high tariffs among the farmers; and in December there took place a scene in the House of Commons at Ottawa which the correspondent of the London *Times* declared to be "unequalled by anything in the history of the Canadian Parliament." A deputation of 800 representatives of agriculture presented a demand for free trade. Short of that, they put in a plea for reciprocal free trade between the United States and Canada in all horticultural, agricultural, and animal products, on the one side, and farm machinery, fuel, illuminating and lubricating oils, etc., on the other.

One element which enters into the whole problem is the amount and source of foreign capital invested in Canada. This has been little discussed. Recently, however, the *Monetary Times* of Toronto published the result of some investigations which it had made. The figures were somewhat surprising. They showed, as was expected, that British capital had been put into Canada in large sums—over $605,000,000 having been invested during the past five years—but that very little of it had gone into industrial enterprises; banks, insurance, land, and public securities absorbing all but a small fraction. On the other hand, investments in Canada by citizens of the United States, while only one-third as great, have nearly all been in mills and mining, packing plants, and factories which are often branches of American concerns. Among recent presidents of the Canadian Manufacturers' Associa-

tion, three were heads of branches of houses located in the United States.

We presume that nearly every public utility corporation expects, sooner or later, to have questions affecting its regulation by the State, and the reasonableness of its charges, passed upon in one way or another by the courts. It is this fact which lends interest to every judicial decision bearing upon such controversies. One has recently been made by the Supreme Court of Oklahoma, which had to do with a small concern and with comparatively trifling pecuniary interests, but which laid down some general principles applicable in more important cases. The Pioneer Telephone and Telegraph Company of Enid had been ordered by the State Corporation Commission to reduce certain of its charges, but took an appeal to the courts on the ground, mainly, that its capitalization had not been properly computed. On this point the Supreme Court upheld its contention and reversed the Commission. What was of especial interest in the opinion is the view that the valuation of a public-service company should not be limited to the mere tangible physical properties, but must include the value of the entire property as a "going concern." It was not a question of good will or the worth of an unexpired franchise that the court took into consideration, but the fact that, because there was "an established system of operation" and at present "customers sufficient to pay the expenses and depreciation and some profit," there was really a "value beyond the mere cost of reproducing the plant."

It takes all kinds of people to make a world, and there are, accordingly, a few persons to be found in New York who like to hear Dr. Cook tell of the "satisfying thump of success" that took place within his "own bosom" when he reached the "boreal centre," and discuss the question whether there is "any one sure shoulder upon which we can hang the mantle of polar conquest." This ought not to be regarded as surprising, when we consider that in a community of five million souls a hundredth of 1 per cent. makes a very respectable number. It is this consideration that comes to our rescue when we note the never-failing supply of gullibles that insures the continuance of certain ancient, though perhaps not honorable, methods of gaining a livelihood. And it is to the same thought that we recur when our eyes fall upon some freak periodical which, from cover to cover, appears to belong to a nonsense world. What sort of people is it that support a magazine which begins with an article entitled "Heaven" and telling authoritatively of the nature of the future life, and ends with one headed "Favorable and Unfavorable Days in February"? How many persons in this metropolis take in solemn earnest both the assurance that "art, literature, physics, and science are as much a part of our [the spirits'] life as yours" and the information that "for buying stocks, dealing with doctors, surgeons, dentists, business enterprise, all matters connected with electricity, speculation, and adventures where any risk is taken," February 1, 5, 14, 19, 22, 27 will be favorable and February 3, 6, 10, 13, 17, 21, 25, 28 unfavorable days?

In the January *International Socialist Review*, Eugene V. Debs solemnly warns the Socialist party against the dangers that come from popularity and numbers. Already, he declares, his party has too many members who "regard vote-getting as of supreme importance," and seek to make the Socialist propaganda so attractive to bourgeois voters as to render it rather a bait for votes than a "virile and efficient revolutionary organization." This is in curious contrast to the attitude of the German Socialists, who glory in their being a "three-million party" and welcome any voter who swells their total even if he be no more revolutionary than a Liberal-Radical who votes for a Socialist because he perhaps has no other way in his district of recording his protest against the rule of privilege. Of course, in Germany, too, there is a divided Socialist camp—those who think they should take part in the government and those who would be purely a party of obstruction. Debs fears that the next election in this country will show a large falling off in the last record-breaking Socialist vote by the desertion of those who are not really revolutionary at heart or even wholly committed to Socialist doctrine. Socialism, he declares, is a matter of evolution, of wise growth, which ought not to be retarded by "obtaining for it a fictitious vote," for it must keep its "revolutionary character" and "working-class character." It would be interesting to hear from the Socialist vote-getter, Victor Berger, upon this point.

Although it is less than a year since vanadium ore of high grade was discovered in Colorado, the production of that metal is expected soon to become an industry as extensive as tungsten mining. Last year Colorado produced about two-thirds of all the tungsten found in this country, worth more than $800,000. It is interesting to note, too, that this tungsten is a product of Boulder, one of the oldest mining districts in the State. The demand for both of these metals comes mainly from steel manufacturers, and as the use of vanadium is admitted now almost to double the hardness and life of steel, there can be little question of a permanent market. The chemists, as recently complained by a speaker at one of their national gatherings, may not be contributing largely to the philosophy of life by running the elusive molecule to its ethereal source or establishing a final atom of matter, but they certainly are adding to that *sine qua non*, the dinner-pail, and in no direction more importantly than in mining. They are giving added values to known ores, and new values to some hitherto unknown. For zinc, which formerly cost the miner money on account of its refractory qualities in smelting, he now receives pay. Cyanide is the backbone of many a gold camp. Chemistry, too, like all other arts and sciences, continually emphasizes its universality, for the first American vanadium ore was called Kentsmithite, in honor of Mr. Kent Smith, a metallurgist of Liverpool.

The *Southern Workman* reports for Hampton Institute that of 1,429 graduates of that institution only two have ever been imprisoned for crime. Of over 2,000 non-graduates with whom the school has kept in touch, it knows of only five who have come into collision with the law. The *Southern Workman* adds, "a comparison with white schools on this point would be of interest." Undoubtedly it would, and undoubtedly most of them would not have so satisfactory a report to make. Outside of Hampton, it is true, however, that many of the schools of this type do suffer in public estimation because of the misconduct of students who have been per-

haps but one session in a school and, without actually claiming to be graduates, pass themselves off as students. Naturally, the school they have attended suffers at their hands and they create prejudices right and left. Even with this drawback, the true understanding of the value of the work done by Hampton and its kind spreads daily. Who can doubt that such a school pays a thousand times over?

We had not looked to the Philippines for a solution of the problem of English composition, but a copy of the *College Folio*, the new undergraduate periodical of the University of the Philippines, gives evidence of an enthusiastic and well-directed attack which is already bearing fruit. The contributors are all natives, yet we do not observe that in point of style the articles fall very much below the corresponding productions of our own students; the subject matter strikes us as more wholesomely interesting. Designed to cultivate among the students the habit of literary expression in English, the *Folio* sensibly confines itself to the treatment of Philippine matters, and more particularly to the preservation of native traditions and songs, all the lore which advancing civilization promises to consign to oblivion. We note, for example, a Cagayano labor song, an extremely interesting account of the Filipino passion play, and descriptions of folk-dramas, marriage customs, image-bathing, and the caste system. But these young journalists do not limit themselves to folk-lore, peculiarly fitted for this task as they somewhat naïvely admit themselves to be. They give us literary criticism, an appreciative essay on a contemporary Tagalog novel, and a plea for a purely native literature in English; in English as a national language "will be presented the irresistible arguments of a Filipino Burke, and in its dancing trochees and gliding dactyls will some day lisp a tropical Herrick." We promise to welcome the little brown Herrick when he comes; let him lisp as tropically as he pleases, but spare us a Filipino Burke!—all the arguments that are really irresistible are the exclusive property of his opponents.

Canada's high place in the British official mind is plainly indicated by the appointment of the late King Edward's brother as Governor-General for two years. The Duke of Connaught was to have been Regent in the imperial capital during the absence of King George and the Queen in India, but a regency has apparently been found unnecessary. The Duke is privately considered one of the most capable generals in the army, and his recent visit to South Africa, on the occasion of the first session of the federated Parliament, created a pleasant impression, both at the Cape and at home. The announcement of his appointment immediately after the conclusion of a reciprocity agreement can hardly be more than one of those coincidences against which Sherlock Holmes warned all amateur logicians. The Duke's name has been mentioned in connection with Ottawa for months. Tradesmen in that city are naturally rejoicing, and politicians, of course, will continue to represent that public opinion which long ago became conscious that the boilers of a ship are more vital to it than the most attractive figurehead.

After the fall of Napoleon III a wave of republicanism swept over England, and "Citizen Dilke" was caricatured and lampooned as he lectured throughout the country on the expenses of royalty, arousing conflicting passions which frequently led to rioting. Distinguished athletically and politically even at Cambridge, owner of the *Athenæum*, a constant traveller who could write of his observations effectively, Sir Charles was marked at so early an age as thirty as a future Premier of England. Revulsion of feeling caused by the Prince of Wales's desperate struggle with typhoid, Gladstone's avalanche in the Commons against "disloyalty," and seven years of conservative reaction under Disraeli, failed to obscure him. At a time when English youth learned *mensa, mensam* and the Eastern Question together, Dilke was at least the most conspicuous authority on foreign affairs. In 1884 he was an important member of a Gladstone Cabinet. A year later his career was snuffed out by a domestic scandal which kept him out of Parliament for seven years, out of the Cabinet for life. His country lost the best of Dilke, though of late years he was given due weight as an authority on foreign relations, as Ireland lost Parnell.

Paris is shocked by a scandal in connection with the national Bureau of Printing. When a law of 1902 authorized the reconstruction of the Bureau on another site, assurance was given that the expense would not exceed four million francs. It now comes out that Parliament and the Ministry have all along been deceived, the officers of the Bureau having known from the first that the cost of transfer would exceed ten million francs. With a charming reluctance to alarm Parliament, however, by mentioning so great a sum, they furnished incomplete and inaccurate information relating to the undertaking. The dance of the millions has commenced, laments the *Temps;* we are at the dozenth, and there is no evidence that it is the last. In the chief architect the Commission of Inquiry has not discovered any of the necessary professional qualities. For the chagrined Frenchman there is only one solace. Is it not admirable? asks the *Temps*.

It is not to be supposed that the Vatican is "looking for trouble," in its relations with various civil powers, but it is certainly finding it. Another serious misunderstanding between Germany and the Holy See is now threatened by the Pope's direction that all Catholic clergy, especially Catholic teachers, shall take the anti-Modernist oath. In so far as this applies to Catholic professors in state universities, the Prussian Government has interposed a strong objection, practically amounting to a veto. Its contention is that such an oath would impair the independence and the devotion to scientific inquiry which have so long been jealously guarded in German universities. The latest communication from Rome appears to recede somewhat from the first position taken, though there is not yet such a full retreat as was made last year by the Vatican, when it fronted an aroused public opinion in Germany, in the case of the unlucky encyclical relating to Borromeo. In Italy itself, the feeling against the spirit now animating the Curia seems to be growing stronger. It would become highly inflamed if the rumor should prove true that the Pope intends to close the Vatican galleries during the coming celebration of the independence and unification of Italy. Such an expression of disapproval would be so foolish that we cannot believe it is seriously contemplated.

THE PRESIDENT ON FREER TRADE.

The message which President Taft sent to Congress last week, along with the project for a trade agreement with Canada, quietly takes some very bold positions. We mean, of course, that they are bold for the chief of a protectionist party. Mr. Taft, to be sure, throws the inevitable sops. He says that the proposed free exchanges with Canada would not be "a violation of the protective principle," since this "does not call for a tariff between this country and one whose conditions, as to production, population, and wages, are so like ours." But case-hardened protectionists will reply, as the *Tribune's* Washington correspondent declares that they are already doing, that they do not give the half of a straw for that or any other "principle," but that they do not want, and will fight to the bitter end, "any reduction of the tariff, even partial and in favor of a single country, which will in any way affect the products of their constituents."

That is the spirit of brute and unyielding protectionism which the President has fronted, and we already hear the responsive groans and curses. New England Republicans are reported to be in a rage. In the agreement with Canada they say that they get a slight reduction on watches and a few trifling Yankee notions, but that they are threatened with ruin by the free admission of Canadian fish. On this subject Representative "Gussie" Gardner is so broken up that he sheds tears—salt tears, we suppose, such as might be wrung from a cured codfish. Senator Lodge has not been heard from, but in view of the last Massachusetts campaign, and of his solemn pledges to do all that he could to promote reciprocity with Canada, he must be thinking unutterable things. Republican Congressmen from along the Canadian line are saying that the enactment of this tariff arrangement with Canada would mean "solid Democratic delegations in Congress" from all the border States; and they add that, if the American farmer is thus sacrificed, he "will never again vote for a protective tariff on any manufactured product." But that would not be so awful as it sounds!

Mr. Taft must have been aware that all these outcries would follow. He knew perfectly well that the Republicans have been prating about reciprocity in general, but have incontinently killed every reciprocity treaty on which they could lay their hands. In particular must he recall the way in which his party danced upon the Bayard-Chamberlain Canadian treaty of Cleveland's first Administration, and vowed that it would stand by the sacred codfish of New England to the last syllable of recorded time. But the President's message shows that he is thinking of larger things, and for their sake is ready, if need be, to drive a wedge temporarily into his party. His attitude is broadly conceived and is defended by arguments that look before and after. Mr. Taft can see, in this matter, further than the "deestricts." He is not willing that either Gloucester or Duluth should have the final voice in what should be a large national policy. Nor will he consent to have the proposed agreement with Canada nicely measured by a yardstick. Even though it could be figured out that Canada might gain a fraction of one per cent. more than the United States, or that some locality would lose the value of a quarter of a ton of hay, the real reasons for coming to terms with Canada would remain, and remain compelling.

They are admirably stated by the President. He sets forth both the detailed, immediate advantages and the larger and far-reaching results. With him it is obviously a question of a new national attitude, and of a new trade policy growing out of it. In sober language Mr. Taft gives expression to the feeling which has been creeping upon the American people as they have seen their natural resources deeply cut into and their old complacency in the thought of having much goods laid up for many years disappearing under the pressure of population and the shifting of production and trade. It is a feeling of undeniable apprehension. Something must be done, but what? No man is wise enough to prescribe infallible remedies for the symptoms of national over-strain and congestion which Americans have been exhibiting, but that man is blind who cannot see the promise of at least partial relief in looking about for new sources of supply for our national necessities, together with new markets for our expanding manufactures. It is this broad policy of which President Taft urges a special application in the way of seeking to do more business on better terms with our 8,000,000 neighbors over the Canadian line. It will be said that his reasoning is essentially that of free-traders, and that logically it ought to be pressed much further. But we are not saved by being logical *à outrance.* Let the general arguments be what they may, here is a specific attempt to throw down a few sections of a tariff wall that never should have been built; and whatever criticism may be made of this petty detail or the other, the large benefit to the people on both sides should be the determining consideration.

The President has put his party in Congress to a sharp test. It has been talking of its desire to do something for the consumer and to ease the pinch of tariff taxes. Mr. Taft has now forced it to show whether this was more than arrant hypocrisy. In his attempt to compel the Republican protectionists to show their hand, he ought to be aided by the Democrats, who should lose no opportunity to press the trade agreement in Congress by every parliamentary means at their command.

THE CRIMINAL'S PRIVILEGE.

The Constitution of the United States contains the declaration that "no person shall be compelled in any criminal case to be a witness against himself"; and the same prohibition is contained in the Constitution of the State of New York. Historically, of course, the principle embodied in these Constitutional enactments arose in the course of the development of the ecclesiastical and common law of England as a protection against persecution and injustice; and equally of course its justification in reason rests upon its efficacy as a defence for the innocent, not as a shield for the guilty. In actual practice, however, we have almost completely lost sight not only of the historic basis of the rule, but also of the rational sanction which can be pleaded for it. Times have changed completely since the days of the Stuarts, when the principle first found lodgment in English legal practice; the danger of persecution or intentional injustice in our criminal proceedings has long ceased to be a real and practical consideration; and yet we go on as though it were an ever-imminent peril. And while it may on the whole be true, in spite of this, that the rule is a desirable safeguard against the punishment of the innocent, we set almost no limit to the stretching of it

beyond its natural scope, even though it be manifest that such stretching can serve no purpose whatsoever except the escape of the guilty.

Being embedded in the Constitution, the right of an accused person to refuse to "be a witness against himself" must, of course, be strictly respected. But it is one thing strictly to respect a Constitutional right; it is another thing to guard it with infinite care, to hedge it around with every possible outlying defence, to permit nothing to be done which might by any possibility be regarded as an encroachment upon it. This kind of jealous guardianship is justified, nay demanded, when the right in question is one of the fundamental rights of a freeman; but the right to refuse testimony in a criminal case has no such character. It is purely a matter of expediency; it is a means to an end, not an end in itself. The mere fact of an accused person being called upon to answer a question relating to the charge against him cannot by the remotest stretch of fancy be regarded as in itself unjust; it is only the possible consequences of it that may produce injustice. In other words, the rule itself is one of the outer barriers set up, out of a scrupulous regard for the rights of the innocent, to prevent possible abuses of the machinery of justice; and to protect this barrier by a still further barrier, as though it were itself a precious or sacred object, would strike us all as the height of absurdity were we not so accustomed to the spectacle. That "no person shall be compelled in any criminal case to be a witness against himself" is asserted by the Constitution; but the dragnet which has brought under the definition of being "a witness against himself" an infinite variety of things which do not come literally under that designation has been the creation of our courts. And what the courts have done the courts can undo.

In rendering his decision in the Callan law case, Judge Crain in his introductory remarks, speaking of the decisions of our courts under the immunity provision of the Constitution, says that "it has invariably been held that its interpretation was to be liberal rather than literal and broad rather than narrow." We do not deny the correctness of this assertion; nor shall we venture an opinion as to whether his own decision, in a matter involving somewhat novel features, is justified by the precedents or will be confirmed upon appeal. We do wish to observe, however, that the only way in which the requirement of the Callan law compels a man to be "a witness against himself" is by the ascertainment of his identity; that it does not involve the statement of any circumstance, the clearing up of any detail, the admission of any culpability, or of any act implying culpability. But this required disclosure of the identity of an automobilist after a collision is, in Judge Crain's opinion, sufficient to bar it under the immunity clause, because it may become "a link in the chain of evidence against him." The law, he says, is unconstitutional because "the statement required to be made may under some circumstances be self-accusatory or tend to establish a criminal liability or subject the maker to criminal prosecution." Would it be going very much farther to say that a law requiring an automobilist to continue to keep his number displayed after an accident is a violation of his rights under the Constitution? Should he be made thus potentially to expose his guilt to the public view?

The question involved in choosing between a reasonable and an extravagant construction of this immunity is of very great importance in itself, but of still greater importance as part of the whole attitude and character of our criminal procedure. To strengthen that procedure, to make it efficient and impressive, is one of the crying needs of our national life, and is at last coming to be so recognized. Our condition in regard to this particular matter and the attitude that should be assumed toward it by our courts has been admirably expressed by Wigmore in his great treatise on Evidence. "The privilege," he says, "should be kept within limits as strict as possible. So much of it lies in the interpretation that its scope will be greatly affected by the spirit in which that interpretation is approached . . . the decision will constantly depend upon whether the privilege is approached with favor or disfavor, with fatuous adulation or with judicious appreciation. In the past twenty years, and especially in a few American courts, this practical difference of effect is plainly apparent; for under the guise of reasoning and interpretation the privilege has by them, in the spirit of implicit favor, been so extended in application beyond its previous limits as almost to be incredible, certainly to defy common sense." In this, as in the still more important matter of endless appeals, delays, and reversals upon technicalities we must get back to common sense if we are to preserve the efficacy of the criminal law.

WOMAN AND INTELLECT.

The vote of 29 members of the Paris Academy of Sciences for Mme. Curie, against 30 votes for her male rival, M. Branly, indicates almost a practical certainty that her election as a member of that illustrious body is only a matter of time. The near approach to a majority in her favor is the more impressive from the fact that those who voted for her election did so in the face of the advisory decision adverse to the admission of a woman which had been rendered by the Institute of France, but which was not binding on the separate Academies composing the Institute. And when it is further considered that the rival candidate was a man of sixty-five whose name had twice before been presented to the Academy, with strong claims to recognition for his contributions to physics, it would seem safe to say that the fact of Mme. Curie's sex would not of itself have prevented her from receiving a majority of the votes of the Academy. In a case of this kind, with the rivals both men, the consideration that the younger aspirant, appearing for the first time, could easily have another chance, while with the elder it must be now or never, would be very likely to be decisive unless the claims of the younger man to the honor were overwhelmingly superior.

Both the near approach made by Mme. Curie to membership in the Academy of Sciences, and her actual failure to attain it, may serve to teach the same lesson in regard to the much-mooted question of the capacity of women for the highest forms of intellectual achievement. Her fame, of course, was secure before the Academy issue ever arose; her name had been added to the little roll of women who had demonstrated scientific ability of a very high order, alongside those of Sonya Kovalevsky and Mary Somerville. But to a multitude to whom the stamp of formal acknowledgment counts for so much, the fact that this woman has all

but been accepted as a peer of the eminent men who compose the Académie des Sciences, in spite of the obstacles set by "immutable tradition," will have a stamp of conclusiveness that her general reputation would not have carried. And on the other hand, the circumstance that her sex was unquestionably thrown heavily into the scale as a hindrance and may very possibly have been the decisive factor, will serve once again to emphasize one of the chief factors that have to be taken into account in making comparisons between men's and women's achievements. It is impossible to judge of the potentialities of women as compared with men by what has actually been recorded of achieved results, so long as those incentives which are the greatest spur to human effort are present in the case of men and absent in the case of women. Women are handicapped by the lack of a thousand forms of incentive and opportunity; and if the rare woman who nevertheless scores a splendid success is denied the usual form of recognition, one cannot but be struck with the contrast, all along the line, between the conditions surrounding women and those surrounding men.

The simple fact is that the assertion of woman's incapacity for the highest intellectual achievement has never had any substantial basis. Incidentally, the maintenance of that assertion has given occasion for some of the best of those examples of defective logic and unscientific modes of thought which so plentifully strew the path of sociological and economic discussion generally. For a while, scientific persons—scientific in their specialty, but, alas, only plain persons when dealing with matters to which a human interest attaches—were very fond of settling the whole business by reference to the weight of the female brain; an argument which, even if it had not been knocked in the head by various developments of a closer study, would in any case have been worthless owing to the obvious fact that from the aggregate weight of the brain no inference could be made even as to the weight—not to speak of the efficiency—of that part which is concerned in the higher intellectual processes. It is long since one has heard much of this argument; it is the rareness of great intellectual distinction in women, and the absence of any examples of the absolutely highest achievement, that constitute the chief support of the doctrine of inferiority.

But the rareness of high distinction in women as compared with men would call for no explanation if people merely exercised a little imagination. It is true that educational opportunities have now, for some years, been liberally opened to women, but these constitute but a small part of the elements in the case. The whole of those decisive forces that determine the career of a man, that keep him spurred to effort, that sustain him, both morally and materially, in the pursuit of his aim, are absent in the case of the overwhelming majority of women. Encouragement, comradeship, the hope of a happy and successful life, the fear of failure—all these constant and pervasive forces, quite as much as love of the work itself, form the spring of the young man's action; not in the case of one woman in a hundred is the like true. People are willing to allow for this in a sort of way, but they have not enough imagination to make anything like adequate allowance. And as for the absence of any example of the absolutely greatest achievement, it ought only to be necessary to point out that America has not yet produced either a Shakespeare or a Newton, although the number of her male inhabitants to whose literary and scientific aspirations there has been no obstacle has been incomparably greater than that of all the women since the world began of whom the same can be said.

SELLING PRIVATE LETTERS.

Coleridge has a remark somewhere about the danger that a literary man's executors may make sad work of his brains. Of that we have had many examples. But there is a more poignant peril. It is that those in legal charge of a dead writer's documents and letters may be guilty of outrages upon taste and even breaches of good faith, which he in his grave cannot resent but from which his name must suffer. In this city, for example, there was last week a sale of the effects of a well-known figure in our literary world, and in them were included letters to him by living men of the most intimate and confidential character. These he had treasured, as was his right, but now that he is gone they are as coolly thrown upon the market as if they were merely his ink-stand or candle-snuffers. In some instances these letters were of so markedly private a nature, being intended for his eye alone and filled with comment upon men and things that could not with propriety even be handed about, much less sold at auction, that their alarmed and mortified authors were forced to go to the sale themselves and buy them in.

It is little to say that such things add a new terror to death. An indiscreet biographer is bad enough. We remember what a wholesale burning of old letters and diaries set in on the occasion of the publication of Froude's Carlyle documents. If such revelations could be made, which of us is safe? That was the horrified question which literary men in England and the United States at once asked themselves, and soon the chimneys were smoking with manuscripts that might make scandalous printing after the owners were dead. We know what Tennyson thought of this sort of breaking every seal and betraying the trust; but it probably never entered into his imagination that an heir could seek to coin money out of letters in which friend breathed confidences to friend. Matters which were so delicate that they could not, either legally or with decency, be published in a biography, it seems to be thought may be knocked down by the auctioneer's hammer to whoever will buy.

In this instance it is only necessary to ask what the dead man himself would have thought and said of such a proceeding, in order to perceive what an affront it is to his memory. Himself of proved fastidiousness in taste, and of the nicest loyalty in friendship, he would have been cut to the quick if he could have fancied such a brutal disposal—or attempt to dispose of communications of which he would no more have thought of making a public prey than he would of the whispered interchange of lovers. A methodical man, he had kept these letters, along with a mass of others, but the idea of making merchandise of them would have been as foreign to his soul as it would have been cruel. To take a dead man's skull and grow in it a pot of basil is a sweet and wholesome thing compared with this plan of doing something which would be excruciating to him in order to make a pot of money.

A current Spanish novel is entitled

"The Dead Command." In the case referred to, they evidently do not, if their known or easily inferred wishes could be taken as a command. But even the living have some rights! As a mere matter of law, we should suppose that this hawking of the private letters of men still alive and sensitive could be enjoined. They certainly could not be printed without permission; how, then, sold in manuscript? But, of course, the gentlemen involved did not wish to advertise their sense of outrage, or actually to make a bad matter worse by taking legal proceedings. They quietly put up the amount of cash necessary to obtain possession of what was really their own all the time. Rather than permit any imputation to rest upon the discretion of their dead friend, or allow any chance collector to display their secret communings with their old confidant, they were ready to make a pecuniary sacrifice—and for some of them it was considerable—and say no more about it.

We are glad to think that such peculiar displays of callousness in regard to the feelings of both the dead and the living are very rare. But they ought to be entirely impossible. Botanizing on a mother's grave is respectable beside offering to barter away the most cherished and sacred tokens of friendship belonging to the dead.

OUR NATIONAL ARCHIVES.

The recent fire in one of the offices of the Geological Survey should draw attention to a measure which has been pending before Congress for the past fifteen years. As it happens, no government records of importance were destroyed when a room in the Geological Survey was burned out; but the escape was only evidence of good luck. The whole Survey is in a rented building which is not fireproof; but, in this respect, it is not much worse off than every other department in Washington, for none of them is wholly in fireproof quarters, and one—the Department of Justice—is in several buildings, not one of which is fireproof.

It is now fully twenty years since Congress was first asked to build a storehouse for the national archives, and some years ago a site was purchased; but there the matter was dropped. The departments themselves have not urged it, and it may be doubted whether they are eager for it. They are more concerned to get new buildings for themselves than to relieve part of the congestion in the old buildings. Their first interest is in getting good offices for men rather than good housing for records. Moreover, there is a feeling that a central depository might diminish the functions of the departments.

It should be understood, however, that the erection of more department buildings will not solve the problem of caring for the archives. The architectural problems in designing a building for archives and a building for offices are quite different. For archives, there must be tier upon tier of stacks, and great areas of space must be left unoccupied as a provision for future expansion. For example, the plans for the German Imperial Archive building, about to be erected in Berlin, provide for a vacant space which, it is calculated, will not be filled in less than one hundred years. It must be remembered, too, that the old department buildings will continue to be used, and that in none of them is there space for the archives. Nothing would seem to be plainer than that the government's archives cannot be properly cared for until they are concentrated in a building especially constructed to hold them. That they have never been suitably cared for, and that their condition becomes worse each year, as the departments become more crowded, are facts which no one can deny.

It was only last winter that the House of Representatives undertook to rescue from destruction some of its earlier records, comprising letters of Washington and Lafayette, with official documents of great value, which had been found among a mass of absolutely unclassified papers. How many of its records have been destroyed or stolen, cannot be even guessed at. The only certainty is that many have been lost. Among the executive departments, the State Department is supposed to have the most complete set of archives; but some of them are packed in boxes and stored in the sub-basement, where they are inaccessible for historical or administrative purposes. The archives of the Treasury Department have been decimated by fire, and many have disappeared from other causes. For certain periods they can hardly be said to exist at all. The War Department permits no one to examine its records. They are kept in greater secrecy than surrounds the archives of any European country, the reason assigned for this policy being that there is no space in the War Department where investigators might work. It may be remarked, however, that there is no space provided for investigators in any government office in Washington, except the Library of Congress.

All American scholars who visit European archives bring back one story—that ours is the only great government which has made no provision for the care and preservation of its records. They see the great Public Record Office in London, the Archives Nationales at Paris, the Royal Archives at The Hague, the sumptuous new archive house at Vienna, the Frari at Venice, the Tuscan Archives at Florence, and so on, and the contrast at Washington makes them ashamed. It is true that our national archives go back only one hundred and thirty-five years, while those of European countries go back eleven centuries; but ours should be as precious to us as theirs are to them.

Happily, influences outside of Washington are exerting energy in behalf of our records. The American Historical Association, numbering three thousand members, has already appointed a committee, composed of Dr. J. Franklin Jameson, Admiral Mahan, and Dr. John Bach McMaster, to urge upon the authorities at Washington the need of preserving the archives, and, at the meeting recently held at Indianapolis, a resolution was adopted which states the matter so succinctly that it may be quoted entire:

> The American Historical Association, concerned for the preservation of the records of the national government, as muniments of our national advancement, and as material which historians must use in order to ascertain the truth; and aware that the records are in many cases now stored where they are in danger of destruction from fire, and in places which are not adapted to their preservation, and where they are inaccessible for administrative and historical purposes; and knowing that many of the records of the government have in the past been lost or destroyed because suitable provision for their care and preservation was not made, do respectfully petition the Congress of the United States to take such steps as may be necessary to erect in the city of Washington a national archive depository, where the records of the government may be concentrated, properly cared for, and preserved.

THE AMERICAN PHILOSOPHICAL SOCIETY.

PHILADELPHIA, January 28.

An impressive tribute was paid to the memory of Henry C. Lea, at a meeting held in Philadelphia on the evening of January 20, under the auspices of the American Philosophical Society in association with the University of Pennsylvania, the Historical Society of Pennsylvania, the Philadelphia Academy of Natural Sciences, and the Library Company of Philadelphia. Before a distinguished and representative audience that filled the beautiful hall of the College of Physicians to overflowing, such men as the Rt. Hon. James Bryce, Dr. Horace Howard Furness, Dr. S. Weir Mitchell, Joseph G. Rosengarten, and Prof. E. P. Cheyney of the University of Pennsylvania joined in giving an estimate of the services rendered by Mr. Lea to historical research, to his country during the civil war, and to his native city as the inaugurator and stanch supporter of the movement for municipal reform. The keynote in all the addresses was one of profound admiration for the unusual combination of intellectual and ethical traits which stamped Mr. Lea as one of the truly great men of his generation. The world-wide fame which during the last twenty years of his life he achieved as the leading authority in the history of the Middle Ages in no way affected the simplicity of his character; and in the midst of his laborious researches, he frequently turned aside to stir his fellow-citizens to an earnest consideration of municipal evils. A man of large wealth, he gave freely, withal judiciously, to educational and charitable institutions.

In the course of his scholarly and comprehensive memoir of Mr. Lea, Professor Cheyney gave for the first time an extract from Lord Acton's letter to Mr. Lea (December 19, 1896), in which that eminent historian, although himself an ardent Catholic, asked Mr. Lea to write the chapter on the "Eve of the Reformation" for the Cambridge Modern History. Lord Acton wrote, "This is the important and most critical and cardinal chapter which I am anxious to be allowed to place in your hands. . . . It is clear that you are the one indicated and predestined writer, there is no one else. I know of no one whom I could go to, if you refuse." The letter is the answer to those more partial Catholic historians who charged Mr. Lea with unfairness in his presentation of the delicate subject which formed the theme of most of his historical writings. Professor Cheyney pointed out that for Mr. Lea, the study of history included ethical estimates, and yet while he denounced what he considered cruel and unjust, he was always fair; and as he advanced in his work, the evident aim to be impartial became ever stronger. It was especially interesting to hear from Mr. Bryce that on his last visit to Mr. Lea, the great historian expressed the satisfaction it gave him to find at the close of his long labors on the middle ages, that the Inquisition, though cruel enough, was not as cruel as was commonly supposed, and that the sacrifice of life was not as large as is usually believed. In an address replete with eloquence and literary charm, Mr. Bryce summed up the traits which give to Mr. Lea's work its permanent value, as incessant industry, accuracy, and clearness of statement, which he cultivated to the exclusion of the allurements of literary excellence, and, quite as important, freedom from any bias. He was cautious in his historical judgments, and when he reached a conclusion, it rested upon the most careful study of all the material accessible to him. The note of personal affection was sounded by Dr. Furness in his graceful and inimitable manner, while Dr. Mitchell related in illustration of Mr. Lea's extraordinary modesty how he was restrained from dedicating his "History of the Inquisition of the Middle Ages," to Dr. Mitchell, who had been his physician, for fear of its not being sufficiently worthy.

Mr. Rosengarten, in an admirable paper on Mr. Lea as a citizen, brought out much that was new of the valuable services rendered by Mr. Lea during the civil war in stirring up Union sentiment through numerous pamphlets, and in actively participating in the work of recruiting troops in his native city. It was he who, with a few friends, organized the Union League of Philadelphia to help the cause of the Union; and it was equally characteristic of the man that he resigned from the League, when it refused after the war to throw its weight on the side of much needed municipal reform in Philadelphia. Mr. Rosengarten also emphasized the great value to students of the historical library which was collected by Mr. Lea and which will eventually go to the University of Pennsylvania. The hope was voiced that the priceless collection might be worthily housed in a building of its own that might at the same time be a fitting memorial to the greatest historian that this country has produced. Portraits of Mr. Lea and of his father, Isaac Lea—a distinguished scientist of his day—were presented to the American Philosophical Society by the members of Mr. Lea's family and accepted by the president, Dr. W. W. Keen, who presided over the memorable meeting. J.

SWISS NOTES.

NEUCHÂTEL, January 18.

At a time when the Pope is doing his utmost to subdue the Modernists, a singular example of submission to papal authority has just been given at the University of Fribourg. For some years the chair of liturgy there has been held by the Prince Maximilian, a son of King George of Saxony. The father fought in the war against France. The son, who was born in 1870, after studying law at Leipzig, entered the army; but a few years later he gave up that profession, made his novitiate in Bavaria, and became a priest. The prince is well known abroad as well as at home. An excellent linguist, he has preached in England as well as in France. He was a favorite of Leo XIII, and it is admitted that his ecclesiastical prestige is due quite as much to his personal qualities as to his royal blood. His specialty in theology has been the story of the schism between the Eastern and the Western church. It had been his ambition to accomplish a union of the divided branches. In discussing this subject, however, he put the blame on Rome for certain moments in the great dispute. The successor of Leo XIII could not tolerate this interpretation of history, and Maximilian was called upon to retract certain of his statements. He consented to do this; and it is reasonable to suppose that he is still held in favor at Rome, and that he will keep his chair at Fribourg.

Decurtius, another Fribourg professor who is also a learned historian, has been protesting against certain "modernistic stories" which have appeared in a popular review called *Das Heiland*. In consequence of this protest, the Bishop of Coire in the canton Grisons has forbidden the professors and students in his diocese to corrupt their faith by reading this periodical.

The correspondence of the late Charles Ritter has just been published at Lausanne. Ritter was a *théologien manqué*, having been diverted from a career in the church by his skeptical opinions. The letters in this volume are interesting, not only because of their contents, but because of the writers, among whom are Renan, Sainte-Beuve, Cherbuliez, George Eliot, D. F. Strauss, and Paul Bourget. For the greater part of his life Ritter was a lyceum professor in the little town of Monges, on Lake Leman. As he used to say of himself, he was *homo rusticus*. In some of his literary judgments he was extravagant. George Eliot was "l'unique," "la sainte"; Renan, too, was one of his "idols"; and Strauss was "the man of the century for whom I have had the most admiration and sympathy."

The ugly old cathedral of St. Pierre at Geneva is the subject of an interesting and well-illustrated "album" published by Kündig, under the direction of Camille Martin. There are forty-five large plates and fifty-six minor illustrations in the book. The restoration of the exterior of the church, which was not long ago completed, is unsatisfactory, and M. Martin does not hesitate

to criticise it. The work of restoration was especially difficult, because St. Pierre's belongs to no particular period. It was begun in the thirteenth century and has no style of its own, being an example of a mongrel architecture, partly Roman, partly Gothic. The impression of solidity and sombreness is, however, in harmony with the later Calvinistic traditions which have made the old church the chief Protestant shrine on the Continent of Europe.

The most noted station in Switzerland, for the cure of tuberculosis, is Leysin in the canton Vaud. Under the auspices of the Société Climatérique of that place, a number of interesting studies of the "white plague" have just been published. These are likely to be useful to the medical profession generally, especially because of the wide experience of the several authors. The preface is by Cérenville, honorary professor of clinical medicine in the University of Lausanne. This collection of essays is not intended to advertise the "cure" at Leysin; but is a scientific account of results achieved in treating this disease, which is strangely prevalent in Switzerland, in spite of a climate which offers the best conditions for prevention and cure.

The "Annuaire de l'instruction publique en Suisse," edited by Professor Guex of the University of Lausanne, gives an exhaustive account of the progress of education in Switzerland. The editor is director of the normal schools in the canton Vaud, and in this pamphlet of some five hundred pages he reviews the movement of pedagogical ideas in general, gives a narrative of what has been accomplished during the year in the different sciences, and describes with elaborate statistics the organization of public instruction throughout the Federation. One part of the work is devoted to an analysis of educational legislation during the past year. In addition to this general annual, several of the cantons have their own special publications. The report of the educational authorities of the canton Neuchâtel is as bulky a volume as that issued by the federal government.

It is a fine tribute to the memory of Lincoln that a distinguished Swiss author should present his life and character as a pattern for the young men of the Helvetian republic. Eugène Monod has just published a life of Lincoln, entitled "Un grand Américain," which is dedicated "à la jeunesse suisse." Monod compares the American President to the great heroes of Cornelius Nepos or of Plutarch.

A. A.

SCANDINAVIAN BOOKS.

BERGEN, Norway, January 20.

In the long list of Christmas publications in Scandinavia very few are entitled to international consideration. Of the new Swedish books special attention must be called to the bulky novel, "Thure Gabriel Silfverstaahl" (Stockholm: Bonniers), by the young author Sven Lidman. It created an enormous sensation, particularly in Sweden, because of the author's bitter scorn of the late King Oscar's policy during the fatal conflict between the two countries five years ago; he accuses the King of having lacked intellect, courage, and forethought, and represents him as a feeble-minded, senile weakling, who had only little interest in the affairs of the state. A book of essays, by the famous poet, August Strindberg, called "Svarta Fanor" ("Black Banners"); a collection of short stories, "Sagar om hjärtat" ("Stories of the Heart"), by Gustaf Ullmann, a long novel, "Havet" ("The Ocean"), by K. G. Ossian-Nilsson; "Tva sagodramer" ("Two Saga-dramas"), by Per Hallström, and the novels "Barnet" ("The Child"), by Hildur Brettner, and "Bendel & Co.," by Henning Berger—all are extremely popular in Sweden. The well-known poet, Gustaf Fröding (see the *Nation*, Vol. XCI, p. 387), has collected in book form a number of his previously printed poems and essays, in two volumes, entitled "Efterskörd" ("Aftermath").

One of the most popular Danish books this winter is the novel "Inger," by Mrs. Emmy Drachmann, the divorced wife of the famous poet. It deals chiefly with the writer's marriage with Holger Drachmann, and is a pathetic and well-written story which would be read with real interest even if it did not involve the life of a prominent man. Another Danish book has attracted much attention, although not of a specially complimentary sort, "Den Farlige Alder" ("The Dangerous Age"), by Karin Michaëlis, the wife of the dramatist, Sophus Michaëlis, whose play, "Revolutions bryllup" ("A Revolutionary Wedding") was given in New York last autumn. It represents in a series of letters the erotic feelings and ideas of a woman in the age between forty and fifty, but though it must be admitted that the book is written with talent, it is a question whether such intimate revelations should have been published. The book should certainly not be placed on the open shelves in a public library, an observation which applies likewise to the new novel, "De Salige" ("The Blessed Ones"), by the young author, Harold Kidde. It is written in lyric, rather high-flown language, which is pleasant as a rule, but at times spoiled by affectation and extravagance. The author is a dreamer who sees everything with a blur, even his characters; a few chapters, nevertheless, are written with forceful realism, those wherein an outcast girl tells of her experiences. Of the following three Danish books that have met with the approval of the critics as well as that of the public, "To Slegter" ("Two Generations"), by Jacob Knudsen, and "Pelle Erobreren," by M. Andersen-Nexo, are novels of some note, and "Himmerlandshistorier" ("Himmerland Stories"), by Johannes V. Jensen, is exceptionally well written and will be read with great interest. The author, though a comparatively young man, has a secure position as a writer of fiction, and, indeed, is often compared with Knut Hamsun and Verner von Heidenstam. His works are admired for their excellent literary style and a vivid, easy imagination, which frequently finds vent in quite grotesque pictures and comparisons. He possesses a fund of good humor, and entertains while he preaches. Next to the critic, Georg Brandes, he is regarded as the greatest literary man in Denmark to-day. Another eminent writer, Herman Bang, has brought out a significant collection of critical essays on well-known European actors and actresses of the present time. The book, which is entitled "Masker og mennesker" ("Masks and Men"), and which contains sketches of Eleonora Duse, Josef Kainz, and the Danish actress Betty Nansen, to go no farther, is brilliant, fascinating reading, and attests Bang's reputation as one of the most intelligent theatrical critics on the continent.

In Norway, the Christmas season was signalized by Halvdan Koht's "Pengemagt og arbeid i Amerika" ("Capital and Labor in America"). Professor Koht stopped in America for eight months, two years ago, and during that time acquired a surprising amount of information. He deals with the Standard Oil Company, its history and present power, with the agricultural conditions in the United States, with the immigration problem, with the negro question, which he thinks is of an economic rather than of a racial nature, and with the origin and history of socialism in America. Written in an interesting manner and without marked bias, the book has found many readers in Norway and will undoubtedly contribute to a clearer comprehension of the most vital American problems of the present time. Another professor at the University of Christiania, Gerhard Gran, has just published a bulky monograph on Jean Jacques Rousseau. It concerns mainly the life of Rousseau, but is to be followed by a volume on Rousseau's teachings and by still another on Herder, the philosopher; for not until these works have been written, says the professor in his preface, shall he have the material needed to accomplish his real aim in this series, namely, to write a standard biography of Norway's greatest poet, Henrik Wergeland. As will be seen, Professor Gran is aiming far ahead, though perhaps not far afield, considering his well-known perse-

verance and capacity for work. This first volume on Rousseau is full of life and vivacity, if also of undue enthusiasm for its hero.

Of other Norwegian books may be mentioned a new collection of letters, "Breve til Hans Son" ("Letters to His Son"), by the late novelist, Alexander L. Kielland. They are issued by his son, the young author Jens Zetlitz Kielland, and the refined, masterful language and the warm heart of the famous writer are noticeable in all of them. The novelist, Thomas P. Krag, has written a collection of short stories, "Vei og vidde" ("Path and Upland"), which are mostly good reading, but of somewhat unequal merit. Hans E. Kinck, novelist and dramatist, has finished a strong drama treating of Pietro Aretino and the gay and frivolous life in Venice. It is difficult reading, but is profound and interesting. The famous discoverer of the leprosy bacillus, Dr. G. Armauer Hansen, has written his memoirs, in which will be found many readable things concerning conditions in the past, as well as interesting reflections on problems of the present day. Finally attention may be called to the "Leo Tolstoy og Nutidens Kulturkrise" ("Leo Tolstoy and the Cultural Crisis of the Present Time"), by the literary critic, Christen Collin. It gives much valuable information on Tolstoy's life and teaching, but is often spoiled by diffuseness. ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

In the Town Hall of Twickenham from July 31 to August 6, 1888, there was held an exhibition commemorative of the two hundredth anniversary of Pope's birth, and while that exhibition contained numerous personal relics of Pope and several original portraits, it was inferior so far as first editions of his books are concerned to the exhibition which is now open at the Grolier Club, No. 29 East Thirty-second Street, and which will continue until March 4. Several books are shown which are not in the great Pope collection brought together by Marshall C. Lefferts and acquired a few months ago by Harvard University. Notable among these are two Dublin editions of "The Dunciad" and a heretofore undescribed first issue of "An Essay on Criticism," having the imprint "London: Printed for W. Lewis in Russell-Street, Covent Garden." In most copies this is followed by "And Sold by W. Taylor" and other booksellers. Although the names of the owners are never placed upon books in the exhibitions of the Grolier Club, it will not, we believe, be betraying any confidence in saying that, with three or four exceptions, the books and portraits in the present exhibition belong to Beverly Chew of this city.

Later than ever before, but including a larger number of records than any preceding volume, American Book-Prices Current, Vol. XVI, covering the season of 1909-1910, has just gone out to subscribers. This volume comes out with the imprint of the new firm Dodd & Livingston instead of Dodd, Mead & Company. Only 550 copies have been printed, and the price, owing to a falling off in subscription taken in connection with the much-increased bulk of the volume, has been raised to $10. Records of the sale of 16,994 lots of books and manuscripts, which have brought $3 or more, are included in the volume. These are selections from some 124,000 or more lots described in 148 catalogues of sales held during the season. We notice one edition of the "Mémoires du Comte de Grammont" entered under Lady Anne Hamilton instead of under Count Anthony Hamilton, where other editions are found. Other mistakes will, no doubt, be discovered by use, but the volume seems, generally, to be well and accurately printed.

On February 7 and 8 the Anderson Auction Company will sell a selection of books from the library of the late Samuel L. Clemens, together with fifteen autograph manuscripts. Most of the books are, of themselves, of slight value, but with very few exceptions they contain Mark Twain's signature, generally with a date, and each volume contains a certificate signed by Albert Bigelow Paine, Mark Twain's literary executor, saying that they are from his library. Many of the books were presented to him by their authors. Some of the volumes contain marginal notes in Mark Twain's autograph, while inserted in others are fragments of his writing, the pieces often being of considerable interest. A copy of Dean Sage's "The Restigouche and Its Salmon Fishing," privately printed, 105 copies only, in 1888, is perhaps the most valuable book in the portion of the library being sold. Portions of the library have been given to the public library at Redding, Conn., in which Mark Twain was much interested. In 1908 he had a printed sheet, headed "To My Guests, Greeting, and Salutation, and Prosperity!" telling of the progress of the library, and closing with the following characteristic sentences, which have not, so far as we know, been reprinted:

Everybody will have a chance to contribute to this fund. Everybody, including my guests—I mean guests from a distance. It seems best to use coercion in this case. Therefore, I have levied a tax—a Guests' Mark Twain Library Building Tax, of one dollar, not upon the valuable sex, but only upon the other one. Guests of the valuable sex are tax-free, and shall so remain; but guests of the other sex must pay, whether they are willing or not. I desire that the money be paid to me, personally; this is the safest way. If it were paid to my secretary, a record would have to be made of it, and the record could get lost.

A list of the more important manuscripts included in the sale has been already printed in this column. They are mostly late manuscripts, the longest being "A Horse's Tail," written on one side of 159 leaves, printed in *Harper's Magazine* in 1906, and "Meisterschaft," 92 leaves, printed in the *Century Magazine* in 1888. A note to the printer on the "Meisterschaft" manuscript shows that there was probably prepared a privately printed issue of this piece which, if one is still in existence, would be counted a great treasure by any Mark Twain collector. This note reads:

Dear Van. Please set this up, & after you have got your proof as clean as you can, send me a proof and I will correct it & return it to you, & ask you to strike off two or three perfected copies for me to forward to the "Century." . . . Keep the thing private. Don't let it get out of your hands.

This shows that the original plan was to set up the story in some other printing office and strike off a few copies which the author could revise with more care than could be given to the regular magazine proofs. Whether or not this was actually done is, of course, uncertain.

On February 9 and 10 they will sell Part I of the important library of Judge Jacob Klein of St. Louis, including first editions of Matthew Arnold, Lord Byron, Bret Harte, and other authors, books in fine bindings, autographs, and many other interesting lots.

On February 6, 7, and 8 the Merwin-Clayton Sales Company will sell the angling collection of the late James L. High of Chicago. Included is the first edition of Izaac Walton's "Compleat Angler" (1653), one of the rarest of English books. This copy is in old russia, tooled on sides and back. The Locker-Lampson-Van Antwerp copy in the original sheep binding, which brought £1,290 in March, 1907, is now in Mr. Morgan's library. The Heckscher copy, in modern binding, sold in New York for $3,900 in February, 1909. Mr. High also owned the second, third, fourth, and fifth editions of Walton, all of which are rare and sought for by collectors, as well as a very long list of later editions. Another great rarity is Venable's "Experienced Angler" (1662), a perfect copy in old calf binding.

On February 9 and 10 they sell a miscellaneous collection, including a selection from the library of David N. Carvalho, the handwriting expert.

Correspondence

AN EXTRAORDINARY COINCIDENCE.

TO THE EDITOR OF THE NATION:

SIR: The day before yesterday my son, in commenting on Martine's election to the United States Senate, made this remark to my wife and me: "What kind of a name is Martine?" Yesterday morning I read in Grillparzer's Diary for 1829 the following:

"How curious, almost mechanical, the interference of memory in dreams is, I learned again last night. I dreamed towards morning that I was reading some verses which my brother Karl had addressed to a 'Frau Martine.' Awaking immediately thereafter, nothing appeared to me strange in the dream except the name Martine, which I did not remember ever to have heard before, nor did it seem to me probable that the like of it existed anywhere in the world. Still ruminating on the part played by fancy in the invention of this name, I sat down to breakfast, in the course of which I began to read Tacitus. In order to recall something I had forgotten, I turned back a number of pages to the passage about the death of Germanicus, which I had read a few days previously, and lo and behold! the woman of whom Piso was said to have made use in the poisoning of Augustus's grandson was called Martina. My bad memory had made me forget this circumstance so completely that even the repetition of the name in my dream could not for a moment recall the fact that I had heard it once before—and yet I knew in my dream what was hidden to me while awake."

Have the annals of the Society for Psy-

chical Research any coincidence more striking than this? GUSTAV POLLAK.

New York, January 26.

MODERN LITERATURE IN THE FIRST TWO COLLEGE YEARS.

TO THE EDITOR OF THE NATION:

SIR: Occasionally the college instructor in English or German is surprised to hear one of his students remark, "I wish we read more books like Macaulay's 'Essay on Clive,' or Heine's 'Harzreise.'" What kind of home training has this man had? What school taught him to appreciate a classic in its disguised text-book form? A few weeks ago I had occasion to speak of Carlyle and his stimulating influence upon his readers, whereupon one of my students replied, "Well, I had to read 'Heroes and Hero Worship' in my English course last year, and I felt when the year was over that I didn't want to hear any more of Carlyle. He is too hard and too uninteresting." Recently, a former classmate of mine, now a business man, said to me of his English course in the sophomore year, "Do you remember how we had to read Thackeray, and how we hated him? I despised him then, but the other day I picked up his 'Lectures upon the English Humorists,' and read them with keen pleasure. Why was I not able to do that in college when I was studying English literature?" Perhaps an immediate answer might have been given to the effect that as a student his mind had not matured sufficiently to appreciate such literature—a very easy and a very inadequate explanation. It seems to me that the true reason lies in the fact that our American college student has not been taught, and is not taught to-day, to look at literature in the proper light. When Carlyle was a poor, struggling tutor, he wrote to his brother John these lines: "After all, this literature is a grand and glorious thing. It is the life-blood of the mind; and mind is the sovereign of Nature. Kings who have it not go down to dust and are forgotten; those who have it influence the world, and spread their own brief being over many generations of their fellow men." How many instructors teach their students literature from that point of view? In choosing books to be read in our modern literature courses we first of all consider whether two or three texts can be covered within a certain number of weeks. We then select works which will probably amuse the student, just as the kindergarten teacher gives "funny stories" to the beginner in reading, thereby deceiving the pupil into thinking that serious books are necessarily dull and difficult to understand. I think it is no exaggeration to say that many instructors theoretically believe in Carlyle's words, but practically, they treat this "life-blood" in the classroom as though it were a bitter medicine which must be swallowed by the student as quickly as possible, preferably in sugar-coated capsules, taken not more than twice a week for one term.

An aid to this false pedagogy is the lack of coördination of courses. Take the teaching of German literature, for example. There is a great gap between the quality of the German literature which the student reads in his freshman year and that which he reads in his sophomore year. During the first two semesters he is generally required to read the same kind of German which he had at the secondary school, namely, "from 200 to 300 pages of easy stories and plays," supplemented by a greater amount of composition work, which bores him tremendously because he wants to "speak the language immediately and not do all this writing business." When the end of the freshman year comes, the amount of literary appreciation which the student has acquired is virtually nil. I think that this lack could be filled by a better coördination of courses in the secondary schools, by a distinct change in the character of the entrance examination papers—it is rare to find a paper which contains a single question bearing upon literary history—and, lastly, by a coördination and coöperation in the modern language departments of the college. How many instructors in English ever ask their students even to glance at the correspondence between Carlyle and Goethe? How many endeavor to show to their classes the influence of Hoffmann upon Poe, or try to persuade their students to read Matthew Arnold's essay upon "A French Critic of Goethe," or invite them to compare the work of *any* English writer with that of a French or German author? The trouble is that each course is considered by its conductor as a kind of hermetically sealed safe, out of which no coin is to be drawn and put into exchange with that of other courses in other departments; and the student, consciously or unconsciously, acquires the same view of his literary studies as that held by his teachers.

To my mind this is all wrong. There is no reason whatsoever against acquainting the undergraduate with the value of a comparative study of literature as soon as he can read more than one language. I should like to see this done in the freshman year and not postponed until the student is a post-graduate. That is why I favor such texts for the freshman year as Eckermann's "Gespräche mit Goethe," Carlyle's "History of Literature," Boswell's "Life of Johnson," and many others of that universal character.

Is it not advisable, then, that, in the teaching of modern literature during the first two college years, we should bear in mind these facts? (1) The importance of taking the study of literature more seriously; (2) the necessity of a greater coördination and coöperation of courses; (3) the superior value of textbooks whose material is taken from the writings of great historians, great biographers, and great critics of literature.

ALFRED E. RICHARDS.

Princeton University, January 22.

QUESTION FOR INDIANISTS.

TO THE EDITOR OF THE NATION:

SIR: Years ago, in studying the mythical cosmography of India, I unexpectedly came upon the idea of a perfectly uniform septipartite division of each of the seven geocentric heavens, in such wise that each higher and ampler vault or hemisphere would be an enlarged pattern of the one next nearer to the earth, and all of them celestial reproductions and amplifications of the septipartite upper hemisphere of the central earth. The conception is so intrinsically interesting, and so characteristically Indian, that in reporting it (in "The Cradle of the Human Race," 1885, p. 459, and again in "The Earliest Cosmologies," 1909, p. 87), I regretted my inability to cite any authority for it beyond Shome's Prize Essay of 1840. Recently, in rereading, after many years, a part of Wilford's fantastic, yet instructive, paper on the Svēta-dvīpa, in his "Sacred Isles of the West" (*Asiatic Researches*, Vol. XI), I lighted upon the passage (p. 104) in which he mentions a second Svēta-dvīpa, "in the air," immeasurably above his terrestrial one, and adds: "The geography of the two is the same exactly; the dimensions only are different."

It is hardly possible to doubt that we have here a reference to the same elaborate cosmological conception, and to the superimposition of one conventionally subdivided celestial dvīpa upon and high above another. He names no authority for this second Svēta-dvīpa "many millions above the terrestrial one," but says it is the teaching of "the commentator on the Bhāgavata, with many other learned men." If among the readers of the *Nation* there is any specialist in Sanskrit literature who can throw further light on this singularly attractive world-view, or upon the authorities referred to by Wilford, he will render an important service to students of Indian thought by so doing.

WILLIAM FAIRFIELD WARREN.

Boston University, January 25.

VOCATIONAL GUIDANCE.

TO THE EDITOR OF THE NATION:

SIR: In your generally favorable comment on the Harvard University summer course in vocational guidance, in last week's issue of the *Nation*, there is evidence that you have not fully understood the aims of the proposed course, inasmuch as you speak of it as "a course in choosing a vocation." The aim of the course is to guide students (teachers attending the course) to an understanding of the principles involved in giving vocational advice, and to the best sources of the knowledge they (and others) require to become satisfactory vocational advisers. But you "fear the worst," namely, that in some form or other a course in vocational guidance will "find itself in the regular college curriculum." There is no intention of offering such a course to college undergraduates. Moreover, you suggest "that boys disillusioned prematurely by the humdrum to which they must look forward will refuse to make choice of any career whatsoever. . . . To tamper with a boy's vision of his future is perilous." This suggestion you would probably not make if you were more fully informed concerning the aims and methods to be inculcated by the proposed course. Far from tampering with a boy's vision of his future, it is one important function of vocational guidance to help a boy to develop such a vision if he has it not; and, if he has it, to help him in every possible way to realize it through educational opportunities that may be, or ought to be, accessible to him. Nothing is farther from the intention of those interested in the movement for vocational guidance than that it shall ever mean prescribing a vocation or limiting the range of the possi-

ble vocations which an ambitious youth may entor. It doos mean bringing to bear on the choice of a vocation organized information and organized common senso.

PAUL H. HANUS.

Harvard University, January 28.

ON THE SAME.

To the Editor of The Nation:

Sir: Perhaps every one who has to do with higher education will agree that the shibboleth of tho moment is "courses." If a person takes a "course" in a subject, he is *ipso facto* an authority in it; without the "course" he has no right to an opinion. The superstition has indeed gone a step farther: school committeemen and trustees are generally a little suspicious of the applicant who has not taken a course in pedagogy. In view of these facts, the announcement of "an interesting and novel course" to be given at the next session of the Harvard Summer School gains added point, a course which "will deal with the theory and practice of vocational guidance." This sort of work will naturally appeal to the teacher who is not only interested in her classes, but fully alive to the unwritten responsibilities of her position. Longing for the ability to guide her pupils into paths that will bring them to happiness, usefulness, and power, she at once falls into tho contemporary delusion. Her first thought is to take a "course" in "vocational guidance."

But is such a method the proper one? It seems to me that in order to guide one's pupils in the matter of choosing a vocation and making the best of life, one must possess culture, sympathy, tact, quickness of insight, an ability to obtain the confidence of boys and girls—in short, all those immaterial qualities which are the result of fine living and the possession of a noble soul. You cannot give lectures and laboratory demonstrations on them. You cannot pass examinations in them. They come only after long years of calm living and thinking; they are the evidence of maturity and mellowness of character. It surely is time to protest against applying to spiritual matters hothouse methods and the laws of skyscraper engineering. You can, by hastening natural processes, ripen a bunch of grapes in a week, but you cannot convert a sinner in that time. An architectural marvel may be erected in a month, but a towering life cannot be. The new course at Harvard may be able to give information on a few superficial matters that an intelligent person could obtain independently. It cannot, however, provide a short cut to the goal of every true teacher's strivings. D. T. POTTINGER.

Boston, January 21.

THE SOURCES OF "IVANHOE."

To the Editor of The Nation:

Sir: It was only after I had read my paper on "Scott's Ivanhoe and Sidney's Arcadia" at the recent meeting of the Modern Language Association that I learned of Professor Kerlin's article on the same subject in *Modern Language Notes* for May, 1907, pp. 144-146. If I had thereupon decided not to publish my paper, I should at once have publicly acknowledged Professor Kerlin's priority. I decided, however, to make the acknowledgment in connection with my own published results. The relation between these and Professor Kerlin's would there, I thought, appear most clearly, and would justify my decision to publish. Professor MacCracken's very interesting letter, in your issue of January 19, makes it proper to state these relations now.

Professor Kerlin's article deals only with the internal evidence, viz., the similarities between the two works. Quite independently I have found, roughly speaking, about twice as many of these similarities, some of which I had not the time to present to the association. The following situation, common to both works, is an example: The hero in disguise meets his old enemy; the enemy speaks slightingly of the hero, not knowing him to be present; the hero in disguise vouches for the valor of the hero *in propria persona*, and on his behalf challenges the enemy, undertaking that the hero will maintain the challenge ("Arcadia," III. xxvi, p. 351, v. ff. [Sommer's facsimile of Quarto of 1590]; "Ivanhoe," ch. v.). A parallel so complex would almost seem to possess a certain probative force apart from the cumulative evidence of the numerous other parallels, and, I venture to think, is not, as Professor MacCracken says, an "infinitesimal borrowing." My investigation further deals with (1) the external evidence of Scott's acquaintance with Sidney's work (*e. g.*, his possession of a copy, which I examined at Abbotsford last September); (2) the contribution of the "Arcadia" to "Ivanhoe" in relation to the other sources of the latter; (3) Sidney's own sources for the matter taken over by Scott. The second point involves a consideration of Scott's use of his literary material; and here I heartily agree with Professor MacCracken that this use was not "an offence." Nor can I think, with your correspondent who reported the meeting of the association, that these *Quellenstudien* are of small interest, concerned as they are with a long sweep of literary tradition ending in a masterpieee. This literary tradition is considered under the third heading above. For instance, Sidney took from Underdowne's translation of the "Æthiopica" of Heliodorus the antithetic formula: "Thus was their banquette turned to a battaile" ("Arcadia," II. xxvii, p. 223v.; "Æthiopica," I. i, Underdowne, p. 10 [Tudor Translations, vol. V.]); which Scott used again: "Men of their precarious course of life change readily from the banquet to the battle" ("Ivanhoe," ch. xli.). Finally, I cannot feel sure, with Professor MacCracken, that Scott received from the "Arcadia" no suggestion at all for the fire at Torquilstone. The "Arcadia" certainly contains this situation: a desperate combat is interrupted by a fire; the combatants turn to fighting the flames and at length to saving themselves ("Arcadia," II. xxiv, p. 211, where the fire is on shipboard). In view of Scott's many other borrowings from the "Arcadia," it seems not unlikely that this passage was present to his mind along with the fine passage from Barbour's "Bruce" quoted by Professor MacCracken.

SAMUEL LEE WOLFF.

New York, January 25.

THE DIRECT PRIMARY.

To the Editor of The Nation:

Sir: The professors, it seems, from the report of the last meeting of the American Political Science Association—the professors have their doubts as to whether the direct primary is a success as a solution of the boss evil in American politics. The conviction, in fact, is insidiously stealing over their minds that the ordinary American will not be bothered with the trouble to register his political preferences at the polls, except under the spur of a riotous campaign embellished with brass bands and personal vituperation. The ordinary citizen, the theory was, would go to the primaries—in fact, was positively aching for the chance—only the boss had fixed up the slate in advance, and it was useless to try to offset his influence. If we only had the direct primary, the popular will would manifest itself at once. We got the direct primary. The voter still failed to do his duty.

To remedy this, the proposal occasionally appears in the press that citizens should be fined for not voting. We shall have reached the end of the passage when it is proposed that cigars and sandwiches be offered to him who will kindly take the trouble to exercise the precious right of suffrage.

But through all this the fact stands out in all its stark nakedness that we Americans do not esteem the right of suffrage; it is too cheap, too common, to be bothered with. The right to vote does not connote intelligence or respectability. It is merely an accretion that comes with twenty-one years and a pair of trousers.

Eventually—but when, no man knoweth—we shall have to learn to regard the ballot as a privilege, and not as a duty—a privilege to be earned by affirmatively proving fitness, something worth striving for, a mark of a modicum of intelligence and respectability. The mere fact that a human being is of the masculine gender, has survived the measles and whooping cough, and is not at election time in jail or the insane asylum, really is not and ought not to be considered a qualification for taking equal part in the management of the country. And there is no reason under the sun why the ballot should be thrust on such creatures. And, just so long as the ballot is thrust on such creatures, the respectable element of the country will regard the right to vote as the cheapest and least valuable thing in this life. Yet that simple fact is the hardest thing for students of political science and observers of national life to get into their heads. It seems almost sacrilegious, because, forsooth, we have read in the Declaration of Independence that all men are born free and equal—an evil inheritance from the precursors of the French Revolution, embalmed in our political philosophy.

The first man to welcome the elimination of the unfit from the suffrage would be the American workingman, the man with wife and children and household goods, the man who lives somewhere, who is somebody in the estimation of his circle of acquaintances, who takes an intelligent interest in public affairs of his country, whether native or adopted, the man who, taken in totality, is the most valuable asset in American national life. The men who would oppose most bitterly drawing the line

at intelligence and respectability would be the politician who goes into public life for what he can steal, and his brother-in-arms, the newspaper proprietor, whose business it is to stir up the lower classes.

E. L. C. MORSE.

Chicago, January 16.

THE BUDGET OF THE SCHOOL AT ATHENS.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, who gives a report of the recent meeting of the Archæological Institute at Providence, in the *Nation* of January 12, makes the statement that the annual budget of the school at Athens is something above $20,000. I wish, indeed, that this were so. As a matter of fact, the school's income is about $10,000, when times are good, and the budget is made accordingly. J. R. WHEELER,

Chairman of the Managing Committee of the School at Athens.

Columbia University, January 17.

Literature

THE LAST VOLUME OF THE CAMBRIDGE MODERN HISTORY.

The Cambridge Modern History. Planned by the late Lord Acton, LL.D., Regius Professor of Modern History. Edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., Stanley Leathes, M.A. The Latest Age. New York. The Macmillan Co. $4 net.

With this twelfth volume there comes to its end (save for the maps, which are yet to appear) one of the most remarkable and interesting literary enterprises of our time. Many encyclopædias have before now attempted to turn special or expert knowledge to account by entrusting separate departments of science, whether natural or social science, to writers possessing special competence. But here the more difficult experiment has been tried of constructing a full and minute historical narrative by a series of articles or chapters, each meant to fit into or continue its predecessors, which are the work of different minds, possibly entertaining different views of history, probably each of them affected by a certain personal bias or tendency which distinguishes each worker from his fellows. That such a scheme should be even moderately successful does credit to the faith of its framer, the late Lord Acton, and of the editors who, after his much to be lamented death, took over the scheme, and have worked it on his lines for the last ten years.

Into the extent of the success attained we shall presently inquire. Meantime, let us note that the present, and concluding, volume consists of twenty-six chapters, written by twenty-five hands, most of them new hands in the series, and five of them belonging to the European Continent, viz., Profs. Bourgeois, Oncken, Eisenmann, Stavenov, and Señor S. P. Triana. Of the three editors, neither Dr. Ward nor Mr. Prothero is a contributor, but Mr. Leathes writes two chapters. Besides the properly narrative articles, which cover nearly every part of the world, there are six "general chapters," one on broad features of historical movements in modern Europe and five others on the History of the Law of Nations, on Social Movements, on the Scientific Age, on Modern (geographical) Explorations, and on the Growth of Historical Science.

In the quality of the work there is very little to remark, for it neither rises above nor sinks below the last three volumes. The writers are careful and painstaking, bent on the excellence of their matter, and taking little apparent thought about style or manner. No chapters are better (and few indeed so good) than those in which Professor Bourgeois traces the history of the Third Republic in France, and Professor Oncken describes the parallel and frequently interlacing course of events in the new German Empire, which, almost equally with the French Republic, sprang out of the war of 1870-71. Both these writers show a philosophic grasp of their respective subjects, and bring out the salient features with a clearness and force which entitle them to the highest praise. Excellent also are Dr. Westlake's chapter on the Foreign Relations of the United States during the War of Secession, and Sir Frederick Pollock's summary of the progress made in the Law of Nations and in measures looking to the prevention of war. Sidney Webb's chapter on Social Movements and G. P. Gooch's on the Growth of Historical Science contain a great mass of closely packed information, and Dampier Whetham does perhaps as much as can be done in twenty-five pages to convey some idea of the more recent and striking advances in physical science.

The obvious difficulty which confronted the writers of the political parts of this volume was that of treating with the breadth and the impartiality proper to a philosophic historian events that are still too near to our own time to be understood in all their bearings or approached with the cold detachment of science. The editors in their preface recognize this difficulty when they say:

> The historian must endeavor to see this world not as it affects the prejudices, interests, and limited outlook of his contemporaries, but as it might appear to one who should look back on it without any personal concern in its turmoil. Only partial success is possible; but he may console himself for partial failure with the belief that he is handing down to posterity one of those records of contemporary impressions which history is bound to respect if only they be sincere, impartial, and accurately informed.

The contributors have doubtless honestly tried to deal impartially with recent periods, but some at least of them have fallen short of success. In the third chapter, for instance, the view presented of several critical points in recent English history, such as the eventful years of 1875-80, leaves much to be desired, although those years now lie thirty years behind. Neither is it always correct in its statements of fact. When the narrative comes down to within ten or fifteen years of the present day, one can perceive that each writer feels the strain of trying to raise himself to a point high above the dust of the present and of preserving political detachment, to be so severe that he takes refuge, and perhaps rightly, in an entirely bare and colorless record of facts. It would, we think, have been better to bring the historical narrative to a close, at least as far as Great Britain is concerned, at 1880, or, perhaps, 1890, or 1900 at the very latest. The end of the century would have been, if not an historical landmark, yet a point easy to remember, and the history of the United States (published some time ago in Vol. VII) stops even before that date. While closing the narrative at one of these points, it would have been convenient to append a plain chronological record of the most important events in each country, a record much fuller than the chronological table which we find at the end of the volume. (In the case of this present volume that table is meagre and not very judiciously framed.) In this way the reader would have had at least an outline of history brought up to the latest possible moment, while the impossible task of treating current events in a truly historical spirit would have been declined.

The conclusion of the series is a fitting time to review it as a whole, and in doing so two questions naturally arise. The first is: How far have these twelve volumes realized the hopes and views of the gifted man who planned the scheme, a man who was himself unequalled in the English-speaking world for his command at once of historical method and of an immense store of historical learning? The other question is: What does the series give the world which the world lacked before, *i. e.*, things which neither the ordinary educated man nor the scholar could have found by consulting the various histories of different countries, different epochs, different institutions, which would stand ready to his hand in any well-stocked library?

As respects the former question, Lord Acton's hopes have been so far met that the series has maintained a high average level of thoroughness and fairness. Every chapter in it deserves to be called scientific, in the modern sense of the word. There are chapters written with a level tameness of style which approaches dulness. In many there is a

lack of color, in some few a lack of grasp and philosophic insight. The later volumes seem as a whole, though with some brilliant exceptions, to fall below the earlier ones, and particularly below those on the Renaissance and the Reformation, in which some of the articles reached a level not surpassed by any of our contemporary historians. This tendency to a decline in brilliancy of execution is the experience of all editors. They begin by making great efforts to procure the most eminent men in each department, but after a while they find that the trouble of doing so is too great in proportion to the result, especially as very eminent men are sometimes troublesome to deal with. So after a while the editor usually contents himself with finding good solid workmen, who will turn out a careful and sensible article and mail it to him not much later than the promised date. It is also probable that Lord Acton desired a somewhat more perfect continuity of treatment than has been in fact attained. Apparently he would have liked the chapters not only to be each of them a whole in itself, dealing with what might be deemed one period, or one career, or one special topic, but also to be part of a narrative so continuous that there would be no gap between every chapter and that following next upon it, each fitting into the other. Whether such perfection could have been reached where so many different writers were at work may be doubted. Whatever defects the execution of the scheme shows seem to be inherent in the scheme rather than chargeable upon the editors. Nothing—or at least very little—of importance has been missed out because it falls through between the chapters. But sometimes one is perplexed by the shifting of the point of view, or by what may be called the change of atmosphere from one chapter to another. This would, of course, be far more felt but for the effort made by all the writers to eliminate their personal proclivities and forego or avoid that dramatic coloring which the literary artist loves but the scientifically minded historian of our own day rejects. Flavor suffers in the process of desiccation to which the contributors have subjected themselves. Yet that is what the dominant standards of the twentieth century demand; and for such a book as the present they are proper standards. So on the whole it may be concluded that Lord Acton, were he still with us, might well be content with the result of his scheme. He aimed at an impossible perfection: his editors have given us what is less, indeed, than some may have hoped, yet a solid and useful contribution to historical knowledge.

In what, then, does the value of this series lie? What does it give us which we could not get before from cyclopædias on the one hand and from independent treatises containing the histories of countries or epochs on the other?

The answer to this question is found in the fact that such a series combines the completeness of an encyclopædia with the greater fulness and presumably higher quality of a history proceeding from the pen of a competent historian. Doubtless we miss the interest which belongs to a well-marked individuality, such as the vivacious charm of J. R. Green, or the careful balancing of Stubbs, or the epigrammatic trenchancy of Goldwin Smith, the brilliance of Michelet, or the fiery force of Treitschke. Writers of that stature seldom run in the harness of a composite work. They must do their work in their own way and on their own scale. But we have in these volumes something complete and rounded—a book in which we are sure to find what we want and which the diligence of the editors has kept up to a level always respectable and sometimes excellent. For many countries of Europe there exists in English no satisfactory history covering the whole ground. There is none for Germany, none for Italy, none for Spain, none for Russia, none for Hungary. Most of us, if asked where to go for some account of the affairs of Portugal in the eighteenth century or Chile in the nineteenth or Poland in any century whatever, would be entirely at a loss. Here we find what we want. This is the one great and conspicuous service which the book renders, even to a scholar and much more to the average reader of an inquiring mind. He knows that he can be virtually certain of finding what he wants, and of finding it given in a completer way than any encyclopædia attempts. An instance presents itself in the present volume. Chapter xxi contains an account, brief indeed, and not very well arranged, but still a careful, fair, and generally accurate account of the republics of Latin America. The student who desires the information there given might have to search the shelves of a library for days to find it, and perhaps would not even then have got what he desired so concisely and judiciously set forth. This merit of the series is alone sufficient to justify its existence, and will, it may be hoped, enable it to hold its place in libraries for many years to come.

If it is to continue to be sold to and used by students, new editions will doubtless be called for, so it is worth while to take this opportunity of considering what improvements in it are required. One of these which we, and probably other reviewers, suggested in notices of the earlier volumes, has been adopted in the later ones, viz., a chronological table of events at the end of each volume. A much smaller addition, but one for which readers might be grateful, would be the placing in the margin of the pages a note indicating the contents of each paragraph, with the date of the events which the paragraph describes. But the change which most scholars will chiefly desire, and which, it is believed, many have already asked for, is the giving of references to authorities for the statements made in the text. We are well aware of the arguments used to defend the omission to give such reference, and aware also that the bibliographies appended to each chapter are intended to supply the want of references. But as these bibliographies include not a few books that are either trivial or untrustworthy, or both trivial and untrustworthy, not discriminating between good authorities and bad, they afford little guidance, though they may occasionally help the scholar to remember the name or date of some book which he had heard of previously but forgotten to consult. To make a system of references to authorities altogether complete would no doubt be a heavy task, and would add to the bulk of the book. In many cases, however, especially in the later periods, the requirements of the reader would be met by the citation of a few books of recognized authority, or a few public documents, without giving specific references for every fact to a particular page. In future editions, therefore, we hope to see either references or a much-amended bibliography.

Though no chapter, so far as we recollect, can be pronounced unworthy of its place, those few which are comparatively weak, might be either rewritten or carefully revised and strengthened. This suggestion is perhaps more applicable to what may be called the "general chapters," such as those on the history of political ideas and on literary history, than to the narrative chapters. It applies also, however, to one or two chapters in the present volume, in which the writers have not been able to overcome the difficulties (already discussed) which arise from the nearness of the events to our own time. When a work has reached so high a level as this does, one becomes more eager to see it brought even higher. It is a credit to British scholarship, yet not indeed specially to British, for besides the American contributions, it contains articles of conspicuous merit from writers belonging to the European Continent, whom the editors have been wise enough to enlist. The growth of the scientific spirit in historical writing has brought the great nations nearer together in their methods of treatment than they used to be. One feels in passing from a French or a German scholar's work to that of an Englishman or an American no abruptness of transition, but only a slight difference in tone and man-

ner which is in itself fresh and pleasing. Such variety is one of the agreeable features of the book.

One other question bearing on the series as a whole might be here considered, but it is so large a question that a brief reference to it must suffice. Such a great historical work has two aims, the one to present an account of all important events in narrative form, so that whoever desires to know what was happening in any particular part of the world at a given time may find the information he desires. The other is to present a broad philosophical view of the general movements which run through history, indicating the main intellectual and moral forces that have been at work and the lines which their action has followed. One asks accordingly in looking over the titles of the chapters from beginning to end whether these two objects have been attained. As to the former, the only criticism likely to be made is that some few of the byways of history have been insufficiently treated. They are *ex hypothesi* of quite secondary importance, but as it is specially hard to know where to find a proper treatment of them, this would be a reason for treating them here. The history of China and Japan in the seventeenth and eighteenth centuries, and the history of parts of the Near East during the same period, are examples. As respects the latter object, it may be suggested that Volume I ought to contain a much fuller general view of that which mediæval Europe gave to modern Europe as we find it in the middle of the fifteenth century, and that in the later volumes there ought to be chapters upon the relations of the civilized European nations (including the United States) to one another over the world outside Europe, and upon their relations to the barbarous or semi-civilized peoples. The extension of European power over these races, and the New World politics which that extension has created, are the most remarkable events in the world-history of the last sixty years, and seem to require a fuller and broader handling than they have received in the two last volumes. If space has to be found without unduly lengthening the series, it might be found by omitting or compressing the less important among the chapters on literature. Without in the least disparaging the importance of literature as a part of history, it may be suggested that the estimates of particular writers which fill a large part of those chapters could be omitted or shortened, for they lie rather outside the scope of the book, and do not always elucidate the movements of thought in the period covered.

CURRENT FICTION.

Rulers of the Surf: A Story of the Mysteries and Perils of the Sea. By J. W. Muller. New York: D. Appleton & Co.

The composite nature of the book is suggested by its two titles. Here is a jumble of sympathetic realism and the wildest romance. The earlier chapters deal vividly with the experience of the life-savers and fishermen on the fighting side of Long Island. In so far as description is adhered to, description of scenes and of general types, these pages are of unusual quality. The savagery of the open sea and the uncalculated bravery of those who daily cope with it are sketched with a good deal of vigor and color. There are chapters on deep-sea fishing which suggest the vividness of A. H. Bullen's first books; and nothing better has been written in celebration of our national life-saving service. But, alas, the usual thing happens: our author falls a victim to that strange centripetal force which seems destined to drag most of our essayists and literary painters into the common whirlpool of fiction. We are always free to wonder in such instances whether the writer himself has lacked courage to stick to his last or has succumbed to the voice of the publisher pleading with him to give his true work that false garnish of fiction which will commend it to the hasty palate of the goody-loving public. In this case far too few pages have been turned when the technical hero makes his appearance in the person of a foundling rescued from the deep and adopted by one of the life-savers. For his sake is presently manufactured a plot of considerable ingenuity involving abduction by a pirate, pursuit of treasure under the sea, and escape in an open boat from the hands of the abductor. That gentleman is a smooth and wily and savage villain quite of the Stevensonian model, hiding his wickedness under an affectation of simplicity and hearty good humor—a Long John Silver, in short. He has reappeared more than once in the sea romances of the past year: we would respectfully suggest that no further replicas are in order. When we say that the waif from the sea turns out to be the grandson of a very rich man, who has had his eye upon him all the while, we shall astonish nobody. The whole machinery of the story, as a story, is outworn and perfunctory. Nevertheless, the book is decidedly worth taking up for the sake of the opening chapters.

The Sword in the Mountains. By Alice MacGowan. New York: G. P. Putnam's Sons.

Here is an exceptionally vivid and interesting civil war document relating to that part of the great struggle which raged about Chattanooga. It draws quality and value from being in the main restricted to one locality. To give the faithful military history of one vital centre is to make an indelible impression of the grip of war. So, too, the story gains, since the characters, a more or less fixed group, never part with their personal relation to the region, and they and their setting become for the reader familiar company before the 450 pages are ended. Miss MacGowan's affectionate intimacy with the Tennessee and North Carolina boundary qualifies her for her task in an especial manner. Her own childish recollection, as she sets forth in her preface, goes back to the midsummer days of '65, when her mother had brought three little children down from Ohio to visit the husband and father whose regiment lay in Chattanooga. Her Northern birth, her later life in Chattanooga and on the neighboring ridges equip her inevitably for making a story which, lacking warmth and color not at all, is yet free from prejudice, and aims at accuracy rather than at pleading. The mountaineer's passionate loyalty to the Union, the Southerner's hot devotion to the Confederacy, flourish side by side in her experience and in these scenes. She has seen both sides, and she describes with a sympathy not so much divided as multiplied, father and son, old neighbors, lovers, standing at opposite points of view, each more often keeping than losing a spark of consideration for the endangered enemy; sometimes risking life and even honor for old ties' sake.

She has known, too, how to make a story on a level of interest with the history. The actual events in the stirring drama are told with admirable straightforwardness. But comment and description over-abound, giving the book undue length and undue wordiness. An occasional word of old English usage prettily hints at the mountaineer's pedigree. But the "white teeth of his smile," and "blond inches," and "cosmic despair," and "gruesome agonists," cause a sigh for the late Professor Hill, who, a student tells us, "could cure grandiloquence in one lesson."

The Winter Queen. By Marie Hay. Boston: Houghton Mifflin Co.

The present writer has produced several other books of this general type—dealing, that is, with royal personages and court life. Our huge feminine reading public appears to have an insatiable appetite for books of the sort; and most of them are produced frankly enough as supplies for a particular demand. Some of them are made up of mere gossip and scandal; others attempt to picture the dramatic moments in the life of royalty. This book is of the latter type. It is plain that the author has conceived a real enthusiasm for her subject. "Because," she says, "the Stuart charm, working through the

long-dead years, enchained me; and then, because personality is deathless, I fell into a true love for her Majesty of Bohemia." The purpose to tell the story of Elizabeth Stuart came upon her during a visit at Prague—a mystical impulse: "Perhaps her spirit, hovering over Bohemia, had come to order me to tell her sad life." There and then, at all events, began a pilgrimage through many countries in search of material. The result is a volume beautifully printed, illustrated, and bound, containing a narrative which labors under the disadvantage of being neither quite history nor quite fiction. The author says she has given as much study to her subject as though she had written a biography. It is a pity she did not write a biography. For it is clear that she has had no such training or impulse as could hope to produce that very rare thing, a real historical romance. For one thing, her style is affected. She has read and admired Hewlett, and has striven for a manner of elaborate artlessness flavored with archaism. Her fortune has not been above that of the ordinary historical romancer. With the best will in the world to make her people speak seventeenth-century English, she is continually permitting them to lapse into modern idiom. On one page Elizabeth keeps fairly to the mark with: "Alack! dear heart, why should I be weary of you because I crave a journey?" And on the next, all she can muster is, "We are living in the year of grace sixteen hundred and seventeen; we are no longer in the dark ages when murder was an ordinary matter." Nor is the story-teller's own English always unexceptionable. With all her anxiety for the refined word, she can speak of "an indulgent smile like we give to the harmless nonsense spoken by a child." As for her subject in general, we cannot say that the author succeeds in conveying to the reader the glamour it has for herself. This Elector and Electress of the Palatinate—this daughter of James of England and Anne of Denmark, with her young husband—remain in our minds as rather ordinary people. If the reader can feel the divinity that hedges them, in virtue of their rank, all may be well. Otherwise he is likely to find the book, on the whole, a little dull.

The Slowcoach. By E. V. Lucas. New York: The Macmillan Co.

This is a story of the ten days' travel of the Avory children and some of their friends from Oxford to Bredon and back in a "caravan," which had mysteriously arrived at the Avory home. There were Janet, the eldest and most practical; Robert, who was all for geography; Hester, who worshipped Napoleon and Shakespeare; Gregory, the youngest, with engineering aspirations; Horace Campbell, whose ideal was wavering between a cowboy and "Raffles"; Jack Rotheram, inclining to the sea, and his sister Mary, who, to a snub nose, quantities of freckles, and a very nice nature added good play with a cricket bat and a singing knowledge of the old Somersetshire songs. There were more adventures on the expedition than could have been hoped for in an England devoid equally of Robin Hood and Roundheads, and some of them were very exciting. But the trip itself was the real adventure, especially its startling end, after all chance for anything to happen would have been thought past. Rather oddly, the best-told parts of the tale are the "composite story," written by the young people early in the journey and entitled "The Secret of the Castle," and the "adventure of the little old lady," with her own "ripping" narrative, "Barbara's Fugitive." Unexceptionable is Hester's ode to the Rev. Francis Gastrell, who, in 1759, razed New Place in his rage at a demand for the poor rate.

O thou most base,
Who hadst possession of the dwelling-place
Of William Shakespeare, Stratford's loveliest son,
What is it thou hast done?
. . . . . .
Thou knave, thou cad,
Thou everything that's bad!

CHRISTIAN ETHICS.

History of Ethics within Organized Christianity. By Thomas Cuming Hall. New York: Charles Scribner's Sons. $3 net.

In all the confused and bewildering story of the Christian Church nothing is more confused and confusing than the history of Christian ethics. Nothing, moreover, should naturally be regarded as of greater importance. Yet, strange as it may seem, we have had until now no really adequate treatment of it in the English language. Professor Hall, therefore, deserves the thanks of every one interested in this subject for his scholarly and skilful attempt to steer us through the maze of ethical—and unethical—doctrines that bear the name Christian. His book, to be sure, will be lacking in interest to all who are not inherently interested in the subject. It is also rather lacking in unity and in continuity of development. But for neither of these things is our author to be held responsible, as they both are due to the nature of the subject. For the truth is, the history of ethical thought within organized Christianity is a collection of somewhat isolated and often quite stupid moral philosophies, interspersed, to be sure, with occasional instances of brilliant intuition, but lacking that unity of development which is needed to attract spontaneous interest.

We cannot here rehearse the story of Christian ethics. Suffice it to say that the book covers surprisingly well the whole of the field indicated by its title. One chapter is given up to the Greek, Hellenistic, Roman, and Hebrew contributions to Christian ethics. Another is devoted to the ethics of Jesus and the New Testament writers. Then follow several chapters on the Early Church, the Bishops' Church, the Papacy, and Scholasticism. And, lastly, come three chapters on the Reformation and the development of ethics within Protestantism and modern Catholicism.

The contrast between the ethical enthusiasm and lofty moral teaching of Jesus and Paul, and the lowly position of ethics within official Christianity almost ever since, is strikingly brought out. For Jesus and for Paul the most important thing in the new Gospel was the strength that comes from the divine into the human *for the sake of righteousness.* This primal emphasis on the ethical enabled the Founder of Christianity and his great follower to put almost everything else in its proper place—faith, ritual, government, asceticism, and all the other things that common life and awakening philosophy force us to face. But when the great Apostle passed away and Christians felt the need of an external unity, dogma and the demands of the Church as an institution took the foremost place which ethics had held and should always have retained. And as the pagan world flocked into the Church and became nominally Christians, they brought with them all sorts of unethical beliefs and magical practices which Jesus would have fiercely denounced and which have been the bane of Catholicism and even of Protestantism ever since.

For Dr. Hall has succeeded in writing his history from a really unprejudiced point of view, so that Catholic and Protestant are alike fairly but critically treated—*nullo discrimine agetur.* The externality of the Roman Church, its reliance on sacramental magic, and its loss of the freedom of the spirit and of the ethical inwardness which characterized Jesus and Paul and John, these and other things like them are brought out with clearness and studied in detail. But the common superficially optimistic view of many Protestants, that everything was set right by the Reformers, is as emphatically rebuked. Calvinism, in particular, and British Puritanism make a rather sad showing. "For the Roman imperialism Calvin simply substitutes a Scriptural imperialism. The Biblical Church is the ultimate and final authority over the really regenerate man. . . . Beyond her pale there is not only ordinarily no salvation, but no really ethical life. . . . No really Protestant, *i. e.*, autonomous, ethics can flourish on this basis. The Church officers controlling the sacraments and the preaching of the gospel become the directors of men's consciences. . . . This is simply Roman Catholicism without the name Roman." "The student of ethics comes away from

the study of Puritan thought as seen in Knox with the profound conviction that whatever gains the Reformation made in systematic ethics were not made by Puritanism, but rather in spite of it; that as an ethical teacher it was too fast bound in scholasticism to advance our ethical freedom in Christ Jesus."

Not even Luther comes through Professor Hall's analysis unscathed. Much of the Roman Catholic view of authority, much of scholasticism and of ecclesiasticism is carried over into his teaching, and the really protestant elements are there only through a noble inconsistency. But these inconsistent elements form the really important and fruitful part of his thought. "The glory of Protestant ethics as founded by Luther and developed by Kant is the autonomous, democratic, unpriestly character stamped upon it. All men should be kings and priests of God. The ministry, according to Luther, was purely functional. He did not carry out the logic of his assumptions at all times, yet in the main he was true to them. In the last analysis for Luther the soul must stand alone for truth and trust that it will not be forsaken."

As this last quotation shows, Dr. Hall accepts and stands for the relative and developing nature of our moral ideals. For ethics there is no absolute. And it is, he tells us, to Kant perhaps even more than to Luther that we owe this essentially Protestant position. Hence in these later years Christian thought has so coalesced with independent philosophical thought that to-day, so far as content goes, one can hardly point to any peculiarly Christian ethics.

One will probably frame too pessimistic a view of Christianity from Dr. Hall's pages unless one constantly stops to reflect that the subject of the book is ethics, not morality; philosophical theory rather than practical conduct. Through all those centuries in which so little advance was made in ethical insight, the Church was still really standing for righteousness and proclaiming and cultivating it. Yet when even this is said, the story at best is humiliating to the modern Christian, and he feels on finishing it that the danger of "mere morality" has never been anything but a theological myth, and that the degeneration in moral enthusiasm and insight which followed so speedily upon the teachings of the Founder is one of the saddest things in human history. As our author says in his preface, "The simple things which the Master stood for, and which can be tried out in life, we have deemed 'impracticable,' because 'you can't change human nature. So ecclesiastical tradition has substituted theologies which cannot be tested in life, for ethics which may be. It has demanded belief in doubtfully true speculative and intellectual propositions, and called such assent 'faith,' where the Master demanded loving and trustful acceptance of simple canons of conduct, and identified such acceptance with loyalty to his purpose. The study of the history of ethics may lead, it is to be hoped, a chosen band to really resolutely insist upon putting in the foreground what Jesus put in the foreground, and relegating even true traditions to the background if they are of secondary importance for his purpose."

A Queen at Bay: The Story of Cristina and Don Carlos. By Edmund B. d'Auvergne. New York: John Lane Co. $5 net.

This is an interesting account of the stormy period of the Carlist wars, presented from the standpoint of the regent Cristina, the more welcome because good books on this complicated and difficult field are extremely rare. Its clearness and simplicity, and the absence of partisan bias raise it far above the usual standard of popular works. The faults of Cristina—the predominantly personal point of view from which she approached every problem, her utter lack of principle, and her inability to control her passions—are frankly admitted. Yet on the other hand, it is made abundantly clear that her pluck, persistence, common-sense, and ability to bargain and compromise were chiefly responsible for giving Spain a liberal constitution.

Rarely, indeed, have the personal interests and family affairs of any nineteenth century ruler been so closely bound up with the government of his country, as were those of Cristina. Because her daughter's throne was threatened by a rival more despotic and obscurantist even than her execrable husband had been, she found it expedient to lean on the people and grant them some share of the liberties they desired in order to enlist their sympathies on the side of the reigning family. After the Carlists were defeated in 1839, she became involved in a struggle with her quondam ally Espartero, and was exiled for a brief space to France. Her rival's term of success, however, was but short, as she prophesied at the moment of her departure, and she was recalled in 1844. The next two years were occupied in the diplomatic intrigues which led up to that most unsavory triumph of Bourbon diplomacy—the Spanish Marriages—by which the courts of Paris and Madrid were apparently united in indissoluble alliance; but the revolution which ousted Louis Philippe in 1848, wrecked all these plans, and led on, though very indirectly, to the overturn in Spain which caused the second and final departure of Cristina from the stage of history in 1854. From the personal point of view her career was something of an anti-climax; though her daughter held on in Spain till 1868, her grandson was "restored" in 1874, and her great-grandson occupies the Spanish throne to-day. On the other hand, the various liberal constitutions which were evolved and thrust upon her country during the troublous years of her regency, though they were none of them permanent, gave Spaniards the political training and education which have made possible their comparatively enlightened government at present.

Notes

Macmillan's list of forthcoming books includes: "The Income Tax," by Prof. R. A. Seligman of Columbia University; "The Justice of the King," a romance by Hamilton Drummond, and Prof. William Lyon Phelps's "Essays on Russian Novelists."

Little, Brown & Co. will bring out Jeffery Farnol's "The Broad Highway" on February 11.

Among the new works of fiction promised by Harper & Brothers are novels by Justus Miles Forman, Kate Langley Bosher, Anthony Hope, Irving Bacheller, Louise Closser Hale, Holman Day, Justin Huntly McCarthy, Harriet Prescott Spofford, H. Perry Robinson, William Samuel Johnson, and Marjorie Patterson.

"Riverside Readers" is the name of a new series which Houghton Mifflin Co. will issue as text-books in the spring. The editors of the series are James H. Van Sickle, superintendent of schools in Baltimore; Miss Wilhelmina Seegmiller, director of art in the Indianapolis public schools, formerly principal of a grammar school in Grand Rapids, Mich., assisted by Miss Frances Jenkins, supervisor of elementary grades in Decatur, Ill.

"Robert Kimberly" is a new novel by Frank H. Spearman, which will be issued in February by the Scribners.

E. H. Gomes is publishing with Seeley & Co. his illustrated book, "Seventeen Years Among the Sea Dyaks of Borneo."

Elliot Stock announces for publication a biography by W. J. Carlton, of Timothe Bright, "Doctor of Phisicke," whose "Treatise of Melancholy" was well known in the days of Shakespeare.

The Oxford University Press will celebrate the tercentenary of the authorized version of the Holy Bible by issuing shortly a photographic reproduction of the Black Letter edition of 1611. The size of the reprint will be eleven and three-quarter inches by eight and one-quarter inches. Alfred W. Pollard has written a bibliographical introduction of upwards of fifty pages, in which he describes, first, the earlier English translations, 1380-1582 (the Wyclifite Bibles, Tyndale's New Testament, Coverdale's Bible, Matthew's Bible, the Great Bibles, the Geneva Bible, the Bishops' Bible, the Rheims New Testament); secondly, the Bible of 1611 itself, giving a list of the revisers and the rules by which they were bound; and, thirdly, the later history of this Bible. The volume will contain "The Translators to the Reader," various illustrative documents, and, of course, the Apocrypha. Henry Frowde also announces

a cheaper reprint, in Roman type, page for page, of the editio princeps, similar to that published by the Oxford University Press in 1833. This volume will be eight inches by five and one-half inches, and will also contain Mr. Pollard's introduction.

To read Prof. William Knight's "Glamour of Oxford" (Frowde) is to undergo one of "the last enchantments of the Middle Ages." From Thomas Churchyard's "Tragedy of Cardinal Wolsey" down to the latest lucubrations of living Dons he has ranged with sure instinct for poems and passages of prose that give something of the spell that emanates from the colleges on the Isis and the Cherwell. His anthology has one trait not common to such books: the selections increase in interest as they approach our own day, and indeed the largest and by far the best part of the volumes comes from the second half of the nineteenth century. And among these late celebrators of the home of romance none is better than Lionel Johnson, whose "Oxford Nights" is a poem that not only the lover of Oxford but all lovers of books will be grateful to have pointed out to them, if they do not already know it. Professor Knight has missed some telling passages from seventeenth-century writers which would have strengthened somewhat his collection where it is inevitably weak. For instance, there is a passage in the introduction to Traherne's "Roman Forgeries" which gives an admirable picture of a religious discussion at Oxford in those days.

From the tone of the opening chapter one suspects that Mrs. Steuart Erskine's "A Royal Cavalier: The Romance of Rupert Prince Palatine" (Appleton) is going to be romance indeed, but she soon settles down into a decent historical gait and writes a well-judged and not uninteresting biography. The Stuart family, and particularly the adventures of Elizabeth of Bohemia and her many sons and daughters, have been extraordinarily popular among bookmakers these last four or five years, and it is only strange that Rupert has not had his thick volume before now. Mrs. Erskine follows him at great length through the Rebellion, and, as would be expected, has more praise for his courage and energy than she has censure for his rashness. If anything, the chapters dealing with his strange career after the war are even more interesting, as they are certainly fresher in matter. One could wish that Mrs. Erskine had omitted some of her strategic discussions and taken the space to add details to the background of Rupert's life as counsellor and man of science in England after the Restoration; she has missed here a golden opportunity. Among the illustrations there is a facsimile reproduction of a marriage certificate of Prince Rupert and Francisca Bard, which has been preserved in a family descended from a sister of Francisca's and has recently come to light. The document seems to be genuine, and, if so, settles one of the obscure points of Rupert's life.

There is probably no English writer who is more often misrepresented and about whom more general ignorance is displayed than Francis Jeffrey, the critic of the *Edinburgh Review*. Of Wordsworth's "Excursion" he wrote, as the opening of his essay, "This will never do!" and for those four words he has been held up as the supreme example of blindness to the great things of an age. As a matter of fact (waiving the question whether this particular dictum is right, and the judgment of to-day is veering unmistakably toward Jeffrey's position) few critics have, within certain necessary bounds, shown greater breadth of taste and knowledge than this same reviewer. Macaulay may have been influenced by his own Whiggery when he pronounced Jeffrey "more nearly an universal genius than any man of our time"; but Carlyle was not so prejudiced, and Carlyle wrote of Jeffrey in almost the same vein. For such reasons as these we regard the volume of "Jeffrey's Literary Criticism" as one of the most useful that have yet appeared in the delightful green and gold series of Henry Frowde. Only fourteen essays are included out of his innumerable contributions to the *Edinburgh*, but they give a fair intimation of his power and scope. The editor, D. Nichol Smith, has written an Introduction altogether admirable in its brief compass for its sane treatment of a difficult subject.

Frank M. Colby, in "Constrained Attitudes" (Dodd), says one thing truly: "There can be no sound derision of things *sub specie eternitatis* that does not include the blushing author. True satire is always self-ironical, and would have the whole world by the ears." To illustrate his point, he should have added to this series of voluble, faintly "scintillating," mildly satirical essays on —— to tell the truth, on nothing in particular, but ostensibly on the present state of journalism, criticism, and letters in general—he should have added a chapter on the Glittering School of Essayists. He should have discussed the problem of rhetorical galvanism, the bankruptcy of paradox, the mystery of the existence of manner without matter, the exhilaration of proceeding with energy and alacrity from nothing to nowhere. When this chapter is written, let us have it illustrated: for the head-piece, a carnivorous Saracen cleaving with bright blade the woundless air; for the tail-piece, a fine, crackling fire under an empty pot.

The *Nation* has from time to time, during the last thirty-nine years, called attention to Dr. Giuseppe Pitrè's "Biblioteca delle tradizioni popolari siciliane," an astounding monument to the erudition and industry of the collector, who has been a busy professional man and an honored municipal officer. The "Biblioteca," which has now reached its twenty-third volume ("Proverbi, motti e scongiuri del popolo siciliano," Torino: C. Clausen), contains a vast collection of Sicilian popular songs, tales, proverbs, festivals, children's games, customs, riddles, etc. We do not know of a similar collection in any age or country which could be ascribed to the industry of a single man. Pitrè began his work just in time to rescue for future generations of scholars an enormous mass of the most valuable folklore. The latest volume contains over a thousand proverbs not included in the thirteen thousand published in 1880 in four volumes, VIII-XI, of the "Biblioteca." In addition to these proverbs and proverbial sayings, there is an interesting category of *bons mots* in dialogue form, terms of comparison, formulas of beggars, imprecations and threats, popular etymologies, and prayers and conjurations. The last class is especially interesting, as it contains prayers against all kinds of diseases and against witchcraft, the evil eye, as well as charms to fascinate men, to make a baby walk, to shorten the death agony, to obtain news of a distant friend, to find a lost object, to get money, to kill a reptile with impunity, to charm ants and wolves, etc. The present volume has a pathetic interest, since it is dedicated to the memory of Pitrè's daughter Rosina, who with her infant was buried beneath the ruins of Messina on the 28th of December, 1908. The husband escaped, and in his distraction walked miles with his dead child in his arms, thinking it was still alive.

In other days, not so far removed as to be beyond recollection of the older generation, the American flag, instead of causing comment when it appeared in foreign ports, was the emblem of commercial dominance on the high seas. The beautiful ships that bore the ensign of the republic, their builders, masters, and crews, are epitomized by Capt. Arthur H. Clark, in "The Clipper Ship Era" (Putnam), who also points out reasons for the decline of the American mercantile marine. As a practical seaman, once an officer of a famous flyer, the author knows whereof he speaks, and he pictures sympathetically the romance of the American clipper ship, not omitting her competitor under the British flag. He describes the stately Indiaman, the North Atlantic packets, early clippers, California clippers, and those in the Australian and tea trades. His book, indeed, is a valuable history of ships that have passed. It was the California gold fever that stimulated American shipbuilders to create wonderfully fast vessels, which daring and resourceful captains raced around Cape Horn, under clouds of canvas. Records of these famous voyages—the Flying Cloud's eighty-nine days from New York to San Francisco in 1851 still stands unbeaten—are set forth in detail, and convey in themselves proof of the superiority of our native shipwrights and navigators. Capt. Clark is under no delusions as to the conditions which cost the United States her command of the seas:

> The supremacy held by the merchant marine of the United States in 1851 was maintained until 1856, and during this period American ships continued to be built, bought, and chartered by British ship-owners; but, after the great financial depression which affected both countries, from 1857 to 1859, British ship-owners no longer needed American-built ships, for in Great Britain iron had by this time superseded wood in the construction of large vessels. Thus the advantage to the United States of having an abundant supply of timber was taken away, while the advantage of free trade, with low cost of living, was on the side of England.

He adds:

> It is true that during our civil war American ships were still sold in England, but this was because their owners had no profitable use for them at home, rather than from any lack of British iron vessels. Since that period the decline of American shipping, for reasons that should be well understood, has been constant. I refer to the navigation laws and protective tariff of the United States. . . . As is well known, they prohibit an American citizen from owning a foreign-built merchant ship. Meanwhile, the protective tariff so increases the cost of living, and with it the cost of the labor and materials that go into the construction of a modern ship, that the American shipbuilder cannot produce a steel or iron vessel at anything like the

cost that will enable her to compete successfully with a ship of the same class constructed in a European shipyard.

Excellent pictures of famous clippers add to the book's attractiveness.

"The Life of Marie Amélie, Last Queen of the French" (Appleton), by C. C. Dyson, includes a sketch of her father, Ferdinando IV of Naples, and her mother, Maria Carolina, Queen of Naples and Sicily, with an account of their reign over the Two Sicilies, their first and second exile in Palermo, Ferdinando's forced abdication in favor of his eldest son, and Maria Carolina's retreat to Vienna, and her death there. Marie Amélie is a vivid and engaging personality. The niece of Marie Antoinette and wife of the eldest son of Philippe Egalité, having married the man she loved while he was an exile in poverty, unspoiled by the luxury and power of her position as Duchess of Orléans, and having borne with dignity her elevation to the throne and the humiliation of her flight from France, she died, the last Queen of the French, at the age of eighty-two, an exile, but to the last an active force in the lives of those around her. Her life abounds in romantic and picturesque incident; the time and the people lend themselves to dramatic narrative—the youth of Louis Philippe; the Hundred Days; the thrilling episode of the Duchess of Berry's attempt to raise an insurrection in favor of her son; her imprisonment at Blaye. But, with the material made to his hand, as it were, Mr. Dyson has done a poor piece of work. He is obscure; his English is always commonplace, and sometimes bad; above all, he lacks the essential gift of the historical imagination. We lay down the biography with a sense of incompleteness, though we have followed the records of three reigns, the fortunes of three generations, and seen Marie Amélie's grandsons fight under McClellan in the civil war. She herself cannot be made dull, but even history's dramatic repetition of itself in her great-granddaughter, Marie Amélie, the Queen of Portugal, who has recently sought refuge in England, fails to kindle imaginative interest in Mr. Dyson's carefully written book. The volume is illustrated, is indexed, and has a table of contents and a list of the authorities consulted.

"Two Great Rivals: (François I and Charles V) and the Women Who Influenced Them" (Appleton), by Lieut.-Col. Andrew C. P. Haggard, is a notable effort to force between the covers of a single volume every dramatic episode in the struggle between Charles V and Francis I. The question of historical accuracy does not trouble the author at all, nor is he especially concerned to preserve any continuity or indicate any connection between the events he describes; his book is written to sell and will probably do so. Female intrigues and licentious passions occupy, not unnaturally, the centre of the stage, the chapter headings, The Amours of François and Françoise, The Love Affairs of Eléonore, Unholy Love of François I for Marguérite of Angoulême, and The Influence of the Women, speak for themselves. Military events are not neglected. Gaston de Foix and Bayard are "lugged in" at every possible opportunity; Marignano, Pavia, and the Sack of Rome are portrayed vividly, though quite inaccurately. Diplomatic matters are occasionally mentioned, especially when they are sufficiently picturesque; when they are not, and the author finds it impossible to exclude them, he dresses them up in fantastic costume. In this connection, it may be worth while to explain that the somewhat cryptic chapter heading, Two Disappointments for the Butcher's Son, refers to Cardinal Wolsey's failures to get elected Pope in 1521 and in 1523. Twenty-one handsome illustrations are an important feature of the volume.

The Champlain Society has been fortunate in the men entrusted with the editing and translation of its publications. As Professor Munro has won recognition as an authority on the Seigniorial System in Canada, Col. Wood on the great Siege of Quebec, and Professor Grant on Lescarbot and his period, so William F. Ganong, in "New Relation of Gaspesia, with the Customs and Religion of the Gaspesian Indians," by Father Chrestien Le Clercq, translated and edited with a reprint of the original, has brought to bear a very special knowledge. Dr. Ganong professes no particular competency as a translator of old French, but his excellent previous rendering of Denys's peculiarly difficult "Descriptive and Natural History of North America" prepared one for his equally satisfactory version of Le Clercq. The "Nouvelle Relation de la Gaspesie," which to some extent supplements its author's larger and more important work, the "Premier Etablissement de la Foy" (translated by J. G. Shea), describes the Gaspesians and their country. Le Clercq had spent many years among them as a Recollet missionary, and was therefore fully qualified to write with authority. He discusses their origin, birth customs, their dress, ornaments, etc., their wigwams and home life, their language, religion, traditions, their tribal and marriage customs, their mode of making war, their hunting, amusements, and finally their death and burial customs. One long chapter is devoted to a graphic description of Le Clercq's voyage along the coast from Nepisiguit to Miramichi, including an account of the settlements of Denys, de Fronsac, and Enault; and another to his first voyage to France after a residence of five years in Canada. The historian Charlevoix many years ago said scornfully of Le Clercq's book:

> A coast that is a waste; some little islands and harbors where the fishery is made; Indians who come and go from Acadia and its neighborhood; that is what Gaspesia is and the Gaspesians, whom our author names Porte-Croix from a false tradition. It is not the wherewithal from which to fill up a volume of six hundred pages with very interesting matters.

But says Dr. Ganong:

> The value of the *"Nouvelle Relation"* to us is of a kind of which neither author nor critic could have had any idea. As one of our minor historical sources capable of yielding materials of value to modern critical study, as a repository of interesting fact concerning the early days of our native land, as a piece of the rare but precious literature having the power to make us feel something of the spirit of its times, the book has a high and enduring even though very local value.

The biennial report of Gov. Charles S. Deneen of Illinois closes with an earnest recommendation to the Legislature that the State coöperate with Indiana and Kentucky in marking the route followed by the Lincoln family in its migration from State to State. The Legislature of Kentucky has already enacted a law naming the route from Hodgenville to Indiana "The Lincoln Way." The Illinois plan includes a careful survey under the direction of the Illinois State Historical Society of the route, and the erection by the State Highway Commission of "such markers and suitable signs as may be necessary to mark the way in a prominent and permanent manner." If the Legislature would extend the Governor's suggestion so as to include the construction of a substantial avenue on the Illinois portion of the route, and suggest similar action by the two other Legislatures, the resemblance to the Appian Way, noted by Gov. Deneen, would be still closer, and the cause of good roads would be greatly advanced.

Only a small beginning has been made with the scientific investigation of the Talmud and kindred Jewish literature, but Prof. Hermann L. Strack's little work, entitled "Jesus, die Häretiker und die Christen nach den ältesten jüdischen Angaben, Texte, Uebersetzung und Erläuterungen" (Leipzig: J. C. Hinrichs), is a valuable contribution on a special problem in this field. Strack, doubtless the best Christian scholar in Talmudica, furnishes the chief data from his sources, which include the Talmudic literature and the church fathers. Greek and Latin. What he has brought together only confirms the judgment of the venerable Prof. Franz Delitzsch, expressed decades ago, that the Talmud and kindred Jewish literature make as little mention of Christ and of Christianity as they do of heretical and heterodox persons and movements in general, and that this almost complete suppression is the result of premeditation and purpose.

Hegel's "Phänomenologie des Geistes" was characterized more than forty years ago by the chief apostle of American Hegelianism, Dr. W. T. Harris, as "the greatest work in the whole history of thought"; it is, at any rate, the most remarkable and the most characteristic product of Hegel's peculiar genius. Yet the first complete English translation has but now appeared, from the hands of Prof. J. B. Baillie of King's College, Aberdeen ("Hegel's Phenomenology of Mind," 2 vols., Macmillan). As compared with the translation of several sections of the book given by Dr. Harris in the "Journal of Speculative Philosophy" in 1868, Mr. Baillie's rendering is, as a rule, incomparably clearer and more idiomatic, without being any less faithful. As compared with the regrettably brief sample of a translation published recently by Professor Royce, in Rand's "Modern Classical Philosophers," the present version is conspicuously less readable and less illuminating. But Mr. Baillie has, as he tells us, conceived it to be his duty to give a fair English equivalent of Hegel's language, with all its stiffness and obscurity, not to paraphrase, nor, "when the thought of the original is clad in wincey, to drape it in satin." There are times when a somewhat freer translation would have been a more faithful one; there are passages in which some of the shadings of Hegel's thought seem to escape; but upon the whole, the "Phenomenology" in its entirety may now be said to have been successfully naturalized in English philosophical literature.

The death is announced of the Rev. Dr. John Lemley, author of a number of books on religious subjects.

Word has been received from Constantinople of the death of the Rev. Herbert M. Allen, a missionary of the American Board of Commissioners for Foreign Missions.

Sir Charles Dilke, whose death in his sixty-eighth year was reported last week from London, and whose career as a statesman bulked large in England a quarter of a century ago, was the author of the following works: "Greater Britain," "The Fall of Prince Florestan of Monaco," "The Present Position of European Politics," "The British Army," "Problems of Greater Britain," "Imperial Defence" (with Spenser Wilkinson), "British Empire," and "Memoir of Lady Dilke."

Elizabeth Stuart Phelps Ward died last Saturday night at her home in Newton Centre, Mass. She was born in 1844 in Boston, the daughter of the Rev. Austin Phelps, who later became professor at the Andover Theological Seminary; her mother was the oldest daughter of Moses Stuart, also of Andover. At the age of thirteen Elizabeth Phelps began to write for the *Youth's Companion*, and before she was twenty had published in *Harper's Magazine*. Her first important work was "The Gates Ajar," a spiritual romance prompted by the loss of a brother in the civil war. Her other works include: "The Gypsy Series" (4 vols.), "Men, Women and Ghosts," "The Trotty Book," "Hedged In," "The Silent Partner," "What to Wear," "Trotty's Wedding-Tour and Story Book," "Poetic Studies," "The Story of Avis," "Sealed Orders," "Friends," "Doctor Zay," "Beyond the Gates," "Songs of the Silent World," "Old Maids, and Burglars in Paradise"; "The Madonna of the Tubs," "The Gates Between," "Jack the Fisherman," "The Struggle for Immortality," "A Lost Hero" (with her husband), "Come Forth" (with same), "The Master of the Magicians" (with same), "Fourteen to One," "Donald Marcy," "A Singular Life," "The Supply at St. Agatha's," "Chapters from a Life," "The Story of Jesus Christ," "Within the Gates," "Successors to Mary the First," "Avery," "Trixy," "The Man in the Case," "Walled In," "Though Life Us Do Part," "Jonathan and David," and "The Oath of Allegiance."

Drama

The production of Josephine Preston Peabody's striking poetic play, "The Piper," is a pleasant episode in the somewhat eccentric history of the New Theatre. It can scarcely be necessary to give a detailed description of the piece itself, which was reviewed first in this journal as long ago as December 16, 1909, and has since then been the subject of mention more than once. Founded upon the legend of the Pied Piper of Hamelin, it provides a happy ending, in which the abducted children are restored to their stricken parents by the Piper, who, after entertaining them awhile in a secret cavern, and vowing that he will never surrender them to the tyrannies and hypocrisies of the money-grubbing city, yields to the entreaties of a widowed mother—in whom he discovers a living soul—and the spiritual influence of the Christ. The Piper is the embodiment of the spirit of liberty and protest, the champion of natural freedom in life and religion, whose mission it is to free all things from their material and spiritual cages. He is the central and all-important figure of an interesting fairy tale, full of true poetry, vigorous satire, and significant symbolism, and is drawn with uncommon vigor and imagination. In more than one scene he has speeches which rise to a high pitch of poetic eloquence and emotional intensity. He is essentially a masculine figure in his boldness and his tender susceptibility, and an error of managerial judgment was committed when it was decided to give the part to Edith Wynne Matthison, whose great skill and insight as an actress cannot make up for the lack of the proper male characteristics. Her performance is, in its way, a remarkable achievement—eloquent, graceful, passionate, humorous, and tender—but it is not masculine, and so fails to fulfil the spirit of the author's creation. It would have been wiser to defer the production of the piece indefinitely than to run the risk of changing the sex of the hero. As the character is not an intricate or difficult one, it seems plain that in any well-organized stock company there ought to be some actor capable of playing it at least with the needed virility. In other respects the production at the New Theatre is worthy of high praise. Pictorially, it is especially beautiful. But the soul of a poetic play is more important than the decorations.

Edward Sheldon, the author of "Salvation Nell" and "The Nigger," is clinging to the errors of his ways. His latest play, "The Boss," which may now be seen in the Astor Theatre, is likely to prove a commercial success, making its appeal solely to the common crowd, but is altogether inconsiderable from any point of view of literature or drama. As an aggregation of violent, extravagant, or abnormal situations, it will compare favorably, or unfavorably, with either of its predecessors, but exhibits no advance in the art of construction. It is one of the consequences of the mischievous example set by Clyde Fitch—who was a good craftsman—in the compilation of "The City" and other melodramas closely akin to the dime novel. The ingredients of it—served up with a sauce of modern slang—have long been familiar to the cheaply sentimental and sensational stage. Once again we have the honored merchant who has misused trust funds, and is therefore in the power of an unscrupulous and ruffianly enemy, and the devoted daughter who—this time in the most incredible circumstances—sells herself to obtain her father's liberty and cash. That such a man as the "Boss" should have acceded to such terms, or abided by them, is beyond all reason. After six months of platonic alliance, the wife offers herself as a bribe to her husband, if he will yield to his striking laborers, in whom she is deeply interested. These are samples of the raw flavor with which this dramatic dish is seasoned. The Boss, himself, though overdrawn in all respects, and absurdly inconsistent, after the fashion of lurid melodrama, is a potent theatrical figure and is effectively presented by Holbrook Blinn. But the part is not difficult. The other characters are chiefly feeders to the "star."

A one-act play by Henry James, called "The Saloon," has just been produced in the Little Theatre, London. The *Times* says that "it is full of Henry James sentences, so full that the poor players knit their brows in the effort to remember the unusual collocations."

Joseph M. Gaites will give the first performance of "Thais," in dramatic form, in Springfield, Mass., on February 9. The dramatization has been made by Paul Wilstach, who adheres more closely to the incidents in the novel of Anatole France than does the operatic version. It has twenty-seven speaking parts, of which the chief are taken by Tyrone Power, Constance Collier, Arthur Forest, Elmer Grandin, and others. The incidental music will be an important feature of the representation.

Ben Greet is now rehearsing four revivals of Sir W. S. Gilbert's plays—"The Palace of Truth," that was so successfully produced at the Garden Theatre last year, and "Pygmalion and Galatea," as afterpieces for "Creatures of Impulse" and "Rosencrantz and Guilderstern." Later he contemplates a Shakespearean festival downtown at popular prices. During Lent, "Everyman" will be presented, probably at Mendelssohn Hall.

As the successor to "Nobody's Daughter" at Wyndham's Theatre, in London, Frank Curzon and Gerald du Maurier have selected a new four-act play by Leon M. Lion and Malcolm Cherry, who have provisionally named their piece "Mr. Jarvis." It tells a story of a political conspiracy in which the Old Pretender is the central figure.

Louis Waller will soon appear as Marc Antony in the forum scene of "Julius Cæsar," which he is to produce at the Palladium in London. The London music halls seem to be able to get all the real drama they want.

The publication of "The Plays of Thomas Love Peacock" (David Nutt), some fifty years after the author's death, does, as the editor, A. B. Young, observes in his preface, call for explanation. Not only have the three plays now given to the public never before been printed, but their very existence has been known to few. In 1903 the British Museum bought a number of Peacock's MSS. from Mrs. Edith Clarke, among them being these dramas in the author's own handwriting. The first of these, "The Dilettanti," a comedy somewhat in the manner of Goldsmith, was probably written some time about 1814. The second, "The Circle of Loda," a romantic drama in blank verse, may have come from the same period, or a little later; the influence of Ossian is marked, and the editor surmises that the plot bears a veiled allusion to the desertion of Harriet Westbrook, by Shelley, and the transference of his affections to Mary Godwin. The third play, "The Three Doctors," is a musical comedy, and shows analogies with "Headlong Hall" and "Melincourt." "The Circle of Loda" is of no special interest, but the two comedies are full of the wit and boisterous humor that give so piquant a relish to Peacock's novels, and they are constructed more compactly than the novels. By their very compactness, they lose that joyous discursiveness which is, perhaps, the chief charm of the Peacockian manner, but they are delightful bits of nonsense in their

own way, and their publication was more than justifiable. Scattered through the plays there are a number of songs that compare well with those in the tales. The following, from "The Dilettanti," may be quoted as an example:

With knights, and maids, and loves, and arms,
And countless deeds, and war's alarms,
Our mystic song the hearer charms,
While the ev'ning bells ring merrily.
Of magic groves and vales we sing;
Of Merlin, and the Elfin-king,
Of sprites that o'er the witch-grass spring,
While the ev'ning bells ring merrily.
Of deep enchantments strange and strong,
Of sweetest notes of fairy song,
That float the haunted air along,
While the ev'ning bells ring merrily.

Henry Bryan Binns, the author of biographies of Lincoln and Whitman, has written a drama, entitled "The Adventure." This is to be produced in London at an early date. It will be published on February 15 by B. W. Huebsch.

George Porto-Riche, the author of "L'Infidèle," "L'Amoureuse," and "Le Passé," who was very prominent on the French stage in the last quarter of the nineteenth century, but who has been silent for ten years, has now come to the front again at the Paris Renaissance with another of his dramas of passion, entitled "Le Vieil Homme," or "The Old Adam." A printer and publisher, Michel Fontanet, in order to avoid the temptations of Paris, and to allay the only too reasonable jealousy of his devoted wife, Thérèse, has established himself at Grenoble, where, for a time, he lives peacefully with his wife, his son Augustin, a romantic boy in his teens, and his father-in-law, who, although a prominent figure in the play, has nothing to do with the main plot. Comparative peace prevails in the household until the arrival upon the scene of a certain fascinating Madame Allin, a coquette by nature, who is allowed to gain a footing as a friend of the family. The boy, Augustin, of whom she makes a plaything, is soon madly in love with her, and it is not long before the elder Fontanet also falls under her spell. Thérèse is the prey at once of the fiercest conjugal jealousy and maternal anxiety. In her despair, for the sake of the boy, she appeals to Madame Allin to persuade Fontanet to go to Paris alone, for a few days, that the boy may have an interval of peace. The agreement is made, but meanwhile Augustin makes a declaration of his passion, and is repulsed in kindly fashion by Madame Allin, who gives him some sound advice. All might be well, but unhappily Fontanet will not depart without a farewell interview with his enslaver, and the boy, becoming aware of this meeting, desperately goes off into the hills, in a fierce thunderstorm, and commits suicide. The story is said to be told with great insight, skill, eloquence, and sincerity, but it is not a pretty one. The French critics say that it betrays the influence of Ibsen, and certainly the manner of the final catastrophe is suggestive of the Norwegian's habit of mind. Much of the success of the play is attributed to the excellence of the acting of M. Tarride and Madame Simone, as the husband and wife. The part of the boy, Augustin, was entrusted to an actress, whose evident femininity—as one would think might easily have been foreseen—was entirely destructive of all illusion in the love scenes.

Music

The Pianoforte and Its Music. By Henry Edward Krehbiel. New York: Charles Scribner's Sons. $1.25 net.

Although Mr. Krehbiel asserts on the first page of his new book that in writing it he was "more desirous to instruct than to entertain," he has nevertheless deigned here and there to introduce an anecdote or a page or two of details regarding social conditions, like those to which he devoted his "Music and Manners in the Classical Period." For the rest his monograph might bear the subtitle, "Chapters of Musical History." It is a study of the origin and development of the pianoforte, the music composed for it, and the performers who, in the concert halls, brought that music home to the understanding and enjoyment of the people. It is shown clearly how the manufacturer, composer, and performer were fellow-agents in the evolution of pianoforte music from the days of the earliest players of clavichords and harpsichords to the great virtuosi of our day; in other words, how, at first, the composers as well as the performers were hampered by the primitive condition of the instruments, and how, in course of time, their desires led the makers to improve them.

Undoubtedly the best pianos now made are of American manufacture. The frontispiece of this volume is a picture of one of the only two now existent instruments made by Cristofori (the first real pianofortes, *i. e.*, instruments on which one could play loud or softly at will); this instrument is housed in the Metropolitan Museum of Art in New York. Mr. Krehbiel briefly describes the changes in mechanism and aspect of pianos from the time when this was made, in 1720, to the epoch of the perfected American grand. The mediæval precursors of the real pianoforte also are described. Turning to the composers, the author devotes chapters to the earliest Clavier Music, The English Virginalists, French and Italian Clavecinists, The German School: Bach and Handel, Classicism and the Sonata, Beethoven, The Romantic School, National Schools. Part III attempts the task of summing up in thirty-four pages what should be said about the great players from Bach to Rubinstein and Hans von Bülow—a task, it is needless to say, impossible of satisfactory execution in so short a space.

A famous German author some years ago wrote a history of music in which he enlarged so much on the early periods that he had not space enough left for the more interesting and important later epochs. "The Pianoforte and its Music" has the same defect. Doubtless nine-tenths of its readers would have been glad if the long chapters on the earliest Clavier Music and the English virginalists had been shortened to make room for a few pages on the playing of Paderewski, D'Albert, Hofmann, Busoni, and others; or some details regarding the pieces of living composers like Debussy and Ravel, who are disposed of with the grammatically Debussyan remark that "chief of the younger men who in small descriptive pieces marvellous for finish of harmonic detail and intervallic novelty are Claude Achille Debussy, born in 1862, and Maurice Ravel, born in 1875." It is also likely that readers of a book which devotes six pages to Clementi, Dussek, and Cramer, who have "disappeared from our concert-rooms," would have been glad to have more than fifteen lines about MacDowell's pieces for piano, which are not only the best composed in America, but, with the exception of Grieg's, the best composed anywhere since Chopin.

In Mr. Krehbiel's opinion, the best piano music since Schumann is that of Brahms—an opinion which probably two or three per cent. of his readers will share. Few of them will begrudge Beethoven a whole chapter of thirty-three pages, for he is one of the greatest composers for pianoforte, though not half as important in this field as Chopin, or, from some points of view, Liszt, two innovators who are disposed of much more briefly. Beethoven has suffered from the too extravagant praise of his friends, who have too persistently ignored the greater poetical tenderness of Chopin and others. Beethoven himself knew his limitations better than they and was frank in his confession of them. In 1802 he said to Krumpfholz: "I am not satisfied with my works up-to-date"; and years later, as Ries and others reported, he disliked playing his own pianoforte pieces. Some of the Beethoven sonatas are among the greatest works written for piano, but many are becoming obsolete. J. S. Shedlock, in his admirable book, "The Pianoforte Sonata," shows more discrimination than most of the Beethovenites. "To suggest," he remarks, "that any one of Beethoven's thirty-two should be removed out of its place would now sound flat blasphemy; but art progresses, and some even now are falling into oblivion." This could not be said of Chopin's pieces; hardly any of them have suffered from the lapse of time. They excel Beethoven's in wealth of melodic invention, in harmonic and modulatory originality, in idiomatic pianistic style, and in coherence of form. Mr. Krehbiel speaks scornfully of those who depreciate the large forms, and he compares a sonata or symphony to a cathedral; but if cathedrals were as loosely, as incoherently, put together as sonatas and symphonies are, the first gale would blow them into ruins.

It is to be regretted that the author did not realize that Chopin is the sun

around which all pianoforte music revolves, quite as much as Schubert is the sun in the world of song; to be regretted also that, instead of devoting a page to what he justly calls the "metaphorical rhapsody" of Lenz and others on Liszt, he did not give space to citing the searching and instructive remarks of Rudolph Breithaupt on Liszt's pianistic innovations printed in *Die Musik*. Of Schubert, the author writes sympathetically and the remarks on the piano music of Bach and Handel are admirably to the point; so are those on Schumann, Mendelssohn, and Weber. The writer's erudition is manifested by the offering of much by-the-way curious information in text and footnotes. There are eleven illustrations.

Mauriee Renaud will give his second song recital at Carnegie Hall on Tuesday afternoon, February 7.

Lilli Lehmann's voice resists the effeet of time. A few weeks ago she appeared at the Imperial Opera in Vienna in "Fidelio" and "Don Giovanni" with the usual sueeess.

Handel has never been so popular in Germany as in England. His oratorio "Belsazar" had its first Leipzig performance this winter.

In commemoration of the fifteenth anniversary of Prof. Arthur Nikisch's first appearance as eonduetor in Russia, the Kussewitzky concert committee in Moscow arranged an extra concert to be given under his direetion. The programme was entirely devoted to eompositions by Tchaikovsky, and included the Symphonie Pathétique. Herr Nikiseh, who in Russia is considered unrivalled as an interpreter of Tehaikovsky's music, reeeived tremendous ovations. Addresses, laurels, and valuable gifts were sent from all parts of Russia. No foreign artist has probably ever been aeeorded sueh a tribute of admiration in that country, says the London *Musical Times*.

The five volumes of the new edition of Grove's "Dietionary of Musie and Musicians" comprise nearly 4,000 pages whieh contain about 4,000,000 words by 184 writers. It is stated in a London journal that the editor of this edition, Fuller Maitland, invited a well-known and able musieian to deal with Riehard Strauss, but the proposed contributor deelined the task after hearing "Salome."

Art

A second exhibition of the Senefelder Club in London promises well for the revival of lithography as an art. Every effort was made to insure this revival some ten years or so ago, when the centenary of Senefelder was celebrated in Paris, but with no very practical results. A number of distinguished artists produced distinguished lithographs, but only in a few cases were collectors, dealers, and publishers interested, and the art languished for the want of neeessary patronage. Artists have always been interested, for there is no more autographic method for the multiplication of their designs, but artists eannot live on their own personal interest alone. When the Senefelder Club was organized a year ago and gave a remarkable exhibition at the Goupil Gallery, everybody who cared for so delightful an art hailed it with joy, but also with fear that the first exhibition might be the last. However, the club in its second year shows itself to be, if anything, stronger than ever, and its seeond exhibition in the same gallery is more remarkable than the first. The club has the good sense to realize that it ean but losc by insularity in art, or even by restrieting its show entirely to members. Some of the British exhibitors do not beiong to the club, and not only do many foreigners contribute, but the work of artists long sinee dead is ineluded. As a eonsequenee, the eolleetion gains in breadth and variety. Almost everything that the artist ean do on the stone, almost everything that he ean obtain from it, is represented. There are the direet, suggestive, almost short-hand notes by Manet, La Guerre Civile, and La Barricade, for instance, and at the other extreme the worked-out effects of light and atmosphere by Signac and Emil Claus. Willette ean be seen in a cartoon the meaning of which leaps to the eye, and Henri de Groux in designs so intrieate that whatever horrors he may have wished to convey vanish in the endeavor to unravel the tangle of figures and lincs. And Fautin-Latour can be eontrasted with Veber, Louis Legrand with Anquetin and Steinlen. Germany is well represented in the careful but simple studies of mountain forms by Sauter, and the elaborate flowers by Fräulein Lange, wonderful examples of eolor printing, whieh give not a mere suggestion of eolor as in Whistler's exquisite little prints, but carry it as far almost as in a painting, and never beyond the legitimate possibilities of the medium.

There are good things too from America: a portrait by Albert Sterner, two figure studies and a ehureh interior, with extraordinary effects obtained from brilliant touches of color, by MeLure Hamilton; and a series of drawings of Niagara by Joseph Pennell, some of which, it may be interesting to note, have been already bought by the British government for the Victoria and Albert Museum, South Kensington, together with several other prints in the eolleetion. It is this offieial recognition in a eountry offieially indifferent to the eneouragement of art that is one of the most promising signs of the sueeess of the elub and its exhibitions. Herkomer, who has talked a great deal of the new process invented by him—though it is not easy for the modern lithographer to invent anything in which he was not anticipated by Senefelder—shows several prints which, whatever the merit of the process, have a dulness, a heaviness curiously inappropriate when the chief attraction of lithography to the artist is the chance it gives him for spontaneity and direetness of expression. In the series by C. H. Shannon a most delicate and sympathetic understanding of the medium is revealed, but little is to be said about his work that has not been said already. There are portraits by F. E. Jackson, who has mastered the technique of the art most thoroughly. But of all the British members not one is so striking as John Copley, who gets from the stone a richness and color that pure black-and-white does not often give. Other prints are interesting for other reasons. But enough have been mentioned to explain the importance of the exhibition, and the loss it would be if an art with such possibilities, of which the artist is so ready to avail himself, were allowed to disappear for want of recognition. Because commercial lithography is guilty of atrocities, it does not follow that artistic lithography must pay the penalty.

The *Monatshefte* for January contains a discussion by Dr. Steinmann of the portrait which he discovered of Queen Charlotte, George III's consort, painted by Gainsborough. The portrait is now in the possession of the Grand Duke of Mecklenburg-Schwerin.

"Cathedral Churches of England" (Duffield), by Helen Marshall Pratt, is a guidebook so concise and clearly arranged that it might well find a place in the pedestrian's knapsack. It is based upon a thorough study of the churches and the literature concerning them, and includes essays on the development of Gothic architecture and stained glass in England, a bibliography, and itineraries. The usual instructions to the reader as to what he shall or shall not admire are wisely omitted; and it is a pity that the small reproductions of commonplace photographs were not left out, too.

Mabel Tuke Priestman, in two volumes published by McClurg & Co. under the titles "Artistic Homes" and "Handicrafts in the Home," has made "copy" of several houses of the improved kind now building in many American suburbs, and of some of the revived arts and crafts which are in evidence wherever two or three are met together at a woman's club. Mrs. Priestman is an art writer, not an art critic. With never a smart saying or neatly turned antithesis she tells a story that is almost demurely unaffected. "A house of simple colonial design, of good architecture, and well adapted for the suburbs or country, has been built in Germantown," is her way of beginning a book. No philosophical preface is deemed necessary, no introduction to expose the reaction of the American man on his problems of shelter and domestic enjoyment. This kind of treatment, sketchy and suggestive, is directly opposite to that of a vast German treatise on the American house which has lately appeared. Most of the houses described and illustrated by Mrs. Priestman are of Philadelphia. The handicraft book is one which, while it invites criticism of its haphazardness in the selection of arts and crafts, will be useful to many amateur and semi-professional workers. This is the day of "art crafting in metal," as an ingenious advertising writer phrases it—of high school ceramics and sanatorium mat-making. With desirable definiteness as regards the tools and materials needed, the costs and the processes possible for beginners, Mrs. Priestman describes several metal crafts, wood and chip carving, leather work, pyrography, hand-woven rugs, raffia needlework, and other occupations at which busy hands may turn an honest dollar, and which nowadays give pleasurable employment to the hands of not a few of the idle rich. Omissions of some rather popular pursuits will be noted.

The Guild of St. Dunstan, for example, might justly complain that there is no chapter devoted to ecclesiastical art. The vogue of the hand-wrought picture and mirror frames is not considered. Some of the arts taken up—as pyrography—have, unfortunately, been so vulgarized that heavy responsibility rests on the author who encourages further incursions into an overworked field. The volume, nevertheless, deserves commendation for its sincerity.

The definitive catalogue of the etchings and mezzotints of Sir Seymour Haden, who died not long ago, has just appeared, in an edition limited to 225 copies, with the title, "The Engraved Work of Sir Francis Seymour Haden, P. R. E., an illustrated and descriptive catalogue, by H. Nazeby Harrington. With 109 plates, containing reproductions of 250 etchings." (Liverpool: Henry Young & Sons.) As the title indicates, Mr. Harrington has followed the excellent plan of giving a reproduction of each print catalogued, a plan to which the works of Rovinski (on Rembrandt), Deiteil, H. J. Hubert (on Israels), and others have already accustomed us. In the case of unique or rare impressions the locale is noted, in which category the New York Public Library often appears, as it possesses the only noteworthy public collection of the English etcher's work.

Dr. Arvanitopoulos has had another successful season of excavations at Pagasæ in Thessaly, where he has cleared the second tower, which was found to have been filled with rubbish containing a number of painted Greek gravestones. About one hundred such gravestones were brought to light, some of them in an excellent state of preservation, of which the following are the most important: A stele of Aristoxydes of Keios, representing a warrior greeting a youth; one of Klemene, the daughter of Agathokles, representing an altar with a serpent; one of Lycoleon of Angea, with a feast of the dead; and one of Paulos, son of Artemidoros, with a beautiful representation of an anthemion.

John Lockwood Kipling, father of Rudyard Kipling, died at his home at Tisbury, England, last Sunday. Known in this country as the illustrator of his son's books, he was by profession an architectural sculptor. He spent most of his life in India, and he won considerable renown not only there, but in England, through his artistic knowledge and his deftness in execution. He was born in Pickering, England, in 1837. His father was the Rev. Joseph Kipling. He received his art education at the South Kensington Institution. With two associates, he was chosen to direct an art school which it was proposed to found at Bombay. The successful carrying out of this plan marked the beginning of modern art education in India. Lockwood Kipling remained in direction of the Bombay School of Art until 1875. He left Bombay for Lahore, where he established the Mayo Art School, a monument of the government to the memory of Lord Mayo. Later he was appointed to a more notable position, that of curator of the Lahore Museum, an institution devoted to the collection of all varieties of native art and curiosities. The museum grew greatly in the years of his connection with it. He managed the Indian exhibit at the Colonial and Indian Exhibition in London in 1886. One of his most recent tasks was the illustrating of an edition of Rudyard Kipling's books. He made bas-reliefs in clay and photographs of these were reproduced as illustrations. He was the author of "Beast and Man in India," which appeared twenty years ago.

John MacWhirter, the painter, who died in London on Saturday, was born near Edinburgh seventy-four years ago. As a painter of landscapes, a master of detail and technique, and as a scholar of botany, geology, and the natural sciences, Mr. MacWhirter for more than half a century had been considered one of the leading lights of the English scientific and art worlds. Honors were conferred upon him continuously from the time he was twenty-five years old, when he was elected an associate of the Royal Scottish Academy, to 1894, when he was enrolled in the Royal Academy. The first of his landscapes, for which he was far famed, was exhibited in 1869. It was entitled "Loch Coruisk, Isle of Skye." Other famous paintings were "Lady of the Woods," 1876; "The Three Graces," 1878; "The Track of the Hurricane," "The Sleep That is Among the Lonely Hills," 1896, and "A Monarch." He wrote "Landscape Painting in Water Colours."

Jules Maciet, vice-president of the Union Centrale des Arts Decoratifs, and president of the Société des Amis du Louvre, and a great patron of art, died recently, at the age of sixty-four.

The death is announced from Stuttgart of the painter, Hermann Pleuer, who is best known for his "Farewell," "Amen," a series of "Moonlight Nights," and "Railway Scenes."

The French miniaturist, Madame Camille Isabert, is dead, at the ripe age of eighty-eight.

Finance

SOME INTERESTING REMINISCENCE.

The circumstances which bring men together in the large operations of finance, and the necessary reserve and secrecy which surround their joint undertakings, render it always improbable and usually impossible that, even when a given episode or a given career is closed, any one who was personally associated with it should give to the reading public his frank recollections and impressions. High financiers do not keep diaries which may be published for subsequent generations, as is sometimes the habit of participants in the secrets of diplomacy. If they write letters, the recipient usually has as good reasons for safeguarding them as the writer has. Personal testimony of such men on such subjects is usually to be had only under the probe of courts or legislative committees, and in that case, it is apt to be a version of the episode distorted by the wish to twist it into defence, apology, or denial.

Otto H. Kahn, a close personal associate of the late Edward H. Harriman during the spectacular episodes of the decade past, and a member of the banking house which had most to do with financing his undertakings, set an interesting precedent, in an address last week, by discussing these very episodes and by frankly summarizing Harriman's character and methods in connection with them. The character sketch is of interest in itself—not less so from the fact that the really conspicuous part of Harriman's career did not begin until he was nearly fifty years of age, and occupied barely a decade before it was terminated by his death. Mr. Kahn, in his reminiscence, lays particular stress on two essential qualities in this interesting financial career—the "sheer persistency" of Harriman, in refusing to abandon any purpose on which he had set out until it was achieved, and the extraordinary power which he exerted over the will of other men, in dictating policies and actions. Mr. Kahn recalls his first recollection of Harriman when, fourteen years ago, the then comparatively unknown promoter sought to interest the powerful banking house in a business proposition. The request was declined. Harriman's answer was: "I am dead tired this afternoon, and no good any more. . . . I'll tackle you again to-morrow, when I am fresh. I'm bound to convince you, and to get you to come along." And he did so.

When Harriman entered the board of the reorganized Union Pacific—not then as the reorganizer, but as a newcomer in the company—he was regarded by his colleagues, men long identified with the company, with reserve if not unfriendliness. Yet "within one short year," Mr. Kahn (himself a member of the Union Pacific board) remarks, Harriman "had placed himself at the head of the board and become the ruling spirit, the dominating force, of the enterprise." When Ryan in 1905 bought control of the Equitable Life from young Hyde, Harriman demanded a half interest, which was publicly refused. Yet it became known, after Harriman's death in 1909, that in this, too, he had had his way.

In 1898, starting out on a tour of inspection of the Union Pacific, of which he had just been elected chairman, he telegraphed back to the directors asking authority to buy some $25,000,000 of new equipment and materials. The board resisted; predictions of a renewed lapse into insolvency were made in it. Harriman returned, and the board yielded; indeed, he had gone so far as to contract beforehand for part of the requisite purchases, on his individual responsibility. To this reminiscence of Mr. Kahn it may be added that, within less than four years, the board had authorized Harriman, as its chairman, to "borrow such sums of money as may be required for the uses of this company, and to execute in the name and in behalf of this company a note or notes for the amount so borrowed." This re-

markably broad power was exercised on one occasion, to the extent of $75,000,000, to buy up shares of half a dozen other railways, east and west of the Mississippi, on the basis of bank loans to the Union Pacific or its subsidiaries. As a final sidelight on this aspect of Harriman's individuality, Mr. Kahn adds that "if a fight was on somewhere, whether it was his or not, he itched to be in it. . . . He was a born fighting genius, and had he lived in an earlier age, he probably would have ranked amongst those who with their swords carved kingdoms for themselves out of the map of Europe and founded dynasties. . . . It is no mere phrase to say that he never knew the meaning of 'fear'—either physical or moral." The remarkable fact about this is that he was a man of frail physique, feeble health, and far from impressive bearing.

The evidence which Mr. Kahn produces of the genius for practical railway administration which Harriman possessed, is entirely convincing; indeed, that genius has long received full recognition from people familiar with the subject, and is likely, as time goes on, to receive increasing recognition. The conspicuous leaders in the finance of the period were as a rule men whose particular achievements were the buying up of competing corporations at extravagant prices, and the successful "unloading" on the public of the huge mass of paper securities created. Harriman, too, was a master of the expedients of issuing paper and inflating values; he was, indeed, a far more aggressive leader of Stock Exchange speculation than his competitors; but none of them left such marks of constructive achievement of a sound industrial character on the history of the corporations. Most of them left in the wake of their careers a series of shattered markets, undigested securities, and companies waterlogged with excessive capitalization. Whether the autocratic power, obtained and exercised by Harriman through these high qualities, was always used in the interests of the community and for the best good of sound finance, is a different question. The fight of 1901 over the Northern Pacific, for example, is explained by Mr. Kahn, as it has been explained by others, as having been planned only in defence of the vital interests of the Union Pacific property. This means that, rather than let the Northern Pacific keep control of the Chicago, Burlington and Quincy (which that company and the Great Northern had just bought) Harriman resolved to buy the $150,000,000 Northern Pacific itself. He did this through borrowing prodigious sums on Union Pacific's credit and using the proceeds in the open market, in competition with the bids of the Morgan interest.

That the rash undertaking did not end in the disaster which such procedures usually invite, was due to exceptional economic conditions of the day; but the example was mischievous and demoralizing in the extreme. As for the necessity of that contest, Mr. Kahn is careful only to say that the terms of peace "gave to the other side the appearance of victory," and ascribes even this to Harriman's self-restraint. He probably refers to the lodging of the shares of both contestants in the Northern Securities holding company. But that company was three years later dissolved by the Supreme Court; the shares were distributed; the Morgan party received a majority of Northern Pacific stock, and, with the fight over for good and the Union Pacific loaded with $83,000,000 new debt, control of the Burlington remained, and has ever since remained, exactly where it was when the fight began.

Perhaps even more open to discussion is Mr. Kahn's interpretation of the events of 1906 and 1907, when Harriman came in for a very large share of public denunciation. His account of the matter is that a plot had been organized, in circles of high finance, whose members smarted with hatred and jealousy of Harriman, to ruin the ambitious Union Pacific chieftain. As a first step, the plotters poisoned President Roosevelt's mind against Harriman. The Interstate Commerce Commission's investigation followed; then the Alton investigation. Harriman's associates began to desert him; the public denounced him as a law-breaker; his own friends advised him to resign his railway offices and leave the country.

As to the existence of such a plot to ruin a troublesome antagonist, Mr. Kahn's testimony may easily be accepted. Such an incident would have been no novelty in Wall Street, and Harriman had never troubled himself with making friends of the rival financiers whose preserves he invaded. But the crux of the question is whether Harriman was or was not himself to blame for the situation in which he found himself. Unbiassed inquiry will, in our opinion, decide that he was. No matter who instigated the Government inquiry into Harriman's use of Union Pacific's resources in 1906, it ought to have been investigated. A railway executive who, at the top of a wild Stock Exchange speculation, not only plunges his company's entire cash surplus into stocks of other railways, but bonds his company for $75,000,000 to continue the daring performance, was a proper subject for such investigation. Mr. Kahn admits that this was a "serious mistake," and it certainly was. Furthermore, there is now no doubt whatever that the extremely embarrassing situation in which some powerful capitalists of the Harriman group were found as the panic of 1907 approached, was in no small measure a result of their financial exploits of 1906, under his leadership.

The concluding words of this review of Harriman's career by his former colleague and friend will probably come closer to expressing the sober judgment of the community at large regarding this ten-year episode:

> I have said that he came to hold a greater power in the railroad world than is likely ever to be held again by any one man. In this remark I had reference not only to the very exceptional combination of qualities in him—I know of no parallel to this particular combination in our industrial financial history—but even more to the fact that his death coincided with what appears to be the ending of an epoch in our economic development. His career was the embodiment of unfettered individualism. For better or for worse—personally, I believe for better, unless we go too far and too fast—the people appear determined to put limits and restraints upon the exercise of economic power and overlordship, just as in former days they put limits and restraints upon the absolutism of rulers. Therefore, I believe, there will be no successor to Mr. Harriman; there will be no other career like his.

Why War Must Cease!

The Great Illusion

A Study of the Relation of Military Power in Nations to their Economic and Social Advantages

By NORMAN ANGELL.

400 pages. Crown 8vo. $1.50 net.

"Mr. Angell throws into the dust bin the worn-out theories, the axioms of statecraft, the shibboleths of diplomats, the mouthings of politicastros as to the necessity for war. . . . Not to speak of it flamboyantly, this work is to war and to the spirit of the war god the modern *Mene Mene, Tekel Upharsin,* the flamingly prophetic handwriting on the wall for all captains of whatsoever sort who by means of war would keep humanity frightened, brutalized, enslaved, and impoverished."—*St. Louis Globe-Democrat.*

The book is being published simultaneously in the United States, England, France, Germany, Denmark, Spain, Finland, Holland, Italy, Sweden, and Japan.

NOW READY NOW READY

THE

AMERICAN YEAR BOOK

FOR 1910

Prepared under the care of a supervisory Board consisting of accredited representatives or members of THIRTY-FIVE GREAT NATIONAL LEARNED SOCIETIES.

DR. ALBERT BUSHNELL HART, Harvard University, Chairman.
DR. S. N. D. NORTH, Formerly Director of U. S. Census, Managing Editor

The American Year Book records the events and progress during the year in every department of human activity, with especial stress on American affairs. It has been the aim of the editors to reach the highest point of authority and accuracy. All the departments have been handled by experts. The work is arranged with the idea of serving the busy man who wishes his information to be compact and absolutely reliable.

Its 887 closely printed pages provide exact information on scientific, historical, literary, sociological, economic, and kindred subjects; concise national and international statistics; a chronology of notable events; a select bibliography; and a variety of tabular matter. A full subject index thoroughly analyzes the contents. The volume is easy to handle—only five by eight inches, and about two inches thick. The price is $3.50 *net*.

A DESCRIPTIVE CIRCULAR WILL BE SENT UPON REQUEST.

PUBLISHED THIS WEEK:

Railroad Traffic and Rates

By EMORY R. JOHNSON, Ph.D.
Professor of Transportation and Commerce, University of Pennsylvania

and GROVER G. HUEBNER, Ph.D.
Instructor in Transportation and Commerce, University of Pennsylvania

This important work is not an attack upon railroads, nor a defence of them. It is an exhaustive account of the intricate and detailed work connected with railroad traffic and rate making. It is not the result of a few months' labor. The authors have given the subject years of study, and have received information and advice from many prominent railway officials and other traffic experts. The volumes are thus written by university professors with the assistance of practical railway men.

The business of the traffic department of railroads is covered in minute detail, and there are also several chapters upon the traffic problems with which the operating department is concerned—terminal handling of traffic, the work of the station agent, car service, time freight, etc. There are also elaborate explanations of the shipping papers and tickets used and the methods of accounting of freight and passenger traffic.

The subject of rate making is gone into with absolute thoroughness, and the book contains a large amount of valuable material to be found in no other volume. For example, one hundred and fifty pages are devoted to a description of the actual systems of rate making. This highly important information has not been available heretofore in print. More than sixty pages are given over to a discussion of the express services and tariffs. A full account of the Pullman Company, which has never been written up heretofore, is given in a lengthy chapter. There are three chapters upon the transportation of the mails and the payments therefor.

The book is written in a concise, clear style. It is a manual that will be of daily assistance to railway officials, traffic men, government officers, large shippers, university professors and students, and every one interested in railroad matters.

Elaborately illustrated with Maps, Charts, Diagrams and Forms.
Two Appendices and Index. Two Volumes. 8vo. Cloth, $5.00 net.

RECENT BOOKS

PRAGMATISM AND ITS CRITICS. By ADDISON W. MOORE.

This is the clearest and most satisfactory summing up of the controversy that has yet appeared. Even the most technical matters are presented in such a way as to be intelligible to anyone who is genuinely interested in the movement. *294 pages, 12mo, cloth; postpaid $1.36.*

MORPHOLOGY OF GYMNOSPERMS. By JOHN M. COULTER and CHARLES J. CHAMBERLAIN.

Each of the seven great groups is here presented in detail, and a final chapter discusses the problem of phylogeny and points out the evolutionary tendencies. The illustrations are numerous and in large part original. *470 pages, 462 illustrations, 8vo, cloth; postpaid, $4.22.*

THE BOOK OF MICAH. By PAUL HAUPT.

A new metrical translation, with restoration of the Hebrew text and an elaborate commentary, critical and explanatory. *118 pages, 8vo, paper; postpaid, $1.06.*

PROCEEDINGS OF THE BAPTIST CONGRESS, 1910

The practical, live questions of religious belief and every-day practice are here discussed with a frankness and freedom almost startling. The contributors stand high among the influential men of the denomination. *218 pages, 8vo, paper; postpaid, 58 cents.*

The Nation

NEW YORK, THURSDAY, FEBRUARY 9, 1911.

The Week

The strength of the sentiment in favor of election of United States Senators by the direct vote of the people has been strikingly attested in the proceedings of the Senate during the past few days. Nobody would have supposed, a few months ago, that a majority of the Senators could have been found to vote for consideration of the proposed Constitutional amendment, when it had been so recently reported and only a few weeks remained of the session; and this despite the fact that the amendment, as proposed, is obnoxious to the charge of doing much more than it is ostensibly designed to do. Senator Lodge was justified in viewing with great apprehension, as he did in his speech Monday, the sacrifice, as an incident to the contemplated change, of powers now possessed by the Federal Government in relation to the election of Senators. But this objection would be infinitely more effective if it came from a source friendly to direct election in itself. Inherently, there is nothing in direct election which should necessitate any alteration in the present balance of powers between the nation and the States; and the language of the amendment ought to invite neither the objection made by Southern members to some forms—that they would give the central government powers like those contemplated in the Force bill—nor the objection urged with so much emphasis by Senator Lodge.

That the ship subsidy bill should pass even one house of Congress is bad enough. That it should pass because a new Democratic Senator failed to stay in his seat to vote is fresh proof of the absence of proper leadership in the Democratic party. Now the fight will be on in dead earnest in the House of Representatives, and there the bill should be beaten at all costs. The dispatches indicate that the outlook for it is slim there, but no stone should be left unturned to insure its defeat. At the very moment when the whole political question of the hour is the battle against special privilege, the suggestion that the United States should spend large sums of money to make possible certain steamship lines which would otherwise operate at a loss, ought to be spurned. Just how much principle there is behind the bill appears from the fact that the new insurgent Senator from Washington was opposed to it *until* Pacific Ocean lines were included in it. Then his opposition melted away. It is the same old story of creating industries on the you-tickle-me-I'll-tickle-you basis, to support which the whole people is taxed.

The courtesy of the Senate often moves in mysterious ways its wonders to perform, and just now it appears to be working upon Senator Lorimer to induce him to resign. Tearful appeals are made to him by brother-Senators. They point out to him with pathos in their voices the exceedingly awkward position in which they are placed. Senatorial courtesy is pulling them now this way, now that. They hate to reflect upon the Senatorial committee which has reported that not enough votes in the Illinois Legislature were bribed to invalidate Lorimer's election, but then there is the evidence, there is Root's speech against him, there is exigent public sentiment. On the other hand, they would be smitten with grief to vote against Lorimer, a brother beloved, and himself the very flower of Senatorial courtesy. Won't he kindly prove that he is by taking himself out of the way, and enabling Senators to do their duty by dodging it? To this moving request Senator Lorimer himself is said to be objecting that suicide is confession, but we are confident that if the courtesy of the Senate is resolutely applied to him, he will yet permit it to do its perfect work.

The lesson of the forest fires of last summer, in the opinion of national forest officers, is the value of proper utilization of the range under regulated grazing. Detailed examination of the lands burned over in Washington and Oregon shows a timber loss of about 700,000,000 feet. In the forest where the fire extended over the greatest area, 160,000 acres were burned. This part of the fire, however, was chiefly surface, and far less destructive than fires which travel through the crowns of the trees. The reason for the non-use of this and other forests is their inaccessibility. As a consequence, the dry grass and other herbage spread the flames. and also made them fiercer than they would have been if the land had been grazed. It is the policy of national forest administration to open all available range to the fullest use consistent with preservation of its "carrying power" and with protection of forest growth and water supplies. This is done by opening means of communication, through construction of driveways, roads, and trails, so that stock may penetrate wherever forage is to be found. The Department of Agriculture is also obtaining concessions from railways in the form of rates and facilities for shipping stock in and out of regions where forage is now going to waste. The topography of some of the country is such as to make it available only from the Canadian side, but American stock owners are beginning to work into it from that direction.

Two points in the report of the Commissioner of Indian Affairs deserve notice. The first is the arousing of interest in the efforts of the Government to protect its wards from the introduction and sale of liquor. Not only are the superintendents of the various reservations and schools working with the Department in this matter, but there is an increasing coöperation by the State officers. In some States men are employed to detect liquor-selling to Indians, in others no more saloons are to be licensed, and in some, ordinances have been passed by county officers prohibiting such sale. In a few cases the Indians themselves have petitioned for the revoking of saloon licenses. More than a thousand convictions for illegal selling were obtained during the year, and more than a hundred saloons were closed. The second point has to do with the old story of the stealing of Indian lands. In 1906 Congress removed all restrictions on the sale, encumbrance, or taxation of the lands of the adults of mixed blood on the White Earth Reservation in Minnesota. At once the allottees began to sell their

lands. The cupidity of the white purchasers led to flagrant violations of the law. They bought lands of Indians who were unquestionably full-bloods, and resorted to every kind of trickery and fraud, until 95 per cent. of the allotments, or the timber on them, had been acquired. An investigation into these sales, which involved millions of dollars, has resulted in the assignment of special United States attorneys by the Department of Justice to recover the lands and the value of the timber illegally purchased. Progress is slow on account of numerous legal difficulties in the way, but it is earnestly to be hoped that it will be sure.

The Baltimore ordinance for the segregation of white and colored people in their places of residence has been pronounced void on account of technical defects, by a Baltimore court. But it is interesting to note that while the judges rendered their decision on the ground of improper framing of the ordinance, they took occasion, in handing down the decision, to touch upon the real issue involved, as follows:

> Whether it is possible to pass a valid ordinance providing for the segregation of the white and colored races in their places of residence, is a question of great importance, but is one which in our judgment ought to be decided when an ordinance not otherwise void is before this court.

It happens that of the two judges sitting in the case, one is a Democrat and the other a Republican, but there is apparently no difference of opinion between them as to the grave doubt that attaches to the question whether it would be possible Constitutionally to effect the object arrived at by any device whatsoever.

San Francisco will think none the less of her victory over New Orleans as the Panama Exposition city for the "climax of enthusiasm" that came with the speech made by Representative Rodenburg in behalf of her rival, or for the "frank acceptance of the fact" that the influence of the Administration was cast on her side for the purpose of obtaining, without open protest, the ratification of the new treaty with Japan. The Pacific metropolis has been confident of winning, and ready to celebrate the news with a "spontaneous" demonstration, carefully outlined for it in advance by one of its weekly journals. The details of the impromptu celebration are monotonously like those of any occasion of rejoicing. A parade and a noise are its essential elements, the latter to be produced by "opening up every siren and whistle around the bay, and keeping it open while steam or air holds out," as well as by "automobile sirens, tin horns, rattles, and torpedoes."

The House has passed without debate the Senate resolution making possible the reinstatement of the nine cadets who were dismissed from West Point two years ago for hazing. It is the latest of many illustrations of the Congressional way of enforcing discipline among those who are some day to be in position of authority. The old rule that he who commands must first learn to obey is too often superseded both at West Point and at Annapolis by appealing over the heads of one's superiors to a body subject to pressure of political and social influence. The fact that army officers generally deprecate the passage of the resolution seems to have no more weight with Congress than the common-sense considerations that point in the same direction.

The announcement by the Union Pacific management that it proposes—regardless of halting bond markets, government supervision of rates, and demand for higher wages by railway laborers—to spend $75,000,000 in double tracking of its transcontinental line, is interesting in many ways. It is an evidence, for one thing, of the development of the railway industry in the younger West. So long as a railway from the Missouri River to the Pacific had, as its primary function, merely the linking of two distant industrial communities by traversing two thousand miles of largely unsettled territory, a single track was not only sufficient, but was all that such an enterprise could afford. But the change in that section of the country, during the decade past, has been very great. The States directly traversed by the Union Pacific's lines to Portland and San Francisco now contain two millions more of population than in 1900; their product and industry have grown even faster than their population, and the movement of through freight and passengers has risen in almost equal measure. It is this remarkable industrial growth which brought such railway companies as the Union and Northern Pacific from their insolvency of 1896 to their exceptionally prosperous condition of to-day. The project will require at least five years.

Two points in the announcements of Dean West, made last Thursday with reference to the new Graduate College at Princeton, though not entirely unfamiliar, are of great interest. These are the plans to keep the graduate school distinct in every way from the college, and to give graduate students, at reasonable prices, comfortable lodgings. At Harvard and Yale instructors are sometimes confronted by the problem of lecturing to men ranging all the way from freshmen to men three or four years out of college—or, in individual cases, twenty years. The example of Princeton will doubtless be influential in changing all this. In the matter of surrounding the actual living of graduate students with a certain atmosphere of culture, Princeton, with her great endowment of upwards of three millions of dollars, can also do great service. Harvard fronted in this direction two or three years ago by devoting Conant Hall to the purpose, after having seen graduate students packed away in stuffy rooms, sometimes starving themselves into serious illness, and in other ways pitifully bringing reproach upon the graduate school. Remembering these former conditions, which are typical, we believe, of such schools elsewhere, we may well be delighted to hear from Dean West that

> The quadrangle of Thompson College is planned to accommodate approximately 100 graduate students. Each student is to have his own study and bedroom, for the all-important reason that experience proves that the graduate student, far more than the undergraduate, needs the exclusive and continuous use of his study. A great deal of his work has to be done alone. Moreover, every two suites of student's rooms will be provided with a small bath and toilet room for the sake of health, cleanliness, efficiency, and economy in the service of the building and the general amenities of civilized life. Breakfast and luncheon will be served in the small dining-room and dinner in the Memorial Dining Hall.

The emotions of Keats on first looking into Chapman's Homer are rare in a day of crammed and bored candidates for a college entrance examination in English, but an ornament of the lyric stage has apparently duplicated the experi-

ence. "For the first time in my life," she is reported to have said, "I am reading the Bible." And she goes on to offer evidence, not only of her reading but of her historical judgment. "I am reading about Solomon, and I just adore him." It was in Philadelphia that the new planet swam into her ken, and that, like stout Cortez (who was really Balboa), she started at the strange sight with "wild surmise." How deeply she was affected is revealed by her declared intention "to keep on reading the good book." It would be interesting to know the reason for her flattering endorsement of the luxury-loving monarch, but she gives no hint.

The increase of 679 persons, or eleven per cent., in the number taking the civil service examinations for places in the Philippines during the last fiscal year, is due almost entirely to the larger number of Filipinos examined in English. Excluding non-educational examinations for skilled laborers, there was an increase of 861, or 24 per cent., in the number of Filipinos examined in English, and a decrease of 304, or 19 per cent., in the number examined in Spanish. Up to September 30, 1903, the maximum number of Filipinos examined in English in any year was ninety-one. During the last fiscal year it reached 4,516. Of the persons examined in the fifty-three distinct kinds of tests during the year, 79 per cent. were examined in English. Slightly more than 80 per cent. of the local appointees were Filipinos. There was a decrease of 31 per cent. in the number of Americans appointed in the United States to the classified service. One feature of the year's statistics which the Bureau of Civil Service looks upon unfavorably is the increase in voluntary resignations of regularly and permanently appointed Americans. Of these, there were 508, or 19 per cent. of the total number, and this is an increase of 132, or 35 per cent., above the number for the preceding year. Finally, the ability of the Bureau to supply well-qualified men has borne its natural fruit in leading appointing officers to take a higher view of its value.

Kinglake had a cynical reference to "the qualifying words which correct the imprudences and derange the grammatical structure of a Queen's Speech." That thing could not be made in connection with the King's Speech at the opening of the new Parliament Monday. It is very brief, but, on the main issue, is wholly business-like. As everybody expected, and as, indeed, was inevitable after the general election, the Government is at once to push its bill for limiting the veto of the House of Lords. The Chancellor of the Exchequer is away ill in the South of France, but the scheme which Mr. Lloyd George had spoken of to provide a system of State insurance against sickness and lack of employment will also, it is announced, be introduced in the present sitting of Parliament. This will naturally bind the Labor members even more closely to the Ministry. As for the terms of the Veto Bill, it is probable that they will, in general, follow those of the measure of last year. But so great among the thinking men of both parties is the sense of the gravity of the Constitutional crisis, that it is not impossible that, after a time, some sort of compromise may be arrived at, covering both a sharper definition of the legislative powers of the House of Lords and a thorough remaking of that body.

Notwithstanding all the usually just complaints against rumor-printing by newspapers, it is evident that rumor may spread amazingly without their assistance. The story of King George's morganatic marriage has been common talk all over Europe and even in America for years. Semi-official contradictions, such as that from the pulpit by the Archbishop of Canterbury, falled utterly to stop a slander cruelly defamatory of a woman, grievous to her distinguished family, and injurious to national morals. It is not long since a sensational story about the death of a prominent American was as common gossip in the clubs of London and Paris as in New York, but the publication of denials and evidence, when it at last came, was made with the evident purpose of nailing a lie and not with the malicious desire further to spread it abroad, as betrayed by the writer in the *Liberator*. The sentence of a year in prison must be everywhere hailed with satisfaction, and the swift course of justice, clearing up and ending the whole miserable affair in a couple of hours, is recommended to our courts for observation.

That the representatives of more than a million organized workers voted unanimously at Leicester, England, last week for a resolution denouncing militarism and war and declaring for the arbitration of all international disputes is heartening news. It was at a special conference for disarmament prior to the annual conference of the Labor party that this action was taken, and Keir Hardie's resolution, in favor of the universal strike as a means of preventing war, was defeated by only six votes. A clause of the resolution adopted calls upon the workers of Great Britain to take organized action with their fellow-workers in Germany and elsewhere to bring about disarmament and the reduction of militaristic burdens. There is a significant warning in this to statesmen of all nations, for this means that English working men have taken precisely the same position as the followers of Bebel in Germany.

One of the inconspicuous but not unimportant problems of empire is the question of European education in India, which is now agitated by the members of the "Domiciled Community." Such education has always depended mainly upon private liberality, which is inadequate for providing facilities equal to those furnished by the Government for its purely Indian subjects. This discrimination is bringing earnest protest from the classes unfavorably affected by it, who point out that a European student is excluded from the colleges affiliated with Calcutta University, that it is difficult to obtain properly qualified teachers, and that there is need of a more complete training, especially designed to prepare young men for their chosen profession. The solution of the problem which commended itself to the recent European Schools Conference was the establishment of an Indian Training College for teachers, and of a Central European College, affiliated with the University of London and "staffed" at first by competent teachers from abroad. This will require a fund of £250,000, which it is proposed to collect from England, America, and the colonies. Meanwhile, the "Domiciled Community" is urged to put its own house in order and to give united support to those who are already working in its educational interest.

A REALLY NATIONAL POLICY.

Monday's action by the House Democrats in deciding by a large majority to vote for the bill carrying out President Taft's trade agreement with Canada, is highly significant. It of course assures the passage of the bill by the House next week. It also shows that the measure can count upon a large Democratic support in the Senate. And this fact must have its influence with disgruntled and wavering Republicans. Can they refuse to stand by their own President? Will they compel the man whom they expect to renominate for the Presidency next year to depend upon the other party for putting through the first distinctive policy he has fathered? That policy, moreover, is evidently popular. Are the Democrats to be enabled to say that, but for them, it could not have been enacted? These questions suggest the natural and legitimate party pressure which will be put upon grumbling and reluctant Republicans before the vote is actually taken in the Senate —either before March 4 or after.

But the whole subject ought to be considered in a spirit broader than that of party. Mere partisan tactics and estimates of political advantage should go for nothing in comparison with the large issues which are written so plainly on the face of the plan of reciprocity with Canada. For here we have a policy which, in a real sense, is national. The protective system, to be sure, used to boast that it was the truly national policy, but as we see it in operation today we know that it is nothing of the kind. It is, rather, the intensification of fatuous localism, every spot or place or group with a special local interest insisting upon having the general tariff law moulded to suit its particular demands, and accomplishing that result by joining hands with a thousand other petty and limited interests in order to unite their parochial self-seeking in one catch-all which they then call "national." It is not Washington that makes a protective tariff, it is Gloucester and Fernandina and Marion and Fargo. Raise back-yard views to the millionth power and you have a national policy!

Not such has been the process by which the agreement for reciprocal trade with Canada has been framed. Local interests—fishmongers and woodcutters—complain bitterly that they were not "consulted" by the President. But he was not drafting a tariff to be log-rolled through. He was shaping a trade policy for the common good. The general government, as we call it, never shows itself more truly general than when it works out a project, like this for freer trade with Canada, in which the controlling consideration is the benefit of all the people, and not the advantage or disadvantage of a few. When we see that done, we really have a national Administration acting in a national spirit. Tariff-makers might like to proceed in that way, but they cannot. They are bound by the swarming Lilliputians of local interests. But nationally-minded rulers who set about lightening tariff burdens are not so tied. They can see the problem steadily and see it whole. And there can be no doubt that the negotiators who, under President Taft's direction, worked out the Canadian agreement did so on the basis of a broadly conceived national measure. This is proved, if proof were needed, by the very fact that it is so violently attacked by embittered localities, but so generally approved by the country at large.

In following up the Payne-Aldrich tariff within less than two years by a plan to relieve the people partly of some of its worst effects, the President has incidentally thrown a great deal of light upon the inherent narrowness and selfishness of protection. In a way, a reciprocity agreement is the process of making a tariff in reverse. In order to produce that vast conglomerate known as the Payne-Aldrich law, thousands of localities pressed forward, one with its salt fish, and others with their lemons and lumber and wood-pulp and paper and steel beams and pottery, and got their due schedules. But no sooner comes along a scheme of Canadian reciprocity, drawn on national lines, than we see these local interests disintegrated instead of combining; each standing off by itself to splutter and make faces, quite unaware how small and ridiculous it looks when compared with the large good of the nation. It is when we observe the nature and sure effects of this exposure of the spirit of protectionism, seeking to put a local veto upon a great national benefit, that we get a better understanding of the powerful blow for tariff-reform that Mr. Taft has struck.

The trade agreement is meeting with some opposition in Canada, too, very much of the sort which it encounters here. There, also, the protectionists who cannot see the forests for the trees have made their protests. But the defence of the measure is the same in Canada as here—namely, that it is a truly national undertaking, intended to promote both trade and good feeling. This, too, is the sufficient answer to the wails of protest which the British Imperialists are emitting. They say that Canada should not have been allowed to enter into the agreement. But Our Lady of Snows is mistress in her own house; and any attempt now to take from her the right to make her own tariffs would evoke a national spirit more ominous than anything shown in the trade arrangement with the United States.

THE UNBUSINESSLIKE POST OFFICE.

Mr. Don C. Seitz, with that directness and vigor characteristic of all his utterances, has paid his respects to the Post Office Department in an article in the current *World's Work* which he entitles "The Post Office: An Obstructive Monopoly." If to the ordinary reader it seems as if there were a good deal of heat in this expression of opinion, it must not be forgotten that Mr. Seitz is the business head of the New York *World*, and that the publishers of the New York newspapers can always be eloquent, and are usually tempted to profanity, when it comes to speaking of the Post Office with which they are daily in touch and to which they send endless complaints from the subscribers who do not receive their newspapers regularly. So difficult has the situation become that the New York newspapers do a large amount of the Government's work for it. They themselves route, bag, and ship their mail, carrying it to the trains and delivering it themselves, thus saving the Post Office thousands upon thousands of dollars annually. This they do not do as an act of beneficent patriotism, but because they find it much cheaper to do the work themselves. In many cases it would not be done at all in time to be of use if the Department were relied upon, for, as Mr. Seitz says, the newspaper is a perishable article which loses its value if not delivered promptly. "So the newsdealer is served by express or by direct

shipment through the railroad at less than half the cost and with much more celerity and regularity than can be had through the Post Office. . . ."

An idea of the severity of Mr. Seitz's assaults upon the Department may be obtained from his statement that, "in ten years at least, the Department has never gone to Congress with a single business-increasing proposition, or with facts and figures that any human being could understand or believe." The arguments most telling with the public are the simple statement that the Canadian Post Office earned $743,102.25 net in its last fiscal year, 6.71 per cent. of its total revenue, while in Japan the Yankees of the East eke out their slender national income by a Post Office surplus of $9,850,000. Contrast this with our own deficits of $17,441,779 in 1909, and $5,848,567 in 1910, and the indictment of the United States is complete. The big drop within the last year is due to Mr. Hitchcock's efforts to economize and improve, for which he has justly been praised. No harder-working Postmaster-General ever held office. Yet it is doubtful if even he realizes clearly where the difficulty lies; that the real place where the Government's emphasis should be laid is upon bettering facilities in order not so much to save money as to increase business. Better post offices, better service, speedier and more frequent deliveries—these are some of the ways of increasing gross and net receipts.

To this the Department answers that Congress is the real stumbling-block. But first and foremost—and here we think the Postmaster-General will agree with us—the trouble is politics. No business concern could be a success which appointed its men as does the Post Office, or threw most of them out whenever it obtained a new president or general manager. To expect to find enterprising, active business men in the rural post office is ridiculous; if such are there, it is by accident and they may expect to go at any time. What is there to encourage a good man to stay in the service? It offers no career; until it does, we shall never see it on a basis comparable to that found in other countries.

A first step might well be perhaps to take the Postmaster-General out of the Cabinet and out of politics. Mr. Taft has extended the civil service rules to postmasters and is known to be ready to put all appointments on a sound basis. Once take the service out of politics and arrange some system by which good men could be induced to enter and be enabled to rise, and the ground-work for reform would be laid—provided the service could be safeguarded from dry-rot and organized like the United States Steel Company or some other well-managed corporation. The Post Office is our greatest monopoly; it ought, as Mr. Seitz says, to pay better than any industrial Trust. Instead, it is shabby, out-at-the-heels, wofully inefficient in a thousand ways, and far too often unenterprising. Berlin's service was better twenty-five years ago than New York's is to-day, and anybody who is familiar with the English service knows how impossible it is to compare ours with it, in speed, in usefulness, in accuracy. For one thing, there are no express companies there to bulldoze Parliament into forbidding a parcels post. Yet, on this side, many people who at heart desire a parcels post are afraid to urge it lest it become vastly inferior, in the Government's hands, to the present express service.

One general rule may be laid down. As in private business, the best way to obtain business is to lower rates. Certain exceptions there may perhaps be in certain classifications, but a reduction of city postage to the one-cent drop-letter rate of the Canadian posts would doubtless pay for itself. The two-cent transatlantic rate has come to stay, and must soon be extended; reducing the price has paid the world over—wherever it has been tried. Mr. Seitz would have the Department send out "business-hunters," as freight lines do—to hunt for trade, and not for votes as now—make its offices the most attractive in every town and village, and refuse to permit them to be "the last business institution to open in the average town and the first to close." Altogether, there is much sound sense in this article.

HORACE GREELEY.

Only a few weeks ago there was celebrated the hundredth anniversary of the birth of Charles Sumner, and now the like commemoration takes place of another of the leading figures in the anti-slavery movement. Few contrasts, however, could be more marked than that between Charles Sumner and Horace Greeley. Nor was this contrast merely such as turned on the difference in their antecedents, their education, and the manner of their entry upon their public careers. Sumner was a man bred in an atmosphere of culture, surrounded in his youth by exceptional advantages, and having throughout his life as much the character of an aristocratic scholar as that of a democratic statesman and agitator, whereas Greeley had a fierce struggle with poverty and remained always the typical American man of the people. But quite apart from this, there was a fundamental difference of temperament and attitude. Sumner, once embarked upon the anti-slavery fight, pursued it in the spirit of a man of one idea; Greeley, with all his humanitarian ardor and fervent advocacy, remained ever the practical politician, without fixed anchorage in permanent principles of action. In the great movement which ended in the civil war, there were many types of effective leadership; that of Garrison was as different as possible from that of Lincoln, and Greeley's cannot be classed with either of these.

The function of Greeley was not to stamp his impress upon policies, or to build up a clearly marked following on definite lines, but to awaken in the minds and hearts of millions of his countrymen the sentiment of abhorrence for slavery and the determination some way or other to bring it to an end. In the spread of this gospel through the agency of every-day journalism he was beyond all comparison the greatest force. Nor should it be imagined that in saying this one is paying tribute merely to the constancy of his advocacy. To hammer away at one subject year in and year out, in season and out of season, is a task of no special difficulty; it requires neither peculiar ability nor unusual courage. What Greeley did was to make his *Tribune* editorials on slavery fresh and interesting, to say the same thing a thousand times without fatiguing his readers. His ability to do this was due partly to his vigorous nature and his extraordinary command of racy and energetic English; but it must also in great measure be ascribed to the very fact that his interest in a great range of other subjects was almost as keen as in the dominant political issue that he represented. The socialistic theories of Fourier, the cause of temperance, the dissemination among the people of the results of modern science, the development of the new

West—all these and many other subjects evoked his ardent sympathy and coöperation.

But the question that comes uppermost to the mind in thinking of Greeley to-day is, of course, that of the change which has taken place in the nature of journalism since he founded the *Tribune*, with a capital of a thousand dollars of borrowed money, seventy years ago. It is not necessary to look upon the men of that time either as giants or as saints, in order to recognize that a profound change has come over the face of things since their day, and that in some essential respects that change is in the nature of a serious loss. Greeley was not a model of perfection, either in his judgment or in his freedom from certain common failings, such as those manifested in some of his strivings for public office. But the history of his journalistic career is that of a man who, upon the sheer basis of his character and ability, built up a newspaper whose function it was to spread through the community those views of political and social questions which he desired to promote, and that kind of instruction and enlightenment which he thought it important to propagate. Such an achievement is to-day all but impossible; and one need not be in any unreasonable degree a *laudator temporis acti* to feel that the loss is deplorable.

Nor is the change confined to this. With the investment of enormous amounts of capital in newspaper enterprises, there has been a gradual but unmistakable alteration in the purpose which is predominant in most of them, apart from any question whether the policy of the paper is or is not shaped in other respects by one strong individuality. There is now no such sense of proportion even in the better class of newspapers as used to prevail half a century ago. Inclusion or exclusion, amount of space and degree of prominence, are for a large part of the matter determined rather by attractiveness from the point of view of entertainment than by importance. In very many ways the newspapers of to-day are better than they were in Greeley's time; in point of freedom from partisan control the conditions are incomparably better now than they were then. But in regard to the general make-up of the paper as well as in regard to the association of its editorial view with the personality of its editor it is far harder in our time for a newspaper to bear the stamp of one striking individuality. Greeley's name will remain a landmark in the history of American journalism; and perhaps no more emphatic tribute can be paid to the extraordinary character of his influence as an editor than in the statement that he would undoubtedly be to-day a greater figure in history if he had not received the tribute of a nomination to the Presidency of the United States.

THE BOLL WEEVIL PANIC.

Messrs. Alfred H. Stone and Julian H. Fort, two cotton planters at Dunleith, Mississippi, have submitted to the First National Bank of Greenville a report of a recent tour of those areas of Louisiana, Texas, and Mississippi which have suffered from the boll weevil. It is a most enlightening document, and one bound to bring great comfort to those who are aware that since its appearance in 1892 this insect pest has affected an area of 225,000 square miles within the five States of Texas, Oklahoma, Louisiana, Arkansas, and Mississippi, and has within the past year invaded Alabama. To many frightened observers it has seemed as if King Cotton himself were doomed; as if the staple upon which the prosperity of the South is builded were going to disappear as completely as did the institution of unpaid slave labor, without which, so Southern planters and statesmen contended for decades, a cotton crop was impossible.

In that case, when the planters were compelled to pay their labor, they speedily found that they could make greater profits than before. The boll weevil is obviously no such blessing in disguise. Yet, as Messrs. Stone and Fort point out, it has already been discovered that the weevil presents instead of one problem "a variety of local problems, differing with local labor and economic conditions, and influenced by physical considerations of soil, rainfall, temperature, vegetation, drainage, etc." This is in itself most reassuring; for if the evil is one affected by local conditions, it is obviously absurd to say that it portends the end of all staple cotton growing and the breaking up of the plantation system of raising cotton on a large scale. Yet it is undeniable that in certain sections the evil that has been done is very great. The Natchez district of Mississippi has, for instance, been completely disorganized, and is to-day a country "stripped of labor, farming implements, and stock, empty houses on tenantless lands—a picture of desolation for a counterpart to which memory must return to the devastation of the civil war." In a single county, that of Adams, the cotton crop has dropped from 23,836 bales in 1906 to less than 900 in 1910, while in the same period the number of gins has decreased from 42 to 8. "The destruction is complete."

Now if all this were really due solely to the boll weevil, the outlook would be serious enough. But the encouraging fact is that the chief evil has been the failure of the human beings affected to meet the blight calmly and scientifically—encouraging because the mental balance of planters and laborers can be reëstablished. It is the psychology of the panic with which we must largely deal, for it is the panic rather than the weevil that has done most of the damage. When the panic began the merchant who advanced money to the tenants (the landlords of this district all live in the city) determined to realize what he could out of the meagre personal property which was the only asset of the negro tenants. What happened then is thus graphically described:

> The country roads leading into Natchez were filled with negroes, wagons, and mules; the streets of the town were filled with puzzled negroes, upset, disturbed, and bewildered. They knew nothing except that their merchants would carry them no longer, that they could not carry themselves, and that they had been called upon to pay what they owed or surrender what they had mortgaged. Every available pen in the city was filled with horses and mules. The planter from the Delta needed the labor, and the latter was eager to go. The planter paid the merchant an agreed price for the negro's account, loaded him and his family and household plunder on a boat or car, and brought the entire outfit home. Hundreds of negroes and carloads of live stock and personal property were thus removed from Adams and adjoining counties.

A clear picture of abject surrender without a struggle, as it is a vivid illustration of the economic slavery of the negro! Not a single planter or plantation in this district tried to demonstrate what might be done, to create confidence and to furnish an object lesson of the folly of demoralization, or to mark the way for the reëstablishment of the business upon a newer and sounder basis.

More than that, not only has human-

ity, in some sections, fled before the boll weevil, but, according to Messrs. Stone and Fort, "no other insect, since the dawn of history, has had to bear the burden piled by human nature upon the boll weevil." As soon as it appeared, every other cause of crop failure was forgotten. The army worm, the boll worm, the boll rot, the blight, shortage of labor, over-cropping of tenants—all these and a hundred other causes of poor crops, to say nothing of the human element, were ignored, and everything charged to the terrible weevil. Every worthless planter or tenant shouldered off his sins on the insect. It reminds us of an episode in the recent general election in a town in Scotland, where a once famous mill is now closed. Protectionists chalked on the door: "Free trade did this," but a lover of truth inscribed the facts, when he wrote underneath: "Whiskey and soda did this." Whiskey, shiftlessness, ignorance, inefficiency, and dishonesty seem to have come into their own in the boll weevil districts. The planter, good or bad, looking back on the past, cannot remember that he ever failed to grow less than a bale an acre.

Where men of education, means, energy, and business capacity have been face to face with the evil, they have found various ways of adjusting themselves to the situation. Sometimes, it is true, nature has been against them, as in certain parishes of Louisiana, and nature has won. One Louisiana planter, beaten in the fight against the weevil, turned at once to cane-growing, which had been the ante-bellum industry of this section, with the result that he will soon occupy the same high place as a cane-grower that he held as a cotton-planter. Other planters have found that by reducing the cotton acreage per hand and by making a change in varieties of cotton, the less prolific being abandoned for a more prolific variety, they have been able to hold their own, particularly if they have, after reducing the cotton acreage, turned their idle acres to such crops as corn, hay, peas, rice, and broom corn. In the semi-tropical districts of Louisiana, because of the great moisture and other physical conditions, such as the heavy mosses on the trees, the fight has gone hardest; but elsewhere, as, for instance, in Texas, "prosperity has come with the return of sanity and such readjustment of farming and business matters as prudence and common sense have suggested." "Cotton is still being grown, and the boll weevil has ceased to be a cause of alarm, or even a topic of conversation." Remembering the advantages which have come to the South in the past from the diversification of industries, the establishment of manufactures and mining, it is quite possible that from this point of view the boll weevil will not be by any means an altogether unmitigated evil.

THE SUPER-PROFESSORATE.

The premature retirement of a favorite professor from Princeton suggests that our academic organization may possibly not provide the right opportunities for the teacher whose *forte* is eloquence and inspiration. A faculty is lucky which boasts one or two such men. It is in every way easier to find competent specialists and diligent teachers than lecturers of eloquent and broadly interpretative quality. But the moment a Norton or a Shaler develops this superiority, the very fact produces odd and unpleasant anomalies. The course necessarily assumes an extra-academic quality, the form or presentation and the personal enthusiasm of the lecturer outweighing and properly minimizing the number of mere facts offered; but the course quite illogically continues to be treated as a routine part of the curriculum, and the lecturer is put in the absurd position of solemnly examining men on the enthusiasms he has created.

What practically happens with these courses is that they become famous in the outer world, but, being frequented by scores of the more easy-going young gentlemen, mildly scandalous at home. These courses, unless bolstered up by artificial and barely justifiable means, are always soft spots in the curriculum. Many a Harvard graduate tells of the high pleasure he had in Charles Eliot Norton's lectures on fine arts, but no one tells how often he slumbered in the consecrated peace of Sanders Theatre. Lectures that should attract the best intelligence among the students draw largely the dullards and sluggards. But imagine that such lectures were no part of the curriculum, were accompanied by no requirement of attendance or examination, meant opportunity and not duty. Immediately the attendance would be measured solely on the true scale of interest, the lecturer would stand or fall by his sheer power to charm and stimulate. It would become a clean academic transaction with no element of pretence or temptation to shirk on either side of the desk. We should have on a fair and humane basis a new office, the super-professorate.

If this looks like an odd or indefinite function, let us recall that the thing has actually produced itself in France, Germany, and Italy by a sort of natural selection. Lecturers who develop extraordinary capacity for sympathetic and popular interpretation of their subjects, insensibly liberate themselves from the task of routine instruction. The facts that one got from Hermann Grimm or Ernst Curtius in their later years at Berlin were accessible enough. No one came nearer to a doctorate, or prepared for an examination, by hearing these charming and eloquent scholars. If their lecture rooms were crowded, it was because the students delighted in the mellow culture there revealed. It was not to such professors that one applied for guidance in research or routine work of any sort. Through the development of extraordinary and valuable capacity Grimm and Curtius had emancipated themselves, had become in the fullest sense super-professors. It is the glory of the unbureaucratized universities of Germany that they so freely provide for any sort of exceptional capacity.

Do we need the super-professor in America? Emphatically, yes. If the academic air of France and Germany is more bracing than our own, it is precisely because the ideas of scholarship are generously put at the general disposal. Ideas circulate and are appraised in a manner unprecedented in our more rigid academies. We need the super-professor, but we shall probably not best get him by taking thought. Occasionally he will create himself, and then a wise university will liberate him for his proper work. Evidently, his qualifications should be sharply challenged and scrutinized. He assumes to do much more than the ordinary professor; we must satisfy ourselves that the pretension is sound. In the nature of the case there can be no steady supply of inspirational men, and that is all the more reason for getting the whole good out of them when they do occur. Something like the super-professorate is already existent in the numerous endowed lecture-

ships in our colleges and universities. A poet critic like Prof. G. E. Woodberry, with his pretty regular appearances at our universities, may fairly be called an itinerant super-professor. Doubtless there will be more lectureships, and the fighting line of the super-professorate will probably continue to be a flying column. That is no reason, however, why a great university should not on occasion domesticate a super-professor. Only if they desire the best of him they must treat him frankly as an auxiliary. The moment they enlist him too narrowly, his very popularity will begin to weaken the curriculum generally, and too often subtly to undermine his influence.

Ask any professor friend what he thinks of this plan and he will probably tell you it is clotted nonsense for the (to him) conclusive reason that the American undergraduate will not attend any course for which he is not formally booked, and for which he receives no academic credit. Our answer is that it might be worth while to treat the undergraduate as if he were intelligent and await his response. The American undergraduate after all is of one flesh and age with those fellow-students who abroad crowd the lecture-rooms of Erich Schmidt and Emile Faguet. Nor have we learned that at home such foundations as the Turnbull Lectures on Poetry at Johns Hopkins University have ever languished for lack of student support.

KEEPING UP APPEARANCES.

The epigrammatic statement of a previously obscure thinker that two thousand dollars a year is enough to live on but not sufficient to enable one to keep up appearances has been greeted with a chorus of approval that is not a little significant. Whatever one may think of the principle of conduct implied, the frank avowal of it is at least refreshing. But the really important considerations in connection with it do not relate to the familiar living beyond one's income that everybody finds it natural to denounce in everybody else. This is a fairly modern phenomenon, induced by the disappearance of hard and fast social lines on the one hand, and by the broadening of economic opportunities on the other. But there has always been, in realms far removed from the material, an endeavor, often only half-felt, at keeping up appearances, on the part of those who would scorn the thing in its grosser manifestation. What, for example, are manners for, if not to put an agreeable face upon disagreeable conditions? What is politeness, except a kind of social lubricant? Will it be seriously contended that the ceremonious attitude which is regarded as proper to be assumed toward strangers is even skin deep? It is almost ludicrous to see the tragic air with which we offer our apologies to an unknown human being with whom we have mistakenly taken liberties that are recognized as insufferable by any except our long-enduring friends. And yet the sincerest scoffer at any form of keeping up appearances is, as a rule, scrupulously careful to do nothing, however trivial, that in his circle would be termed ungentlemanly.

It is difficult to see how civilization could get along without a continual practice of keeping up appearances. Suppose a lawyer, in a burst of confidence, told the judge that he did not really care a continental for the ruling he was so strenuously arguing for, but that what he was actually after was the satisfaction of victory and the professional advantage of a successful case. Imagine a surgeon casually remarking to you just before the ether blotted out everything, that while as a fellow man he was sorry for you, you were the subject he had long been hoping might come his way, and that he looked for an hour or two of the keenest intellectual delight. Think of a politician asking for votes on the ground that he wanted a place where he should be prominent and sought after. Conjure up a broker regaling his customers with the information that a commission and not the financial prosperity of his patrons was nearest his heart. How many hours would the fabric of our social order hold together under such mad veracity?

One of the most noteworthy appearances which the generality of mankind have always felt a supposed necessity of preserving is that of consistency. Despite Emerson's tempting quotation, a man is likely to offer an elaborate justification of any divergence from what is known to be his past record, or, if he can at all manage it, to show that the lapse is only apparent, and that, in reality, his latest action squares exactly with all his former ones. Even if he falls back upon Emerson, it is with a self-conscious air of employing a doubtful makeshift that deceives, and is intended to deceive, no one, least of all himself. In the bottom of his heart, he believes, with the rest of his fellows, that there is something irregular, if not sinister, about a change in professed ideas or practice. All the ingenuity of logicians has not evolved a more effective argument than the *tu quoque*, a form of reasoning which they try to discredit by putting it among the fallacies and labelling it *argumentum ad hominem*. But, so long as man is man and not a syllogistic machine, he will regard the retort as worth a whole armory of certified dialectic weapons.

It is impossible to examine our devotion to appearances without having our respect for it strengthened. Like other instincts, it often goes astray, but it is fundamentally a tribute to our aspiration to be more than we are, and perhaps more than we can be. What we do when we keep up an appearance is to assume the rôle of a character which, at best, we should like to be, and, at worst, do not dare not to seem to be. Keeping up appearances at somebody's else expense is inexcusable, but the honoring of noble sentiments and practices for what they are on their face is the short-cut we have taken toward our ideals.

TWO FRENCH PUBLICATIONS.

PARIS, January 24.

The final volume of Henry Vignaud's monumental work on the life of Columbus up to the time of his discoveries is about to be published in Paris. Your correspondent has had the privilege of reading advance sheets of the general recapitulation and conclusion of the work. Like the previous volumes, it is written in French. Of Mr. Vignaud's earlier work in this matter, "Toscanelli and Columbus," with two letters in the ensuing controversy, and "A Critical Study on the Various Dates Assigned to the Birth of Columbus" had English editions.

It will be remembered that Henry Vignaud was for more than thirty years secretary of the United States legation and embassy at Paris, and that ten years ago he began publishing the results of a long and laborious lifetime's critical study in the original sources of the history of Columbus. These final volumes form the completest repertory existing of such history, in its original documents and its controversies; and they give in detail each of its events in the light of that serious and enlightened

criticism which has become possible only with the wealth of material placed at the historian's disposition in these recent years. They also show, as Mr. Vignaud earnestly remarked to your correspondent, that "I am not a contemner of Columbus, an iconoclast, as I have been termed."

I have endeavored to extract from Mr. Vignaud's pages, in his own words, the substance of the conclusions to which he has come:

"The results of this critical examination, which has been the object of my work and which my readers are enabled to follow in all its phases, are summed up in the three following propositions which change our whole conception of the conditions in which the discovery of the New World was prepared and accomplished:

"(1.) The object of Columbus was not originally to go to the Indies; his expedition was made solely to discover new islands and lands.

"(2.) He had what he believed to be sure indications of the existence and situation of such islands and lands—indications which must have come to him mainly from the unnamed pilot to whom public rumor gave so great a part in his first discovery.

"(3.) The documents attributed to Toscanelli, which would show, if we relied on them, that the original design of Columbus was to go to the Indies, were produced only to make it be believed that such had been his design, and they cannot be authentic.

"These propositions are so contrary to those which Columbian tradition has finally caused to be accepted that it is well to recall with some exactness the reasons on which they are based.

"The assertion of Columbus, repeated by his two first biographers, and, it may be said, accepted by all modern authors, that his design consisted in going to the Indies by sailing to the west; that it was this which the Catholic Kings ordered him to do, and that it was this which he undertook to carry out, is confirmed by no document, by no testimony, which has not a Columbian origin.

"On the contrary, documents and testimonies show:

"That there is no trace of Columbus ever speaking of going to the Indies, either to the King of Portugal or to the Catholic Kings;

"That it is not that which King Ferdinand and Queen Isabella charged him to undertake, nor that which they supposed he would do;

"That what he undertook to do was to discover new islands and lands, of whose existence he had had indications;

"That the indications which gave him the certainty of finding what he proposed to discover, and which permitted him to assert that they would find land 700 or 750 leagues off, came from testimonies as to the existence of new islands to the west, which he had carefully gathered, and, in particular, from a pilot, who had by accident touched at one of the islands;

"That for no one, at the departure of the expedition, was there any question of going to the East Indies, and for every one there was question only of new discoveries;

"That it was only after they had reached the Antilles, which were discovered far beyond the distance at which they believed they should find land, that Columbus imagined he was in the Indies and in the vicinity of Cathay;

"That, on his return, he declared he had come back from the Indies, of which there had been no question before, and he applied himself to finding theoretic reason to justify such an illusion, under the empire of which he undertook his three other voyages—an illusion which he kept until his death;

"That it was after his second voyage, whence he returned with the conviction that Cuba was a projection of Asia, and after his third expedition, in which he discovered the continent, which confirmed him in his illusions, that he completed his theory of the littleness of the globe and the proximity of the Indies—a theory first formulated by him in 1498;

"That Behaim, who had exactly the same ideas, had made them known probably as early as 1489, and certainly in 1491 and 1492, at the time of the construction of his globe, and in July, 1493, the date of a letter now well known which he caused to be written by Müntzer;

"That it is chiefly in the 'Imago Mundi,' in the 'Historia Rerum,' and in the relation of Marco Polo that both Behaim and Columbus found the essential elements of the cosmographic theory which they held in common;

"That the documents attributed to Toscanelli had nothing to do with the formation of such ideas in the discoverer of America and in the author of the Nuremberg globe, each of whom has informed us exactly of the sources from which they drew;

"That these documents (attributed to Toscanelli), whose existence no one suspected, were produced in the middle of the sixteenth century only to confirm the Columbian version that the expedition of 1492 had the Indies for its aim.

"The true merit of Columbus, that which really distinguishes him from all the sea adventurers of his time, that which places him among the privileged men who have added to the sum of our knowledge, is that he drew from all the vague, uncertain, and for the most part erroneous indications which were given him the right conclusion that land existed there, where America is found, and that he took as a fact this hypothetic conclusion which experience demonstrated was the reality."

"Après l'Abandon de la Revanche" (A. Lemerre: 500 pages, 3.50 francs), by Madame Juliette Adam, has stirred more patriotic and party feeling than any other book of the season. It is the seventh and last volume of highly personal notes, taken during a long lifetime identified with the growth of the Third French Republic. Of more than one of its founders, Gambetta at the head, it has been said that Madame Adam had the task of taming and polishing them for their work. She remained a sort of godmother of the new republic, until she saw plainly, in her own mind, that Gambetta's policy was giving the republic a permanent trend whither she would not go, and away from all that she had hoped. It is this last volume which, day by day, notes her dismay and anguish "after the abandonment of the Revanche"—the abandonment of all effort on the part of the republic to heal the ever-gaping wound and mutilation which the old France had suffered from her war with Germany.

Since the publication of her book, Madame Adam has felt obliged to answer the reproach of Paul Déroulède that she accuses Gambetta of "criminal connivance" with Bismarck. She refuses to accept the responsibility of such "big words," but once more speaks out her whole mind (*Figaro*, January 12, 1911).

No matter whether Bismarck and Gambetta met together or not, their political and diplomatic understanding had anti-Clericalism for its basis—the same passion in the author of the *Culturkampf* and in the orator who was the enemy of Clericalism. It is not astonishing that out of this should come the French policy which I have styled "Bismarckian." The diplomatic understanding of Gambetta and Bismarck had its full reward. At the congress of Berlin the future laying of hands on Tunis by France was treacherously drafted in order to embroil us with Italy and throw the latter into the Triple Alliance. . . .

I have not written this seventh volume of my memoirs for those of my time; they already know what to think of the Franco-Bismarckian policy. This is the only name to give to it in its anti-Clerical action, in its colonial expansion, in its turning us away from Alsace-Lorraine. I have written it for the young who no longer understand anything about it, and confound the deplorable state of present policy with republican principles. I, too, am republican in principle, and shall remain so; I have never sought or accepted the slightest profit or honor for my ideas. . . . I would only strengthen my unreserved respect for Gambetta, the heroic tribune of the National Defence; but I am more than ever resolved, from the evidence of its results, to condemn his borrowed policy of the *Culturkampf* and diplomacy subjected to Bismarckian influence. And to intensify in me this worship of the past, I repeat over to myself words which Gambetta himself, on the eve of his fatal accident, said to M. de Marcère—words behind which he passed in review all his political disillusionments, and, I cannot doubt it, the ideal of the

Revanche with them: "Dear friend, everything has to be begun over!"

A few words from Senator de Marcère himself serve as preface to the book. They explain as well, perhaps, as can be what must have been an underlying divergence of principle and aim all along. After all these years, in which the policy of their common friend Gambetta has borne its full fruit, he addresses Madame Adam:

You and I, dear friend, were carried away by our dream, and we had faith, not only in our ideas, but in our companions as well, whereas, in reality, they were working at another task than ours.

S. D.

NEWS FOR BIBLIOPHILES.

It has been definitely announced in the English papers that the great library formed by Henry Huth (1815-1878) and later owned by his son, Alfred Henry Huth (whose death last October was noted in this column), has been placed in the hands of Sotheby, Wilkinson & Hodge for sale. It will be offered for a time privately *en bloc*, but if unsold the books will be put up at auction in instalments, the sales beginning the present season and continuing the next year. Fifty books are first to be selected by the British Museum, as indicated in the following paragraph from the will of the late owner:

If at any time it should be found necessary to sell the collection, before such sale the authorities of the British Museum are to have the first selection of a gift of fifty items therefrom, which shall be marked by them and always known as the Huth Bequest. In making this selection the authorities shall not be allowed to take a second or more perfect copy of any item already in the National Collection, unless they shall exchange such item for the one already in their possession, the exchange of any item being counted as one of the fifty for their selection.

The Huth library is perhaps the finest private collection of book rarities remaining in England. Its value has been estimated at £250,000. It is not as large and probably not as valuable as the Robert Hoe collection, which will be sold by the Anderson Auction Co. in this city, the first sale, about twenty sessions, to be held in March. In many respects, however, the two libraries might be compared. In incunabula and English literature before 1700 they are not far dissimilar. In later English literature the Huth library contains comparatively little, whereas the Hoe Library has a rich collection. French literature, which forms one of the most important sections of the Hoe library, is less notable in the Huth collection, which is, however, rich in Spanish books. Both libraries contain famous collections of Americana, but, especially in early English books of travel to America, the Huth collection is the finer. And, though Mr. Huth owned some fine illuminated manuscripts, their value cannot approximate those brought together by Mr. Hoe.

The Hoe library has two specimens of the Gutenberg Bible, one on vellum and one on paper; the Huth library has a paper copy. Both contain fine sets of the four folios of Shakespeare, Mr. Hoe's first folio being the taller, 13⅜ inches, whereas Mr. Huth's is only 12½. Both libraries contain a notable collection of the quartos, the Huth being the better, including the "Merrie Wives of Windsor" of 1602 and the "Hamlet" of 1604, as well as the "Venus and Adonis" (1594), "Lucrecce" (1594), and the "Sonnets" (1609).

It is certainly a remarkable circumstance that two such collections of books should be upon the auction market at once. Collectors of literary rarities will have opportunities offered them within the next eighteen months which will probably never occur again. The Edward E. Ayer collection of Americana has been permanently transferred to the Newberry library, in Chicago; the John Boyd Thacher collection of incunabula is in the custody of the Library of Congress, probably never to leave it, and other collections are likely to find their way into public institutions.

In the second part of the library of Judge Jacob Klein of St. Louis, to be sold by the Anderson Auction Co. on February 15 and 16, are included notable collections of first editions of Meredith, Stevenson, and Swinburne. The Meredith set includes presentation copies of both the "Poems" (1851) and "The Shaving of Shagpat" (1856), the author's first and second books, as also the private issue of "Jump to Glory Jane" (1889); the signed contracts with his publisher for the issue of several books; and several fine letters. Among the Stevenson rarities are the author's first book, "The Pentland Rising" (1866); the two scientific pamphlets, "Notice of a New Form of Intermittent Light for Light Houses" (1871) and "On the Thermal Influence of Forests" (1873); a set of four numbers of the *Edinburgh University Magazine* (1871); the three privately printed plays, "Deacon Brodie" (1880), "Admiral Guinea" (1884), and "Beau Austin" (1884); several of the Davos Platz leaflets; and the South Sea Island skit, "An Object of Pity," printed at Sydney for Lady Jersey.

The Swinburne collection is the finest ever offered at auction, beginning with the "Undergraduate Papers" (1858), which contains the author's first published writings. Only some five or six copies are known, and no copy, we believe, has appeared in the auction room since the Rogers sale in Boston, in 1888. That copy brought $105, and was bought by Mrs. N. Q. Pope. It is now in the Frederick R. Halsey collection.

Other authors whose works are represented in this sale are Lowell, Joaquin Miller, Walter Pater, Tennyson, William Watson, and Walt Whitman. There are also included very extensive series of the publications of the Riverside and Roycroft presses.

On February 14, 15, and 16 the Merwin Clayton Sales Co. will sell the library of the late Elliot Smith of Morristown, N. J., including nearly a hundred lots of Napoleoniana, and on February 17 a further selection of duplicates from the New York Public Library, mainly Americana.

Correspondence

SINGLE TAX.

To the Editor of The Nation:

Sir: In November you published an interesting editorial, entitled "The Backbone of Socialism," in which you attacked (successfully, it seemed to me) the Socialist saying that "Interest is robbery."

On November 27 you published a letter from me in which I requested you to break the backbone of the single tax, which is based, in its ethical aspects at least, on the proposition that "Rent is robbery."

Now, while the Socialist party will undoubtedly modify our public institutions to some extent, it is inconceivable to me that the people will ever consent to have their government take over and operate the factories and stores. But the single tax propaganda is a different matter. The machinery of taxation exists. All that is necessary for putting the single tax in operation is to abolish all other forms of taxation save that on land values, and many of these taxes are now hardly ever defended except as a present necessity.

Those who have read the campaign speeches of Mr. Asquith, Lloyd George, Churchill, and others in the year of 1910 know that they defend the budget and tax from the standpoint of Henry George. Their illustrations and arguments—especially those of the chancellor—sound much like the utterances of American single-taxers.

The idea may be said to be firmly established in English politics. It is already a practical political question in Denmark, principally on the demand of the small farmers, about whom Mr. Spence is so anxious. One thousand western Canadians went to Ottawa recently and demanded a reduction of taxation on imports and an increase in the taxation of the land. The single-taxers are well organized in several countries, and now have money, largely through the generosity of Joseph Fels of Philadelphia. In his speech here the other day Mr. Fels said that he was on his way to Vancouver, where they have abolished local taxes on buildings and personal property, and where they have a single-tax mayor named Taylor. At his own expense, Mr. Fels is going to take Mayor Taylor to England to tell the British people how the land value tax works in British Columbia.

I could give more facts tending to show that the single tax movement is likely to become disturbing to existing conditions and to that class who want things left alone. It is worthy of more space in the press. And it seems to me that the only way to block the single-taxers is to prove to the people that rent is not robbery; in other words, that increase in the value of the land, morally as well as legally, belongs to the land owners.

Cleveland, O., January 19.

THE FORTIFICATION OF THE ISTHMIAN CANAL.

To the Editor of The Nation:

Sir: The question of fortifying the Isthmian Canal is now before us and is likely to have a strong bearing upon international affairs. If we feel that it is necessary to fortify this canal in order to protect ourselves from encroachment, it will show to the whole world a distrust of others that they do not show toward us. Can we, one of the most powerful nations on the globe, afford to put ourselves in such a position? I do not deprecate so much the fifteen or fifty million dollars that will be wasted in such fortifications, or the expense of keeping them up, as I do showing in such a pronounced way our distrust of other nations. Would it not be well at this time to

consider carefully the necessity for any fortification of the canal; to consider the security of its position three to five thousand miles away from any force that could seriously menace it; to consider the peaceful relations existing between ourselves and others, and the very strong desire of all nations to maintain these relations—the necessity, in fact, for retaining them for the self interest of all; and in addition to this situation to consider our natural advantages and power—to consider also the general sentiment of the world in favor of unfortified highways of commerce, and the almost certain establishment at The Hague of a judicial court for settling the difficulties that may arise among the nations? Are not the risks of fortifying this canal greater to us and to the other nations than the risk of its destruction?

EDWIN GINN.

Boston, January 31.

COMMERCIAL ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: It is well known that language reflects national character. It is also an obvious commonplace that Americans as a people are occupied, preoccupied, with the acquisition of wealth. It is not unnatural, therefore, that American speech should be colored by the commercial activities of American people. Such has unfortunately been too much the case. The distinctive features that reveal an American's nationality are not only his pronunciation, or "accent," as the English have come to call it, his peculiarly American names for things, and the well-known tags of conversation, such as "I guess," but what we may call a commercial tone coming from his figurative use of business terms when speaking of subjects outside the realm of business.

This tendency in American speech has long been struggled against. In the well-known *index expurgatorius* prepared by William Cullen Bryant, in the middle of last century, when he was editor of the *Evening Post*, there were a number of words which were objectionable, because of the fringe of commercial associations attached to them, and which made them out of keeping in the expression of ideas more independent of trade. Some of these cant words of commerce proscribed by Bryant were *balance* (for remainder), *endorse* (for approve), *loan* (for lend), *item* (for particle, extract, or paragraph), *over his signature, parties* (for persons), *posted* (for informed), *realized* (for obtained). Even certain words less obviously of middle-class origin had in this country acquired a commercial connotation to such an extent as to be objectionable; for instance, *repudiate*. Still other words acquired new and unauthorized uses, such as *claim* (for contend), *located* (for situated).

The efforts of men like Bryant have been to some extent successful. Many of these words have been distinctly branded as vulgar. Others, such as *item*, which have been used by careful writers, have been so used because they have shaken off, to a great extent, their objectionable associations. The source of the evil, however, has not been, and, in the nature of things, cannot be, removed. Every teacher of English composition has to struggle against the use of words of commercial connotation. In the compositions that he is called upon to read, he encounters not only the words singled out by Bryant, but others of their kind. He finds that *average* stands for *ordinary, sample* for *instance, figure out* for *make out*. If one may judge by the language used in composition courses, the young American thinks only in terms of percentage, since the word *part* is quite superseded by *per cent*. Worst of all is the word *proposition*. This word is of interest to the etymologist because it promises to repeat the history of the word *thing*, which in its origin meant something not unlike the literal meaning of *proposition*. But *proposition* at present is probably the most universal term of commercial cant, and may be said to exemplify the faults of its kind.

As has been said, thus far the opposition to words of this objectionable class has met with some success. Allied with Bryant and his like against a commercialized vocabulary have been most of the forces of English teaching. In recent times, however, there has begun a movement in education which threatens to weaken the forces of opposition. The high schools of the country, actuated by the laudable desire of serving their communities, have been installing commercial courses of all kinds. The colleges also have not only been establishing courses in commerce, but in parts of the country, propose to recognize commercial courses in the high schools for entrance credit. The North Central Association of Colleges and Secondary Schools, which, as its name implies, includes the principal schools and colleges of the Middle West, in a recently published report recommends for recognition for entrance credit seven units in commercial subjects, among them a half unit in business spelling and correspondence. The half unit in business spelling and correspondence is defined as "preliminary review of five hundred common business words. Thorough drill on business correspondence, including . . ." In some of the text-books for such a course, I have recognized the effort on the part of the authors to teach the avoidance of many of the stereotyped forms of commercial phraseology. But can such efforts be effectual? When five hundred words are used as a basis of instruction, is the English language not reduced to a business code? Can such a course do more than give a superficial polish? If old, stereotyped forms of expressions are eliminated, new ones are bound to come into being. The only way to avoid hackneyed phraseology is by learning the resources of the whole language, not of merely a selected five hundred words.

G. H. MCKNIGHT.

Ohio State University, January 28.

SHYLOCK AND ATHEISM.

TO THE EDITOR OF THE NATION:

SIR: According to the report of my paper read at the Modern Language Association, in the *Nation* of January 5, I made Shylock out an atheist. What I said was that in keeping with ancient superstitious notions of the Jew as an atheist and possessed of the devil, he was represented as a devil and an atheist in Elizabethan popular literature and drama. Of atheism Shakespeare says nothing, but he has Shylock, as a Jew, called a devil in jest nine times over, has him declare that "he never felt the curse on his nation till now"—that is, now that his diamond is gone, which cost him two thousand ducats in Frankfort—and has Tubal and him meet at the synagogue, *ein Teuffels Nest*, in the urbane phrase of Luther, to hatch his plot.

ELMER E. STOLL.

Western Reserve University, January 20.

"MILTON NO PLAGIARY."

TO THE EDITOR OF THE NATION:

SIR: In connection with the correspondence on Milton's debt to Du Bartas, it may be worth while to recall the Reply of John Douglas, afterwards Bishop of Salisbury, to William Lauder, who published in 1750 a pamphlet on Milton's Use and Imitation of the Moderns in Paradise Lost. The Reply of Douglas ("Milton No Plagiary") appeared in the same year, and convicted Lauder of forging whole lines of Staphorstius, Masenius, Grotius, etc., which were to be Milton's originals. Du Bartas is only once mentioned, and that slightly.

The Reply was so conclusive that Lauder was not only disclaimed by Dr. Johnson, who had written his Preface (Boswell iii, vii), but by his very booksellers, who publicly advertised that they would have nothing more to do with him ("Select Works of Douglas," 1820, p. 226).

Ottawa, February 1.

THE MOST FAMOUS NOSE OF ALL.

TO THE EDITOR OF THE NATION:

SIR: Since the discussion on noses in your columns will not down, let me add to your collection the most written-about nose in all literature—that of a Herr Wahl, on which the poet Haug wrote two hundred witty epigrams, under the title of "Zweihundert Hyperbeln auf Herrn Wahls ungeheure Nase." This curious nosegay has served to keep the name of the author fragrant. Haug was a friend and classmate of Schiller's. The "Hyperbeln" appeared in 1804.

"PESSIMISTIC" AND "OPTIMISTIC."

TO THE EDITOR OF THE NATION:

SIR: In your kind review (*Nation*, February 2) of my recent volume on "The History of Ethics Within Organized Christianity," your reviewer raises one question in my mind upon which I should like to have your mature judgment. He speaks of "too pessimistic," and in another place of "a superficially optimistic." Now, the question in my mind is whether this is not robbing philosophy of two much needed terms when we have in English the words "hopeful" and "despondent." What your reviewer meant was a too despondent view of Christianity. Pessimism means the worst possible—how can you have a "too worst possible"? Optimism means the best possible—how can one have a superficially best possible? I am not a purist; indeed, I am somewhat of a Philistine with regard to innovations, because I regard language as a living thing, but the misuse of optimism

and pessimism savors for me of that careless use of academic slang characteristic of so many of us. In point of fact, hopeful and despondent are far better words, and really express what most people mean when they use optimism and pessimism. I have the same feeling with regard to the word "conservative" used as a careless substitute for "cautious," and I notice even the careful *Nation* speaks of "a conservative view of the financial situation," meaning by that a cautious attitude to that same situation. I know these abuses are widely prevalent, but I think the *Nation* might serve us all by calling attention to an impoverishment of language on one side, with no corresponding enrichment on the other.

THOMAS C. HALL.

Union Theological Seminary, February 6.

[The *Nation* agrees heartily with Dr. Hall in his dislike of the cant use of "pessimistic" and "optimistic," and its rule is to avoid the words. In the present instance "despondent" and "hopeful" would have been better English. The propriety of limiting "pessimistic," granting the word itself is properly used, by "too," etc., is, however, another question. The superlative force of "pessimism" seems to have become obscured, and the word seems to mean no more than looking systematically on the dark side of things. Why cannot these superlatives which have passed into mere intensives be modified quantitatively?—ED. NATION.]

DIARY OF DR. HOLYOKE.

TO THE EDITOR OF THE NATION:

SIR: At the Stickney sale of manuscripts held at Libbie's auction rooms in Boston, December 18, 1907, there was sold (number 418 in the catalogue) the diary for the year 1747 of Edward Holyoke, catalogued as president of Harvard College. In reality, the diary was kept by Edward Augustus Holyoke, M.D. (Harvard, 1746). The Essex Institute is preparing for the press a volume containing the diaries of Dr. Holyoke, his wife, and other members of the family, and greatly desires to ascertain the present whereabouts of this diary for the year 1747. Libbie & Co. no longer have the records of that particular sale, and thus far the Essex Institute has been unable to trace the item. Can any reader supply a clue? GEORGE FRANCIS DOW.

Salem, Mass., January 31.

THE STATE HISTORIAN.

TO THE EDITOR OF THE NATION:

SIR: I wish to add my voice to those which, I hope, in large numbers are asking for the reappointment of Mr. Victor H. Paltsits, as State historian of New York. To those who, as outsiders, but as outsiders warmly interested in the progress of historical studies in this country, have observed the work of the State historian's office during the last ten years, the contrast between Mr. Paltsits's work and all that preceded is very striking. He has lifted the office to a higher, indeed to the highest, plane. He has not only put forth work of great utility and marked by the utmost excellence of execution, but he has shown in his various reports that he has the requisite intelligence, foresight, and judgment to decide what is best worth doing in that position, and to devise the best means for doing it.

I have abundant means of knowing that what I have said represents the general opinion of American historical students. They would regard the reappointment of Mr. Paltsits as the obviously appropriate step, and would consider it a distinct calamity that any change should be made in the office at the present time.

J. FRANKLIN JAMESON.

Carnegie Institution, Washington, February 4.

SELLING LETTERS OF THE LIVING.

TO THE EDITOR OF THE NATION:

SIR: The estate of the late Edmund Clarence Stedman was closed in August, 1909, all the property being at that time turned over to the executor of Mr. Arthur Stedman and to the granddaughter of Mr. E. C. Stedman. I, as executor, was anxious to retain control of the property until the library could be disposed of in accordance with the wishes of my kinsman, as stated in his will and repeatedly impressed upon me during his lifetime. As literary executor, also, I was very desirous of entrusting the editing of the "Life and Letters" to a man of literary reputation and experience. The counsel of the estate, however, advised me that, the legal term of eighteen months having expired, the heirs would force me to show a more valid reason for retaining the executorship, and I was obliged to retire. The executor should not be charged with any responsibility for this scandalous sale of the confidences of Mr. Stedman's friends, for it was as painful to him as it was to them, or could have been to that sensitive and honorable soul himself. THOMAS L. STEDMAN.

New York, January 29.

Literature

AMERICAN INDUSTRIAL SOCIETY.

A Documentary History of American Industrial Society. Edited by John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner, and John B. Andrews. Vols. V, VI. Labor Movement, 1820-40; Selected, Collated, and Edited by John R. Commons, Professor of Political Economy, University of Wisconsin, and Helen L. Sumner, United States Bureau of Labor. Vols. VII, VIII. Labor Movement, 1840-1860, Selected, Collated, and Edited by John R. Commons. Vol. IX. Labor Movement, 1860-1880, Selected, Collated, and Edited by John R. Commons, and John B. Andrews, Secretary, American Association for Labor Legislation. Cleveland: The Arthur H. Clark Co.

With the appearance of volume nine, this comprehensive assemblage of documents is all but complete. The tenth volume, with which it will conclude, is not yet issued, but will contain only two chapters of text proper, to which an exhaustive analytical index to the entire series will be annexed. The first two volumes were devoted to plantation economics prior to the civil war. These volumes were reviewed in the *Nation*, October 13, 1910. Volumes three and four, with an extra supplementary volume (not separately numbered), contained the records of early labor conspiracy cases in the United States from 1806 to 1842. As indicated in the notice of these volumes in the *Nation* for December 15, 1910, the editor employed these judicial records mainly to substantiate his contention that in this country the origin of a self-conscious working class is traceable, not to a change in the technique of production, as the Marxian formula asserts, but to the menace of competition arising from the extension of markets. The labor movement proper, in its various phases, from 1820 to 1880, is illustrated in the six concluding volumes.

Professor Commons has chosen to subdivide this period of sixty years into three equal parts, and has devoted a brace of volumes to each double decade. His principle of dividing the epoch is not mechanical, however, but is based upon the periodic fluctuation of general prices, witnessed in every score of years. During the upward swing of trade, labor is worked full time and overtime. The rising cost of living provokes the laborers to organization. They strike for higher wages. The employers make wage advances which prove inadequate to meet the still rising cost of living. Finally the turn in the tide of prosperity comes. Wage reductions are for a time resisted, but finally prove inevitable. Labor organizations are disrupted, and their fragments are diverted into channels of political or social agitation. "This cycle has been so consistently repeated, although with varying shades and details, that it has compelled recognition in the selection and editing of the documents of this series" (Vol. V, pp. 19, 20). Professor Commons even contends that the curve of prices, representing their rise, culmination, and fall in each of these twenty-year periods, "is the backbone of American history." One does not need to subscribe to this rather sweeping generalization, in order to see that the price-cycle furnishes an admirable basis for subdividing the history of the labor movement in this country.

Local organizations of craftsmen in the United States can be traced as far back as 1786. But not until 1827, when the Mechanics' Union of Trade Associations was formed in Philadelphia to promote a ten-hour working day, was there any symptom of a coalition of different trade organizations for a common object. Similar city-wide or county-wide organizations emerged in New York, in Boston, in Baltimore, Washington,

Newark, N. J., and in Albany before 1840. In a general way they ran a similar course, winning the majority of early strikes until the tide of prosperity receded. Thereafter they frequently originated short-lived political movements in their respective vicinities. Even more significant than these vicinal unions were the attempts to organize wage-earners into national unions. Their conventions of 1834, 1835, and 1836 are notable for the extended areas from which delegates were drawn. An interesting parallel movement in the same period was the organization of particular crafts, such as the cordwainers and the printers, upon a national scale. The platforms of the city-central unions, as well as of the wider national unions, voice the grievances of the wage-earners of the late '30's. Some of their demands, such as that for free and universal public instruction, have so long been conceded that we read with surprise the stigmatization of "agrarianism" which the conservative element brought against the project (Vol. V, p. 110 sq.). The condition of laborers, especially the hours of women and children in factories, is repeatedly denounced, as well as many other evils which modern legislation is fast remedying. Just how far the monopoly of public lands was felt as a pressing grievance by wage-earners' unions it is somewhat difficult to determine; but prominence is generally given it in the enumeration of evils requiring remedy. Professor Commons declares that "what the working man of the thirties asked was not mere equality before the law," but "a preference over property," the preference being typified in homestead exemption laws, free education, and mechanics' prior lien. It is worthy of notice that the allurements of coöperative industrial organization had in this early period begun to appeal to associated labor. These two volumes, dealing with the period 1820-1840, are in some respects of more importance than any other pair of volumes in the set. They rescue from oblivion the beginnings of labor movements organized upon a scale other than parochial; and they permit us to form some just idea of the extent to which public opinion of a later day has travelled to adopt what were denounced originally as monstrous and subversive doctrines. The "documents" *en appui* are mostly newspaper accounts of the demands of laborers, supplemented by the proceedings of labor conventions.

The two volumes covering the years from 1840 to 1860 (Vols. VII and VIII) suffer necessarily from the humanitarian avalanche of that era. The history of labor organization is crossed by Fourierism; by Owenism; by the various socialistic experiments, like the Shakers, the Rappists, and the Icarians; by coöperation; by Evans's agrarianism; and last by the abolition movement. It was a confused and perplexing epoch. Professor Commons well characterizes it in his Introduction to Volume VII:

> The forties far outran the other periods in its [*sic*] unbounded loquacity. The columns of advertisements in a newspaper might announce for Monday night a meeting of the anti-slavery society: Tuesday night, the temperance society; Wednesday night, the graham bread society; Thursday night, a phrenological lecture; Friday night an address against capital punishment; Saturday night, the "Association for Universal Reform." Then there were all the missionary societies, the woman's rights societies, the society for the diffusion of bloomers, the séances of the spiritualists, the "associationists," the land reformers—a medley of movements that found the week too short.

No two volumes—no, nor twenty—could fairly compass this reformatory chaos. From this welter of conflicting doctrines and movements, it is almost a wonder that there finally emerged the embryo of modern trade unionism. But surmounting the sporadic and local labor movements, the purely beneficial labor association, and the coöperative labor store system, there had appeared by 1853-54, the class-conscious trade union, pure and simple, "unduped of fancy," grimly confining itself to establishing the minimum wage and the closed shop. Its weapon was the strike. Its method was collective bargaining, which fixed for a stipulated period wages, hours, and conditions of employment. Although the vortex of war swallowed up, for a time, all lesser interests, the type of union fittest for ultimate survival had made its appearance.

If the seventh and eighth volumes make an impression of fragmentariness, by reason of the variety of social reform projects touched upon, the ninth volume appears to make an almost arbitrary selection of topics to illustrate the labor movement between 1860 and 1880. The crisis of 1857 and the civil war had wrought havoc with the effectiveness of national labor organizations. But the subsequent rise of prices due to monetary inflation, and the speculative mania, following the war, called back into existence the national labor organization. This movement, under the name of the National Labor Union, grew in momentum under the influence of annual congresses between 1866 and 1871. While at first espousing the traditional shibboleths, particularly emphasizing the eight-hour day, and still coquetting with coöperation as the goal of economic organization, the new national organization soon fell into the swamp of Greenbackism; organized as the Labor Reform party; eventually nominated a Presidential candidate, Judge David Davis; and finally came to naught. The concluding section of the volume recounts how the decline and fall of this ill-starred movement was carefully noted by the recently formed American branch of the International, and was duly reported (Vol. IX, p. 366 sq.) to the General Council of the International at London. Besides these two episodes just cited, a display of labor conditions dealing largely with immigration, particularly of the Chinese, and typical extracts from Ira Steward's little known philosophy of the eight-hour movement comprise the substance of the volume.

The work, as a whole, is perhaps the most comprehensive non-official compilation of sources upon any one aspect of our economic history that has so far been issued. The ten volumes, though distinctly unequal in value, will be indispensable to the future investigator of our industrial conditions. The first two stand quite apart from the remainder of the series, so far as subject matter is concerned. The name of the work, as a whole, is seriously misleading. It does not begin to canvass the field it professedly covers. American industrial society cannot be compressed within the limits of labor organization movements, either quantitatively or qualitatively. But the ten volumes are a mine from which serviceable material must be quarried for any historical edifice devoted to a portrayal of our industrial constitution.

CURRENT FICTION.

Princess Flower Hat. By Mabel Osgood Wright. New York: The Macmillan Co.

The "Commuter's Wife" is repeating herself after the fashion of the sprightly performer who once more responds to the expected encore. The vivacious heroine appears here under a new and fantastic name; but she is only too easily recognized. The mild neighborhood romance in which she is involved, with its frequent horticultural digressions, has little novelty to commend it. The young person with the fanciful nickname is a city girl who conceives a sudden passion for country life. She buys an old house in the neighborhood of the commuter and his wife, with an acre of land. The place next door belongs to a rather mysterious absentee, the subject of not very flattering local gossip. Of course, as soon as he discovers that he is Flower Hat's neighbor, he ceases to be an absentee. The conclusion is foregone. Flower Hat accepts the neighborhood gossip at its face value, and straightway begins a course of such rudeness as is hardly possible for gentlewomen outside of fiction. A very pretty quarrel is begun, in which his hired man and her hired woman take the low comedy parts. But we all know at the outset that the excursions and alarums incident to this kind of battle are of merely ornamental character. One's interest in a re-treatment of the

old situation must be a tribute to its freshness and spontaneity. This performance is rather strained. Princess Flower Hat is a flippant and self-consciously whimsical person such as lady story-tellers delight in and men avoid.

The Gift-Wife. By Rupert Hughes. New York: Moffat, Yard & Co.

The triumphant adventures of young America abroad are here pleasantly varied by a few simple changes in personnel and itinerary. The hero is a Yale man, but not oppressively athletic, and instead of hailing from Wall Street, he is no better than a surgeon. Moreover, he is a periodical drunkard. His sprees last two or three weeks, and he never knows where he has been or what he has done when he comes to himself. His conduct during these balmy intervals, however, is merely eccentric. He becomes a different person, but not an offensive or helpless one. Hence it is only necessary to place him in Europe at the beginning of one of his weird seizures, in order to insure complications desirable from the point of view of the romancer. Matters are complicated by the fact that he has just been put in charge of a little girl whom he is to take back with him to America. He knows what he has to fight against, but accident puts it out of his power to win. For a time he keeps the child with him during the inspired wanderings which follow, but eventually leaves her, forgotten, in a café at Budapest. When he returns to himself presently, in a Turkish harem, the immediate past is all a blank. Evidently, there are three things for him to achieve in the field of romance to which he has been called: to find the little girl, to marry the light of the harem who has rescued him, and to reform. All of these matters are duly attended to, after a good deal of amusing action and by-play. The tale is told in that good-humored and often witty style of "jolly" with which the American reporter is responding to our national taste for badinage.

Tama. By Onoto Watanna. Illustrated by Genjiro Kataoka. New York: Harper & Bros.

To a reader who has just been perusing the late Lafcadio Hearn's "Japanese Letters," the atmosphere of a book like this is a trifle puzzling. Hearn was always laying stress upon the irreconcilable difference between the Japanese point of view and our own. He held, for example, that it was impossible for a Japanese to understand our conception of the romantic relation of the sexes. Yet here is a story by a Japanese as Western in feeling as if it had been written by the author of "Madam Butterfly"—more Western than if it had come from the writer of "Madame Chrysanthème." Tama is a "fox-woman," feared and hated by all the natives of a remote province of Japan. She is the daughter of a white sailor and a Buddhist nun, who have been murdered by Japanese for the religious and racial crime of their union. The child has escaped to the forests, and there, though blind, has grown up in wild beauty, an accomplished thief and reputed witch. A foreigner comes into the district, an American who has been appointed teacher in the local college. To his imagination the story and presently the vision of Tama, the golden-haired witch, make strong appeal. She hovers about him, but will not be brought to close quarters, and he finally permits some of his Japanese students, who are devoted to him but fear and hate the "fox-woman," to trap her like an animal. Everything follows according to Western precedent. The man sets the girl free, wins her confidence and devotion, and protects her against the violence of the Japanese, who are determined that she shall share the fate of her parents. The pair escape to the forest, and finally make their way to the temple where Tama's father and mother have been murdered. They know that pursuit is upon them, and prepare to face death, when lo! a deputation arrives to lead them back to safety and even glory among a people who have sloughed off their superstition like a garment, and are eager to honor the former outcast. Is such a conversion possible in Japan? When we say that the man has been disfigured by smallpox, and is sure that Tama will loathe him when her vision is restored; and that she only loves him more than ever, we have outlined a conventionally Occidental plot. Whatever its source, the story is delicately told; and with its Japanese decorations, beautifully framed.

The Phantom of the Opera. By Gaston Leroux. Indianapolis: The Bobbs-Merrill Co.

It is a long drop from M. Leroux's "Mystery of the Yellow Room" to this fantastic piece of nonsense. The former was one of the best-constructed and most exciting detective stories of recent years; the present tale is enormously ingenious, but melodramatic *à outrance*, and runs in places pretty close to the ridiculous. A man of great powers, but born diabolically ugly (the old and wearisome *âme damnée* of the romanticists), becomes one of the contractors for building the opera house at Paris, constructs a secret dwelling for himself in the cellars, with all sorts of trap-doors, hidden passages, etc., through the edifice, and there, unseen and unknown, lives and makes himself felt by a thousand mysterious pranks and crimes. Of course, he falls in love with a young singer; in fact, the plot of the story hangs on the combat of this unseen wooer and an ordinary young man for the fair soprano. Despite the incredibility of the whole situation, M. Leroux succeeds in piquing the reader's curiosity, and the last search for the demon through the dark cellars of the opera is not without moments of what is called "breathless suspense." The audacity of the writer almost deprives the reader of his judgment. But M. Leroux owes to the world another detective story as good as "The Mystery of the Yellow Room" and better than "The Perfume of the Lady in Black."

BABYLONIAN AND ASSYRIAN OMENS.

Cuneiform Texts from Babylonian Tablets, etc., in the British Museum. Parts 27 and 28 (50 plates each). Printed by Order of the Trustees.

The two parts now added to this important series are taken up exclusively with omen texts—a branch of the Babylonian and Assyrian literature, the importance of which has only within recent years come to be recognized. All scholars must be grateful for the rapidity with which the valuable material of the British Museum is being made accessible, but it seems a pity to reprint texts that have already appeared instead of first exhausting the unpublished material. So of the fifty-nine tablets and fragments embodied in part 27, more than half have already been copied and published by Dr. Alfred Boissier of Geneva, whose various works on omen texts have given him the distinction of being a pioneer in this subdivision of the Babylonian-Assyrian religion. Part 28 also contains five plates of texts published some years ago by Boissier. Some mention at least should have been made of this in the introduction, where one also might have expected a reference to the fact that another text (K 258), covering two plates of part 27, was published some years ago by S. A. Smith, and that two further texts (KK 2007 and 3171) appeared in a former series of British Museum publications. With part 25 of this new series there was published a most necessary index of the registration numbers of the texts included in parts 1 to 25. It would be useful to embody with the thirtieth part an index of all tablets of the new series that have previously been published, together with an indication of where the former publications may be found. This is particularly essential, since a large number of the texts of the new series reproduce texts—often in a greatly improved form—that were included in the former series.

Coming to the texts themselves, the neat copies due to P. S. P. Hancock, one of the assistants in the Department of Egyptian and Assyrian Antiquities, demand a special word of recognition. Two classes of omen texts are covered by parts 27 and 28, omens derived from

monstrosities and unusual phenomena among new-born children and the young of animals, and omens derived from the examination of signs on the livers of sheep—the sacrificial animal *par excellence* among the Babylonians and Assyrians. An entire previous volume—part 20—having been devoted to "liver" texts, the eight plates of part 28 containing further specimens of this class may be regarded as a supplement to part 20. They deal chiefly with signs observed on the gall-bladder and on the finger-shaped appendix to the upper lobe of the sheep's liver which played a specially important part in hepatoscopy, or divination through the liver. Special mention should be made of a text (K 717), from which it appears that the meaning of the sign observed differed according to the month in which the animal was examined. This points to an association between hepatoscopy and astrology. The additional "liver" texts of part 28 furnish further illustrations of the complicated system of divination which was gradually evolved in the temple schools of Babylonia and Assyria, and which continued its sway over the population down to the downfall of both empires.

The "omens from births," as the other class may be briefly called, cover the entire twenty-seventh part and 42 plates of the twenty-eighth part. These omens differ from the "liver" texts, inasmuch as in the latter case an animal is deliberately selected and sacrificed in order to procure a sign of the will and intention of the gods through the inspection of the liver, whereas in the case of unusual phenomena among new-born children or the young of animals the sign is sent, as it were, by the deity as a warning or indication of something unusual that is about to happen. Another distinction between the two classes consists in the official character of the interpretations given to signs on the liver of the sacrificial animal, bearing as they do almost exclusively on public affairs such as war, victory or defeat of the army, good or bad crops, low or high prices, pestilences, and the like, affecting the entire population, whereas the signs represented by "births" affect also the individual in whose household or among whose possessions the signs in question are observed. Many of the phenomena noted strike one as exceedingly curious. Besides such monstrosities as children born with six fingers, six toes, three and even four feet, with one or both ears missing, with only one leg or without any legs, etc., the texts speak of children with the head, ear, or eye of a lion, dog, pig, or serpent, horse, cow, fox, or jackal. In the case of monstrosities among the young of animals, some of the phenomena are still stranger, such as sheep with two tails and four hearts or without hind or fore legs. Still more puzzling are the many instances of apparent hybrids, such as a foal with the head of a pig or the tail of a dog, sheep giving birth to a lion with the eye of a dog or pig or ass, and more of the like. It has been held that in such cases we are to suppose that the sign appeared to an individual in a dream, but the objection to this view is that the possible and apparently impossible monstrosities are bunched together in one and the same text. A more likely view seems to be that fancied resemblances to the organs or parts of animals in question lie at the basis of many of the signs, and perhaps as a further factor we must assume the persistent influence of the early beliefs in the existence of hybrid and fabulous monsters with which, as the Babylonians believed, the world was once populated. We must also remember that the purpose of the priests in making these extensive collections of omens of all kinds was to provide for all possible contingencies.

Quite apart, however, from the specific character of the omens noted, the value of these "omens from births" consists in the insight that they afford into a phase of the Babylonian-Assyrian religion furnishing a complement to the views held of the gods. The *Götterlehre* is mainly the product of the schools; the actual religion of the populace is represented to a large extent in the views underlying the various forms of divination.

The Political History of England. Edited by W. Hunt and R. L. Poole. 12 vols. New York: Longmans, Green & Co. 1905-1910.

With the appearance of Prof. A. F. Pollard's volume, covering the years 1547-1603, this great historical enterprise is brought to a good end. Of the last volume published it will suffice to say that it is up to the average of the series, learned and sound in the politics of the period, of somewhat less merit for style and for lucidity; the years following the Armada and the accession of James are treated rather summarily. But it is to the work as a whole, rather than to this last volume, that our space must be devoted.

The final estimate must partly confirm the first. To Mr. Poole, the able editor of the *English Historical Review*, and to his collaborator, Mr. Hunt, the chief credit is due. The editing has been admirable. Twelve volumes have been made to fit; the bibliographies are valuable and systematic; the work is a whole to a remarkable degree; and all that is in it can readily be found. The contributors have not, of course, been of equal merit; there is a marked superiority of quality in the volumes dealing with the early period of English history over those dealing with modern times. And among the first six volumes the present reviewer would single out those of Professor Tout (1216-1377) and of Mr. Fisher (1485-1547) as representing the highest level of achievement; the former excelling in well-rounded erudition, judgment, and clearness of statement, the latter in the supreme quality of historical sense and distinction.

As to the value of the "Political History" it may be said that it must remain for a good many years to come the summarized history of England which readers and students will make the starting point of further reading and investigation. Yet it is too packed with and narrowed down to pure politics, and too near the text-book in style, ever to hold the interest of an ordinary reader, while on the other hand both its text and its bibliographies are not detailed enough quite to serve the purpose of the real investigator; in a way it is little more than a chronological encyclopædia of English political history. This aspect of the matter may be worthy of a moment's consideration.

Although there are several distinguished English historians like Mr. Trevelyan, Professor Bury, Professor Firth, and others, who are not among the contributors to the "Political History," yet it may fairly be said that the work is representative of the English historical scholarship of to-day, and particularly of the very strong Oxford school. What then is the attitude of English historical scholarship towards its subject? It is largely negative. It is marked by disinclination to generalize, by a resolute preference for the purely political, and even party-political, above every other manifestation of the working of history; it seeks its quality in preciseness, by eliminating the social, the economic, the religious, the cultural factors from consideration. Now, to make politics the supreme test of history is fallacious, and on this point the present writer is glad to lean on the authority of Professor Turner, whose brilliant presidential address to the American Historical Association last December was based on this same text. History has jogged along after the sciences on the road of the endlessly subdivided special topic, and now that the sciences have turned off that road and once more headed back toward the land of complex factors, it is time history hastened to follow the better example. At all events, it seems quite probable that the "Political History of England" will remain a landmark in historical writing, indicating the furthest point reached by the tendencies of the last few decades. The "Political History" is a good, and honest, and valuable piece of work, but it is open to the just criticism that when it turns to its uses a real historian like Mr. Fisher, one is left regretting that he could not have written his volume untrammelled by the requirements of his editor.

History of the Sherman Law of the United States of America. By A. H. Walker. New York: Published by the Author. $2.

Mr. Walker is a firm believer in the policy on which, as he contends, the Sherman law is based. He does not recognize any distinction between reasonable and unreasonable restraints of trade, between good Trusts and bad Trusts; no matter what excuse could be given, no matter how important it may be to prevent cut-throat competition, every contract which directly restrains interstate commerce is within the law; the fact that the power exists to control prices is sufficient to constitute a monopoly, even though the power is never exercised and every element of unfair competition and oppression is lacking. He cites in support of his view the discussion in the Senate and the House on the original Sherman bill, the Reagan substitute, and the Sherman bill as it was finally enacted. The decisions of the courts, of which he gives summaries arranged chronologically, have, according to him, definitely settled the meaning of the words "restraint" and "monopoly." In the final chapter he examines the judicial records of the judges who will have to decide the Tobacco Trust and the Standard Oil cases, and comes to the conclusion that there is no doubt that the contentions of the Government in these cases will be sustained.

It appears to us that the author minimizes the difficulties which would result from the logical carrying out of his views. For instance, when he refers to the remark by Judge Lacombe, that if this construction is the correct one it would make invalid an agreement to join forces between two carriers running express wagons between two villages in contiguous States, the author contemptuously dismisses the contention with the remark that "the law does not regard trifles." The maxim does not seem to apply. If it is true, as was held in the Tobacco case, that a merger agreement entered into by a manufacturer voluntarily, without any unfair competition, for the purpose of protecting his business, which could no longer be managed by him individually, is really invalid merely because it diminishes the flow of competition, it is difficult to see why any contract of this kind should escape; the contract between the two carriers may, in its restricted territory, be much more effective to stifle competition than the contracts condemned by the author. The Government contended at the time of the argument of the Trust cases before the Supreme Court that the court in coming to its decision had the right to take public policy into consideration. If this suggestion is followed, the court may well hold that a policy which should procure competition against the operation of natural law and against the wishes of the parties interested, even when they are not under a public duty to compete, is not an enlightened public policy; it might hold that to the words "restraint" and "monopoly" must be given a technical meaning, the first signifying any unreasonable restraint, the second requiring the elements of oppression and coercion.

Nor are they so entirely precluded by prior decisions as the author contends. The Trans-Missouri, Joint Traffic, and Northern Securities cases, which formed the basis for the extreme doctrine, were directed against railways. There is an obvious distinction between railways and other public corporations which are bound to compete, and purely private concerns where no such duty exists. Moreover, these cases were decided by a bare majority. Judge Brewer, who was one of such majority, expressly states in his concurring opinion in the Northern Securities case that he did not agree with all that was said by the judge delivering the majority opinion, and that in these cases the decision might well have been placed on the ground that the restraints were unreasonable. If the law would punish, not the possession of the giant strength, but the use of it as a giant, it might be more efficacious in correcting the economic evils which may result from large combinations. The author admits that, notwithstanding the Trans-Missouri and Joint Traffic cases, virtually the same conditions prevail at the present time, and that the Northern Securities decision has not prevented the stifling of competition. If the law were directed exclusively against acts which were morally indefensible, and in every case the actual parties who committed such acts were criminally prosecuted, instead of merely the corporation fined and punished, respect for the law would be increased.

It is the very cipher of a function
To fine the faults whose fine stands in the record
And let go by the actor.

Die Kulturwerte der deutschen Literatur in ihrer geschichtlichen Entwicklung. By Kuno Francke. I. Band, Berlin: Weidmannsche Buchhandlung.

Since the author of "Social Forces in German Literature" states in the preface of his new book, that it is not identical with the former, all but the first chapter having been completely rewritten, it is needless, and would perhaps be unfair, to trace the differences between the two works. For after all an author writing on German letters in the two languages is justified when he addresses a German public in taking for granted certain things upon which he would have to expatiate in writing for American readers. Nor would it be just to approach a work of such serious purpose and thorough scholarship in a cavilling spirit, because the patriotic note sometimes obtrudes itself a little too emphatically.

Dr. Francke succeeds admirably in abstracting from the transient manifestations of the racial spirit, during such periods as the migration and the Crusades, the basic qualities of the German character: fearlessness, loyalty, and an almost youthful race pride. He presents impressively the contrast between the Church and the State, and to the conflicting ideals of the two he attributes the slow and inferior development of German art. But even in the religious poetry of the Middle Ages with its variations of old Bibical themes, he detects distinct racial features, among them a lusty realism which enters even into the dramatized sacred legends of the first woman playwright, the German nun Roswitha. In such discussions he is penetrating as well as learned. When, however, he begins to compare the poetry of chivalry produced in Germany with its equivalent in France, Italy, and England, he seems to be too readily swayed by his national or personal sympathies. For whatever the merits of the songs of Walther von der Vogelweide, and however right the author may be in ranking that poet as a personality higher than any of the Provençal troubadours, the comparison with Chaucer and Dante certainly forces the note. On the other hand one cheerfully accepts Dr. Francke's summary of the qualities which differentiate Walther von der Vogelweide from his French contemporaries, viz., a certain democratization of what was primarily an aristocratic pastime, an anticipation of the individual's protest against the dictates of society, and an almost revolutionary view of the conflict between Church and State. His analysis of the two great national epics, the "Nibelungenlied" and "Gudrun," has also some illuminating touches, and toward the end of this chapter he tersely and aptly characterizes the three epic poets of the period of chivalry, calling Hartmann von der Aue a painter of souls, Wolfram von Eschenbach the poet of ideal aspiration, and Gottfried von Strassburg the analyst of human passion.

The chapter on civic culture shows how the individualistic principle in thirteenth and fourteenth century mysticism became gradually democratic, especially as it manifested itself in the ecstatic revelations of the Beguines, typified in Melchthild von Magdeburg, and in the robust personal note of the itinerant preachers, of which the quotations from Berthold von Regensburg are striking examples. Eckhart, whom he calls the head of German mystics, anticipates according to Dr. Francke traits of a classicism of a much later period. To Heinrich Seuser, whom he calls a romantic,

he devotes an extraordinary amount of space, and Johannes Tauler, he appropriately calls a practical idealist. In his discussion of the folksong of the period Dr. Francke argues convincingly in favor of the individual origin and personal character of a good number of the songs which other authorities have pronounced purely impersonal expressions of the folk-soul. In his comparison of these songs with those of chivalry, he dwells upon their more naïve conception of love, their more intimate sense of nature, and their more direct vitality, and adds:

> We can imagine ourselves in the world of Walther von der Vogelweide, we can enjoy his images and sympathize with his ideals; but the folksong we can actually live within ourselves even to-day; we can feel its kinship, we are not separated from it by social barriers and historical suppositions.

But the most distinctive feature of the work is Dr. Francke's lucid exposition of the close relation between the literature and the art of Germany. From his comparison of the art and the letters of certain periods he derives some of his most forcible arguments and brings into the light points that otherwise would escape the reader. The work is a valuable contribution to the history of German literature, and the three volumes which are to follow will be awaited with genuine interest.

Theocritus in English Literature. By Robert T. Kerlin. Lynchburg, Va.: J. P. Bell Co.

This is a monograph of 215 pages which should be interesting both to the student of English and to the student of Greek. The one important thing, which is the direct influence of Theocritus upon the long line of English poets, is very carefully studied, though this is unfortunately burdened and obscured by a great deal of unimportant and inconclusive matter which adds very little to the value of the book. There is a special chapter on Theocritus in America, in which we are told that "the younger American singers, whatever their merits, have paid more tributes to Theocritus than to any other ancient poet"; also, that "doubtless the chief means of making our poet known in America" was the prose translation by Andrew Lang. Apparently, the older American singers and the older American writers knew very little about the Idyls:

> To illustrate the change that has taken place, in American papers and magazines the name of Theocritus is not to be found until within the last decade—never a review or notice of any translation, never a comparison of any other writer with him, never an allusion to him such as the English papers and magazines have contained all along. But his name is now beginning to appear with some frequency in our weeklies and our dailies (p. 141).

The point of this illustration, such as it is, is somewhat obscured by the printing of two quotations concerning Theocritus (pp. 156, 159) from two American magazines of the years 1888 and 1893. And possibly some of our older writers could cite similar appearances of the poet's name from a period still more remote. In an introductory section entitled The Place of Theocritus in the World's Literature there is an unfortunate statement about the influence of Theocritus in France:

> Of the French little need be said. Marot, who was imitated by Spenser in the "Shepheardes Calender," cannot be certainly affirmed to have known Theocritus—at least directly. And so remote from shepherd-life and rural manners are the other French pastoralists, that if Theocritus was known to them—as he was to Fontenelle—yet their artificial taste excluded his rusticity and natural graces (p. 11).

This sounds like a bit of traditional criticism, but it entirely ignores such an important group of writers as the French Pleiad, and especially the two great names of Ronsard and Baïf. Both Ronsard and Baïf state definitely that they had studied the Greek bucolic poets; and even without their definite statement the fact would be obvious enough—not only in their eclogues but throughout their voluminous works. Indeed, the poets of France must claim a large share of space in any study of the pastoral. For although in France, as elsewhere, men were misled for a time by the spurious pastoralism of the eighteenth century, yet even before the close of that century the great Greek models found once more a worthy interpreter in the romantic figure of André Chénier. And even in our own time we have heard delightful echoes of Theocritus in the poems of Leconte de Lisle.

Notes

Henry Holt & Co. will issue within the next fortnight "The Newer Spiritualism," in which Frank Podmore, while inclining against the theory of spirit communication, attempts to show possible extensions of the human faculty; "Half a Hundred Hero Tales of Ulysses and the Men of Old"; "Studies in Language and Literature," in honor of Prof. James Morgan Hart of Cornell, which will consist of eighteen contributions by his former students; Kellogg's "The Animals and Man," and "Perrault's "Les Lunettes de Grand'maman," edited by Mary Sinclair Crawford, the illustrations being reproduced from the French edition by Geoffroy.

A number of religious publications will be brought out this season by the Scribners, a list of which includes: the third volume of the "Encyclopædia of Religion and Ethics," edited by James Hastings, D.D.; "History of Christian Thought from the Reformation to Kant," by A. C. McGiffert, D.D.; "A Biblical Geography and History," by Charles Foster Kent; "John the Loyal, Studies in the Ministry of the Baptist," by A. T. Robertson, D.D., and "The Message of the Poets," by Prof. Nathaniel Schmidt, of Cornell, being the eleventh number in the Messages of the Bible series.

The Scribners also promise: "Louis XIV and Madame de Maintenon," by Charlotte Lady Blennerhassett; a new volume in the South American series, entitled "Brazil," translated from the French of Pierre Dennis by Bernard Miall; the last volume of the memorial edition of the works of George Meredith; "Narratives of Early Carolina," edited by A. S. Smalley, jr., and "Henri II. His Court and Times," by H. Noel Williams.

On February 18, A. C. McClurg & Co. will issue Gen. Hiram M. Chittenden's "War of Peace: a Present Duty and a Future Hope."

The spring announcements of L. C. Page & Co. include: "The Story Girl," by L. M. Montgomery; an as yet nameless novel, by Norval Richardson; "A Captain of Raleigh's," by G. E. Theodore Roberts, and a novelized version of a play, "A Soldier of the Revolution," done by Robert Neilson Stephens just prior to his death.

A book that is certain to attract wide interest is the "Letters and Journals of Charles Eliot Norton," in preparation by Houghton Mifflin Company for issue, it is hoped, in 1912. The book, which will run to two volumes, will be edited by his daughter, Miss Sara Norton, and M. A. De Wolfe Howe.

John Bigelow is at work upon the fourth volume of his "Retrospections of an Active Life."

Included in the spring books of the Baker & Taylor Co. are: "Dan McLean's Adventures," by Frederick W. Brown; "The Canon in Residence," by Victor L. Whitechurch; another Lawrenceville book, to be called "The Tennessee Shad," by Owen Johnson, and "The Blue Goose Chase."

Longmans, Green & Co. will issue shortly: "A History of Wales from the Earliest Times to the Edwardian Conquest," by Prof. John Edward Lloyd; "The First Decade of the Australian Commonwealth: a Chronicle of Contemporary Politics, 1901-1910," by Henry Gyle Turner; "The Sevenfold Unity of the Christian Church," by the Rev. Arthur C. A. Hall, D.D., Bishop of Vermont; "Prayer and Practice; or The Three Notable Duties," by the Rev. E. E. Holmes; "Studies in the Passion of Christ," by the Rev. C. H. Robinson, D.D.; "The Passion in the Spiritual Life," by the Rev. Jesse Brett; "John Viriamu Jones, and Other Oxford Memories," by Prof. Edward Bagnall Poulton; "The Religion of the Englishman: Six Addresses on Modern English Society Delivered at All Saints', Margaret Street," by the Rev. H. F. B. Mackay, and "The Resurrection and Modern Thought," by the Rev. W. J. Sparrow Simpson.

In the list of books promised by the English firm of Murray are: "Some Principles of Liturgical Reform," a contribution towards the revision of the Prayer Book, by Dr. W. H. Frere; "Japanese Poetry," by Prof. B. H. Chamberlain; "Reminiscences of a Paris Physician" (Dr. Poumiès de la Siboutie), edited by his daughters, and translated by Lady Theodora Davidson; "The British Empire," a text-book by E. G. Hawke; "The

Downfall of the Gods," by Sir Hugh Clifford; "Repton," a tale of Marlborough and the Jesuits under Queen Anne, by Lieut.-Col. F. Kane, and "Pot au Feu," by Marmaduke Pickthall.

Among the announcements of Nisbet & Co. is "The Position of Woman, Actual and Ideal," a series of studies by Miss Sheaven, Prof. J. A. Thomson, Sir Oliver Lodge, and others.

"Marriage and Divorce: Some Needed Reforms in Church and State," by Cecil Chapman, will inaugurate the Woman Citizen series, which is undertaken by the firm of David Nutt.

The same house has in hand "Monumenta Historica Celtica," a collection of references in classical authors by W. Dinan; "Thoughts on Ultimate Problems," by F. W. Frankland; and Matthew Arnold's "Celtic Literature," edited by the late Alfred Nutt.

A new book by H. Charles Woods, entitled "The Danger Zone of Europe—Changes and Problems in the Near East," will be published before long by Fisher Unwin.

Novels to be published by Little, Brown & Co. this month include: "A Woman with a Purpose," by Anna Chapin Ray; "How Leslie Loved," by Anne Warner, and "Alise of Astra," by H. B. Marriott Watson.

The nineteenth annual meeting of the American Jewish Historical Society will be held in the city of Philadelphia on Sunday and Monday, February 12 and 13. There will be four sessions: three on February 12 and one on February 13. The place of meeting is the Hotel Bellevue-Stratford, corner Broad and Walnut Streets.

The International Trap Shooting Tournament and Sportsmen's Exhibition, which will be held March 7-13, at Madison Square Garden, will have a book booth containing the literature of out-of-door sports, life and natural history. In like manner, the out-of-door art will be represented by an exhibition of paintings, drawings, and photographs by well-known men.

The Pan-American Commercial Conference will be held in Washington, February 13-18.

The noted Persian traveller, Major P. M. Sykes, gives, in the *Geographical Journal* for January, an account of a journey in the northeastern part of that country, the aim of which was mainly to solve some of its historical problems, especially those relating to the invasion of Alexander the Great. In the story of the Duke of the Abruzzi's expedition to the Karakoram Himalayas, told by one of its members, Dr. de Filippi, emphasis is laid on the remarkable feat of camping at above 21,000 feet for nine days without experiencing insomnia or mountain sickness. David Thompson, of whose career a brief sketch is given, came from a London charity school in 1784 to this country in the employ of the Hudson Bay Company. He educated himself as a surveyor in the forests and on the plains and mountains of the West, and did such excellent work that he was appointed by the government of Great Britain as its astronomer and surveyor to determine and define the boundary line between the United States and British North America under the Treaty of Ghent. Among the other contents is a most valuable contribution by Dr. J. S. Owens, to a subject closely connected with irrigation problems, the settlement of solids in water, seven different experiments being described.

The third and fourth volumes of "Emerson's Journals" (Houghton) comprise the years from 1833 to 1838 inclusive. About a third of the earlier volume is given up to the European trip that followed the death of his first wife. No American traveller of his time showed a finer appreciation of art. We regret there is not space to transcribe his eloquent words on the Church of Santa Croce, Florence. The years 1833-4 saw a consolidation of his health and nerves, and, with a fortunate second marriage, the institution of a new home. The ministry was now definitely behind him, and his journals and lectures were rapidly putting together the raw materials of the poems and essays. These journals are records of an inner life, and one reads them not for facts, but for opinions. He now had learned to accept his extreme self-consciousness and love of solitude. He writes cheerfully, "Certainly a man would be glad to do his country service, but he cannot cram his service down its throat. It is time enough if he come when he is called. It is enough for him if he has eyes to see, that he is infinite spectator, without hurrying, uncalled, to be infinite doer." One cannot read amiss amid these jottings. We take at random:

I told Landor I thought it an argument of weak understanding in Lord Chesterfield, his slippery morality. It is inexcusable in any man who pretends to greatness to confound moral distinctions. True genius, whatever faults of action it may have, never does. Shakespeare never does, though a loose liver. But such fry as Beaumont and Fletcher, and Massinger, do continually. . . . I think it was of Socrates that Landor dared to say—so far can a humorsome man indulge a whim—"He was a vulgar sophist," and he (Landor) could not forgive vulgarity in anybody; if he saw it in a wise man, he regretted it the more.

Of Goethe there is frequent criticism. His "velvet life" seemed not quite true to the New Englander. Concerning Goethe's manysidedness is written:

Goethe is praised as murionous, or allsided. And, if I understand it, this is the apology that is made for his Epicurean life, compared with his religious perceptions. To praise a man for such qualities is like praising an observatory for being very low and massive, and a very good fort. It is not more the office of man to receive all impressions, than it is to distinguish sharply between them.

The volume containing the journals from 1836 to 1838 affords equally good picking. We may put together three extracts which suggest the tone and have a certain spiritual continuity. Regarding the older poets, and with Ben Jonson especially in mind, Emerson writes:

The great poets are content with truth. They use the positive degree. They seem frigid and phlegmatic to those who have been spiced with the frantic passion and violent coloring of the modern Byrons and Hemanses and Shelleys. But it is like taking a walk or drinking cold water, to the simple who read them.

Friends come and go in the pages, Alcott, Margaret Fuller; Thoreau begins to count. At the end of April, 1838, occurs the following entry:

Yesterday afternoon I went to the cliff with Henry Thoreau. Warm, pleasant, misty weather which the great mountain amphitheatre seemed to drink in with gladness. A crow's voice filled all the miles of air with sound. A bird's voice, even a piping frog, enlivens a solitude and makes world enough for us.

The growing sense of reality is shown in such sayings as these:

Elizabeth Peabody brought me yesterday Hawthorne's "Footprints on the Seashore" to read. I complained that there was no inside to it. Alcott and he together would make a man.

When I read the North American Review or the London Quarterly, I seem to hear the snore of the muses, not their waking voice.

I hate goodies. I hate goodness that preaches. Goodness that preaches undoes itself. A little electricity of virtue lurks here and there in kitchens and among the obscure, chiefly women, that flashes out occasional light and makes the existence of the thing still credible.

Here is some suggestion of the temper of these journals. Only reading can give any idea of their multiform charm and interest.

A book confessedly "compiled from very crude and careless notes" awakens unpleasant suspicions, but Harry De Windt's "Finland as It Is" (Dutton) is better than its promise. The author, an experienced traveller, at home in many lands, has a graphic pen, and presents a very attractive picture of a little-known country. A certain vein of journalistic exaggeration runs through the book, but it is too obvious to mislead, and the reader soon learns not to take too literally such statements as that "the shops of Helsingfors are quite equal to those of any European capital," that the hotel there is "equal in every respect to the Cecil or Savoy," and that the Societetshuset at Tammerfors is "quite equal in every respect to the Helsingfors hotel; indeed, the apartments were even more luxurious." Finland, according to Mr. De Windt, is the paradise of the travelling epicure, for even at the post-house of the little village of Virkulla, where "the floor was of polished *parquet*, bright as glass, and there were rocking-chairs, flowers, and pictures," the postmaster prepared a meal, consisting of "grilled trout, chicken, and a sweet omelette, served upon spotless china and a snowy tablecloth." And as for the treatment of visitors, the author doubts whether there is "another country in Europe where an absolute stranger would meet with such spontaneous and kindly hospitality." Finnish women excite his unbounded admiration. They are "certainly as well, if not better, educated than those of any other European country." In Vasa, the shops are "far better than those usually found in an English town of the same size and importance"; and, "booksellers are legion, for the Finn is a great reader." Dickens "always holds his own, and of American authors Mark Twain is the most popular." Thus he skims lightly and pleasantly over the surface of things, with a sharp eye withal for the less commendable aspects of Finnish life. He finds, like other observers, that "the administration of Finland is quite as intolerant where Jews are concerned as Russia itself." Another dark feature of the country is the prevalence, "for some unknown reason," of blindness. "Finland contains, for its size, more blind people than any country in the world, Egypt, perhaps, excepted." The book was apparently written during the South African war, and the preface is dated August, 1901; but the information conveyed has lost little of its freshness since then. The practical direc-

tions for travel in Finland will be found very serviceable by the intending tourist, and his curiosity will certainly be enhanced by the attractive full-page illustrations. The drawings in the text are less pleasing.

The plan proposed by P. A. Silburn for what he quaintly terms the "Governance of Empire" (Longmans), is the creation of an Imperial council composed of members to be elected by the legislatures of the various constituent parts of the empire, including Great Britain, and of representatives of India. All matters of Imperial nature are to originate in this body, but shall not have the force of law until the legislature concerned shall have ratified and adopted the same. It is gravely proposed that only 67 out of the 216 members shall be allotted to the United Kingdom, that India shall have 37 members, and Canada 30. While the question whether the colonies should not have some representation in the councils of the nation, especially if they are expected to share in its burdens, is one which deserves the serious consideration it has received at the hands of all political parties, it is evident that the plan proposed is so far removed from practical politics that it is unnecessary to criticise it at length or to point out that its adoption would mean not the "governance" but the destruction of the empire and the substitution of a loose federation of virtually independent states. The chapters devoted to the federal government of ancient, mediæval, and modern times contain little that is new. Much space is devoted to Greek and Roman history, but not a word is said about the Constitution of the German Empire, and only a few allusions are made to the United States. These, however, are decidedly novel. The American Constitution is substantially similar to that of the Achaian League, and the reason that this fact was unknown to Washington, Hamilton, Jefferson, and the two Adamses, is that "these hardy colonists were denied the advantages of that higher education which would have made them acquainted with the labors of their prototypes of twenty centuries ago."

Volumes XVII and XVIII of the "Journals of the Continental Congress," edited by Gaillard Hunt (Government Printing Office), carry the record of that body from May 8, 1780, to the end of the year. It was the darkest period of the war. On the twelfth of May, the British took Charleston. June 7, Congress informed the Virginia Assembly that, while every effort would be made to defend the South, "they are not to rely too far on the assistance which may be drawn from the army of the United States," but must employ their own resources to the utmost. Gates, ordered June 13 to take command of the Southern department, met disgraceful defeat at Camden, August 16. The States had failed to pay the requisitions, or to raise any of the 25,000 men which were to coöperate with the French forces that arrived in July. August 3 came a memorial from the general officers, on behalf of the army as well as of themselves, calling attention pointedly to the failure of Congress to provide for their pay, or even to take notice of their demands; while on September 30 dispatches were received announcing the treason of Arnold. That, under these distressing circumstances, Congress accomplished as much as it did is to be attributed, in large part, to the conviction that independence was not far distant. Burdened as it was with the interminable details of administration, Congress found time for notable constructive action. June 22, the new bank at Philadelphia was given cordial recognition; October 21, half-pay for life was promised to officers who should serve until the end of the war. The quartermaster's department was reorganized in July, the inspecting, mustering, and hospital services in September. The parties to the Vermont controversy were given a rehearing, though the influence of New Hampshire and New York was still sufficient to prevent any recognition of the new State government. September 6, Virginia and Maryland were urged to come to terms in the matter of the Western lands; while, on October 10, it was voted that unappropriated lands, when ceded, should be held as national domain and disposed of for the common benefit, and ultimately be formed into "distinct republican States," and admitted to the Union. In December, Dana was appointed minister to Russia, and John Adams commissioned to conclude a treaty of amity and commerce with the United Provinces. Instructions to Jay, in October, directed him to insist, in his negotiations with Spain, upon free navigation of the Mississippi; while Adams was informed that a "short truce" with Great Britain would be regarded as "highly dangerous," and that the indispensable condition of peace was the recognition of American independence. Students of American financial history will be grateful for the full plan of taxes to be laid upon the States, November 4, and for the detailed report on finances, submitted December 18.

"Life and Public Services of J. Glancy Jones," by Charles Henry Jones (Lippincott), illustrates the twist in the historic vision which earnest filial piety may produce in the minds of men fairly sensible. Mr. Jones, looking back through the perspective of half a century beholds in his father a conspicuous pillar of the State, and invites the world's attention to a biography of nearly eight hundred pages, dealing with characters and issues that passed out with the civil war. J. Glancy Jones was unquestionably a good father and a correct, law-abiding citizen. At first an Episcopal clergyman, he laid down that office to follow the law and politics, serving as a Congressman from Pennsylvania during most of the decade closing with 1860. In public life he was a Democrat of the most thorough-going type. If not pro-slavery, he at any rate would not disturb an institution which the Constitution so plainly sanctioned, and had no word to say as to righting any wrongs under which the black race might suffer. As chairman of the Committee of Ways and Means, and as minister to Austria during Buchanan's term, he discharged faithfully and well much routine work; but in the struggle of the country toward a humaner status he was strongly reactionary. He held opinions now discredited, and followed leaders and policies that proved inadequate and have long been condemned. Of course, it is well to get the point of view of such a man, but it may be better obtained from more succinct accounts of more significant characters.

The solemn inauguration in the summer, at Bagnères de Bigorre in the Pyrenees, of a bas-relief commemorative of Sophie Cottin (1770-1807) should excite as much interest in America as in France. Sainte-Beuve already said in his day: "Not a work of hers can be read now, except through curiosity to know our mothers' modes of sensibility." In the French course of our American girls' schools, her "Elizabeth ou les exilés de la Sibérie" has been a common textbook. The clear, correct, easy flow of its language made up amply for the old literary fashion of its story, whereas the "French novel" was a forbidden book to the American schoolgirl. Sophie was the daughter of Risteau, director of the Compagnie des Indes; and at twenty, just as the Revolution was beginning, she was married to the Bordeaux banker, Cottin, and went with him to Paris to live the short-lived triumph of the upper middle classes over the old régime. Her husband, much older than herself, fell dead of fright when the national guards came to arrest him under the Terror. Madame Cottin weathered the storm in discreet retirement, where she composed the romances "Claire d' Albe," "Amélie de Mansfield," "Malvina," "Mathilde," and the rest—which were long best sellers, and are now all but unknown. She died in full success at the age of thirty-seven.

English speaking students of the Old Icelandic language have, up to the present time, been without a short and handy dictionary, obtainable at a reasonable cost. The Cleasby-Vigfusson dictionary, published in 1874, which is still in certain respects the most complete thesaurus of Old Icelandic, contains a mass of quotations and other information which is invaluable to the scholar and the advanced student, but which is so much unnecessary lumber to the beginner. The need has now been met by a concise "Old Icelandic Dictionary" (Frowde), compiled by Geir T. Zoëga, first master in the grammar school of Reykjavik (Iceland). The book is based in the main upon the larger work, but deviates from it in some important respects, notably in the typographical arrangement, the alphabetical order of compound words, and in the separation of æ from æ and ö from ǫ, the latter changes denoting a great advancement in philological method and scientific sound notation. An appendix contains an outline of grammatical paradigms and a list of irregular forms.

We commend to the notice of American teachers M. A. Hamilton's "Junior History of Rome" (Clarendon Press) as an unusually successful attempt to make the early history of Rome interesting to young people. Although designed as a text-book, the volume has none of the external apparatus of a class-room manual; instead, it is a straightforward narrative of events, told in simple and attractive style, with emphasis on biography and action, and with praiseworthy attention to the earliest period. L. H. Herbert, who furnishes an introduction, speaks of the book as specially fitted to introduce pupils to the study of Latin literature; but while it should prove useful to that end, it is the historical rather than the literary side that is emphasized. As the story is not carried beyond the time of Julius Cæsar, the work obviously does not meet fully the prevailing college entrance requirements in this country, but it is a welcome addition to the list of really

good books for collateral reading, and will appeal to schools which teach Roman history, not as a separate subject, but in connection with the reading of classical authors.

Francis Philip Nash, emeritus professor of Latin language and literature at Hobart College, died suddenly at the residence of his daughter-in-law, Mrs. B. H. Nash, in Boston, on Sunday. He was graduated from Harvard in the class of 1856. Later, as a teacher, he belonged to what is becoming more and more a bygone type, for his achievement is to be measured not so much by what he actually wrote as by his sturdy scholarship, and by the nobility of his influence on students.

The death is reported of Owen Kildare, who popularly was known as "the Kipling of the Bowery." He was born in New in 1864, and started life as a newsboy. In turn he became a prize-fighter, a "bouncer" for a bartender, a dock laborer, and a social betterment worker in his district. Learning to read at thirty, he competed, a few years later, for a prize offered by a newspaper for the best love story. This began his career as an author. He contributed to many magazines and published four books: "My Mamie Rose," "The Good of the Wicked," "The Wisdom of the Simple," and "My Old Bailiwick."

Dr. James Albert Harrison, for fifteen years professor of English and Romance languages in the University of Virginia, and one of the best-known authors of the South, died last week at Charlottesville, in his sixty-third year. He had filled successively chairs at Randolph-Macon College, Washington and Lee University, and the University of Virginia, and was lecturer on Anglo-Saxon poetry at Johns Hopkins. He wrote: "Group of Poets and Their Haunts," "Greek Vignettes," "Spain in Profile," "French Syntax," "History of Spain," "Story of Greece," and "Autrefois" (a collection of Creole tales). He was joint author of several other works, and edited certain French, German, and Anglo-Saxon texts.

Science

To the series of "Garden Flowers in Color" Stokes has announced the addition of "Orchids" and "Daffodils."

"However cleverly written, an essay on guns soon becomes old and valueless," says Charles Askins in "The American Shotgun" (Outing Pub. Co.), and in this respect he is not far from the truth, for changes in style and make of guns are frequent, and a dissertation on them would be of less value, under ordinary circumstances, than the annual catalogues of the makers. Mr. Askins's book, however, tells many things about guns which the makers would be likely to conceal, and for that it is valuable. A part of the book is devoted to hints on shooting which are distinctly worth while; it is more than likely that the last chapters will be more carefully read than the first.

The supposition that the climate of the continent of North America has changed considerably during the last one or two thousand years, while at variance with the prevalent opinion of scientists, is a conclusion to which investigation of the ruins of the Hohokam has brought Dr. Ellsworth Huntington of the department of geology at Yale. In an article in the February *Harper's*, entitled "The First Americans," the investigator brings together the supposed conditions of life of a people who have left little except remains of implements and pottery. What remnants of their ancient villages there are, however, have not been much studied, owing to the fact that the ruins, while extending over large areas, are insignificant in appearance. Carved on the Picture Rocks, halfway from Tucson to Charco Yuma, can be seen the pictures of the feet and the bow and arrow of a primitive being whom Dr. Huntington christens Man-Who-Can-Shoot, and also the grotesque running figure of Man-Who-Ran-For-His-Life, pursued by an angry buck. The great mass of the ruins, lying in the valleys of southern Arizona and northwestern Mexico, are in places where it would be impossible now to locate villages, and where, during part of the year, not even drinking water can be obtained. At one time the almost uninhabited fifty miles below the main irrigated areas of Tucson contained at least seven villages, with a total population of about 5,000. This fact, taken in connection with others, such as the lack of tools for digging wells, means for the author that in the days of the Hohokam the climate was much moister than now, and that in favored spots cultivation could be carried on by means of the natural rainfall.

The reader of G. B. Grinnell's "American Game-Bird Shooting" (Forest and Stream Publishing Co.) is reminded first of the want of a satisfactory work upon this subject, and of the great difficulties of an attempt to deal with it within the limits of a single volume, as Mr. Grinnell has done. Sectional conditions vary so widely in shooting in this country that he would be brave indeed who ventured to think general observations sufficient. It is but fair, however, to say that Mr. Grinnell admits this, and makes allowances; the fault lies in the scope laid out for his work. The author defines his subject as upland shooting of those birds commonly sought with dogs. He devotes the first part of his book to a description of the natural history of the birds, including woodcock, the American snipe, the several varieties of quail and grouse, and the wild turkey; the second part to actual field conditions met with in shooting, with short chapters upon dogs, guns, and ammunition. It is unfortunate that Mr. Grinnell lacks an entertaining style, which makes books upon this sport so readable. One is often annoyed, too, by needless repetition of words and by a confusion of the singular and plural in speaking of certain birds. So, in the chapter on bob-white shooting (p. 348):

> In many parts of the South, where the quail are in greater abundance, their sweet notes may be heard in many directions, at many distances, in the early morning and evening hours. These calls often work great harm to it, for by them the shooter learns the whereabouts of all the birds.

The brief accounts of personal experiences in the field, told by the author, or quoted from other writers, are the most interesting pages of the book. In the end, Mr. Grinnell offers some thoughtful observations upon the shooting of the future, emphasizing the immediate need of better game protection. The volume is well illustrated, and the several plates in color are capitally executed.

"Ski-ing for Beginners" (Scribner) is interesting and instructive. This exhilarating winter sport is increasing in popularity, and as W. Rickmer Rickmers is the first to write for beginners, his book is timely. The ski is a much more difficult snow-shoe to handle than the Canadian variety, and until now there has been no such elaborate teaching. More than 100 pictures and diagrams, with explanations, form not the least important part of the book. For the experienced there are valuable hints on outfit, as well as directions for touring, in which respects Mr. Rickmers is a well-known authority.

Louis Gentil, from his scientific exploration of the Atlas Mountain chain in Morocco, brings up again the question of Plato's Atlantis in a note presented to the French Académie des Sciences. He does not find, as is commonly supposed, that the chain stops short fifty miles from the Atlantic Coast, with plateaux between. On the contrary its folds and fractures keep on, plunge beneath the ocean, and crop up again in the Canary Isles. The channel which separates these islands from the African mainland may be compared with the Strait of Gibraltar, except that the latter dates from the pliocene, while the former seems to belong to the quaternary, that is, to be contemporary with man. In fact, the central mass of the Atlas is the resultant of great fractures which gave rise to tremendous volcanic eruptions. Subsequent displacements and the play of the ancient fractures gradually lowered the regions of Marakesh to the north, and Sus to the south, leaving the giant volcano of Jebel Sirua, which M. Gentil has been the first to describe. This present state of the Atlas is undoubtedly far later than the constitution of the Alps; and it shows a possible existence of the land of Atlantis in the human era. M. Gentil concludes that a minute geological study of the South Morocco coast and Canary archipelago might clear up the legend.

Dr. Leonard Parker Kinnicutt, chemist, died at his home, in Worcester, Mass., last Monday, at the age of fifty-seven. He graduated from the Massachusetts Institute of Technology in 1875; for four years he studied in Germany, at Bonn and at Heidelberg, and later at Johns Hopkins and at Harvard, at the last-named institution being for several years a professor of chemistry. In 1890 he was made director of the chemical department of the Worcester Polytechnic Institute. At the time of his death he was recognized as one of the greatest experts on sewage disposal and water supply in this country. He was a member of many scientific societies here and in Europe.

Drama

SOPHOCLES IN GERMAN.

BERLIN, January 20.

Had Sophocles returned from the shades last month, and chanced to visit Berlin, he might have had the pleasure

of witnessing three performances of his plays within a week. Whether he would have recognized them as his is another question, but he need by no means have been ashamed of their reception by the public. The "Œdipus Tyrannus" has, up to the present, been seen by more than 100,000 people, and the announcement of every new performance is greeted by a rush for tickets that exhausts the supply within a few hours. The "Electra" was given only a few times, on each occasion, however, to a crowded house. A third production—of the "Œdipus Coloneus"—put on the boards about twenty times, proved less successful, but attracted serious attention, partly, perhaps, because of its pretentious claims. All three plays were performed by professional companies, under professional direction, before the regular theatre-going public, and at playhouses containing seats that ranged from the priceless royal box to the humble fifty pfennig Stehplatz.

The "Œdipus Coloneus" bravely attempted to be quite true to the antique. Except for the members of the chorus, there were but four (male) actors, and to these all the rôles, both male and female, were entrusted. Masks and buskins were used, the scenery aimed at reproducing the conditions of the Greek stage, and various other details of the arrangements were intended to reproduce those of an actual ancient performance. A fairly literal, though fluent, translation by Adolf Wilbrandt served as text, and the chorus—that stumbling block of modern managers—was retained. This effort was generally conceded to be praiseworthy, but unsuccessful; students were interested, and yet they could but agree with the public in finding that at a comparatively small theatre, in a day when every spectator might use his opera-glass if he chose, masks and buskins were ludicrous, the consequent restraint in expression and movement an unnecessary sacrifice, and the presence of men in the female parts, to say the least, unnatural. It seemed an instance of clinging to ancient usages in such dissimilar circumstances that the true significance of the original, instead of being illumined, was almost completely lost.

A very different spirit directed the production of the "Electra." Although the text followed the Greek original quite closely—it was again a translation by Wilbrandt—modifications in arrangement and presentation were introduced at will. Two attendants spoke the lines of the chorus in a realistic fashion; the acting was wholly unhampered by ancient traditions; scenery and costumes were modern versions of the antique; exits and entrances were accomplished in the usual manner; and the action took place upon the ordinary stage level. Under such conditions, external distractions were minimized, and the onus of being effective was, so to speak, thrown upon the tragedy itself. And the tragedy undoubtedly was effective. The human elements in the fate of the heroine (excellently played by Adele Sandrock) clearly appealed to the audience, and there were unmistakable signs of weeping in the urn scene. Even the lyrics were appreciated, and the famous praise of Athens was roundly applauded. The concluding scenes were less successful, perhaps because the secondary rôles were unsatisfactorily acted, more probably because of the foreign religious and ethical conceptions involved, and the (to modern minds) anti-climax of the end.

It is the production of the "Œdipus Tyrannus," however, that has had the most vogue and that has literally become the rage in Berlin—the topic of conversation on every street corner—the subject of post cards and cinematograph performances—the butt of parodies and caricature. And this production pretends to be neither wholly ancient nor wholly modern. The director of the Deutsches Theater, a man noted for his artistic disposal of details and his painstaking attention to picturesque effects, has frankly used every resource known to the present-day theatre in order to make the tragedy as effective as possible to a modern audience.

In this he has been materially aided by the translation. Hugo von Hofmannsthal pretends merely to have translated and adapted the "Œdipus Tyrannus" for the modern stage. As a matter of fact, he clings closely to the original in form and substance, but manages—by the use of an emotional vocabulary, by abridging similes and long descriptions, by dramatizing stage directions, and by reshaping the parts of the chorus and the Second Messenger—to vivify and intensify the impression and decidedly to quicken the tempo of the whole. The lines of the chorus are greatly shortened and are so incorporated into the action and so distributed among the members as to become the utterances of a very realistic group of elders; and the substance of the extended speeches in which the Second Messenger announces Jocasta's death and the blinding of Œdipus is breathlessly imparted by a group of half-distracted maids from the palace.

The performance was given in a huge circus building, and heroic proportions were the rule. At one end of the arena arose the front of an enormous Doric palace, upon the twelve broad steps of which the action of the principals for the most part took place. Characters not supposed to be dwelling in the palace entered the arena from below, the actual distance from the entrances to the palace steps being one of the many details that contributed to the general impression of heightened reality. The size of the arena permitted the introduction of a mob of some two hundred supernumeraries, and the scene at the opening where these pest-ridden suppliants rushed with outstretched arms to beg the king for relief was one of the most striking in the play. The advantages of space and modern mechanical devices were also apparent in the direction of the chorus, the figures of which symmetrically, though unobtrusively, grouped themselves in the semi-darkness below the palace steps. The principal rôles were entrusted to actors fully capable of striking the remarkable range of feeling that the tragedy demands, and their finished impersonations contributed in no small measure to the perfection of the whole performance.

This production has again demonstrated that Greek tragedy can still be made effective to the masses—it has, in fact, been the incentive to a great movement for national Volksfestspiele in Germany—and it has also demonstrated, not only to the masses but to students and scholars as well, that a performance in the hand is worth any amount of archæological research in the bush. G. F.

Amélie Rives has written a one-act play called "The Kid Faun," the same being "an echo of 'The Faun,'" which William Faversham is presenting at Daly's Theatre. This little play will be presented at Maxine Elliott's Theatre on the afternoon of February 17 as one of the features of a charitable performance. The two leading characters in the play will be impersonated by E. Effingham Pinto and Mrs. Patrick Campbell.

Sir Charles Wyndham, it is said, has bought the English rights of H. S. Sheldon's play "The Havoc," and will himself assume the part assumed in this city by Henry Miller.

According to the Canadian papers, Louis N. Parker's play "Disraeli" and George Arliss, who enacts the famous British statesman, have both had a very favorable reception in that country. The piece seems to be nine-tenths fiction with just a dash of historical truth to give it substance. It is a drama of love and social and political intrigue, which reaches its climax when the hero, outwitting all foreign diplomatic and financial rivals, finally succeeds in completing his famous purchase of the Suez Canal shares.

When "Count Hannibal" has run its course at the London Garrick, Oscar Asche will give a series of Shakespearean revivals, including "Othello," "As You Like It," and "A Midsummer Night's Dream."

Henry Hamilton is writing a new stage version of the career of Joan of Arc, in which Ellaline Terriss will be seen in London in March.

Miss Darragh and Basil Dean have taken over the repertory season in Liverpool (which was to have been given by Alfred Waring and the Scottish Repertory Organization), with the support of the Liverpool Playgoers' Society and others. The season will begin on February 20 at Kelly's Theatre with a fortnight's production of John Galsworthy's "Strife"; and among

other plays to be produced in the course of the six weeks are Sudermann's "The Vale of Content," St. John Hankin's "The Cassills Engagement," and J. M. Barrie's "The Twelve-Pound Look." It is hoped that the success of the venture will be such as to justify the permanent foundation of a repertory theatre for Liverpool. John Masefield will go to Liverpool to lecture on behalf of the scheme.

It is said that Gordon Craig will have a hand in the preparation of the scenery for Sir Herbert Tree's revival of "Macbeth" at His Majesty's Theatre, in London.

There seems to be a pretty general agreement among the London critics that Sir A. W. Pinero in his latest comedy, "Preserving Mr. Panmure," has been guilty of more than one offence against good taste. His cynical attitude of mind has betrayed him into lapses of this kind before. In the present instance he has chosen a peculiarly repulsive incident as the theme of laughter. Mr. Panmure is a grotesque old satyr, married to a saintly wife who has instituted an "Order of Pure Souls." His unpleasant character is insisted upon with great particularity. Therefore, when he forcibly kisses the pretty governess, the latter feels that she has been horribly outraged, but she is too fond of Mrs. Panmure to shock her by a recital of the matter. Nevertheless, she cannot keep her secret altogether, and the fact leaks out that she has been kissed by one of the half-dozen men among the guests of the house. The question, in which all the women are vitally interested, is, by which one? Mrs. Panmure decides that it is clearly her husband's duty to search out the offender, and so the guilty old rascal is compelled to begin an investigation which it is his prime object to defeat. It is easy to imagine to what excellent comic purpose Pinero would employ material of this sort, and it is said that the jealous and hypocritical complications that he has devised excited roars of laughter. But, as one critic observes, the laughter was often on the wrong side of the mouth. There was an uneasy feeling that the source of mirth was not wholly legitimate. Moreover, Sir Arthur, it seems, has also seen fit to make religious convictions the subject of his ridicule. Most of the critics say that the play is too long and that the fourth act, especially, seems thin and tedious, after the fun of the second and third. Arthur Playfair distinguished himself by a remarkable character study of the old reprobate Panmure, and Marie Lōhr made a bewitching little governess.

The seventieth anniversary of his marriage has drawn attention to the oldest Paris playwright, probably the oldest of the world. Ferdinand Dugué is ninety-five years old, and his wife ninety-two. His first play, "Gaiffer," was produced at the Odéon in 1843; his last "Un Drame au fond de la mer," at the old Théâtre Historique in 1877. This and other pieces of Dugué are still played in suburban and provincial theatres, and make a living wage for his old days. His "Pirates de la savane" has had more than 10,000 representations. Dugué is the last survivor of the school of the Boulevard du Temple, where so many theatres stood until they were swept away in Baron Haussmann's modernizing of Paris streets. It was called the "boulevard du crime," from the peculiar human interest then cultivated in playwriting. Dugué still inhabits this boulevard; and he is also faithful to the antique spirit of its drama. The other day, in answer to congratulations, he observed: "You know I am not tender for the modern stage. Its plays and their subjects are always the same one thing—adultery. Say what you will against the historic drama, there was good in it, and the public learned something from it; but all that seems old-fashioned now." Dugué has always refused to publish his Memoirs; but he says that he has notes of his lifetime classified and in order, and that he is willing they should be published when he is gone.

Music

Gustav Mahler. Von Paul Stefan. Munich: R. Piper & Co.

The announcement that Gustav Mahler has been persuaded to retain for another year the conductorship of the New York Philharmonic Orchestra is most welcome to those who have at heart the welfare of concert music. No other living conductor except Arthur Nikisch knows as he does how to interest the public in the music of all epochs and countries. He is, however, undiplomatic, and averse to lionizing, or even social intercourse; he dislikes the self-advertising methods of the day so much that he even refuses to talk about his symphonies when they are produced here, or to furnish "programmes" of their contents which would facilitate writing about them in the newspapers. The result of this lack of "push" is that he is not so well known to the general public as he ought to be in the interest of the art he represents; his aims are not fully understood; nay, newspaper misrepresentation of them has given many music lovers erroneous ideas regarding him, and kept them from enjoying his marvellous interpretations of the masters, from Bach to the present day.

Under these circumstances nothing could be more timely than the appearance of a book which tells the story of this unique man's career, and his triumphs and trials in Europe, where there is a large party which considers him the greatest of living composers as well as of operatic and concert conductors. While his compositions have heretofore received much less attention than those of Richard Strauss and Max Reger, his fiftieth birthday was celebrated last summer with great pomp by the performance of his eighth symphony, which requires a thousand singers and players for its production. This was in Munich, but it was in Vienna that he passed the most important decade in his life. Though not a Czech, he was born in a Bohemian village, and there is much of the true Bohemian spirit in his music. As a boy he heard, sang, and played hundreds of Slavic tunes, and these became part and parcel of his mental fibre. When only six years old he discovered in his grandfather's house an old piano of which he became so enamored that he did not hear, or neglected, even the calls for meals. Two years later he gave lessons! He was taken to Professor Epstein, who recognized in him the "born musician." At fifteen he was in the Vienna Conservatory, winning prize after prize for playing as well as for essays in composition. At eighteen he began an opera which he never completed; at nineteen, to make a start in practical life, he accepted the conductorship of a summer operetta company at $12 a week.

A performance of "Parsifal" at Bayreuth fired his ambitions. He wrote to Angelo Neumann, applying for a position as conductor. Neumann, who had just become manager of the Prague Opera, gave him one. Anton Seidl was the first conductor; he gave Mahler an opportunity, and was so much pleased with the result that he entrusted him at once with the preparations for the production of "Rheingold" and "Walküre." From Seidl Mahler got impressions and hints which had a great influence on the development of his mind. Subsequently, he conducted in Leipzig, and then in Hamburg, where Nikisch held the first place at that time, and at Budapest, where a strong man was wanted to stop the growing deficits. He succeeded, but owing to the accession of a new manager who did not approve of Wagner, Mahler left, returning to Hamburg, to which Pollini had summoned him by wire to be first conductor, as Nikisch had resigned. Among his singers were Ernestine Schumann-Heink and Katharina Klafsky. Here he showed his sympathies for French and Russian music. One of his most enthusiastic admirers was Hans von Bülow, who, when he became too ill to remain as conductor of the Philharmonic concerts, appointed Mahler as his successor.

Honorable though these positions were, the call of Vienna was irresistible when it came in 1897, for here Mahler was appointed not only chief conductor but director, with full authority over artists, repertory, and every detail of the management of the imperial institution. Dr. Stefan gives many interesting details concerning the reforms introduced by Mahler, and his ideals, which, in the main, were in accordance with Wagner's. He not only fired the artists to renewed efforts, himself being always the hardest worker, but he brought the audiences to behave in a more mannerly way, with more respect for those who came early and wished to remain to the end. Neglected masterworks were revived, and the works in the regular repertory were

rescued from slovenly execution and from the evil effects of alleged traditions. As a matter of course, in making all these reforms, he could not help treading on the toes of a good many easy-going people. Enemies multiplied; his iron will galled many; his passion for a perfect ensemble made him pay scant respect to "stars," who were not allowed to indulge in individual propensities at the cost of the ensemble. The friction steadily increased, until Mahler tired of it and accepted a call from New York; but the war between the Mahlerites and the Weingartnerites continued to rage for a long time.

Dr. Stefan gives brief analyses of Mahler's symphonies and songs, which must make every reader eager to hear more of them. He dwells on this composer's curious attitude toward the question of programme music, which is similar to Strauss's pretended attitude but the opposite of his practice; he tells an amusing story of how some of the critics were deceived when Mahler completed Weber's unfinished opera, "Die drei Pintos"; he quotes various striking aphorisms uttered by Mahler, and Mahler's own division of his works into three periods or styles; he calls attention to Mahler's curious indifference to the fate of his compositions after he has once made sure by a performance that the orchestration is correct in every detail; and at the end he gives a useful list of brochures and articles in periodicals on Mahler and his works. Concerning the alterations in the orchestration of older musical works which Mahler frequently makes in order to cover weaknesses in those scores and to cause them to sound to our ears as they sounded to those who first heard them, Dr. Stefan contends, with some justice, that it would be almost a crime *not* to make such improvements.

George P. Upton is publishing with A. C. McClurg & Co. "The Standard Handbook of Music," which traces the history of music, describes the functions of the orchestra, historically and instrumentally, deals with chamber and vocal music, etc., and gives separate treatment to religious music.

Several songs in English will be included in the programme which Mme. Johanna Gadski will give at her only New York recital, in Carnegie Hall Tuesday afternoon, February 14. Among them are "The Church Yard," Franz; "The Little Gray Dove," L. V. Saar; "One Gave Me a Rose," Edwin Schneider, who is Mme. Gadski's accompanist; "Dearest," Sidney Homer; and "Ecstasy," W. M. Rummel. Other features of the programme will be Lieder groups of Schubert, Schumann, Franz, and Brahms.

Concerning Wagner's autobiography, which is soon to appear in the book market, Dr. Julius Kapp gives some interesting information in the Berlin *Tageblatt*. Wagner undertook to write the story of his life at the suggestion of King Ludwig II of Bavaria. He dictated it in the years 1865 to 1870, a time when Cosima von Bülow (later his own wife) exerted a great influence on him. The first volume covers the years 1813 to 1842; the second, the years 1842 to 1850; the third, 1850 to 1861. A continuation, begun later at Bayreuth, remained a fragment. The title of the work is simply "My Life." In 1870 a Swiss printer, Bonfantini, put the manuscript into type, and printed fifteen copies, which Wagner gave to friends under pledge of secrecy. One of these friends was Nietzsche, who subsequently became one of Wagner's most violent enemies, and declared that he should not believe a single word written by Wagner unless it was corroborated by others.

Richard Strauss is quoted as saying in regard to his new opera:

> The spirit of Mozart floated unconsciously before me, but I have remained true to myself. The orchestra is not as heavy as it is in "Salome" or "Elektra," but it by no means follows that I have yielded to the prevailing fashion which would produce all of Mozart's works with a reduced orchestra. In fact, this is not consistent with Mozart's own intentions, as on one occasion, when an English Mæcenas employed 100 violinists in a Mozart symphony, the composer was delighted with the result. The "Rosenkavalier" is scored for full orchestra, and while it is treated with a certain intentional simplicity, it, nevertheless, presents difficulties, equal in degree, if differing in character, from those to be found in "Salome" or "Elektra."

Art

THE ROYAL TREASURE OF EGYPT AND ETHIOPIA.

Ægyptische Goldschmiedearbeiten; unter Mitwirkung von Georg Möller und Wilhelm Schubart herausgegeben von Heinrich Schäfer. Mit 212 Abbildungen, 2 Farben- und 35 Lichtdrucktafeln. Berlin: Verlag von Karl Curtius. Königliche Museen zu Berlin. Mitteilungen aus der Ægyptischen Sammlung. Band I.

To find the fabled wealth of Homer's "blameless Ethiopians" lying before us in the sumptuous color plates of a modern art publication is not an event of everyday occurrence. The unique and turbulent history, ancient and modern, of this distant and inaccessible civilization, furnishes a rare and picturesque background for the Ethiopian treasure in Berlin, which the modern world has largely forgotten. As far back as the middle of the fourth millennium before Christ, the Egyptians of the lower Nile had established trade relations with the tribes of the northern Sudan, undaunted by the thousand miles of cataract region which lay between. Century by century the Egyptian frontier advanced up the river as the Pharaohs slowly absorbed the cataract country on their southern boundary, till the once rare gold, ivory, ebony, ostrich feathers, and aromatic gums of the south became habitual objects of traffic in the market-places of all the larger cities of Egypt. When in the sixteenth century, B. C., the Egyptian control of the southern trade-routes had developed into actual administration of the country to the foot of the fourth cataract, the land of Ethiopia or as the Egyptians and the Hebrews after them called it, Kush, gradually took on a veneer of Egyptian civilization. This superficial culture from the north, in some externals at least, was rendered more permanent than would otherwise have been possible, by the sumptuous buildings erected in the more important towns by the Egyptian architects on behalf of the Pharaoh. For eight centuries the land of Ethiopia was governed by the Pharaoh's viceroy. Detaching itself at last in the eighth century, B. C., an Ethiopian dynasty, probably Egyptian fugitives in the beginning, turned upon their old Egyptian lords and pushing down the river, took advantage of the complete and final decay of Egyptian power, to seize the venerable throne of the Pharaohs. These became the Ethiopian Pharaohs of Egypt, the Twenty-Fifth Dynasty, who were denounced as a "broken reed" by the great Hebrew statesman Isaiah. Unable to meet the powers of the Mediterranean world on equal terms, they suffered defeat at the hands of the Assyrians, and by 670, B. C., they had ingloriously withdrawn to their remote and inaccessible capital of Napata (Noph in the Old Testament) at the foot of the Fourth Cataract.

When later the Ethiopian kings put also the fourth and fifth cataracts between them and the Mediterranean world, by the transfer of their capital to Meroe above the Fifth Cataract, they turned their back upon the barbarism of inner Africa in complete isolation, and severed any surviving bonds which had united them with the civilization of the north. After the Persian conquest of Egypt in 525 B. C., when Cambyses endeavored to penetrate to the Ethiopian capital, he failed, and his expedition ended in such disaster as so often attends long desert marches in the tropics. Traditions of the wealth and splendor of this distant kingdom in inner Africa gained wide currency in the Greek world, and the impression was universal that Meroe and the land of Ethiopia were the source of Egyptian civilization. This tradition survived and was generally credited almost to our own day. So inaccessible was the cataract region where the land of Ethiopia lay, that it remained unvisited by travelers until two centuries ago. Then there began to reach Europe vague reports of vast and sumptuous buildings and splendid cities now in ruin. These reports were confirmed, early in the nineteenth century, as traveler after traveler, beginning with Burckhardt, who brought the first news of the great temple of Abu Simbel, returned with drawings and descriptions of the magnificent buildings which they had found. The obscure traditions of the Greek age

were now regarded as fully confirmed, and Ethiopia took its place in the old histories of two generations ago, as the primitive seat of civilization on the Nile, and perhaps of the whole world.

As Mohammed Ali's troops pushed southward in the conquest of the Sudan in 1820, he was followed by the usual train of European adventurers, among whom was the Italian army surgeon, Ferlini. Resigning from the service, Ferlini decided in 1834 to try his fortune in treasure-hunting among the ruins through which he had passed on his southward march. Entirely without archæological schooling of any sort, he tried several sites, including the city of Meroe, without success. Undaunted by failure, and entertaining the most preposterous hopes, he left the ruins of the city and turned to its cemetery, with its three imposing groups of tall, pointed pyramids. In the middle group he attacked the best preserved of these, with the intention of demolishing the entire monument and clearing it away to the base. Speaking generally in the light of modern knowledge, such a plan had not the remotest prospect of success. It was precisely like the methodless treasure-hunting of Schliemann, though far less laudable in motive. The results, however, were so anomalous and surprising, that some have doubted Ferlini's story, which is our sole evidence in the matter. Having cut down the pyramid to a short distance below its apex, he found behind a false window in one side, a small chamber six or seven feet long, in which was a long object covered with a white cloth. On removing this he found under it a bier or couch, beneath which was a bronze bowl, containing, wrapped in cloth, the elaborate and splendid golden regalia of an Ethiopian queen. Lured by this discovery, Ferlini continued the clearance of the pyramid, and actually did remove it to the very rock of the hill on which it was built. This barbarous annihilation of an ancient royal tomb brought Ferlini only two beautiful bronze vases of Greek workmanship, which he found in the masonry nearly half way down to the base.

Such was Ferlini's reputation that his discovery brought him little advantage. The treasure was looked upon with general suspicion. Ludwig I of Bavaria, however, selected a few pieces for his own collection; but it was not until 1844 that Lepsius succeeded in inducing the Berlin authorities to purchase the rest, comprising the bulk of the treasure, for £700 sterling. Lepsius, fresh from his memorable expedition through Ethiopia, had finally demonstrated the true character and place of Ethiopian civilization, and demolished the tradition which had enjoyed unchallenged currency for two thousand five hundred years. The regalia of Ferlini's Ethiopian queen became one of the chief treasures of the great Berlin collection, and the fact that it was worn by one of that line of Candace mentioned in the New Testament as Queen of Ethiopia, at the very time when the Apostle Philip preached as they rode in the chariot to the queen's Ethiopian eunuch, "who was over all her treasure" (Acts 8:27), naturally suggests a wider interest than the treasure would enjoy as exclusively works of art. The civilization which these beautiful works represent is now receiving unprecedented attention. Following the Ethiopian Expedition of the University of Chicago in 1905-07, four other expeditions have been dispatched thither by the Royal Academy of Berlin, the University of Pennsylvania, the University of Liverpool, and Oxford University. The Oxford expedition has just left (November, 1910), under the direction of the able Oxford Egyptologist, F. L. Griffith, who has in the last eighteen months made important progress in the decipherment of the ancient Ethiopian inscriptions. The publication of the Berlin jewelry is therefore peculiarly timely, and represents the first of a series of volumes in which the Berlin museum plans to issue in exhaustive form the most important works of art comprised in its great Egyptian collections.

There is no field of art in which early Egypt was so unquestionably supreme as in that of the goldsmith's work. Probably no room in the national museum at Cairo excites such surprise in the mind of the average visitor as that which contains its magnificent collection of works in gold, extending from the thirty-fifth century, B. C., down through the dynasties into Græco-Roman days. This surprise is in great measure due to the fact that the Cairo collection stands alone; none of the European museums contains anything approaching it, and the traveler has had no hint in Europe of what awaits him in Cairo. If we may make any exception as to the European collections, such an exception would be the Ethiopian jewelry in Berlin. Prof. Schäfer, one of the directors of the Berlin museum, has given us a careful and worthy account of these works, with elaborate reproductions and plates, some of them in color. These are done with the proverbial accuracy and beauty of German work in this field, and are accompanied by detailed description in the text, with full citation of related material.

The beautiful volume is, however, more than an elaborate monograph on the Ethiopian jewelry. Dr. Möller, one of the museum staff, has taken up systematically all the Egyptian jewelry in the Berlin collections from the earliest times to the Græco-Roman age, and presented them in the first two sections of the work, with plates reproducing every piece and an exhaustive text. Here are hollow golden beads from the middle of the fourth millennium, B. C., with a diameter of an eighth of an inch, built up of sheet gold in tiny sections so exquisitely soldered together that the seams are invisible. It was the early possession of such technical power as this which made the Egyptian goldsmith supreme in the early Orient. It is impossible in so brief a notice to speak of the individual pieces, but it is not a little interesting to find among the seals the golden seal-cylinder of the chief goldsmith of Mykerinos, builder of the third pyramid of Gizeh (28th century, B. C.). The treasure of the Ethiopian queen by Schäfer forms the third section, while a fourth on the works in gold and silver mentioned in the Greek papyri in Egypt is a valuable contribution by Dr. Schubart. Two useful appendices contain an account of gold and silver overlay and inlay (Möller), besides the original report and catalogue prepared by Ferlini, republished here in Italian.

In view of the fact that the great Cairo collection of jewelry has been published only piecemeal, partially and always inadequately, the Berlin volume will form the basis of our study of early Oriental jewelry, and enable us to test the conclusions of Vernier ("La Bijouterie"). The publisher has spared no pains or expense in supplementing the well-known ability of the authors, and the volume is a model in all matters of mechanical production. It will be indispensable in all art libraries and of great interest to private collectors as well as all students of ancient art.

Finance

LOOKING AHEAD AND BEHIND.

Two beliefs are firmly held in Wall Street concerning the relation of the stock market to the financial situation in general—one, that whatever the outlook for finance may be, speculation for the rise or for the fall will not long remain dormant; the other, that the movement of prices is bound to give some clue to the actual trend of events in the larger field. These presumptions explain why the daily stock market table is scanned every afternoon with interest, not only by bankers and stock-brokers, but by business men outside of Wall Street who never speculate for their own account at all. Yet, if the market is bound to move, even when a financial outlook is perplexing and obscure, it must sometimes follow that the actual basis for such a movement, up or down, will be difficult for the outsider to discern. Sometimes the course of prices seems so inconsistent with what it was a very little time before, when seemingly identical influences were at work in the financial situation, that the bewildered public is driven to

ask whether Wall Street has any serious convictions at all or any real deductive power. The very same news which is used to explain a collapsing market at one time, will be cited a few months later as the cause of a violent advance. Things which would cause terror to-day will be looked upon with the utmost calmness to-morrow.

The past week has provided some curious illustrations. Early last year, it was known that the railways were in need of capital. The Stock Exchange shook its head forlornly. James J. Hill declared that, with these requirements pressing, "the country is up against a stone wall." The companies could not get the money, and failure to get it "spells calamity." The stock market's comment, then, was a severe decline. On Tuesday of last week the Union Pacific management announced its purpose of spending $75,000,000 to complete its double-track—this despite rate regulation, high cost of capital, hostile legislation, and demands by laborers for increased pay. Rumors of similar requests by other railways had been general. The response of the stock market was a burst of enthusiasm and an advance in prices—this on top of a ten-point advance in prices since the close of 1910.

In October, 1909, the Steel Corporation's earnings were increasing at the rate of nearly a million dollars monthly. The company was about to raise its dividend and had planned for still another increase later on. Orders on the company's books increased from 4,700,000 tons on October 1 to 5,900,000 at the end of 1909, the latter figure being larger by 64 per cent. than at the end of 1908. Yet the comment of the Stock Exchange was a break in Steel common shares from 94⅞ on October 4 to 85⅛ on November 30. On Tuesday of last week the Steel Corporation reported for the three preceding months the smallest earnings by far of any quarter in its history, except for the period of violent reaction in the industry during 1904, the half-year after the panic of 1907, and the two or three months of "open market prices" early in 1909.

Not only were the quarter's earnings smaller by 36½ per cent. than the same quarter of 1909, but the decrease had been progressing rapidly. December showed the lowest of all past monthly earnings outside of 1908 and 1904, running 13 to 40 per cent. below the monthly figures of 1901 and 1902, when the company's plant was scarcely more than half as large as it is to-day. But the stock market, which had greeted the good news of the last months of 1909 with declining prices, received last week's very bad report by a rise in Steel common stock to a price 10 points above what it scored at the opening of January.

In this case, Wall Street doubtless would explain the anomaly on the ground that the market of October, 1909, was anticipating the steel trade reaction of 1910, that the present month's market is similarly anticipating a future change in the line of betterment, and that both markets were indifferent to the story of the past. This is entirely plausible. But there is yet another case of Stock Exchange inconsistency, which that explanation hardly fits. A year ago this month decision on the Anti-Trust cases was expected by Wall Street almost hourly. The stock market fell into great demoralization, and Wall Street authorities, great and small, ascribed the whole movement to the impending court decisions. It further professed the view that we could have no business revival in this country with so alarming a factor of uncertainty overhanging. As a matter of fact there was little real probability of a decision at that time. But the membership of the court is complete to-day, and when it adjourned at the close of January for a three weeks' vacation, the justices undoubtedly took home the Oil and Tobacco records with a view to an early decision.

But the stock market, which declined in anticipation of the action of the court exactly a year ago, has advanced with great enthusiasm on the present occasion. This week, if any one in the Wall Street offices suggested the dangers that might confront the market when the decision is handed down, other people listened to him deprecatingly and whispered to one another, "He must be a bear." Yet, so far as the scope and effect of the decision are concerned, Wall Street was either wrong this month or else wrong a year ago. If the Stock Exchange movement was really governed by the Anti-Trust situation, it must, apparently, have made at least one mistake.

No doubt the simple solution is that neither the Anti-Trust litigation, nor the Steel Corporation's earnings, nor the projected borrowing of Union Pacific and other railways, was a fundamental influence on the markets, either a year ago or now. The salient point of contrast is that the money market's resources had been tied up, a year ago, in a host of ill-advised and premature speculations, whereas to-day, after fully twelve months of compulsory readjustment of credit and capital resources, the market is again in a workable condition. Considered in the narrower way, such a change in the money situation would facilitate a rise in stocks to-day, where the similar influences made a decline inevitable in February, 1910. To at least some extent, this change will also affect, in a favorable way, the business situation generally. But it still remains to be seen how far that situation is to be governed or modified by other influences.

VOL. XCII.—NO. 2381 THURSDAY, FEBRUARY 16, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

IMPORTANT NEW MACMILLAN BOOKS

PUBLISHED SINCE THE FIRST OF JANUARY, 1911

By **Garland Armour Bricker,** *of the Ohio State University.*

The Teaching of Agriculture in the High School

The recent movement toward the study of agriculture in secondary schools has opened many problems of an educational nature. In their solution Mr. Bricker's book is uncommonly valuable. *Cloth, xxv+202 pages, 12mo, illustrated,* $1.00 *net.*

By **John Franklin Brown,** *author of "The American High School."*

The Training of Teachers for Secondary Schools in Germany and the United States

A concise, clear description of the standards and institutions which exist in Germany to-day for the training of teachers in the higher or secondary schools, with some account of the methods by which they have been developed and discussion of a standard and plan for training American teachers. *Cloth, x+335 pages, 12mo,* $1.25 *net.*

By **Ephraim Emerton,** *Professor of Church History, Harvard University.*

Unitarian Thought *Cloth, ix+309 pages, 12mo,* $1.50 *net, by mail* $1.60.

The book will be of interest and enlightenment to both those whose impressions of Unitarianism, as opposed to some cherished beliefs of Christianity, have been unfavorable, and those who will be reminded of the high traditions of their fathers—and beliefs which at least produced an unusual number of men of exceptional character.

By **Scott Nearing,** *of the Wharton School, University of Pennsylvania.*

Social Adjustment *Cloth, xvi+377 pages, 12mo,* $1.50 *net, by mail* $1.61.

A book of armament in the fight against the "submergence" which comes from ignorance and poverty, and of inspiration in the effort to develop the ability latent in every community.

By **Henry N. Ogden,** *Professor of Sanitary Engineering, Cornell University.*

Rural Hygiene *Cloth, xvii+434 pages, 12mo,* $1.50 *net, by mail* $1.68.

The book will do much to advance the standard of comfort in rural homes; and it covers the broader subjects which concern the general health of the community at large as well as what is popularly known as Hygiene.

By **William Lyon Phelps,** *Professor of English Literature at Yale.*

Essays on the Russian Novelists

By the author of *Essays on Modern Novelists* which the Boston *Transcript* calls "as vital considerations of literary problems as have been brought to the eye of the thinking public in many a long day." *Cloth, ix+322 pages,* $1.50 *net, by mail,* $1.60.

By **John A. Widtsoe, Ph.D.,** *President of the Agricultural College of Utah.*

Dry Farming *Cloth, xxii+445 pages, illustrated, 12mo,* $1.50 *net, by mail* $1.67.

Like Professor Ogden's volume on Rural Hygiene, this is a new issue in the valuable "Rural Science Series," of which the general editor is Professor L. H. Bailey of Cornell University. The book is the first to assemble serviceably the known facts of science as to profitable farming without irrigation in regions of limited rainfall.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave N. Y.

School Advertising IN THE NATION

The *Nation,* in its special field of political and literary criticism, is unlike any other periodical, American or foreign. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

10 cents a line for 13 times.

The Nation
20 Vesey St., New York City

"The Novel of a Decade."—*London Graphic.*

The Broad Highway

By JEFFERY FARNOL

The remarkable success of this romance in England will undoubtedly be duplicated in this country, for a **fourth large American Edition** was required **in advance of publication.** No novel calculated to give so much delight has been issued in many years. Everyone will be drawn to Peter, the hero, "The Ancient," "Black George," the blacksmith, and Charmian, the elusive heroine.

A Splendid Tribute

London Daily Telegraph—"An enchanting book. A series of incidents as swift as any of the romances of DUMAS."

The Bookman (London)—"As fresh and individual as 'The Cloister and the Hearth' (CHARLES READE) or 'The White Company' (CONAN DOYLE)."

The Sportsman (London)—"It is more fascinating and even more human than 'Lorna Doone.' (BLACKMORE)."

London Evening Standard—"'The Broad Highway' is a direct descendant of Gil Blas (LE SAGE) and Lavengro (BORROW) . . . DUMAS himself was no fonder of a 'scrap' than Mr. Farnol."

THE NEW LAOKOON

An Essay on the Confusion of the Arts

By IRVING BABBITT

Boston Transcript: "Virile in thought and style, and based on an astounding knowledge of such facts as are required, this work is a fitting protest against hyperæsthetic romanticism as is Lessing's against exaggerated neo-classicism."

Westminster Review: "The most stimulating contribution to Æsthetics that has appeared in England for twenty years. One may differ widely from the author's conclusions, but no one can fail to be struck by his boldness, brilliancy, and originality."

Glasgow Herald: "Professor Babbitt does not disgrace the mantle of Lessing. If he is less conclusive and definite than his prototype it is mainly because his subject matter is so infinitely larger and more complex, and for the same reason he is, to the modern reader at all events, very much more interesting."

Contemporary Review: "Mr. Babbitt's concluding chapter is the portion of this brilliant book to which we would draw special attention, for in it he finely and bravely attacks the causes of that decadence in every form of art that now oppresses the Western world."

Scotsman: "In many respects a most remarkable work."

Literarisches Echo (Berlin): "The most important publication of the year in the field of æsthetics."

The Encyclopaedia Britannica

(*11th Edition*)

First review in *The London Times*, 20th Jan., 1911

We welcome this morning the completion of a really great work—the preparation and publication of the Eleventh Edition of the "Encyclopædia Britannica."* Appropriately dedicated to the chiefs of the two great sections of the English-speaking world—to the King of Great Britain and the President of the United States—the first 14 volumes of this book appear simultaneously, with the high pretension of presenting, in an English dress, the best results of modern knowledge on all the main subjects that can interest the human mind. The second half, now in the binders' hands, will be ready soon, so that we may regard the book as practically complete. Its 29 comely quarto volumes, printed on thin India paper, light and portable, clearly printed and tastefully bound in dark limp leather, contain an enormous mass of facts, scientific and historical, in the widest sense of those terms, presented in ordered sequence by the best authorities in this country and in America, and expressed in a literary form which makes details and discussions alike intelligible to the average educated man or woman. Every one who has had a hand in preparing a coöperative work on a large scale knows that under the most favourable conditions the task is difficult. It is hard work to enlist your regiment, and often harder still to make them keep step. Planning and execution, if the book is large and comprehensive, demand knowledge and organizing powers of a high order. This has notably been the case with all the successive editions of the "Encyclopædia" from the year 1768, when "a Society of Gentlemen in Scotland" began to bring out the first edition in sixpenny numbers, afterwards collected into three volumes, down to the time when Spencer Baynes, and after him Robertson Smith, produced, volume by volume, their well-known Ninth Edition. It is obvious that these difficulties become immensely greater if the whole work is to be issued simultaneously, or nearly so, as, for the first time in the history of the different editions, has been done on the present occasion. But they have been triumphantly surmounted, a feat on which Mr. Hugh Chisholm, the Editor, his staff, the great body of his contributors, and, finally, the business managers and the Syndics of the Cambridge University Press, may be most heartily congratulated.

The objections to the old system of publication are well stated in the Introduction to the present volumes. They do not exist, or they exist in a much smaller degree, in the case of works like the "Dictionary of National Biography" or the "Cambridge Modern History," since in those cases the subjects treated are in much less intimate correlation than they are in an encyclopædia. In the book planned by Lord Acton, the editors and writers of the volume on the Reformation had to deal with an epoch which had nothing to do with the volume on Napoleon, and nothing would have been gained by simultaneous publication. Obviously the case is far otherwise with an encyclopædia, where subjects mutually related in the closest manner are dealt with in different volumes, according to the accident of their initial letter. Some fifteen years elapsed between the appearance of the first volume of the Ninth Edition and that of the last volume; a period of time which laid the book open both to the accidents to which human life is liable and to the changes which come about with the rapid development of modern knowledge. In those fifteen years Spencer Baynes fell ill, and his place had to be taken by another editor; while, a fact of more importance in regard to the book's perfection, some of the articles under letters A and B had naturally become a little antiquated by the time Z was reached. It is obvious that if your article on Anatomy is to agree entirely with your article on Zoölogy, your Algebra with your Trigonometry, your American Literature with your biographies of literary Americans whose names come late in the alphabet, it is an immense advantage that they should all appear at the same time. But, as we have already said, the difficulties of simultaneous publication, in the case of a book of over 20,000 quarto pages, are colossal. First you require an ample supply of capital, in the hands of those who are so persuaded of the goodness of the venture that they will undertake the risk. Next, you require something still more important and still more rare—a clear plan, a directing hand at once wise and firm, and a perfect organization. The Introduction describes in a very interesting way what this organization has been in the present case. It was clearly understood from the outset that the Eleventh Edition was to be really a new book, and not a merely improved issue of the Ninth Edition, with those supplementary volumes which were issued in 1902 to form the Tenth Edition. These, as the editor puts it, were to be used as "building material" just as far as they were found adaptable, and no further. "The site—in this case the whole field of knowledge—was mapped out afresh under the advice of specialist departmental advisers, who, in providing for the occupation of the different areas, coöperated with the central editorial staff, comprising many members, each of whom was responsible to the Editor-in-Chief for a particular section of the work." It may be imagined that the choice of these departmental experts and of this editorial staff was no light matter, and that during the eight years which the preparation of the book has occupied many difficulties must have arisen. That they have been successfully surmounted, and that the efforts of all have resulted in a book which really is an organic whole, is greatly to the credit of all concerned.

No sensible man would attempt, at a day's notice, to criticize the matter of a book which deals in elaborate detail with the whole range of human knowledge. The scholars, the students of history or science, the geographers and the educated public who have to consult this book from time to time, must be left to decide as to its real value. All that we can pretend to do to-day is to speak of its general arrangement, its combination of readableness with painstaking detail, and the mass of authority which is represented by its contributors. What strikes one first of all is the care that has been taken to preserve something like a scale of relative importance in the articles. This was the first and most conspicuous merit of the "Dictionary of National Biography," and the lesson taught by Leslie Stephen and his successor has been duly learnt by Mr. Chisholm and his staff. They have had to deal with specialists, and specialists, as we all know, have a weakness for their own subjects, and, if uncontrolled, are apt to deal with them with a fulness not to be permitted in a book of this kind. Here the guiding hand is indispensable, and, so far as we can judge from a rapid inspection, it has applied itself with much discretion. To take a few of the scientific articles in the first volume; everybody knows the interest that now attaches to speculations about the physical constitution of the universe; and with this in his mind the editor has been well advised in allowing Sir Joseph Larmor to write exhaustively on

* The Encyclopaedia Britannica: A Dictionary of Arts, Sciences, Literature, and General Information. Eleventh Edition. 29 vols. 4to. (Cambridge: at the University Press, 1910).

A Specimen Volume Will Be Sent for Examination to Any Reader of "The Nation"

"Aether." Again, mathematics have seen such developments and changes of late years that perhaps 40 pages was not too much to assign to Mr. Everitt and Major MacMahon for their articles on "Algebra" and "Algebraic Forms." In the applied sciences, one of the most interesting subjects of to-day and to-morrow is that of aeronautics; and here we have an elaborate and well-illustrated article, though under that heading it only deals with balloons and airships and not with monoplanes and biplanes. In the historical sciences our whole attitude to antiquity has been changed of late years by the discoveries in Crete; and Mr. Hogarth's article, also fully illustrated, on "Ægean Civilization" is an admirable summary of what has been so far done to throw light upon a great epoch, overwhelmed by some catastrophe as yet obscure. Or again, in the department of geography, which has become so vastly important during the last fifty years, the articles on "Africa" (Mr. T. A. Joyce, Mr. J. S. Keltie, and others), "America" (Mr. David Hannay and Mr. O. T. Mason, of Washington), "Asia," and "Australia"—to say nothing of such minor matters as the Amazon, Arabia, and the State of Alabama—are all described in much detail, with an abundance of the latest information, and with ample bibliographical references, among which those bearing upon Africa are conspicuously full. In a later volume the article on "Ceramics," by Messrs. R. L. Hobson and W. Burton, is singularly complete and beautifully illustrated in colour.

We might speak in similar terms of a great number of other departments; but it will perhaps be enough to mention only one more—that of American geography, history, and literature. Without in any way forgetting that the "Encyclopædia" is primarily and in a predominant sense *Britannica*, those who have directed this new edition have determined that it should contain much more full and first-hand information about the Western Hemisphere, and especially about the United States—and of course about Canada—than has ever been the case before in a book of reference published in England. The reasons for this are obvious. The Americans have a reading public much larger than we have; their Universities, their public schools, and their free libraries are always on the look-out for first-rate books of reference; and they have such a just pride in their own country and its history that they would very naturally be set against a book professing to cover the whole ground of knowledge which did not deal adequately with their great events and their great men. But it would be a mistake to suppose that the American articles are intended for American readers alone. They are for ourselves as well, and the more we read them, the more we study the history of the great Republic, the present condition of the problems that lie before it, and the lives of its chief men, the better it will be for both countries. There is little need to specify the noteworthy articles, but, still confining ourselves to the early volumes, we may just mention, in addition to the treatises dealing with the country as a whole, and with great districts like Alabama and Arizona, a few biographies, and especially those of the family of Adams, from the President of that name to his eminent descendants, some of whom are still living and doing distinguished work.

This article is intended to do no more than to call attention to a really memorable book and to survey in the briefest possible manner its plan and its mode of execution. The first point that makes it memorable is, as we have said, that, unlike all its predecessors, unlike any other book of similar design and scale, it has been finished all at once, and the world will soon possess it complete. What has been launched is not the mere hull of a vessel, but a vessel fitted, armed, and manned. The whole of the 29 volumes have been passed under the editorial eye before any one of them was given to the world; and thus there has been secured a unity of system, a harmony and a homogeneity which would have been impossible if the issue had been made volume by volume. Robertson Smith, when he sent out the Ninth Edition, spoke of the "inconcinnities" inseparable from such a publication; but these, under the scheme that Mr. Chisholm has been privileged to carry out, have been reduced to the smallest possible proportions. Another marked feature of the book is that, so far as is possible in such a case, it is readable. We do not say that it is light reading, or that, for example, the article on Algebraic Forms is a pastime for a leisure hour; but that, so far as the subjects permit, the contributions even of the most learned writers have been presented simply and straightforwardly and in plain English. It has been a principle of the Editor to make his writers explain their technical terms as they proceed. Such terms, of course, abound, but the intention has been to make it always unnecessary for the reader to look up their meaning in a technicaldictionary. In this way the book is, as far as possible, self-explanatory. The last point—though to be sure it is the first that will strike every reader—is that the book is printed on that thin India paper which the University and other Presses have recently made familiar by their editions of the poets and other books of moderate size. Certainly to adopt this material in the case of a work in 29 quarto volumes was a bold and novel experiment, but on the whole public opinion will pronounce it justified. The gain in space and weight is immense; the volumes are light to handle, and the whole 29 will occupy only 3 ft. of shelf room. Doubtless one has to be more careful than usual in turning over the pages, but this will probably be found to be a small drawback, to be set against very real advantages.

Volume V. on India Paper, and Bound in Dark Green Flexible Sheepskin, Will Be Sent by Express upon Receipt of Request.

THE object which The Cambridge University Press has in view, in this and in all other advertisements of the New Encyclopædia Britannica, is simply to tell the public exactly what that work is, and thus to enable each individual to decide for himself whether it would be of such use to him as to necessitate his buying it.

It is impossible by advertisements to attain that object directly. The limitations of space are such that the new features of the Encyclopædia can only be suggested. So the public have been asked to apply for an illustrated prospectus, within the forty pages of which there is room to supply the full particulars. This prospectus gives an account of the origin and of the history of the Encyclopædia Britannica, of the transfer of its copyright to the English University of Cambridge, and of the planning, authorship, and production of the entirely new edition rendered necessary by the growth of knowledge and the recent vast changes in material conditions. It also describes the revolution effected in book production by the printing of the twenty-nine volumes of the new edition on India paper, whereby the weight of the work with its 27,000 pages has been reduced from two hundred to eighty pounds, and the shelf space required from nearly seven feet to a little more than two.

But the publishers of the Encyclopædia do not forget that any account issued by them of a publication of their own may possibly be looked on by some in the light in which one regards, and perhaps occasionally doubts, a description of a child by its own parents. So, to afford a simple means of judging the new Encyclopædia Britannica, all outside influence apart, the Cambridge University Press has decided *to send an actual volume of the work itself, free of all charge*, for the inspection of any reader of the *Nation*.

The book sent will be an actual volume, taken from an India paper set of the work, bound in full flexible sheepskin (dark green). It will be sent *by express*, and *can be returned without trouble, in the same case, charges forward*. Inspection of the volume will show any intelligent man exactly what the new Encyclopædia Britannica is, what purposes it will answer, and what use it will be to him—which is the whole aim of the publishers.

APPLICATION FOR A SPECIMEN VOLUME

Cambridge University Press

Na. 5. Encyclopædia Britannica Department,
35 W. 32d Street, New York.

Please send me a specimen volume (on India paper) of the New Encyclopædia Britannica.

ESSAYS ON THE PURPOSE OF ART: Past and Present Creeds of English Painters.

By MRS. RUSSELL BARRINGTON, Author of 'Reminiscences of G. F. Watts,' 'Life, Letters and Work of Frederic Leighton.' 8vo. $4.25 net.

CONTENTS: Introduction—Present Conditions Unfavourable to the Creation of Permanent Art—The Finer Facts of Nature—National Individuality—Personal Individuality in Art—The 'Something' said by Leighton which 'Nothing has Said Before'—The 'Something' said by Watts which 'Nothing has Said Before'—The Reality of the Spiritual Life in Art—Conclusion.

A HISTORY OF WALES from the Earliest Times to the Edwardian Conquest.

By JOHN EDWARD LLOYD, M.A., Professor of History in the University College of North Wales, Bangor. 2 vols. 8vo. $6.00 net.

In this work the story of Wales is told in detail down to the struggle in which the country lost its independence. Prehistoric Wales, Roman Wales, the early institutions of the Welsh, the political divisions of the country, the Norman invasions and settlements, and the achievements of the more powerful princes are successively described. Special sections are devoted to the history of the Welsh Church. The relations between England and Wales are traced at each stage and the reaction of Welsh upon English history is illustrated.

THE ROMAN EMPIRE: Essays on the Constitutional History from the Accession of Domitian (81 A.D.) to the Retirement of Nicephorus III. (1081 A.D.)

By the Rev. F. W. BUSSELL, D.D., Fellow and Tutor of Brasenose College, Oxford. 2 vols. 8vo. $9.00 net.

This work attempts to set forth the secret influences and tendencies which produced political and social changes during one millennium of the empire; to exhibit the policy and achievement of the emperors in the newer light thrown upon their tasks by recent inquiries; and, above all, by modern analogies in political experiment or disillusion.

BIRD FLIGHT AS THE BASIS OF AVIATION: a Contribution towards a System of Aviation compiled from the results of numerous experiments made by O. and G. Lilienthal.

By OTTO LILIENTHAL. With a Biographical Introduction and an Addendum by GUSTAVE LILIENTHAL, Architect and Teacher at the Humboldt Academy, Translated from the Second Edition by A. W. ISENTHAL, A.M.I.E.E., F.R.P.S. With 93 Illustrations, 8 Litho. Plates, and 1 Portrait. 8vo. $2.50 net.

This is an English version of a book which is considered a classic by recent writers on Aviation, as it contains a record of the important experiments made by the author and his brother on the relations between the form of the wing and the wind pressure.

THE AEROPLANE: an Elementary Text-Book of the Principles of Dynamic Flight.

By T. O'B. HUBBARD, Secretary of the Aeronautical Society of Great Britain, Joint Editor of 'The Aeronautical Journal'; J. H. LEDEBOER, B.A., Editor of 'Aeronautics,' Joint Editor of 'The Aeronautical Journal'; and C. C. TURNER, Author of 'Aerial Navigation of To-day,' 'Cantor Lectures on Aeronautics, 1909.' With Illustrations. Crown 8vo. $1.00 net.

THE DAWN OF CHARACTER: a Study of Child Life.

By EDITH E. READ MUMFORD, M.A., Clothworkers' Scholar, Girton College, Cambridge; Lecturer on 'Child Training' at the Princess Christian Training College for Nurses, Manchester. Crown 8vo. $1.20 net.

'Mrs. Mumford is entirely sensible and human and humane. She shines as a philosopher, and yet more as a mother. . . . Young married people should consult Mrs. Mumford's chatty pages, and learn parental wisdom.'—ETHICAL WORLD.

'A book that will be helpful alike to parents, teachers and nurses. It is well up to date and thoroughly enlightened in its teaching, with carefully reasoned lines of argument and numerous illustrations from life in the nursery.'—BRITISH FRIEND.

WHY WAR MUST CEASE!

The Great Illusion

A Study of the Relation of Military Power in Nations to their Economic and Social Advantages

By NORMAN ANGELL

400 *pages* *Crown 8vo.* $1.50 *net.*

"Mr. Angell throws into the dust-bin the worn-out theories, the axioms of statecraft, the shibboleths of diplomats, the mouthings of politicastros, as to the necessity for war. And from this to a brilliant arraignment of standing armies and navies and war establishments of all kinds is but another step in Mr. Angell's altogether splendid monograph. To use a familiar phrase, no book of similar trend in recent years has caused so many thinking men to sit up and take notice. Not to speak of it flamboyantly, this work is to war and to the spirit of the war god the modern *Mene, Mene, Tekel, Upharsin,* the flamingly prophetic hand-writ ing on the wall for all captains of whatsoever sort who by means of war would keep humanity frightened, brutalized, enslaved, and impoverished."—*St. Louis Globe-Democrat.*

A Short History of Women's Rights

From the Days of Augustus to the Present Time, with Special Reference to the United States and England

By EUGENE A. HECKER

Crown 8vo. $1.50 *net.*

The book is not an argument for or against woman suffrage—but, as the title indicates, a history of the *growth* of women's rights in those civilizations that have contributed largely to the ethical, moral, social, political and legal ideals of the western world.

The most significant chapters, and those which have an especially vital interest, are devoted to the growth of women's rights in England and in America, the modifications made throughout the centuries in the property rights of women, in laws and customs affecting marriage and divorce, etc. Much emphasis is laid on her acquisition of more extensive educational privileges, on her participation in the vocations of men, and on her efforts to attain the right to vote and to hold public office.

"The most complete and most compact study that has yet been made of the evolution of women's rights."
—N. Y. Globe.

The Nation

NEW YORK, THURSDAY, FEBRUARY 16, 1911.

The Week

There is every reason to believe that the President is making a winning fight for his reciprocity policy. It will be difficult indeed for Republican Bourbons to make head against it when the Democrats have ranged themselves pretty solidly in its favor. The policy is one that has powerful Republican authority from the past in its favor, both Blaine and McKinley being on record in emphatic advocacy of it. It has passed the House of Representatives by a large majority. The only way it can be defeated in the Senate is by dogged resistance on the part of the most extreme of standpatters, in combination with a handful of Senators otherwise "progressive" but unwilling to have reform when their own State's tariff ox is gored. Such a combination, however, is by no means probable, and in any event it would not have strength enough to stand out.

Reciprocity with South America is only another example of our fondness for putting a new label on old wares. A year ago the probable formula would have been "the conservation of our South American interests." The thing for which Secretary Knox pleaded so eloquently before the Pan-American Commercial Conference was not so much reciprocity as the awakening of an interest in South American affairs which to-day does not exist and which must precede reciprocity. It is a cause for which our State Department has been working with refreshing zeal, and which, for that reason, is bound to make headway in spite of the many obstacles that must be surmounted. Of these, the two most formidable have been South America's suspicions of our political intentions, and our own manufacturers' indifference to the picayune profits of foreign trade so long as the tariff gave them the richest country on earth to exploit—even if it was their own. With the gradual hewing down of the tariff totem, the second of these obstacles is bound to disappear. The removal of the other calls for the rigid exclusion of every trace of rough-riding diplomacy from our State Department.

Local considerations, as distinguished from national, carried the day in the matter of the new Congressional apportionment. No State likes to suffer a diminution in its numerical representation in the House of Representatives, and yet at every new apportionment some States must necessarily lose unless the total membership is increased. In the present instance the desire to avoid this has led to an increase of forty-two members, since the House has voted to make the new membership 433, against 391 in the present body. There is little doubt that the Senate will accept the decision of the House. This enlargement of the membership gives additional force to the reasons in favor of the prospective change in the structure and arrangements of the hall of the House of Representatives, by which the size of the hall will be greatly reduced, the desks being got rid of. The larger the numbers, the more essential is it to put an end to the noise and confusion which attend the present arrangements.

It is matter for congratulation rather than otherwise that the Senate Committee on Pensions has gone "the whole hog" on the Sulloway pension bill, or at least very nearly so. There has been talk of cutting down the forty-five or fifty million dollars of annual expenditure the bill calls for to perhaps fifteen or twenty million, but apparently the Senate Committee has not cared to be outdone in pension patriotism by Uncle Joe and his enthusiastic followers. If the bill is to pass the Senate as it stands it will make the President's task in vetoing it less difficult than it would have been if the proposal were less extravagant. The general impression is that Mr. Taft has no disposition to give countenance to the scheme even if it should be reduced to less offensive dimensions, and so the bill may have been left in its present shape on the principle that it is as well to be hanged for a sheep as for a lamb.

It is to be hoped that the talk of a new Democratic organization in New York city is intended as something more than a fire set in the rear of Murphy. No doubt his sordid and stupid leadership has filled even Tammany Democrats with a spirit of revolt—as well as, incidentally, nausea—but a movement that is going to amount to anything must have an objective greater than the personality of the particular boss who happens at the time to be peculiarly offensive. The thing to aim at is a return to the plan of an active Democracy in this city, as well as up the State, opposed to Tammany domination. The former "County Democracy" was not an ideal body, but it certainly had men of weight and leading attached to it, who were often able to use the forces behind them to prevent the iniquity of Tammany Hall from triumphing. Meanwhile, every attack by Democrats upon Murphy himself, for the way in which he was made a tool of in the Senatorial contest, and all to no avail except further to discredit his leadership and injure his party, must help to hasten his retreat from a position into which he was forced and to take which he now sees as clearly as his angry followers was a huge blunder.

The corrupt practices act lately introduced in the Ohio Legislature—fittingly enough by Representative Kimble of Adams County—will, if enacted, go far toward making impossible any such debauching of the electorate as has been recently disclosed in that State. Although not so drastic as the measure urged by Gov. Harmon in his last message, the bill provides for careful regulation of campaign disbursements for specific purposes only, these to include nothing which may be called a personal inducement to the voter. It provides also for strict limitation of the amounts which may be expended, from a maximum of $5,000 by gubernatorial candidates to a maximum of $300 by candidates for county and municipal offices. Payments for travel, headquarters, halls, bands, fireworks, and printing are recognized as legal. Campaign accounts must be filed immediately after election, with penalty of imprisonment and fine for the candidate if the law has been violated. Further, employers are forbidden to coerce or even to attempt to in-

fluence their employees by distribution of political pamphlets, or by threatening statements.

Illinois has another sensational scandal in the facts revealed in the sixteen-volume report of the Commission on Submerged Lands, according to which private interests have obtained from the public domain land worth $250,000,000, with a prospect that this sum will be doubled if the inquiry is extended. It has long been known that the lake-front at Chicago, and the beds of rivers and waterfronts elsewhere, are subjected to such encroachment, but both State and municipal authorities have neglected to take measures to stop it. The Commission is of the opinion that the "made land" which has been improperly taken can be recovered, and to that end urges an immediate appropriation of $50,000 for expenses of litigation by the Attorney-General, together with establishment of a permanent commission to continue such litigation. Above four hundred individuals, corporations, and clubs are said to be occupying "made land" along the Lake Michigan coast line and the Chicago River alone. Of one important railway the report says:

> It is a history which reads like a romance, as to how the Illinois Central, starting in with a strip of 200 feet in width from the city limits northward, has continued to grasp and extend, until now substantially 400 acres of the most valuable lands in the city of Chicago are in its possession. It has not carried out the provisions of its charter. It has not dealt in good faith with the people of the State of Illinois, and in the opinion of this committee its charter is subject to revocation.

Probably the first impulse of nine persons out of ten, on reading the proposal that the Government shall create a National Forest of 100,000 acres immediately adjacent to Washington city, will be to say that it is nonsense. But it is anything but nonsense. The project was put forward at the meeting of the American Society of Landscape Architects in this city by Mr. William M. Ellicott, a Baltimore architect, who is thoroughly acquainted with the country in question, and whose familiarity with forests as a sportsman probably combined with his long-standing active interest in questions of city beautification to suggest the idea to him. That there is a considerable forest area in a primitive state in the region bordering on Washington and Baltimore must strike every one at all acquainted with that section: Mr. Ellicott says that there is land of this character amounting to about 100,000 acres, and not available for agricultural use, which could be bought at from $2,000,000 to $4,000,000. Of course, nobody can pass on the merits of such a project offhand; but it is eminently worth looking into. If the tract is all that Mr. Ellicott thinks it is, there is probably no investment of a few million dollars that would be better worth while. To preserve in perpetuity a genuine natural forest 150 square miles in extent, within a stone's throw of the national capital, would be an invaluable achievement.

Everybody will sympathize with Judge Martin in his reluctance to attach the stigma of imprisonment to a woman, in a kind of case that has hitherto been let off with no punishment beyond a fine. But everybody should also sympathize with him in the feeling that it was a necessary act, and should commend him for doing his duty. It was only three days' imprisonment that the Judge imposed in the case of this woman who regarded the purchase in Europe of several thousand dollars' worth of finery as necessary to her comfort, but felt no compunction in cheating the Government of the duties which the law requires to be paid on the purchase. Judge Hand's unqualified warning, some months ago, that smugglers of this class would receive prison sentences, had attracted general attention, and failure to impose such a sentence in this case would have been stultification of the courts. Persons contemplating the purchase of similar necessaries in the future and the committing of like fraud on the Government, will be well-advised to regard this three-day sentence as merely an emphasizing of Judge Hand's warning. If the thing continues, the punishment will undoubtedly be made heavier hereafter.

Two Cornell undergraduates have been sentenced to jail for periods of five and ten days, and the City Attorney of Ithaca announces that, if the ringleaders are caught, he will press for the maximum sentence of six months in the penitentiary. These are refreshing indications of a change of attitude toward student lawlessness. The trouble at Cornell is described as a pitched battle between students and police, in which property was damaged and participants on both sides were injured. More significant is the report that the student conference committee of the university will recommend the expulsion of some of the men implicated. There has been a pretty definite belief in student communities in the extra-territoriality not only of the college campus, but of any spot upon which an undergraduate sets his sacred foot. But a sounder view has been rapidly growing among students themselves, and the day is past when resistance to officers is regarded merely as a playful prank.

The passage by the House of the Embassy bill denotes a change of opinion upon the subject of building residences abroad for our diplomatic service. Five hundred thousand dollars is to be expended annually for the object of the bill for ten years, with a limit of $150,000 for any one residence, including site and furnishing. Representative Underwood objected and advocated the abolition of the entire diplomatic service on the ground that it has been rendered obsolete by the quickened means of communication among all Governments. But this plainly fails to recognize the vast importance of first-hand information and advice which it is the business of diplomats to supply to their Governments, and, even more, the value of an embassy as a concrete representation of a nation's greatness and power. The present payment of above $200,000 annually for rent is a more material argument in the same direction. What the Senate will do is not certain, but anything that will tend to remove the possession of wealth as a condition precedent to a foreign appointment of the first rank cannot be deemed negligible, while the endorsement of the bill by such a triumvirate as President Taft, William J. Bryan, and Samuel Gompers should help to effect its passage.

Few subjects have a more important bearing on the future of New York than that treated by the Architectural Committee of the Fifth Avenue Association in a report made to the Association last week. Owing to several causes, some of them arising from the peculiar shape of the island on which the city is built, others from want of foresight and still others from the extraordinary nature of the growth of the city in business and population, New

York is almost desperately lacking in beauty, or even attractiveness, except in a few special features. For the making of Riverside Drive and Riverside Park we have reason to be deeply thankful, and there are other things that might be mentioned. The towering structures in the financial and office district produce an imposing effect in spite of much that is jarring, and the district as a whole has an impressiveness of its own which will increase year by year. But in the main body of the city there is almost a total lack of anything that can be dwelt on with satisfaction by the eye or the mind. Fifth Avenue is the one feature of distinction, and it is a matter of real concern to the whole people that this be made—or kept, as the case may be—a feature in which New Yorkers can take pride. "There are many difficult problems ahead of us," said Mr. Kendall, of McKim, Mead & White, at the meeting, "but I think if the Association really wants to, it can save Fifth Avenue from perdition."

A limit to the height of buildings has at last been adopted by Chicago, and after September 1 the building ordinance of that city will allow a height of but two hundred feet. The cause of this action is to be found in the declaration of aldermen from the outlying wards that restricting the building height was the only means of compelling the growing business of the city to go outside of the "loop" district. It was urged on the other side that property values, and hence taxes, within this district would be decreased millions of dollars, and that property in the outlying districts would have to be more heavily taxed. An ingenious argument against any limit was presented by one alderman, who urged that the higher the buildings the more labor would be employed upon them. The ordinance may not prove permanent, but will surely cause a boom in skyscraper construction between now and September, and manœuvring for special permits afterward.

Without entering into the statistics of the controversy between the Postmaster-General and the popular magazines, one may point out how cleverly Mr. Hitchcock has turned the magazine publishers' own boasting against them. Business is perfectly justified in protesting against over-taxation, but to make the plea good the magazines have been compelled to sing a surprisingly different tune from that with which they have been accustomed to regale the public. There must be very few children above the age of six in these United States who have been left ignorant of the thousands of dollars which *Jones's Weekly* charges for a single back-cover advertisement, and the hundreds of dollars which it pays for a single short story. Circulations ranging close to the million mark, advertising rates going up by the dollar the agate line, advertising pages increasing by the dozen—all these have tended to create the impression that there was not a day in the week when magazine publishers did not feel sorry for the owners of a mere gold mine or Chicago packing-house. What the magazines are now saying about the precarious nature of their business is probably true, but it is a truth forced out by a threatened tax.

Party machinery is much under discussion in England just now, and Unionists are urged to take several leaves out of the Liberal book. While the Unionist Central Office since 1903 has become weaker, the Liberal Central Association has grown stronger. The executive of the Association is likened to the engine of a motor-car, with its ordinary members attaching it to the chassis, which represents the local associations. The closeness of the relations between party and Government in the Liberal organization is shown by the fact that the president of the Liberal Central Association is the Prime Minister, and the chairman of its executive committee is the chief Whip. The climax of the Unionist complaint comes with description of the Unionist Central Office, where one mounts a squalid staircase and is ushered into a small and uncomfortable waiting-room which a railway company would despise. There the visitor and presumptive seeker for enthusiasm is confronted with a series of wall-maps picturing the ground which the Unionists have lost. The Liberal voter, meanwhile, is received by an attentive doorkeeper, and shown into a room which might be in his own club.

In the cable dispatches relating to Mme. Curie's candidacy for election to the Paris Academy of Sciences, one point of great interest seems to have been overlooked. The vacancy to be filled was in the section of physics, and in voting to fill it the Academy as a whole made its choice from a list presented by the section of physics. In this list, however, as appears from the report of the proceedings of the Academy in the Paris *Temps*, the names were not put on an equal footing. The section recommended "en première ligne" Mme. Curie and "en deuxième ligne, *ex æquo* et par ordre alphabétique," five other physicists, of whom M. Branly—the candidate elected over Mme. Curie by a vote of 30 to 28—was one. Thus it should be noted that in the judgment of those who best know the merits of the case, Mme. Curie was clearly entitled, above all other French physicists, to the honor of membership in the Academy; and it may therefore safely be said that had it not been for the influence of the alleged "immutable tradition" of the Institute, she would have been elected.

Reviewing the work of the first session of the Chinese National Assembly, the North China *Herald* remarks that it has belied the expectations formed of it. Legislatively, the session seems barren. In its conflict with the Grand Council, the Assembly apparently sought to indict the councillors for not assuming responsibilities which at present do not belong to them. At the same time, the complete discomfiture of Prince Ching has shaken the forces of ultra-conservatism. The apparent subordination of finance to such matters as the shortcomings of the Grand Council and the abolition of the queue, is explained by the report of the budget committee. The magnitude of its task may be judged by the 3,280 "pamphlets" which buried the committee but did not dismay it, with the laudable result of its discovery of additional revenue to the amount of $3,000,000, and of the curtailing of expenditures to the amount of above $4,500,000. The original deficit of $20,000,000 promises to be turned into a surplus of $2,000,000. The weakness here is in the Assembly's want of control over financial matters. Its recommendations and the laborious work of its budget committee may go for nothing. Nevertheless, the educational effect of the Assembly has been immense, and, as it finds itself, we may expect, concludes the *Herald*, to see its efforts turned to the effective control of the purse and the constitution of the future Parliament.

SENATORS AND LEGISLATURES.

A large part of Senator Root's speech of last Friday, in opposition to the direct election of Senators, went over the ground, so often covered before, of the profound Constitutional reasons which, in the judgment of its opponents, make against the proposed change. But perhaps the chief emphasis of his argument was placed upon an appeal based on a wholly different order of considerations from those that belong to the higher philosophy of the Constitution. What is to become of the State Legislatures, he asked, if we take from them the power to elect Senators? "Our Boards of Aldermen have sunk to insignificance and worthlessness, as power after power has been taken from them." And the same thing he predicted for the Legislatures if their powers are taken from them. Here we are not in the shadowy region of Constitutional metaphysics, but on the solid ground of everyday experience. Has the power to elect Senators any sort of connection with the other powers of State Legislatures? Is it not an accidental attachment, the lopping off of which would leave the Legislatures freer to exercise those powers which in the nature of things belong to them? As a matter of fact, by the way, at least one Legislature out of every three has not that power at all, and where Legislatures are elected annually only two Legislatures out of six have it.

A few years ago Senator Root made a speech, which deservedly attracted the attention of the whole country, on the urgent necessity of reinvigorating our State governments. But by what strange mental prepossession he is led to believe that the election of Senators by the Legislatures contributes in any way to the strength of our State governments, we are at a loss to imagine. Last Friday he again struck the note of his Pennsylvania Society speech, but he quite failed to show the connection between it and his present thesis. "The most vital thing to be done in the United States to-day," he said, "is to strengthen the State Legislatures. I fear the breaking down of the Federal government through the accumulation of demands upon it and the failure of the State governments to do their part in taking care of their own affairs." Are State governments helped "to do their part in taking care of their own affairs" by the circumstance that the State voter is rendered unable to vote for members of the State Legislature on the merits of State issues? When a United States Senatorship is at stake, how many Republicans are willing to vote for a Democratic candidate for the Legislature simply because he is the better man? And apart from any such personal question, what chance have issues of State policy to get their due hearing in a State campaign when those issues are entangled with the question of whether a Republican or a Democrat shall be sent to represent the State in the Senate? To lop off this entanglement threatens no injury to the State Legislature, but promises to elevate it to its proper rank through the exercise of a freer and better choice in the determination of its membership. Only upon the supposition that State legislation is a matter of trifling importance can we hold that the loss of the incidental function of choosing a United States Senator would tend to reduce the Legislature to insignificance.

All these things would be so even if there were no scandals connected with the election of Senators by the Legislatures—no Lorimer or Quay or Addicks corruption, no Murphy caucuses, no deadlocks, no deals, no dickers. The scandals and deadlocks are spectacular events that have contributed vastly to the arousing of public sentiment on the subject, but the inherent defects of the system are deeply imbedded in its nature, as the experience of a hundred years and more has shown. No one has yet heard of a Legislature whose quality was the higher for having a Senator to elect; we have all heard of scores of Legislatures that have been flagrantly demoralized by the intrigues of the Senatorship. Mr. Root suggests that the evils might be remedied by permitting a plurality to elect, instead of requiring a majority; but this merely shows the desperateness of the case. Deadlocks would in that way be made impossible, but the deadlock is only the symptom, not the disease. Indeed, even this does not do justice to the matter. The deadlock may be—as it is at this very moment in New York—the one weapon which honest men have at their command to prevent the consummation of the worst evils of the legislative method of election. The plurality scheme might save appearances, but it would leave the reality worse than ever.

As for the nature of the choice exercised by legislators, it is utterly different from anything that the framers of the Constitution had in mind. In their plan for the election of Senators, as in that for the election of the President and Vice-President, they failed to take into account the existence of organized parties. Their scheme for the indirect choice of the President and Vice-President became unworkable as soon as the party system was clearly recognized; and, owing to the circumstance that the electors had no other function than that of making this choice, there was no difficulty in nullifying the Constitutional scheme. As the members of a Legislature have other functions, they, of course, cannot be chosen simply as representatives of a given candidate for the Senatorship; but the party system makes it impossible for them to make their choice in any such way as was contemplated by those who made the Constitution. It is a question of party action; if the party choice is a good one, there is no reason to suppose that it would find a whit less favor with the people than with the Legislature; whereas if it is a bad one, it may easily be put through by intrigue in the Legislature, when it would have been defeated by the people. At the present moment, in the greatest State of the Union, we have Depew put forward as the selection of the Republicans, and Sheehan as that of the Democrats, with the exception of a little band of independent Democrats whose hands are upheld in the struggle by the power of public sentiment. What chance would Depew or Sheehan have before the people? What element of benefit, what element of superiority of any kind, is obtained by substituting the "deliberation" of the Legislature for the "unthinking impulse" of the people?

CANADA'S FREE HAND.

Mr. Balfour has condemned the Canadian reciprocity agreement as "an imperial disaster." To the "tariff-reform" Imperialists, the probability that effect will be given to the agreement is, indeed, galling. But Mr. Balfour is the first British statesman to denounce any of the attempts in the past sixty-five years to establish reciprocal trade between Canada and the United States. In Canada and in the other over-sea posses-

sions of Great Britain, this new Imperialism must come with a shock—for if it means anything, it means that the new Imperialism would impair the absolute fiscal freedom which the self-governing colonies have enjoyed since 1846. This accrued to the colonies partly by accident. Sooner or later it must have been conceded them.

It was Peel's reforms of 1846 that gave the larger colonies their new freedom, simply because, when it was no longer the policy of England to maintain protective tariffs, it ceased to be possible to intertwine the tariffs of the colonies with the British fiscal system. Within ten or twelve years were enacted tariffs for Quebec and Ontario in which there were duties intended to protect Canadian manufacturers from British competition. British manufacturers—in particular the iron and steel interests of Sheffield and Glasgow—vigorously protested to the Colonial Office against these Canadian taxes. The Duke of Newcastle, then colonial minister, sympathized with the British manufacturers, and made some remonstrance to Galt, the Canadian minister of finance. But Galt was only extending a policy that had been begun a year earlier by Gayley; and his reply to the Colonial Office was that self-government would be annihilated if the views of the Imperial Government on colonial fiscal questions were preferred to those of the people of Canada. "It is, therefore," he continued in his letter to Newcastle, "the duty of the present Government distinctly to affirm the right of the Canadian Legislature to adjust the taxation of the people in the way they deem best—even if it should unfortunately happen to meet with the disapproval of the Imperial Ministry. Her Majesty cannot be advised to disallow such acts, unless her advisers are prepared to assume the administration of the affairs of the colony, irrespective of the views of its inhabitants." The royal assent was not withheld; and since that time a British Government has never intervened to prevent the enactment of a protectionist tariff in any of the over-sea dominions. Since 1859, there is not one of the self-governing colonies that has not sought to protect domestic industries from the competition of British manufacturers.

Even before the Galt and Newcastle controversy of 1859 settled it that fiscal freedom went with responsible government for the colonies, the British Government had been willing to assist in bringing about reciprocal trade between the United States and the British North American Provinces. They were not prepared for the sudden change which came in 1846. Montreal and Toronto complained that bankruptcy faced Quebec and Ontario with the ending of preferences for their exports. Gladstone, who was then under-secretary for the colonies, was reassuring. But it was said that Great Britain, in establishing free trade with the world, had not guarded the interests of Canada. It was insisted that England, when throwing open her ports to American grain, should have stipulated with the United States for reciprocity for Canada. The Elgin-Marcy Treaty was the result of the appeal to London from the North American Provinces. Twice since the abrogation of the treaty, Great Britain has used her good offices to effect a return to some such system of free exchange between the United States and Canada as was in existence from 1854 to 1866. Were Mr. Balfour at this time Prime Minister, and were Canada as now intent on obtaining reciprocity, his Government would not dare to withhold any diplomatic aid that might be necessary.

Canada is the only Dominion whose trade interests can be much advanced by a reciprocity agreement with a non-British country. Yet all the colonies would have been alarmed had the utterances of Mr. Balfour come from the Prime Minister. In Mr. Balfour, they are understandable in view of recent developments in both England and Canada. Three times since 1906 the British electorate has repudiated the scheme for a protective tariff with preference for the colonies. In Canada the Manufacturers' Association has repeatedly served notice on the Ottawa Government that there can be no British preferences in the Canadian tariff which leave Canadian industries without protection against all comers; and there were many curtailments of the British preference when the tariff was revised in 1907. The repudiation of the Chamberlain plan was the second serious setback in Canada that the movement for protection begun in England in 1903 has received. A third setback is the proposed free trade in all natural products between the United States and Canada. Canada is the keystone of the arch of the Chamberlain-Milner Imperialists; and it is easy to understand why Balfour takes the gloomy view that reciprocity between the United States and Canada is an Imperial disaster.

IMAGINATION AND POLITICS.

Napoleon's saying that imagination rules the world may not be literally true, but there can be no doubt of the great part which imagination plays in the conduct of public affairs. We refer particularly to the popular conceptions of policies and of leaders. There is such a thing as the idealizing sentiment of a nation; and under a democracy it is of the highest importance to a ruler to be able to evoke it in behalf of his own measures and to identify it, so far as possible, with his own personality. To succeed in kindling the enthusiasm of a whole people, as Chatham did, in favor of great national undertakings, makes the rest of the work of government easy; while for a public man to possess the secret of impressing himself upon the imagination of an entire electorate makes up for many faults of character and defects of statesmanship. Lincoln came to have it in the highest degree. Yet one cannot confidently say in advance just what qualities will have this effect. Grover Cleveland's sturdy and tenacious nature had in it this imaginative appeal to the people, and so had Roosevelt's impetuous and showy character. The power to touch the imagination of a democracy might almost seem a wilful gift of fate. We find it where we should not expect it, and it is often missing where we should look for it.

In the case of President Taft, for example, we think that shrewd observers would say that he has thus far not very well hit it off imaginatively with the country. He has done many excellent things and shown some fine traits; but somehow no act of his has been of a sort to cause a popular thrill, nor has his name been one to conjure with. He does not seem to be one of those born to make people's hearts burn within them. Even his latest and boldest policy—that of reciprocal trade with Canada—seems in his handling of it for some reason to be without the infectious quality of enthusiasm. People commend it as wise and they praise him as courageous, but one does not see in-

tense and glowing convictions aroused nor anything like hero-worship called out by the attitude of the President. He has unquestionably met with a heartier popular response to his Canadian agreement than that given to any other measure of his Administration, but even so there is no evidence of a deep and emotional movement flowing out to what he urges and what he is. Mr. Taft is not necessarily at fault for this. A powerful appeal to the imagination in politics is partly a matter of temperament and partly an accident; all that we say is that it is unlucky for a statesman not to be able sometimes to make it with great effect.

That inability is obviously one of the handicaps under which Gov. Dix has to labor. Many have been attracted by his personal qualities, and his programme of retrenchment and a thoroughly business-like administration found much favor with the State. But a high note of leadership is apparently beyond his compass. He may satisfy the people, but he has no gift for stirring them. Their conception of him has been rapidly forming during the past few weeks, and they do not look to him now for any word that will be like the sound of a trumpet, nor expect him to take an attitude visibly heroic and commanding. He has had the chance, from the first of the Senatorial contest at Albany, to impress himself powerfully upon the moral imagination of the people; to assert something of the indignation at base plottings with which Gov. Wilson flamed so effectively before the citizens of New Jersey. But Gov. Dix conceived it to be his duty to put this opportunity aside, and it will not be his again. He will not be classed, it is evident, among the executives who masterfully show the way and quicken the thoughts and feelings of the people while capturing their affections and enlisting their devotion.

But if the Democratic Governor of New York cannot attain the positive in this matter of the political power of the imagination, he can at least escape falling into the negative. For there is a reverse side to popular feeling. It may be drawn out and led, but it may be also repulsed and even horrified. And Gov. Dix has one element of imagination to deal with about which he cannot be too clear or decided, and that is the effect upon the sentiments of the people of New York, and indeed of the whole nation, which has been made by Tammany, and especially by its seeming desire to reach out and clasp the whole State in its foul embraces, and make of Murphy not merely a local boss but a State leader. Now, the point is that the reputation of Tammany is fixed. Its place in the popular imagination was long ago determined by the repeated crimes and incessant villanies of which it has been proved guilty. Tammany appeals to the imagination in politics, but only as a thing of dread and loathing. So that there can be no doubt whatever of what the result will be if Tammany is seen to be getting its tentacles firmly twined about Albany, and if the old purpose of an independent up-State Democracy, ready to make terms with the Democrats of New York County, but never to surrender to them, is now abandoned. That would mean such an imaginative shock to the people of New York that great masses of independent votes would be dislodged to crush and whelm the Democratic party. Gov. Dix is himself an up-State Democrat, knows what the tradition is, and must feel that it is a duty to fight, not only for his own political life, but for that of his party, in preventing Tammany from seizing the State.

NOTICING THE UNCONSIDERED.

Since Francis Galton's death many stories have been told of his remarkable and sustained habit of carefully observing what most men did not even see. It was a part of his equipment for the great work which made him famous, but he carried it also into the little things of life. One of his old and intimate friends writes of a recent illustration of this trait of Galton's. He went, three years ago, to the house of a neighbor where a paper of his own was read before a little company. He was too deaf to hear anything, but he said humorously afterwards:

> I was able to watch the bearing of the audience. My experience is that when ladies are not interested they indulge in fidgets, and the average of their fidgets is about two per minute. Now the average of the fidgets of the ladies present did not exceed two per five minutes. This proves to me that they have not been bored, and this is as much as I could hope for.

On two occasions, at least, Galton sat to have his portrait painted. This is ordinarily an experience of tedium, but the active mind of this sitter found something to interest him. He counted the strokes of the artist's brush! They numbered, in each case, about 20,000. Galton contributed a paper to *Nature* on the subject, in which he said:

> Graef described the very last stage of his portrait as "painting the buttons." When this stage was reached he poised his brush for a moment, made three rapid twists with it, and three well-painted buttons were hereby created. The rule of three seemed to show that if so much could be done with three strokes, what an enormous amount of work must go to the painting of a portrait which required 20,000 of them. At the same time, it made me wonder whether painters had mastered the art of getting the maximum result from their labor.

This may not be an important contribution to art, but it certainly exhibits Galton's marked faculty for giving attention to the unconsidered. It was the same sort of mental power that enabled Darwin to produce his fascinating and important books on earthworms and climbing plants. The material lay there before every eye, but nobody had taken the trouble to notice it. And those cannot be far wrong who say that this alertness of mind, which perceives and interprets what the ordinary man passes by all unknowing, must enter into the definition of genius. If genius is an infinite capacity for taking pains, it is also the capacity for taking notice. And the vexing thing for those of us who do not see what is under our noses is that men like Galton see it with the greatest ease. It is merely for them opening the eyes; and then we reproach ourselves for not having done it long ago, the process seeming so natural and facile.

No word need be said about the value of this power of fixing the attention upon the unnoticed. It is the chief means of making scientific discoveries and giving new ideas to the world about old subjects. Bagehot said that the main reason why Ricardo made such advances in political economy was that he was skilled in taking account of the "imperceptibles." This, of course, is not the whole of it. There must be not only the seeing eye, but the understanding mind; not only the aptitude for isolating significant phenomena, but the interpreting reason to show what their significance really is. Agassiz used to take his students out to a great boulder near Cambridge and demand of them what they saw on it. Most saw nothing; some saw vague scratches, but it was only the vision of the master that instantly beheld in them ice-markings and proof

that the boulder had been deposited where it was by a glacier.

This reference raises the question whether any special kind of educational training can yield this faculty of being always on the watch for the overlooked. In the largest reaches of the power of minute observation, it seems obvious that it cannot be taught. The great endowment of some minds for this kind of work seems to be clearly a gift of nature, not an acquisition. At their marvellous achievements we can only wonder. But there appears to be no doubt that something can be done in the course of education to awaken and direct the faculty for examining and plucking the truth out of what the commonalty dismiss as unconsidered trifles. This is, in part, the aim of research work and the laboratory method in our colleges and universities. It is implied in what Professor Osborn has recently urged as the "centrifugal" method in education—the attempt, that is, to induce students to look away from the routine matter of studies, to think for themselves, to scrutinize and investigate for themselves, to try the original and inventive powers of their own minds. And the faculty of mind referred to is of the greatest use in practical affairs, as well as in the realms of abstract thought or pure science. All of our latter-day agitation about efficiency and scientific management in business and manufacturing and the conduct of railways, really is due to closely attentive minds coming along and noticing what those steeped in the work had failed to observe. It might even be that, if something of this quality of Galton's could be got into politicians—say, a Governor or a President—they would see more things in heaven and earth than are at present dreamed of in their philosophy.

UNREGULATED TIPPING.

The bill which was drafted recently by a restaurant-keeper of Paterson, New Jersey, providing fines and imprisonment for persons who tip excessively, and aiming to regulate the whole tipping system, is an interesting sign of the times. In this country, at least, there has always been much impatience with the very idea of giving or taking fees. It was un-American, we liked to think not so very long ago. In this respect our cowboys, we boasted, were as true gentlemen as courtiers, and to tip them was to invite a bullet. But when foreigners in large numbers brought along the foreign way, Americans yielded; with their instinct for lavishness some asked, some gave, fees of which Europe later learned, aghast. A poorer and wiser man might storm in protest; few really believed that the custom could be checked. More recently, however, conditions have been conspiring against such extravagance. A bill to control tips by law sounds rather less absurd to-day than could have been imagined only a few years back.

Nor is it difficult to account for the public's change of attitude. In the first place, the original idea of gratuities has long been dead. Once kings and overlords scattered gold, like Fortunatus, to show their magnanimity; respect and honor were due them anyhow; they were great gentlemen, and indulged in largess for sweet pity's sake. How much of its old nature remains in the custom to-day? Occasionally, no doubt, individuals still find pleasure in buying a newspaper or a "shine" for a quarter, all to help out one in humbler station. But in general the act has been rid of pleasure by the knowledge that a tip is expected, and that resentment will be shown if it is not given. The excesses to which tipping has led in this country have grown almost unbearable and are often grotesque. Head-waiters, foregoing wages and even paying for their positions, have often managed by virtue of tips to retire in wealth. The cartoonist was not far in advance of his time who represented a gentleman at a coat-room beset by four women holding, respectively, his overcoat, hat, stick, and gloves, and each as expectant as young robins at the approach of the mother bird. Matters would not be so bad if there were some such regulations as custom has imposed abroad—except at those resorts where, as foreigners complain, Americans have "spoiled the market." But in one form or another, the habit has become widespread.

The beneficiaries of the system, like those of the tariff, have been at pains to explain its necessity, as well as its advantages. Newspapers, we are told, cost more in hotels than on the street, because they must help to pay the rent; and the same explanation is offered for the numerous other extra charges which hotels demand. In line with this is a private dormitory on the Harvard "Gold Coast," where a hundred students each pay ten dollars a college-year merely for the hall lights! From that sort of thing it is only a step to a tipping Trust formed in Chicago, in which gratuities go ultimately to the stockholders. Still, there must have been some advantages in the system, for those who could stand the pace. For was it not brave to flaunt a bill and rush in where others feared to tread? To receive first, if scant, attention at the custom house; to enjoy the right of way on one's special train from Washington to New York and to whiz by regular trains—is not this glory?

Now, it is precisely this element of special privilege inherent nowadays in tipping, which has begun to excite violent protest. Practised as it is with such extravagance, tipping is really a form of bribery. Examinations of the methods of tariff-makers and of Trusts have so impressed upon the people the danger of special privilege that they seem at present in a mood to grapple with it even at its pettier end. Whether the giving of fees of whatever sort can actually be regulated by law is, of course, doubtful. The determination of officials to do away with it at the custom-house is encouraging. Yet even more so are the signs that public sentiment is sharpening and concentrating against it. With everything now in the way of being regulated, it may not be too much to hope that our unregulated tipping will one day come to an end. We might at least demand that a scale should be fixed, so that the American in his own land may know, as accurately as Baedeker enables him to know in Germany, what gratuities are expected because normal.

RECENT ITALIAN MEMOIRS.

FLORENCE, Italy, February 1.

Italy has not been so prolific in memoirs as France or England, and her public men are less prone to write their reminiscences. But within the last few months we have had quite a crop of books of this character, dealing with events of recent history. By far the most remarkable is the first instalment of the Crispi papers, a work of the highest importance, the appearance of which has long been awaited with great curiosity. After Francesco Crispi's death his papers remained in the possession of his family until they were purchased by the Italian Government a few years

ago; this statesman's nephew, Sig. T. Palamenghi-Crispi, has, however, been able to publish this volume dealing with Crispi's share in Garibaldi's expedition of the Thousand (Francesco Crispi, "I Mille"; Milan, Treves). The book begins abruptly with Crispi's flight from Sicily after the collapse of the revolution in 1849, plunges us at once *in medias res*, in the vortex of conspiracies and plots that characterized Italian history from 1849 to 1860, and ends with the return of Garibaldi to Caprera after the battle of the Volturno. It contains an ample selection of documents, mostly unpublished, connected together by means of such editorial comment as seemed necessary. Between 1849 and 1859 Crispi lived in exile in Turin, Malta, Paris, and London, looked upon askance by the police and frequently expelled, but ever plotting the downfall of the Bourbon tyranny, and the liberation of Sicily which was his one thought, his only aim. He was the arch-conspirator, the *âme damnée*, of the Sicilian expedition, and these papers make us understand the very important rôle he played in that event. In 1853 he was in correspondence with Kossuth, who had not only promised him arms, ammunition, and ships, but had even guaranteed him that the United States Government would prevent by force, if necessary, any intervention of the European Powers to help the Bourbons to crush the coming Sicilian revolution. However, nothing happened until 1859; Mazzini, of whom Crispi was an ardent follower, was constantly urging an expedition to Sicily, and Crispi determined to go there himself and inquire into the conditions and feel the pulse of the island. This he did, at the risk of his life, and what he saw convinced him that if only assistance and encouragement were given from outside, the Sicilians would rise as one man and the whole rotten edifice of Bourbon government crumble. His task now was to convince Garibaldi of this, Garibaldi being the only man capable of leading an expedition to Sicily; and the documents and correspondence show us how he succeeded in overcoming the general's hesitations.

That is Crispi's great contribution to the Italian Risorgimento. In these pages we can follow the situation day by day, and see how one insuperable obstacle after another was overcome. Garibaldi did not wish to go to Sicily unless the Sicilians had actually risen and were able to hold their own to some extent; under these conditions the Sardinian government, Rattazzi, La Farina (the president of the Italian National Society), and even Cavour were favorable; but they were not realized, and the abortive rising was quickly crushed. Yet Crispi succeeded (whether he actually forged the famous telegram or not is doubtful) in making Garibaldi believe that the rebels were still holding out, and the immortal Thousand sailed from Quarto. Crispi was no friend of Cavour, and indeed the republican conspirator could hardly be the friend of the monarchist diplomat and constitutional statesman. The editor shares his uncle's views, and in his comment he seeks to exalt Crispi by belittling Cavour. Crispi's fame had no need of being magnified at Cavour's expense, and Cavour certainly did not actually oppose the expedition of the Thousand, as Sig. Palamenghi-Crispi suggests, but does not prove. If Cavour did not openly favor it, this was because he could not, like Crispi, consider Sicily alone, but had to keep the whole Italian question in mind and circumvent hostile diplomatic intervention from many quarters and in many fields, intervention which the rashness of Garibaldi and still more that of some of his headstrong followers, might have precipitated. We perceive Crispi's genius and statesmanlike qualities when, after the occupation of Palermo by Garibaldians, we see him no longer a plotter but a supporter of government and administration; thus began the process of evolution which reached its climax when he became Prime Minister of United Italy.

A wider period, but on a narrower stage, is that dealt with in the memoirs of the Baroness Olimpia Savio (Raffaele Ricci, "Memorie della Baronessa Olimpia Savio"; Milan, Treves, 2 vols.), who during her long life (1816-1889) saw the whole pageant of the Italian Risorgimento pass before her. A member of that old Piedmontese aristocracy which was the bulwark of the House of Savoy and afterwards did so much for the creation of United Italy, her own direct service to her country was in the lives of her two sons, both artillery officers. Her *salon* at Turin was the rendezvous of most of the notable people of the day, and it was the first house of a thoroughly Italian character in the Piedmontese capital, for at that time Turinese society was not yet thoroughly Italianized. Among Baroness Savio's friends were men of letters like Manzoni, Tommaseo, Prati, Aleardi; statesmen and patriots like Carlo Poerio, Gino Capponi, Cesare Balbo, D'Azeglio, the diplomat Nigra, Garibaldi, and numbers of others; and many interesting conversations and correspondence with them are published in these volumes. The letters of the two soldier sons give vivid pictures of the campaigns of 1859-60; Alfredo died a hero's death at the siege of Ancona, continuing to give orders to his battery while desperately wounded, and his brother, too, fell bravely at the siege of Gaeta. It is impossible to read the story of these two counts, written by the bereaved mother, without emotion. The excitement of public affairs at a time when the scattered provinces of Italy were being welded into the Italian kingdom, and the meeting of the first Italian Parliament at Turin in 1861, to some extent enabled Baroness Savio and her husband to forget their personal grief. The book sheds some fresh light on the September Convention between Victor Emmanuel and Napoleon III, by which it was agreed that the Italian capital should be removed from Turin to Florence. When that change came about the Savio *salon* declined, but the Baroness continued her intercourse with many interesting personalities, and devoted part of her time to literary work. Sig. Raffaele Ricci has done well to publish these papers, which no one who is interested in the Italian Risorgimento should omit to read.

In the memoirs of Count Campello (Paolo Campello della Spina, "Ricordi di più che cinquant'anni"; Rome, Loescher), we have an account of Roman life during the Italian Risorgimento by a Catholic aristocrat who was also determined to be a good Italian. An enthusiastic Liberal in 1868, and a member of the Roman civic guard, he early accepted the idea of national unity, but has always bitterly opposed extreme Radicalism and anti-Clericalism. The book is slight, but full of curious details and side-lights on history, and is pleasantly written. The Roman aristocracy (with the exception of the house of Caetani), unlike that of most other parts of Italy, and unlike the Roman middle classes, was not Liberal, and was the last to be imbued with Italian sentiments. But in the late fifties, Liberalism in Rome increased, the campaign of 1859 aroused enthusiasm for the House of Savoy, and the occupation of the Papal States, with the exception of the city and province of Rome, came to be regarded as inevitable and necessary. Among the most active propagandists of these views were several noble ladies, including an Englishwoman, the Marchesa Calabrini. Count Campello was elected member of the Italian Parliament for Spoleto after Umbria had been annexed (the family is Umbrian), while his father became Italian Minister for Foreign Affairs. The author gives some interesting particulars of the negotiations between the Italian Government and the Pope in 1867 for a *modus vivendi*, which were broken off in consequence of the French expedition to Civitavecchia, and the Mentana campaign. After the occupation of Rome by the Italian troops in 1870, Count Campello took an active part in Roman municipal politics during successive Clerical administrations and continued his attempts at conciliation between the Pope and the Government, which he regarded as necessary for both to stem the tide of socialism, disorder, and atheism. Among the minor matters dealt with is an amusing history of Roman fox-hunting.

A very different biography is the Commendatore Augusto Bondi's "Memorie di un Questore" (Milan, Società editrice La grande attualità). Sig. Bondi was for twenty-five years in the Italian police administration, and having been removed from his post as *questore* or chief of police in Milan, and summoned before a disciplinary court for some offence of which he says that he himself is still ignorant, he has published his recollections. He writes simply and clearly, and absolutely without the bitter polemical spirit which one might expect under the circumstances. The most interesting part of the book is the account of the author's experiences as police commissioner of the Borgo, the quarter of Rome bordering on the Vatican. He held that position, always a difficult one, at the time of the death of Leo XIII and the succeeding Conclave, concerning which court he gives his readers a great deal of interesting information. The duty of the Borgo commissioner is to guard against any violation of the Law of Papal Guarantees, and to protect the Pope against anti-Clerical disturbances and insults; this has to be done by an implicit understanding, but without any official communication, with the Vatican authorities. Sig. Bondi also had some exciting experiences in Sardinia, where he was sent to help in putting down brigandage, and was entrusted with the extremely responsible task of protecting the lives of the King and Queen of Italy, the Shah of Persia, and other exalted personages on various journeys in Italy and elsewhere. The book tells of many quite extraordinary affairs, far more surprising than most detective stories.

Correspondence

THE SUEZ CANAL.

To the Editor of The Nation:

Sir: In your editorial of January 19, entitled "Fortifying the Canal," you say:

> The Suez Canal was neutralized by England, the nation which built it,

thus repeating the unfortunate error made in the protest against fortifying the Panama Canal, signed by many eminent citizens and published last week, the third reason given beginning thus: "Because, though the Suez Canal was built with English money, England agreed to its neutralization."

The Suez Canal was built by the Universal Suez Canal Company, a private corporation. England was opposed to its construction and placed obstructions in the way of the work from time to time, which delayed its completion and added to its cost. At one time the Egyptian fellaheen engaged on the work were withdrawn by peremptory orders from the English Government to the Egyptian Government. This compelled the use of new machinery, specially constructed to do work that had theretofore been done by hand. With this machinery the contractors were able to excavate 50,000,000 cubic metres with less than 4,000 men in less than five years.

In 1856 Mohammed Said Pasha, Viceroy of Egypt, granted a concession to build this canal to the celebrated French engineer, De Lesseps. Half of the shares in the company that was formed were taken by the Egyptian Government and half of the shares were sold on the Continent, most of them being taken by Frenchmen. It was the marvellous success of this company that led the French people to plunge wildly into the French Panama Canal scheme. The Suez Canal was opened in 1869. England had no connection with it until 1875, when the pressing demands upon the extravagant Khedive Ismail Pasha for money, forced him to accept the secret offer of the astute Disraeli, and the English Government became the owner of the 175,000 shares of the Egyptian Government, paying therefor about $20,000,000. These shares are now worth more than $125,000,000.

Besides this profit of more than $100,000,000, England has escaped the cost of fortifying the canal by shrewdly joining other nations in establishing its neutrality, upon the ground that the canal was built by and belongs to an international private corporation.

The preservation of the Panama Canal from fortification and its neutralization are so important, in order that a beginning may be made in establishing and maintaining the peace of the world and in preparing the way for the beginning of disarmament, that no mistake of fact should be made that would leave the discussion open to a charge of misstatement by those who are urging that the Panama Canal should be fortified.

Providence, R. I., February 8.

SELF-ACCUSATION.

To the Editor of The Nation:

Sir: Your late article on "The Criminal's Privilege" shows the necessity of a reform in criminal procedure. The maxim, *Nemo tenetur seipsum accusare*, "No man is to be compelled to accuse himself," is comparatively modern, is of statutory origin, and originally had added to it the qualification, "Yet when once a man has been accused by general report, he is bound to show whether he can prove his innocence and to vindicate himself." It seems to have originated in the contests between the courts of common law and the ecclesiastical jurisdictions in England. Ecclesiastical courts sometimes permitted torture, which, though occasionally used in England, was never lawful there, and the maxim, *Nemo tenetur*, was intended as a protection of the subject against the infliction of torture. It may be translated, "No one is to be compelled by torture to confess." The rule that was originally intended as a protection against torture is now stretched so far as to put a person accused of crime into a privileged class, and to give him a sort of sacrosanct character. Every man, whether accused or not, owes it to society to tell what he knows about a crime. And to send a recalcitrant witness to jail for contempt of court in refusing to answer is not the same thing at all as the torture against which the rule was directed. A witness can purge his contempt by answering the questions put to him, whether the answers are such as the prosecutor desires or not. Torture was directed solely to compelling the confession of a crime of which the accused might or might not be guilty, and usually accomplished its object.

Courts are compelled, for their own protection, to wink at a most dangerous method of evading the force of the maxim, as interpreted by technically minded judges who have forgotten the reason of the rule. A man arrested for crime is often put through what is called the "third degree" by the police, a most dangerous practice. How much better it would be if the accused were to be examined in open court by the committing magistrate.

The evil of the rule, in its modern interpretation, is much mitigated by the statutory permission given to the accused to go upon the witness stand and testify. This virtually compels the accused, in nearly every case, to offer himself as a witness for examination and cross-examination. The New York statute provides that the failure of the accused to testify shall not raise any presumption against him, but jurymen are not generally fools, and know that an innocent man will be only too glad to tell his story. The failure of an accused person to testify raises, and must raise, a presumption of guilt, statute or no statute.

A. P. Rose.

Geneva, N. Y., February 2.

YONE NOGUCHI AT ENKAKUJI.

To the Editor of The Nation:

Sir: I was much interested to hear, some three years ago, that Mr. Yone Noguchi had entered in the blessing of Enkakuji, the famous Buddhistic temple of the Zen sect at Kamakura, to use his own words, to study the oldest, yet newest, language of silence. He wrote me then:

> I came here to confess how little is our human intellect. The silence here does not awe you, and you have to submit to it without a challenge, with a prayer. It is not a weapon, as it might happen to be in some other place; but it is a gospel whose unwritten words can be read through the virtue of self-forgetting. Indeed, I am now in my third spiritual awakening.

It was, I believe, his first awakening when he left San Francisco, a year after his arrival in California, and went to the home of Joaquin Miller, that eccentric American bard, behind Oakland, where he stayed some three years, on and off. As "The Pilgrimage" was the fruit of his third awakening, "Seen and Unseen: Monologues of a Homeless Snail" came from his first retreat into dream and poetry, the world of silence where is no wind or speech, but the loneliness that is the soul of nature. He was then less than twenty years old, rather comfortably fat, contrary to his present appearance, carrying an air of a Spaniard or Mexican, rather than a Japanese.

My imagination's eyes see clearly Yone Noguchi of fourteen or fifteen years ago (he was already famous, this little lad, less than twenty years old, through America, by his lines of poetry), who wore a straw hat even in winter, and a velvet suit, as I remember, continually for three years, that he bought with the money he earned by washing the windows or scrubbing floors. He was working as a dish-washer or kitch-

en boy at a little country tavern of Menlo Park, near Palo Alto, where the Stanford University is, when the China-Japan war broke out. He gave up the job and walked back to San Francisco, for he wished to see his compatriotis (three of them are now members of the Diet), and discuss the Japanese movement in the field. He became a newspaper man of the *Shoko Shimbun*, or San Francisco *News*, which has a circulation of only 200. He was by turns translator of American papers into Japanese, and carrier-boy. He slept on a table, with old papers as a mattress. Before he went to sleep, he used to read English poems. That was before he went to Miller's with a book of Kochi Zenji, the Chinese priest of Zen Buddhis Basho's hokku poems, and, among English poems, Poe's works. With Poe he was often said to be spiritually related. I think it was in those younger days that he was really romantic, and even great, as a poet; perhaps more so than to-day, when his fame is quite established, even in England. It was his idea to become as free as a wind or a cloud, and a part of nature, like a flower or bird. His master was that vagabond poet, Basho Matsuo, who spent his life in travelling and uniting himself with nature. And Noguchi practised "tramp life" during three successive years in spring. He was a great tramp, even among the Japanese colony. He walked once three hundred miles into the Yosemite valley, where he wrote "The Voice of the Valley." Again, he walked down from San Francisco to Los Angeles. It was often whispered among us that he had gone insane from too much poetry. He always talked of death as the most beautiful thing imaginable, and we were much afraid he might put his fancy into realization. When he appeared in New York in 1899, he wrote frequently for American papers and magazines for a living. We who knew his fantastic but extraordinary life in California began to think that his days as a poet had passed. But when we heard the news that his "From the Eastern Sea" had created a sensation in the English capital, we were glad to think that he was the same Yone Noguchi. If his life history might be told, it would be the most interesting thing. He left Japan in his eighteenth year for America, almost penniless—worse than that, friendless.

His second spiritual awakening was, of course, in London, where he found that poetry and art were the great force of life; I think he was not so sure to make poetry his life's work till he appeared in England, because New York greatly robbed away his precious dream of younger days. Although his stay in London was short, the impression he received there was most intimate, and we shall not be surprised to see him soon again in London. He said to me the other day:

I wish, indeed, more than anything else, to see again the large handsome illumined works of Blake at the British Museum. And I wish I had known more of Whistler's London pictures when I went there last; certainly I should have seen more beauty then. Oh, if I could be there again!

When he returned home in 1904, the reception prepared for him was perfectly unusual. (Whether he likes it or not, he comes out now from the Temple of Silence once a week and attends Keio University, Tokio, where he delivers a lecture on poetry.) But he always doubts how far the Japanese people can understand his poems, and he has some reason to complain of neglect here; he is glad, however, he can have more liberty as a consequence, and can work independently, not a bit disturbed. As he believes, his life's work is still coming; the work he has done hitherto might be merely a prelude; and as a prelude, it was a beautiful prelude indeed.

I am not ready to say that he has turned a Buddhist, though we often found him sitting in the Meditation Hall of the Enkakuji Temple, where he hears the Voice of the Unknowable. Here in the temple ground we see him under the moon or fallen leaves, as if a sad spirit; the following poem he gave me the other day has not yet been published:

In the voices of a bell
Where prayer like a light all day
Kisses the shadow-like chest of faith,
I, awearied not of life, have a home.

Along the path of the breeze
Where love lone but happy sings and roams,
I gather the petals of thought
Nursed by the slumber of peace.

Truth, like the moon of day and night,
Ever perfect, all silent and gold,
Shed thy light over sorrow and cheer,
Make me regain my rest and song.

Ah, through the mountains and rivers,
Let thy vastness thrill like that of air;
I read thy word in the flash of a leaf,
Thy mystery in the whisper of a grass.

S. TSUSHIMA.

Kamakura, Japan, January 16.

THE SUPER-PROFESSOR.

TO THE EDITOR OF THE NATION:

SIR: I was much interested in the theory, set forth in your editorial on the "Super-Professorate," that, when a course begins to be inspiring it ceases in about the same measure to be disciplinary. Is there not some danger that this theory of what one may call the inspirational "snap" may turn to the profit not of the super-professor, but of the super-dilettante? I am not, of course, denying the value of "open" courses, courses that do not count for a degree such as are given in foreign and occasionally in our own universities (that I conceive to be an entirely different question); what does seem doubtful to me is the notion that one qualifies for becoming a super-professor by giving super-snaps, courses that are frowned upon by one's colleagues and are "mildly scandalous" to parents. I believe that the one way to rehabilitate our literary courses in particular is to make them not less disciplinary but more disciplinary than the courses that deal primarily with facts. If we ask how literary courses may be made thus disciplinary we are led at once to the real weakness of our teachers of literature, which is not lack of enthusiasm, but lack of ideas. A lecturer cannot "solemnly examine men on the enthusiasms he has created," but he can examine them, as well as test them in other ways, on their power to handle ideas, on their intellectual grip, as one might say. What is hurting literary studies at present is the feeling that though agreeable they are rather aimless and just a bit unmanly. A certain type of undergraduate who looks on himself as literary is apt to develop an unwholesome complexion and read Oscar Wilde, and his more normal classmates decide that if that be literature, they will go in for football. Evidently the only hope for the teacher of literature is to have so many ideas and to use them with such masculine purpose that no one can confuse him with the mere æsthete and dilettante. I scarcely need add that a right training in ideas presupposes a severe training in facts. That is why so many great scholars (Jowett is the first example that occurs to me) have not disdained in their actual teaching to be humbly and minutely disciplinary.

IRVING BABBITT.

Harvard University, February 11.

GREEK AND SCIENCE.

TO THE EDITOR OF THE NATION:

SIR: In an editorial of the *Nation* of December 29 reference is made to the statement of a writer in the *Classical Journal* "who cites a Dartmouth professor's statement that the boys selected to assist in the science courses are almost uniformly those who offered Greek in preparation and no science." The writer in the *Classical Journal* probably had in mind a statement of my own, which was either loosely made or not quite accurately remembered.

The reference was confined to graduate students in science, who, while studying for their Master's degree, serve as laboratory assistants. My statement was, or should have been, that the Greek section of the college furnished distinctly more than its proportion of these assistants in science, and the science section distinctly less than its proportion. Permit me to give the facts as to these graduate assistants in science for the past twelve years, and as to the whole number of graduate students in science for the same period, I add also the facts as to senior honor men in science, and as to graduates of the college within this period who have been called to positions of more or less permanence as professors or instructors in the scientific departments of the college. I exclude from my computation men who have entered Dartmouth in advanced standing from other colleges, as the facts as to their study of Latin or Greek are not accessible to me. Since 1902 Greek has not been required for our A.B. degree. The effect of this opening of the degree has been fully felt since about 1906.

During the twelve years from 1899 to 1910 inclusive the men who had Greek in preparation for college (and by our requirements, at least one year of Greek in college) formed 36½ per cent. of all the graduates of the period. The men who had science and the modern languages in preparation formed exactly the same proportion. The remaining 27 per cent. had Latin without Greek, forming the so-called Latin-scientific section.

The Greek section of 36½ per cent. furnished 47 per cent. of the senior honor men in science, 58 per cent. of the graduate students in science, 62½ per cent. of the graduate assistants in science, and 58 per cent. of the graduates of these years called to faculty positions in science.

The science section of 36½ per cent. furnished to the science departments 15 per cent. of the senior honor men, 21 per cent.

of the graduate students, 25 per cent. of the graduate assistants, and 8 per cent. of the men called to faculty positions.

The Latin-scientific section of 27 per cent. furnished to the science departments 38 per cent. of the senior honor men, 21 per cent. of the graduate students, 12½ per cent. of the graduate assistants, and 33 per cent. of the men called to faculty positions.

In the past five years, 1906 to 1910, under the full effect of the opening of the A.B. degree without Greek, the Greek section has formed 25½ per cent. of the graduates of the college, the Latin-scientific section 32 per cent., and the scientific section 42½ per cent. In this period the Greek section of 25½ per cent. has furnished to the science departments 40 per cent. of the senior honor men and 54 per cent. of the graduate students; the scientific section of 42½ per cent. has furnished 20 per cent. of the senior honor men in science, and 15 per cent. of the graduate students in science; the Latin-scientific section of 32 per cent. of the graduates has furnished in science 40 per cent. of the senior honor men, and 31 per cent. of the graduate students. The Greek section has furnished to the scientific departments two graduate assistants and one member of the faculty; each of the other sections has furnished one graduate assistant and one faculty member.

Prof. Paul Shorey says in his masterly statement of "The Case for the Classics" (Reprint from the University Bulletin, New Series, xi, 17, University of Chicago Press; a paper which ought to be put into the hands of every superintendent and principal in the country): "Let not our scientific colleagues deceive themselves. They are more allied to us by the severity and definiteness of their discipline than divided by differences of matter and method." The fact that the Dartmouth departments of science have found the Greek section steadily contributing more than its numerical proportion to the group of advanced students in science, and the section entering with no classical training as steadily contributing less than its proportion, confirms Professor Shorey's statement.

It may be of interest to note the effect of the general movement of our schools away from Greek, and of the opening of the A.B. degree to students who have no Greek, as it has effected the numbers of our Greek section at Dartmouth. For the years 1899 to 1910 the percentage of Greek students in each graduating class is as follows: 53½, 54, 51, 59, 51½, 31½, 41, 29, 34, 24, 22, 19. The percentage of the Greek men in the classes now in college shows a still more rapid decrease. Of the present freshman class of 385 members (excluding men dropped back from other classes) only about 8 per cent. entered with Greek.

CHARLES D. ADAMS.

Dartmouth College, January 5.

HOW TO SPELL TOLSTOY.

TO THE EDITOR OF THE NATION:

SIR: On page nine of the first volume of Aylmer Maude's "Life of Tolstoy" these three sentences occur:

His name in Russian is Lyóf Nikoláyevitch (Leo, son-of-Nicholas) Tolstóy. Leo Tolstoy is the way he signs himself when using the Latin alphabet, and when pronouncing the name it should be remembered that the accent falls on the second syllable, and that that syllable rhymes with "boy." The fancy spellings *Tolstoi* and *Tolstoĭ* are due to the fact that some of the early translators and reviewers, not being able to read Russian, relied on French versions, and did not know how Tolstoy spells or pronounces his own name.

Mr. Maude returns to the charge in a preliminary note to the second volume. He says:

We have as yet (though it is much needed) no accepted method of transliteration from Russian into English. . . . I hope the day is not distant when some system will be generally agreed upon in the matter. Any system would be better than the present anarchy.

The American Library Association as long ago as June 11, 1900, adopted a careful and perfectly sensible system of transliteration for the Slavic languages, prepared by S. A. Chevalier, Archibald Cary Coolidge, and A. V. Bobine. In accordanee with this system the short *i* (*i s kratkoĭ*, as it is called) used only in the formation of diphthongs and designated with a semicircle lying on its back, is represented by ĭ (i with a diæresis fairly represents this diacritical mark). This leaves our *y* to stand for the adjective ending *i* followed by the *i s kratkoĭ*, which is so useful in distinguishing between Russian and Polish names. Moreover, the last syllable of the word Tolstoĭ is not exactly the equivalent of our English word *toy*, though it approximates to it, the Russian *o* being like oah, just as our *o* is really a diphthong (*o* fading into *oo*), as any one may prove by repeating it. I have heard Russians speak the word *peró* (a pen), and it sounded like a trisyllable, *pe-ró-ah*).

A man has indeed a right to spell or pronounce his own name as he pleases, but it does not prove that he is correct in doing so. The family of Des Isles at Mount Desert, before fashion settled there, called themselves the Dee Sizzies, and the Scotch make their Campbells come as camels. It is certainly unfortunate that the first and most correct transliteration of the great Russian author's name, corresponding as it does with the common French form of it, should have been confused by Mr. Maude's strenuous endeavors to change it. It is a very small matter, and if the spelling with *y* had first obtained, I should not be in favor of making any alteration in it, but as long as the spelling with *oĭ* has the guarantee of the American Library Association and usage hitherto, I deprecate the use of the other. The heat and fervor shown by the advocates of the y-spelling are quite amusing, and go a long way to show that they are in the wrong.

NATHAN HASKELL DOLE.

Jamaica Plain, Mass., February 7.

WILLIAM B. GILES.

TO THE EDITOR OF THE NATION:

SIR: I am collecting material for a life of William B. Giles, United States Senator (1804-1815) and Governor of Virginia (1827-1830), and would appreciate information leading to a discovery of Giles's letters or other matter bearing on his life.

D. R. ANDERSON.

Richmond College, Richmond, Va., February 10.

HOUSING OF FEDERAL ARCHIVES.

TO THE EDITOR OF THE NATION:

SIR: The real organization of a record office of the United States is a highly technical matter, the mere site being but a detail. As to the site, it seems indicated by every administrative and æsthetic reason as the twin plot north of the Library of Congress. Our lawyers have long had an eye upon this ground for the new Supreme Court building, but there is no special reason for placing the Supreme Court there and every reason for putting the record office there as a mate to the library and to include all historical manuscripts. In this way Washington would greatly improve even upon London and Paris. Every student is well aware of the advantage which would ensue if the public record office and British Museum were side by side in London, and Les Archives and the Bibliothèque Nationale in Paris. Some years ago Senator Lodge introduced in the Senate a bill carefully adapted by me from the act of the first of Victoria which established the magnificent glory of historic scholarship in London. The bill for a record office of the United States is a larger development of the previous bill introduced by Senator Lodge for an historical commission of the United States, the lack of which at this late date is an equal disgrace. These propositions especially appealed to my life-long friend, the late Senator Hoar, and it was at his suggestion not long before his death that I applied to his distinguished colleague.

Senator Lodge is entitled to all credit for his initiative in the Senate, but unfortunately he is bound, like all Senators, in non-controversial subjects by the unwritten law of Senatorial courtesy. The bills have been pigeonholed for years by Senator Wetmore of Rhode Island, the chairman of the Library Committee. I have no idea that Senator Wetmore has personally the least opposition to either scheme, but he naturally deferred to the very strong opposition of the late librarian of Congress. No one who like myself for forty years has known how much scholarship in all directions in Washington owed to the late Mr. Spofford can fail to honor his memory. Mr. Spofford, like all of us, however, had his weaknesses, and his most striking weakness was a mania for retaining in his hand a monopoly of all literary matters in Washington. This particular weakness, as is notorious, eventually got him into trouble, and brought much abuse from the vulgar who had no appreciation of his great qualities, or of the heartbreaking years of effort necessary to have at last our noble book palace erected. The opposition of Mr. Spofford was the solitary discordant note in a chorus of approval by resolution of State Legislatures and historical societies in favor of both bills. I have good reason to believe that the present librarian does not share his predecessor's antipathy, although he naturally in such matter would not, while Mr. Spofford was alive, controvert him in any way. I know that the late head of the manuscript department in the library, Mr. Worthington Ford, is in hearty support of the reform, as I have no reason to think his successor is not of the same opinion. In fact, the Library of Congress in future years will need all its space and all its admin-

istrative energies to handle its wealth of printed books, of prints, of manuscripts of non-historical matter, its maps, and of innumerable other collections. The intensely circumscribed and highly technical task of the professional archivist needs a quite detached foundation. Here I take issue in a minor way with the article in the *Nation* of to-day.

I deny that our archives begin only 140 years ago. I am now preparing for print for the Virginia Historical Society the first court book of Virginia, beginning in 1622, written inside the stockade at Jamestown, with all the intense dramatic flavor of such surroundings. The original is in the Jefferson papers in the Library of Congress, although strictly speaking it should belong to Virginia. In the Library of Congress also are the land records of Florida, removed from Tallahassee, which may refer to matters as far back as 1565. They actually have houses in St. Augustine built in 1580. I take it that it is the scope of a record office and historical commission of the United States to have a fatherly or motherly eye upon all historical records of the American hemisphere from 1492, or even before.

Washington should have a trained staff, authorized to speak, both at home and abroad, as the custodians of our history. I have had the pleasure this evening of calling the attention of Mr. Choate to your important editorial. He not only promised to read it, but to give the matter his support. With his London experience he is well aware how humiliating is the fact of Washington having no equivalent of the British institutions, and with his good word I am sure many others will bestir in the matter. Now that the American Historical Association has added its powerful official voice to the movement, I hope to see within the next ten years, and before my gray hairs have become quite snowy, a fellow palace to the Library of Congress sitting beside it, and housing not only our record office, but our historical commission.

LOTHROP WITHINGTON.

Literature

FIONA MACLEOD.

The Writings of "Fiona Macleod." Arranged by Mrs. William Sharp. New York: Duffield & Co. Seven volumes, $1.50 net each.

William Sharp (Fiona Macleod): A Memoir. Compiled by his wife, Elizabeth Sharp. Duffield & Co. $3.75 net.

The writer who used the name "Fiona Macleod" has been brought into prominence by the publication of a revised and collected edition of his works and by an admirable biography (though a little too long) from the hand of his wife. For twelve years, until his death in 1905 permitted the revelation, his identity with the mysterious writer of the Highlands was kept secret by the small circle to whom it was known. When the secret of Fiona's existence was revealed, there rose in its place the question of Mr. Sharp's double activity—for all through this time he had purposely kept up his critical writing under his own name—and certain amateur psychologists began to spread the rumor of a mysterious dual personality in the man, as if he had really possessed two souls, one masculine and Saxon, the other feminine and Celtic. It is evident that Mr. Sharp liked to puzzle himself and those who were in the secret by posing as one under an extraordinary inspiration. As a matter of fact, there is nothing at all supernatural or even very strange in the matter. From a child the wistful, mystery-mongering vein that runs through the books of Fiona Macleod was marked in William Sharp, and if most of the writings before he assumed the Gaelic name show the ordinary qualities of Anglo-Saxon London, that was simply because he wrote for the market what the market demanded.

William Sharp was born at Paisley in 1855, and was in childhood very delicate. By his Highland nurse, Barbara, he was initiated into the vague superstitions of the Gael, to which he added the dreams and adventures of his own brooding, half-nurtured soul. Mrs. Sharp tells of having heard him speak often of a gentle white Lady of the Woods, who appeared to him in childhood by a well in Argyll, and threw upon him "blueness out of the flowers, as one might lift foam out of a pool." In later years, vacations passed in the western Highlands and on the Hebridean islands reinforced his imagination with the nature myths that still haunted those distant and then almost unvisited places. In particular, he came to love the lonely island of Iona, with its long-remembered traditions of the great Columba, who had come thither from Ireland, bringing to the new land the Gospel of Christ, not as an enemy, but as a friend of the pagan gods of nature. On that island, he became acquainted with an old fisherman, Seumas Macleod, who took the child of seven on his knee one day and made him pray to "Her," the spirit-woman at the heart of the world, and who, as he wrote long afterwards in a letter, "was indeed the *father* of Fiona." And elsewhere he tells of coming once as a boy of sixteen upon the old man at sunrise standing with his face to the sea and with his bonnet removed from his long white locks; and when the boy spoke to Seumas (seeing he was not "at his prayers"), the old man replied simply, in Gaelic of course: "Every morning like this, I take my hat off to the beauty of the world."

When Sharp was twelve years old his parents moved to Glasgow, and the boy was sent to the academy in that city. In 1871 he was enrolled as a student at the Glasgow University, where he remained for two years, leaving without taking a degree. He thereupon entered the office of a firm of Glasgow lawyers. Here for two years he is said to have allowed himself only four out of the twenty-four hours for sleep, wasting his strength, not on the law it may be supposed, but on more attractive studies. His health, always precarious, broke under the strain, and he was shipped off to Australia. The new world did not satisfy him, and he was soon back in Scotland, where he spent a year of idleness. In 1878 he came to London and took a place in a bank; but literature still lured him on, and after a while he threw himself on his pen for support and gradually through many hardships and moments of despair won for himself an acknowledged and profitable hold on the publishers. Naturally, as a servant of the press he wrote what the readers of magazines and popular biographies desired, hiding close in his heart the wayward mysticism and the grandiose philosophy he had learned from nature. Yet those deeper springs of inspiration were never forgotten, and in his intimate letters we hear continually of great projected epics and other poems that were to solve all the riddles of life. From the specimens of these suppressed masterpieces given by Mrs. Sharp in the biography, we conjecture that their loss to the world is not deplorable.

By the year 1892, when Sharp was thirty-seven, he was in a position to command his own time to a certain extent, and with his wife he settled down for a while in a little cottage near Rudgwick, Sussex. Here came the inspiration of Fiona Macleod.

It is not strange that Sharp should have taken a woman's name. He had for one thing the inspiration of a lately found friend in Rome, of whom we get only tantalizing glimpses in the biography and in his dedications—the woman who stood to him as a personification of the *Anima Celtica*, the Celtic Soul still brooding, as he describes it, in the "Land of Promise, whose borders shine with the loveliness of all forfeited, or lost, or banished dreams and realities of Beauty." Moreover, the feminine element, the Ewig-Weibliche, has always predominated in the ideals of the romantic *Schwärmerei*, and it was natural that this latest incarnation of the old hopes and dreams should have appeared in the disguise of a woman. The particular name is easily accounted for. "Macleod" he took from his old friend and mentor of Iona, and "Fiona" is the nearest highland appellation he could find to the name of the island which meant so much to his theory of inspiration.

The earliest book to appear under the new signature was "Pharais," published in 1894; "The Mountain Lovers," which with "Pharais" forms the first volume of the collected works, came out in 1895, and thereafter, for the ten remaining years of Sharp's life, there was a suc-

cession of stories, sketches, essays, poems, and dramas, making in the complete edition seven fair-sized volumes. "Pharais" caught the attention of the discerning at once, and the interest in the unknown writer never flagged. She became a cult with some, and with others a recurring escape from the world and from thought.

With advancing years, the restlessness that had been characteristic of Sharp's temperament from childhood grew to what can only be described as morbid excess. The first glimpse we have of him as a baby is in the guise of a run-away storming the make-believe castles of fairyland, and, at the end, until held in the leash by ill-health, we see him drifting, or rather running, from place to place, seeking excitement from the sea or peace from the hills, always in a feverish haste to overtake some vanishing, unimaginable goal of the heart's desire. He died in Sicily in 1905, beloved and regretted by those who knew him.

Mr. Sharp apparently valued most the later writings, in which the human motives disappear in a haze of disorganized symbolism, whereas the less enthusiastic reader is likely to find his interest centring, with some minor exceptions, in the tales of "Pharais" and "The Mountain Lovers." There the discipline Sharp had acquired from his long apprenticeship to the press kept him within the bounds of reason, while the new freedom and Celtic inspiration added a note that is not common in English fiction. There is more of passion in "The Mountain Lovers"; and the scenes about the lonely pool, the terrible unrelenting love and madness of the blind old man, the elfish fear and wisdom of the dwarf, the yearning of the girl Oona that a soul may be born in her wild, woodland worshipper—the whole tissue of emotions in this solitude haunted by the magic influence of forgotten gods is almost unbearably dark and tragic. But on the whole, "Pharais," with its calmer beauty and subtler pathos, is the finer work; Fiona Macleod never equalled that first lovely creation.

Having found his public in these two tales, Mr. Sharp, one may say, a little abused their good nature. A few of the shorter stories have a weird beauty not without some relation to human experience, and some of the nature-essays written at the very end of his life and brought together under the title of "Where the Forest Murmurs" display an intimate union of symbolism and real observation such as many in these later days have attempted but few have achieved. If he had written always in that vein he would have accomplished something memorable and large in English letters; but too often the symbolism runs quite away with him and leaves one vaguely wondering whether he really had anything in his mind to symbolize. Many of the old Gaelic superstitions and legends he has attempted to revivify strike one in his rendering as merely meaningless day-dreams. Though he never united himself unreservedly with the Irish Celtic movement and deprecated its too common hostility to everything Saxon, yet in his inability to distinguish between an idea or a clear emotion and the flutterings of a sick fancy he fell too often into vaporous nonsense that makes the loosest imaginings of "A. E." or Mr. Yeats seem solid and compact of reason. Possibly he deceived himself into thinking that he was dealing with real ideas and genuine emotions; in truth he was playing with an empty convention. Take a stanza of his poems—almost any stanza will do—

> Oh, fair immaculate rose of the world, rose of my dream, my Rose!
> Beyond the ultimate gates of dream I have heard thy mystical call:
> It is where the rainbow of hope suspends and the river of rapture flows—
> And the cool sweet dews from the wells of peace for ever fall.

Now it is possible that these phrases—"rose of my dream," "ultimate gates of dream," "rainbow of hope," "river of rapture," "wells of peace"—it is quite possible that these phrases when first struck out corresponded to some yearning for an ideal clearly conceived and strongly desired, but as they are used and endlessly reiterated by Mr. Sharp, and by others of his school, they become a mere poetic convention emptier of content than the *clichés* of the pseudo-classical writers. They require no effort on the part of the poet and mean nothing to the reader. One remembers the Grand Academy of Lagado which was once visited by a certain Mr. Gulliver, and the pleasant device of the academicians to produce literature without waste of brain. Something like that might seem to be the method employed in turning out a good deal of this late romantic prose and verse. All you need do is to have a frame of shifting blocks on which are inscribed severally the conventional phrases, and then by the turn of a crank to throw them into new combinations, and the thing is done.

In fact, there is at the base of all this literature, a double misunderstanding. Mr. Sharp and those who were working with him believed that they were renewing the old Celtic idealism and that, in this revival, there was the prophecy of a great spiritual and imaginative renovation for the world; whereas, in fact, their inspiration came essentially from a source that had little to do with any special character of the Celts, and they are the fag end of a movement, rather than the forerunners of anything. Something of the old Celtic imagination may have been caught up by these young enthusiasts. The mere use of the myths of a time must carry with it something of their emotional content, and the new and the old schools of the Celt are bound to have some traits in common—the sense of fateful brooding, the feeling of dark and bright powers concealed in nature and working mysteriously upon human destiny, the conception of passions as forces that have a strange life in themselves and come into the hearts of men as if they were independent creatures, the sense of unearthly yet very real beauty, the haunting belief in a supernatural world that lies now far away in the unattainable West, and now buried beneath our feet or just trembling into vision, the mixture of yearning and fear that is felt toward that world as a source of incalculable joys and dark forgetful madness to those who break in upon its secret reserve. But withal the essential spirit of the sagas is quite different from that of these imitators. The light in the old tales is hard and sharp and brilliant, whereas our new writers love to merge the outlines of nature in an all-obliterating monotonous gray. The heroes in the sagas are men and women that throb with insatiable life, and the emotions of these men, whatever mysticism may envelop their source, are the stark, mortal passions of love and greed and hatred and revenge and lamentable grief. The real source of this Celtic revival is in the romantic revolt of the eighteenth century—in Blake and Chatterton, and that whole movement—to which must be added the influences of Maeterlinck and the other modern pseudo-mystics of the Continent. It does not bear on its face so much the light of dawn as the twilight that precedes the night. It is the fading end of a great inspiration, not the promise of a new world. It is often obscure and meaningless, and sometimes silly; but at its best it carries a gleam of haunted and pathetic loveliness.

CURRENT FICTION.

Dixie Hart. By Will N. Harben. New York: Harper & Bros.

A certain French critic writes of a certain Frenchman's composition, "His music is saying constantly the word *cher*." Mr. Harben's latest book is saying constantly the word "peanut-shells." Not that it occurs as a word, but that the atmosphere of the story is that of scuffling, scattered, and inexpensive husks. To whomsoever they represent a gala occasion, the book should be heartily welcome. An honest, peanutty flavor is not to be despised. But the shells should be treated neatly. There may be a humorous cast in the situation of a married woman devoting her energies and her tears to the memory and the glorification of her former husband. There may be humor in practical jokes and horseplay, if they are kept within bounds. But here they are not. The hero, held up for admiration and affection, is

chivalrous toward his unloved wife, and full of service for the other woman. He has the heart of the trader, however, and some of the most supposedly convulsing pages relate to his dickering and none too honest tricks. Dixie, the heroine, has a very human heart, a very feminine minxiness, combined with a fine capacity for toil and for the maternal care of others. All which qualities make it disappointing to find her so preposterously naïve in making love to Alfred before his freedom sets in. There is no lack of local color, particularly in relation to shops and crops. The greater transgressions are studiously avoided, but there is a low average of that sensitiveness to honor whose absence from stories either grave or gay leaves an unfilled sense of satisfaction. Finally, Mr. Harben, is it true of socks knit in Georgia that "the toe is whar the work begun"?

The Handicap. By Robert E. Knowles. New York: Fleming H. Revell Co.

This author's *forte* lies in the delineation of Scotch and Irish character, which he accomplishes intimately as if from within, with a merry twinkle of the eye in the one case, in the other with duly ingenious reluctance to let go the possibilities of an argument. Quite the cleverest chapter in the book—and a very clever one it is—is that wherein the kirk session convenes, in order to decide whether or not it may accept a gift of "tainted money" proffered by a tavern-keeper. The debate and the conclusions make a rich little scene of casuistry, very Scotch, very Irish, yet possibly translatable into other tongues. There are other effective incidents in the book to which the main story appears somewhat unrelated and certainly non-essential. To justify the title one of the characters is handicapped by a bar sinister which leads to episodes, but hardly touches the plot. In fact, it is not a novel of plot, but of scene and race characteristics in an early Canadian settlement. Much emphasis is laid upon the evils of unscrupulous liquor-selling. The chief figure is an engaging and honest little Irishman. He kept an honest tavern, as his father did before him, but in the end he tears down his sign and betakes him at a loss to other forms of industry.

Mothers and Fathers. By Juliet Wilbor Tompkins. New York: The Baker & Taylor Co.

Mrs. Tompkins is one of the cleverest of our short-story writers, and this collection shows her at her best. The only blemish upon it is an hysterical bit of dialogue which stands in place of prelude. The stories proper deal, for the most part lightly, with some of the problems connected with parentage, much as Mrs. Cutting's stories have dealt with the little difficulties of married life. They are touched with real humor; and one is particularly grateful in this day of circumstance for their frequent restraint, and even inconclusiveness. In several of them a very delicate matter is successfully handled: the relation of the grown-up child to the ridiculous though devoted parent—a silly mother insists on advertising her son's literary wares; a bombastic and absurd father is, with all his inanity of speech, unfailingly devoted to a spoiled wife and an ungrateful daughter; another father unites abominable taste with the kindest and least resistible intent. In these and other instances the writer has interpreted without sentimentality certain important phases of an awkward relation. Other tales in the series are better fun and not less edifying. Most amusing of all is "The Modern Way," a good-humored satire upon the new gingerly method of disciplining children. The story-teller sketches her persons (for example, her Mrs. Nicholson and Mr. Turnbull in "The Lady from California") with few strokes, but so firmly and clearly that their images linger in the mind after the page is turned—a rare experience, after all, for the reader of short stories.

The Drums of War. By H. de Vere Stacpoole. New York: Duffield & Co.

As this is a tale of private romance, and the drums of war sound only through its concluding pages, the choice of title is not above suspicion of catchpenny motive. This is proper enough, as the story is frankly of the type built to sell. It is well qualified as such by ingenuity of plot and liveliness of style. Beginning with deadly conspiracy against a defenceless child, it ranges through the well-defined romantic territory of duel, intrigue, high-born honor, low-born perfidy, and ever-dominating "love-interest." The action takes place in France of the mid-nineteenth century, but the flavor is none the less that of the "Three Musketeers." Our hero is the son of an Irish adventurer who has become a French general and count. He thinks nothing of his two bottles of port, and is as quarrelsome as Sir Lucius O'Trigger. A feud exists between his family and that of a German baron; and turns upon a half-supernatural mystery. Hence that desirable cloudiness of background for the picture of which the modern setting might have seemed to give so little promise. From the first moment omens of evil multiply. Indeed, so many pledges are given that the hero will find himself obliged by fate to drown the heroine that the actual and cheerful outcome is a trifle disappointing. But we must perceive on reflection that Mlle. von Lichtenberg, once out of the masculine garb in which, for safety, she has been brought up, is far too charming to die with the author's permission. The tale is told with great animation, and is a pleasant bit of literary confection.

THREE WORKS ON CONSTITUTIONAL LAW.

A Handbook of American Constitutional Law. By Henry Campbell Black, M.A. Third Edition. St. Paul: West Publishing Co. $3.75.

The Constitution of the United States, its History, Application, and Construction. By David K. Watson, LL.D. Chicago: Callaghan & Co. Two volumes, $12.

The Constitutional Law of the United States. By Westel Woodbury Willoughby. Two volumes. New York: Baker, Voorhis & Co. $12.

The Constitution of the United States has not been the subject of such extensive treatment on a comprehensive scale as its importance would seem to warrant. A wide variety of monographs dealing with particular clauses has appeared, but the Constitution as a whole, its origin, its development through judicial interpretation, and its application to new conditions, has not been a tempting field for the labors of the jurist. This may be in large part due to the complexity of the legal questions involved. The construction of its clauses has given rise to a vast body of litigation, in which new principles have been advanced and old principles turned to new application; so that an adequate and comprehensive treatment of the Constitution can only be the result of years of painstaking study.

The purely legal relations to which the Constitution has given rise, as exemplifying the construction of that instrument at the present day, have been treated in a number of volumes. Of such character is Black's "Handbook of American Constitutional Law," of which a third edition has just appeared. This is the treatise of a lawyer written for lawyers. It consequently largely ignores the manner in which certain principles of constitutional construction have arisen, it overlooks their growth and development, and confines itself merely to the results obtained. Hence while it is a convenient manual of reference for those who wish to know the application of a given clause of the Constitution, it is inadequate to exhibit, as being beyond its scope, the succession of steps by which the Constitution of to-day has become in its practical application a different instrument from the Constitution as it came forth from the hands of its framers. While fairly well adapted to law students who can give but little time to any one department of the law, it is not suited, as it doubtless was not meant to be, to the student of political science, whose business it is to investigate cause and effect in the principles of the law, and to dis-

cover the hidden forces at work in the development of the law.

Of quite another character is the new work by David K. Watson. Its scope includes the history, as well as the application and construction of the Constitution. The author states in his preface that the "work is primarily based upon the proceedings of the Convention which framed the Constitution. The closer the student gets to the spirit which animated that assembly, the clearer will be his apprehension of what it accomplished." This advice is not to be taken too literally. What the Constitutional Convention accomplished was the bare written instrument—an immense work, but something quite different in many features from the Constitution, as it has been construed and applied and developed in the course of our national life.

In the division of his chapters, Mr. Watson follows strictly the order of articles, sections, and clauses, as they appear in the Constitution. While this method has the advantage of presenting the Constitution in a documentary aspect, it prevents the grouping together of correlated clauses, and the unified treatment, both of those principles which have developed from several distinct clauses, and of those other principles, not expressly stated in the Constitution, which have come into force from the construction and application of the Constitution during the course of its existence. For example, the doctrine of Federal supremacy, as it has been worked out in all its details by the Supreme Court, has not been derived from that clause alone of the Constitution which makes it the supreme law of the land, but has been developed from the clause which gives to Congress the power to make all laws which shall be necessary and proper for carrying into execution the powers enumerated in preceding clauses, and from the clause which defines the extent of the judicial powers of the Supreme Court, and from the clause which prohibits the States from passing laws impairing the obligation of contracts. Hence a unified treatment of the question of Federal supremacy, as of other questions, such as administrative law, military and martial law, the separation of powers, the division of powers between the United States and its member States, citizenship, etc., can with difficulty be presented under the method of exposition which follows the Constitution clause by clause.

We are far from wishing to give the appearance of underestimating the value of Mr. Watson's work. As an exposition of the interpretation of the Constitution in the making, and of contemporary criticism upon the objects intended to be obtained by the various clauses proposed, the work will be of great service. It discusses at length the more important cases, quoting freely from the opinions of the Supreme Court; and it frequently supports or elucidates the decision of the court by citations from the messages of Presidents and from other extra-judicial sources. We wish merely to make clear the fact that the book leaves another field of constitutional law still untouched; and this field is equally important and perhaps even more difficult. It includes within its scope, first, a systematic arrangement of the subjects covered by the Constitution and a grouping together of correlated clauses bearing upon these subjects; secondly, a unified treatment of those principles of constitutional law which are not expressly stated in the Constitution, but which have been developed from other principles expressly stated or from the construction of the Constitution as a whole; and, thirdly, a clear statement of the underlying principles of judicial construction, and of the processes of reasoning by which the Supreme Court has come to its decision in questions involving the statement of a new doctrine or the extension of an old one.

This field Mr. Willoughby has attempted to cover, and his treatise is in its method a distinct departure from previous works. How successfully he has accomplished his task it would be difficult to estimate without an extended discussion. Attention may, however, be called to certain external features. The problem of condensation, in a treatise which might normally extend over any number of volumes, was difficult; it seems to have been excellently handled. The corresponding problem of apportionment of space to the various questions has been largely determined by the practical importance of those questions in present-day American law. It can scarcely be hoped that a work involving the statement of so many difficult questions, upon which the Supreme Court itself has been frequently uncertain of its ground and has virtually reversed its decisions under cover of subtle distinctions, will altogether escape criticism; suffice it to say that the work is the result of lectures delivered during many years to students of constitutional law, and has thus been subject in advance to the criticism of many minds.

The House of Lords During the Civil War. By Charles Harding Firth. New York: Longmans, Green, & Co. $2.60 net.

The Regius Professor of Modern History at the University of Oxford has long since given abundant proof of the depth and accuracy of his scholarship, and the present volume is an interesting indication that his minute and prolonged researches in the history of seventeenth-century England have not made him lose touch with the problems of to-day. Nothing could be more timely, in view of the present perilous position of the House of Lords, than this clear, sane, unprejudiced account of its development, influence, abolition, and reëstablishment in the stormy period of the first two Stuarts and of Oliver Cromwell. What greatly enhances the value of the work in connection with the problems of to-day is the fact that much of it was written many years before the present controversy in regard to the powers and usefulness of the Upper House arose, so that it cannot be regarded as in any sense a piece of special pleading. The entire book, in fact, like all the rest of Professor Firth's work, is a dispassionate and scholarly statement of fact, given, as far as possible, in the words of contemporaries. The reader is left to draw his own conclusion, and to deduce his own lessons and morals.

Nevertheless, to all who have not utterly lost faith in historical analogy, the narrative which Professor Firth presents must inevitably prove a cogent argument for the retention of bicameral government—at least in some form. The facts which he sets forth are briefly these: From 1603 to 1640 the House of Lords, greatly increased in numbers by the policy (or impolicy) of the first two Stuart Kings, took an important, and at moments, decisive part in the defence of the Constitution against the Crown. At the time that King Charles began to get a party—*i. e.*, in the struggle over the Bishops' Exclusion Bill in 1642—about half the peers went over, wholeheartedly, to the Royalists; rather more than thirty remaining at Westminster at the opening of the war. Between these and the Commons points of difference developed during the next seven years, not so much because of the increasing conservatism of the former as because of the progress of democratic and revolutionary opinions among the latter. As the course of the war outside placed a steadily increasing proportion of the power in the hands of the Independents in the Lower House, every conceivable expedient was adopted to force the Lords to follow the lead of the Commons—coercion, purgation, limitation, and abolition of veto power:

> The Lower is the Upper House,
> And hath been so seven years;
> Your votes they value not a louse
> Ye antichristian peers.

Finally, as everything else had failed, the abolition of the Upper House itself was decreed, at the time of the King's execution.

The next ten years demonstrated the dangers and drawbacks of unicameral rule, and the difficulties of any remedy short of a return to the ancient Constitution. Government by a virtually omnipotent single chamber proved highly unsatisfactory between 1649 and 1653. The restoration of the executive by the Instrument of Government was an im-

provement, but did not go far enough. Three years later an "Other House," composed of nominees of the Protector, was created. It was exceedingly unpopular and frequently attacked in the course of the next two years, especially after the strong hand of Oliver was replaced by that of his son; yet there is distinctly discernible a general feeling that this new Second Chamber, though by no means good, was far better than none at all. "I am as little pleased with these Lords as any one," said the member for Hastings; "yet we are but one leg, and cannot go, but hop up and down without them. Though they be not to our content, I have seen a man walk very well with a wooden leg." But the reaction was too strong to be permanently satisfied with the gains it had already made. When the overturn of the government of Richard Cromwell brought England face to face with the ugly alternative of anarchy or naked military rule, thinking men saw that there was but one way out of the difficulty: to restore the King, and Parliament—as anciently constituted—with him. Their relative powers and importance were changed, indeed, but the forms stood in the main unaltered, as they had been inherited from the Middle Ages. From that time onward, the necessity of a Second Chamber was almost universally admitted, and the ancient constitution of the House of Lords was generally preferred to any other. Wrote Henry Neville, a member of the Long Parliament, in a curious treatise on the government of England called "Plato Redivivus," which he published in 1680:

> Our government imitates the best and most perfect commonwealths that ever were; where the senate assisted in the making of laws; and by their wisdom and dexterity, polished, filed, and made ready things for the more populous assemblies; and sometimes by their gravity and moderation, reduced the people to a calmer state; and by their authority and credit stemmed the tide, and made the waters quiet, giving the people time to come to themselves. And therefore, if we had no such peerage now, upon the old constitution, yet we should be necessitated to make an artificial peerage or senate instead of it. Which may assure our present lords, though that their dependences and power are gone, yet we cannot be without them; and that they have no need to fear an annihilation by our reformation, as they suffered in the late mad times.

Laokoon: Lessing, Herder, Goethe. Selections edited, with an introduction and a commentary by William Gould Howard, Assistant Professor of German in Harvard University. New York: Henry Holt & Co. $1.50.

It was certainly a wise recognition of the limits of the ordinary American student's capacity that prompted Professor Howard to adopt the plan he did in his edition of "Laokoon." He has given us all the text that he regards as essential "to facilitate the approach" to Lessing's treatise, among the omissions being chapters xxvi to xxix, which contain Lessing's comments on Winckelmann's "Geschichte der Kunst des Altertums." This part of "Laokoon" may well be left to an advanced stage in the student's æsthetic instruction; as ample compensations are included Goethe's essay "Über Laokoon" and Herder's "Erstes kritisches Wäldchen."

Mr. Howard modestly speaks of the freedom with which he has made use of the labors of other commentators, but only the specialist in the field of æsthetics and the close student of German literature can fully appreciate the value of his own additions to the work of his predecessors. Take as an example of luminous exposition the note (p. 366 of the Commentary) on "Keine Stoffe," which not only condenses into less than a page all the reasons adduced by Lessing and Goethe for the avoidance of clothing in sculpture, but presents them with a convincing freshness and finality. Equally enlightening is the note (we quote at random) on p. 396, concerning Lessing's remark about "conscientious Madame Dacier." Here Mr. Howard, in order to show to what extent German writers have adopted Homeric phraseology, quotes from the "Nibelungenlied," from Voss's translation of the Iliad, from Goethe's "Hermann und Dorothea" and "Achilleïs," and from Fichte's "Reden an die deutsche Nation." The student finds in this volume a wealth of syntactical, linguistic, philosophic, and literary notes; a valuable summary of the history of art, based on Springer; and an introduction to German æsthetic literature, preceding and contemporaneous with Lessing, in which the leading writers stand out with vivid distinctness. Probably in no other English book are set forth so clearly, within the same compass, the nature of the difference between the Swiss critics Bodmer and Breitinger and the literary dictator Gottsched; the degree of Germany's indebtedness to France and England in the science of æsthetics; the importance of Wolf and Baumgarten in developing the doctrines of Leibnitz, and, in particular, the intellectual relations between Lessing and Mendelssohn.

Mr. Howard has used the greatest care in modernizing, here and there, Lessing's orthography, and his proof-reading is almost flawless. "So" for "to" counteract (p. cixvii), and "ihm" for "ihn" (p. 39), are the only misprints we have noticed. If he errs at all, it is on the side of reverence for Lessing's text. Thus he retains "ohne*dem*," "dunke*lere*," "*die* Wulst," "wechselsweise" and a few other antiquated forms. "Endschaft" (p. 46) and such an obsolete turn of phrase as 'im geringsten nicht" (p. 52) might perhaps have called for a word of comment in the notes. "Eine alberne Mönchsfratze" (p. 141) is rather too gently dealt with as "monkish whimsey" (would not *distortion* have been better?); while "degenerate rationalism" (p. clxiii) seems too harsh a term to apply to Iffland's "Jäger." On page 36 the connection between the end of chapter ii and the beginning of chapter iii is not absolutely clear. "Aber wie schon gesagt, die Kunst hat in den neuern Zeiten," etc., is an allusion to a passage omitted in the volume—that on later art and the theories of Montfaucon. We offer these trifles merely as suggestions for possible use in the subsequent editions, which are certain to be called for. Mr. Howard's book is a noteworthy product of the best American scholarship. It will be welcomed by instructors here as was Blümner's edition of Lessing by teachers in Germany. Such a treatment of a great classic is gratifying proof that American universities still maintain (we are tempted to say, alone maintain) our highest literary traditions.

Notes

One of the last pieces of writing done by the late J. Lockwood Kipling, father of Rudyard Kipling, will appear in the February mid-month number of *Country Life in America;* it is entitled, "The Origin of the Bungalow," and tells what a bungalow is and how it developed from the service tent in India.

The Putnams promise for February 17 "A Memoir of Lady John Russell," edited by Desmond MacCarthy and Agatha Russell, the selections from the correspondence and diaries running from 1815 to 1898; and "Land Problems and National Welfare," by Christopher Turnor.

The Putnams also announce: "The Ashes of a God," by F. W. Bain; "The Return," an occult romance by Walter de la Mare; "A Question of Marriage," by Mrs. George de Horne Vaizey; "The Little Cities of Italy," by André Maurel, translated by Helen Gerard; "East and West," a volume of nature studies, by Stanton D. Kirkham; "Haydn's Dictionary of Dates Relating to All Ages and All Nations, for Universal Reference," by the late Benjamin Vincent, twenty-fifth revised and enlarged edition; and, as representatives of the Cambridge University Press, "The Peace" of Aristophanes, edited by C. E. Graves, and "The Revelation of St. John the Divine," edited by G. H. S. Walpole, Bishop of Edinburgh.

Gustav Frenssen's "Klaus Hinrich Baas," a translation of which Macmillan will publish in a few weeks, is a story dealing with the rise of a self-made man in Germany.

Moffat, Yard & Co. announce the immediate publication of "The World of Life: a Manifestation of Creative Power, Directive Mind, and Ultimate Purpose," by Alfred Russell Wallace.

Robert W. Chambers's new novel, which the Appletons will issue at the end of Feb-

ruary, bears the title "The Adventures of a Modest Man."

The list of books to be issued in March by Frederick A. Stokes includes: "A Tenderfoot with Peary," by George Sorup, and "The Subjection of Women," by John Stuart Mill, with a preface by Carrie Chapman Catt.

The spring announcements of the Oxford University Press include:

History: "Federations and Unions within the British Empire," by H. E. Egerton; "Ireland and the Normans," by G. H. Orpen, two volumes; "Documents of the Continental Reformation," selected by B. J. Kidd; "The English Factories in India, 1634-6," by W. Foster; "Historical Geography of the British Colonies," by Sir C. P. Lucas, Volume V, part iii, Canada (geographical), part iv, Newfoundland, both parts by J. D. Rogers; "School History of England," by O. M. Edwards, R. S. Rait, and others, new edition revised to date; "Essays on Roman History," by H. F. Pelham, edited by F. Haverfield; "Six Roman Laws," translated, with introduction and notes, by E. G. Hardy.

Theology and philosophy: "Oxford Studies in the Synoptic Problem," by W. Sanday and other Oxford scholars; "The Coptic Version of the Gospels in the Sahidic Dialect," three volumes; "John, the Presbyter, and the Fourth Gospel," by Dom John Chapman; "Kant's Æsthetic," a translation of the "Critique of Judgement," with essays and notes, by J. C. Meredith; "Justice and Happiness," by W. Benett.

Classics: "Cicero, Orationes," by W. Peterson and A. C. Clark, two volumes of the Oxford classical texts, completing the edition of Cicero's speeches; The Works of Aristotle, translated into English under the editorship of J. A. Smith and W. D. Ross, "De Partibus Animalium," by W. Ogle.

English and modern languages: "The Oxford English Dictionary," a portion of *Sc*, by Dr. Bradley; "Berksbire Place Names," by W. W. Skeat; "Old High German Grammar," by L. Armitage; "Drei Wochen in Deutschland," by D. Ll. Savory; "Macaulay's Clive," edited by V. A. Smith; "Macaulay's Addison," edited by G. E. Hadow; "Browning's Men and Women," edited by G. E. Hadow; "Nefrekepta," from a Demotic papyrus, put into verse by Gilbert Murray.

Henry Frowde will also publish: "The Authorized Version of the Holy Bible," a photographic reproduction of the Black Letter edition of 1611, with introduction by A. W. Pollard, and documents relating to the translation and publication of the Bible, in English; "The Autborized Version of the Holy Bible," a reprint in Roman type of the *editio princeps*, with introduction by A. W. Pollard; "Records of the English Bible," by A. W. Pollard.

"Songs of the Road" is the title of a new volume of verse, by Sir A. Conan Doyle, which Smith & Elder have in hand.

Maurice Hewlett has placed with Macmillan & Co. "The Agonists: a Trilogy of God and Man," which presents the stories of Minos, King of Crete, Ariadne in Naxos, and the death of Hippolytus, and attempts to reveal "the fallacy in the ancient conceptions of God-kind and Mankind, and in the ancient views of their relationships."

"Americans All" is a civil war romance, by John Merritte, which will appear under the imprint of Forbes & Co. of Chicago. This firm also announces: "Human Confessions," by Dr. Frank Crane, and "God and Democracy," by the same author.

Mr. Roosevelt's address before the National Geographic Society on his African trip receives the place of honor in the January number of the society's organ. In it he emphasizes the fact that it was a scientific expedition, whose unparalleled success—the zoölogical collections consisting of about 14,000 specimens—was due to the valuable services rendered by his companions. The most interesting incident narrated is that of the killing of a lion by Nandi spearmen. Some of the striking results of the last census are shown by Henry Gannett, with the aid of maps and diagrams. Referring to the increase of population, he says "there is no record of any such growth in any other country." Other articles are on Damascus, "the pearl of the desert," by A. Forder, who predicts that, by virtue of its railway connections, it will become "the hub of the East," and some notes on Oman by Rev. S. M. Zwemer. This Arabian state, though nominally independent, sustains virtually the same relation to Great Britain, as the native states of India, and now that the proposed construction of the Bagdad Railway is bringing up the question of the supremacy of the English in the Persian Gulf, all information in regard to it is valuable. The illustrations, more than 100 in number, are as usual the principal feature of the magazine.

In the last number of *Folk-Lore* there is a valuable article on the marriage customs of the Bedawin and Fellahin in Palestine by Mrs. Spoer, better known in folk-lore as Miss Goodrich-Freer and in psychical research as Miss X. It has much matter both for the Old Testament student and for the Orientalist at large. It shows, for one thing, the hatred between the Qaisites and Yemenites, northern and southern Arabians, an enmity literally millennial, still flourishing in Palestine as it flourished once from Khorasan to Spain. Not even the clashing of Celt and Saxon has such a pedigree or has travelled so far. For another thing, we learn that a girl must not twiddle her toes, behind which lies much folk-lore.

Willard B. Bottome, an official stenographer of the New York Supreme Court, gives profitable information in his new book, "The Stenographic Expert" (New York: The Author). The opportunities presented in this field of endeavor to the man of broad education are told in a convincing manner.

Sir Arthur Quiller-Couch, in selecting and editing a text for "The Oxford Book of Ballads" (Clarendon Press), has had a most difficult task to perform. With sometimes twenty versions of a single ballad to choose from, and with the considerations narrowing the choice none too precise, the problem requires ideally the exercise of the nicest literary instinct. For the measure of success which he has achieved, he gives abundant credit to the notable volumes of the late Professor Child and to that curtailment of the work by Professor Child's late daughter and Professor Kittredge. And it is true that without the efforts of all three such a book as this could scarcely have been issued. As it is, these Oxford ballads maintain, we think, the level set by the other texts of the series. The editor has wisely avoided in his introduction any discussion of ballad origins and any definition of the type, relying simply upon that vague and yet sufficiently distinct feeling which mediæval ballads excite in minds saturated with them.

To their thin-paper edition of Thomas Hardy, Harpers have added "Two on a Tower." In his preface to this novel Hardy remarks: "This slightly-built romance was the outcome of a wish to set the emotional history of two infinitesimal lives against the stupendous background of the stellar universe." The book is criticised in those few words. There is nothing in Hardy more grandiose or more characteristic of his special genius than the pages which give the amateur astronomer's awe of the vast stellar spaces; but the romance itself, at least in its ending, is thin in comparison. Another volume of this series that appears almost simultaneously is the great story of "The Woodlanders."

Francis Miltoun, author of "Royal Palaces and Parks of France" (L. C. Page), plans an itinerary which takes the tourist to many monarchical shrines within a relatively restricted compass of travel. About one-half the book deals with the royal palaces within the city of Paris proper—the Palais de la Cité, the Tournelles, the Louvre, the Tuileries, the Palais Royal, the Luxembourg, the Elysée, and the Palais Bourbon. The other half takes up in turn the suburban palaces, Vincennes, Conflans, St. Cloud, St. Germain-en-Laye, Versailles, and other lesser royal residences, including Malmaison, Marly, and the pleasure houses along the Seine, Maisons, La Muette, and Bagatelle; its furthest flights afield are to Fontainebleau, Maintenon, Rambouillet, Chantilly, and Compiègne, all of which are easily accessible from the capital. It is thus a very convenient and suggestive guide for the traveller who is not making a comprehensive tour, and who wishes to make Paris the centre of his operations. The chapters dealing with specific places and monuments are, on the whole, easily and pleasantly written, and contain useful information. It is only when the author attempts general historic summaries and surveys, as in his introduction and in those chapters that treat of "The Evolution of French Gardens" and "The Royal Hunt in France," that he gets beyond his depth and reveals to the full certain lamentable limitations of critical judgment and technical scholarship. He has read widely, but the vagueness with which he makes his distinctions and traces the steps in horticultural development, shows imperfect and hasty assimilation of the subject which is only too obviously got up for the occasion. In spite of his industrious accumulation of anecdotal material and pertinent facts, the palace-building period of the French renaissance remains to him a closed book, and his references to the life and literature of the age display a pathetic ignorance and confusion, as well as an incredible lack of general culture. Mr. Miltoun sprinkles French words plentifully over his pages, as, when, inspired by his meditations on mutability, he sighs: "Le temps va!" Alas for the treachery of the memory that would reproduce, no doubt, Ronsard's famous line: "Le temps s'en va, le temps s'en va, madame!"

The tide of books on Egypt still rises, and Egypt renders back to each writer of that which he brings. Percy Withers, apparently an English physician, certainly, if so, of the old-fashioned cultured kind, took to Egypt a leisurely taste for architectural and artistic antiquities, a breadth of reading in poetry and of unhackneyed and apt quotation, a feeling for humanity even in Egyptian tombs, and a very real power of clear description and sober suggestiveness struck neither too high nor too low. So in his "Egypt of Yesterday and To-day" (Stokes) he goes up and down the Nile, passing with light allusions the living life he meets, but rendering very keenly and happily the dead life which one must go to seek. He is not a professed Egyptologist or even Orientalist—Petrie, Sayce, and Wiedemann are his prophets—but all he gives has evidently been worked through his mind and is his own. The book will be useful to any one on the Nile except the professional student, and even he may find ideas in it. The thirty-two illustrations are fairly good.

A product, in part, of Egypt, too, but of an extremely different kind is "Islam Lands" (Putnam), by Michael Myers Shoemaker. Mr. Shoemaker is a wealthy American, a globe-trotter of the modern motor-car variety, and has already written several approved globe-trotting books. In that class this book is undoubtedly excellent. A good half is devoted to Nubia and the Sudan, especially to Khartum, an over large part of the rest to the Cairo of Shepheard's and the tourist world, and the remainder to a motor trip from Tunis to Oran. If the judgments tend to be hasty, there are intelligence and experience in them as well, and if the style is occasionally flippant, it is always clear and sometimes rises to dignity and force. The description of Khartum and the accounts of Gordon and Slatin and the whole miserable history of the abandonment are especially good. Nine-tenths of Cairo Mr. Shoemaker did not and could not know; thus he has the perennial confusion of the Mahmal and the so-called Holy Carpet; the other tenth he gives with zest and point. There are forty-four excellent illustrations from photographs.

Hajji Baba of Ispahan has come again in a grandson, but this Nurullah Khan is a chastened and almost moral Hajji. Major Sykes, the British consul-general in Khorasan, has "translated and edited" the tale of Nurullah's life, and especially of his pilgrimage to the shrine of the Imam Riza at Meshed, "from a Persian MS."—a wide and hard saying; possibly there may lie in it some kernel of fact. Practically, however, the book, "The Glory of the Shia World" (Macmillan), meaning thereby the shrine in question, seems to be of the authenticity of Morier's life of the original Hajji Baba. Yet against that view there are passages where the "translator" apparently did not fully take the point of his original. Thus in the story of the commander-in-chief at Tabriz, who on his deathbed insisted on a bribe of two thousand tomans instead of one thousand, and, holding up and shaking two fingers, so died, there is no recognition of the certainty that those two avaricious fingers hurried him at once to hell. He should have died holding up one finger in testimony to the unity of Allah. However all that may be, we have here without question a most vivid and trustworthy account of modern Persian life. The hero is no such picaresque adventurer as his literary grandfather, but a youth born and bred with good social standing and in official circles. He writes poetry and steps easily into well-paid posts. The nature of such posts, the character of the men in them, the way in which they are paid, throw floods of light on the present Persian situation. But that is more or less incidental, and the narrative has been arranged to describe outstanding elements in life—birth, marriage, death and burial, formal entertainments and campaigning, the New Year festival and the lamentation for the tragedy at Kerbela, and, above all, the pilgrimage to Meshed—the place, its shrine, and the ritual there. The New Year festival with its games leads naturally to professional wrestling, and the pilgrimage journey from Kerman across half Persia gives abundance of wayfaring life, from cholera to robbers. A wealth of illustrations has been added, both in color and in black and white, from Persian pictures, tiles, bronzes, carpets, etc., and also a number of photographs.

We do not know whether the noticeable revival of Scott, which is marked just now by new editions of "The Fortunes of Nigel" and "The Abbot" (Frowde), really means a reawakening of popular interest, or only concerted action by the publishers to keep these novels still in the company of good sellers. But whatever the reason, it is pleasant to feel that stories which have been so formative in the imagination of previous generations are not to fall out of the easy reach of any children who have the good sense to like them.

It is difficult to determine whether "Peter the Cruel" (John Lane Co.), by Edward Storer, is more remarkable in matter or in diction. The introductory chapter opens so promisingly with comments on the various writers on Pedro the Cruel from Ayala to Prosper Mérimée, that the reader is for the moment deluded into thinking that he is perusing serious history—only to be brought up sharply with the extraordinary statement that the author, like one of his predecessors, has "gone to't in rhyme," and with a unique bibliographical valedictory—"My dear authorities; your very humble servant!" From this point to the end the book goes on from bad to worse. Into the story of Pedro's conflict with Henry of Trastamara, the author weaves a weary tale of murders and mistresses. The language in which he describes how the Lady Aldonza hid herself from Pedro's lustful attacks in a fresh-dug grave in a convent garden sounds like the sophomore theme of a love-sick college girl. The book has one important merit—absolutely unblinking honesty. It does not pretend to be anything else than it is: a series of striking scenes, gathered here and there from different authors, accepted without the slightest hesitation, untested, save by the standard of picturesqueness and popular interest, and set forth in a high-flown style. But an accurate translation of Ayala's chronicle, even though it were destitute of explanatory notes and critical comment, would have accomplished just as much, and a great deal more besides.

Three volumes issued under the authority of the Historical Manuscripts Commission of Great Britain have recently appeared. These are the reports on the manuscripts in the Welsh language, Vol. II, part iv; on the Manuscripts of J. B. Fortescue, Esq., Vol. II; and on the Manuscripts of the Marquis of Salisbury, Vol. XI, commonly known as the Cecil Manuscripts. Of these reports the first, dealing with the Welsh manuscripts in the British Museum, concerns largely Welsh laws and ancient British poems, with a valuable list of hundreds and commotes, difficult to interpret because of the "fearful distortions," as the editor calls them, of the Anglicized orthography. Two special documents in Latin, of great interest to the Kymric historian, are also included. The seventh volume of the Fortescue or Dropmore collection continues the Grenville correspondence from February, 1801, to February, 1806. Grenville had left office and had become the chief of a small party in opposition, spending part of his time in retirement at Dropmore, engaged in literary and rural pursuits. Inevitably, therefore, the portions relating to Grenville himself are less interesting than formerly, though the period forms something of a turning-point in that minister's political career, marking his final separation from the close political intimacy with Pitt which had characterized the preceding twenty years. The volume contains a long and extremely valuable preface on the general situation, forming an admirable history of the period, and the correspondence includes important documents, bearing on British policy toward Napoleon Bonaparte, the schemes of the emigrant princes, the execution of the Duke of Enghien, the Cadoudal conspiracy, and the formation of the third coalition. A curious misprint in the preface is "Addison" for "Addington," many times repeated. The eleventh volume of the Cecil Manuscripts covers the last fifteen months of Elizabeth's reign, and is of less interest than some of the former volumes. It throws little light upon the queen's personal history, but has much to say of Elizabethan seamen and their exploits. The documents calendared are largely supplemental to those that have already appeared.

In similar form, but issued by the authority of the House of Lords, is the fifth volume of the new series of the manuscripts of the House of Lords for the years from 1702 to 1704, that is, from the death of William III to the end of second session of the first Parliament elected in the reign of Queen Anne. It is largely taken up with the consideration of public and private acts, and with petitions and appeals from English courts. But there are in addition many elaborate papers relating to the navy—especially concerning the proceedings of the victualling board—and to the accounts of that master grafter of this period, Earl of Ranelagh, who held the post denominated by Lord Rosebery, as that "subordinate but opulent" office, the paymaster of the forces. It also contains two very extensive sections relating to the plantations, one touching the general trade of the kingdom and the other, part of which has already been printed in the *Bulletin of the New York Public Library*, 1907, on the general situation in the colonies, with reference to the irregularities of the proprietary and charter governments, especially Rhode Island. A third volume of the Acts of the Privy Council, colonial, published by the authority of the Lords

of the Treasury, has also appeared carrying the entries from 1720 to 1745. This extremely valuable undertaking, second in importance to none for the student of British administration of the colonies, is making rapid progress, and a fourth volume is likely to appear at an early date. The entire series of six volumes will carry the subject to 1783 and will contain all extracted portions of the Privy Council Register relating to colonial history up to that date, including many appendices. Either the fourth or fifth volume will contain a list of the members of the Privy Council and the sixth or supplemental volume will be made up of papers taken from the unbound collection of documents that came into the hands of the council. The present volume discloses the great activities of the committee of the whole council, which retained its deliberative and initiating powers long after the Privy Council itself had ceased to do more than give legal authority by its orders in council to the recommendation of official boards and departments and of itself as committee. The chief business here dealt with consisted of the consideration of colonial appeals and grievances, the confirmation or repeal of colonial legislation, and the drafting of the instructions of colonial governors.

Douglas Sladen's "The Secrets of the Vatican" has been reprinted in a popular edition (Lippincott), which contains all the material, including the many illustrations, of the first. As we remarked in noticing that edition, Mr. Sladen has not revealed the real secrets of the Vatican, but he has described in popular form the daily life of the Pope and his court, the functions ecclesiastical and political of the various cardinals and prelates, the proceedings at conclaves, and similar matters. In addition, he furnishes a history of the parts of the Vatican and St. Peter's into which strangers seldom penetrate. He retains the Archbishop of Westminster's attack on Modernism; but in general the work is non-polemical. Mr. Sladen himself is an agnostic, but he says that his work has been accepted in Catholic circles as the best of its kind in English.

Gen. Alexander Stewart Webb, ex-president of City College, one of the last of the group of division commanders of the civil war, son of an army officer and grandson of the man who commanded the Connecticut brigade of Continentals under Putnam and Washington, died last Sunday, at his home in Riverdale. He would have been seventy-six if he had lived until Wednesday, for he was born in New York city on February 15, 1835. His life was a crowded one. For four years he was a cadet at West Point, for fifteen years a soldier, serving in two wars—that against the Seminole Indians, in Florida, and the civil war—and for thirty-three years president of the College of the City of New York, during the period when it was evolving from an institution of secondary importance into one of the efficient educational factors in the country. He graduated from West Point in 1855, served in some of the hottest of the civil-war battles, receiving a medal from Congress for his bravery in the battle of Gettysburg. At the conclusion of hostilities he entered the regular army, from which he was retired at his own request in 1870, so that he might accept the presidency of the City College. Among his numerous writings was "The Peninsula—McClellan's Campaign of 1862," in which he defended his former chief.

Archbishop Patrick J. Ryan of the archdiocese of Philadelphia died at his residence in that city last Saturday, aged seventy-nine. He was born in Thurles, County Tipperary, Ireland, and studied at Carlow College; he came to this country in 1852, and was made professor of English literature in Carondelet Theological Seminary, St. Louis. In 1853 he was ordained priest. President Roosevelt appointed him, in 1902 a member of the Board of Indian Commissioners to succeed Bishop Whipple; from the University of Pennsylvania he received the degree of LL.D. He was the author of "What Catholics Do Not Believe" and "The Causes of Modern Religious Skepticism."

The death is reported from Baltimore of Rabbi Maurice Fluegel, in his eightieth year. Dr. Fluegel began to write at the age of twenty, and published works on historical, philosophical, and political subjects, successively at Leipzig, Paris, Bucharest, and since 1864 in the United States. He strove in his writings to do away with race prejudice. In 1902 appeared his "Quabbal and Vedanta," dedicated to President Eliot, in which by a comparative study of religions he tried to evolve a universal philosophy.

The death is reported, in his sixty-third year, of Henri Durand-Morimbeau, who wrote under the name of Henri des Houx. After a short career as a professor of rhetoric at Limoges, he turned to journalism; he helped to manage *La Défense*, and later became editor of *Le Journal de Rome*. He is best known for his "Souvenirs d'un journaliste français à Rome" and "Guerre au Papisme."

Science

The Age of Mammals in Europe, Asia, and North America. By Henry Fairfield Osborn, Curator of Palæontology in the American Museum of Natural History, etc. Illustrated. New York: The Macmillan Co. $4.50 net.

The single word "Illustrated," on the title-page of this handsome volume, inadequately characterizes that important feature. Roughly computed, there are 56 maps, 34 localities, 24 sections and charts, 53 skeletons and teeth, and 60 restorations of extinct mammals, mostly by Charles R. Knight. Since, *e. g.*, Fig. 14 includes two skeletons, Fig. 187, three restorations, and Fig. 189, four maps, and since about 130 pages are occupied by tables of classifications, a bibliography, and the index, it is safe to estimate at least one illustration for every page of the text proper. Indeed, the pictures are so numerous, artistic, and instructive that the casual inquirer might gain much from them alone, while a preliminary survey of them will materially aid the comprehension of the text, which is confessedly far from "light reading."

The preface states that "the especial purpose of the work is to spread the knowledge of palæontology in the United States." This science, "the zoölogy of the past," demands for its successful pursuit an accurate knowledge of the skeletons and teeth of recent animals, their form, mode of locomotion, and food; likewise, a familiarity with the facts, methods, and principles of geology. A pupil of Huxley and Balfour, and for some years concerned mainly with comparative anatomy (the last of a series of papers on the brain having been published in 1888), the author has wisely employed unusual abilities, means, and opportunities for the advancement and dissemination of a science which constitutes one of the three sources of our knowledge as to how living beings, including mankind, came to exist. Palæontology has therefore a profound intellectual value, but lacks the material incentive pertaining to the study of many groups of recent animals and plants. This absence of economic association is merely emphasized by the curious fact recorded in the footnote to p. 333:

> In all the larger cities of China fossil remains are sold as "dragon bones" and "dragon teeth," and used in medicine. To bring out their supposed medicinal properties they are fried, boiled in wine, or even eaten in their natural state. Nearly all collections of Chinese fossils have been bought up from the druggists, who fortunately keep accurate records as to the provinces and even localities from which they have been brought.

An Introduction of eighty pages deals with general topics, that is, the history of the science, adaptive radiation, polyphyly (the evolution of parallel series of locally separate analogous phyla), the distribution of mammals in space and time, and the sources of the world's supply. The following are a few of many noteworthy passages of more or less general application:

> There is nothing more obstructive than reverence for old ideas and systems which have outlived their usefulness. . . . Every rudiment of a cusp on a tooth, or facet, or articulating surface on a bone has its value, not as a sign-post on which to hang a new species, but as suggestive of the dawn of some new character, or the instrument of some function or relationship. . . . Better, in the end, wrong results which have been reached by right methods than right results reached hap-hazard by vicious methods.

Cuvier's "law of correlation" is restated as follows:

> The feet, which are correlated chiefly with the limb and body structure, and the teeth, which are correlated chiefly with the skull and neck structure, diverge and evolve independently in adaptation to securing food and to eating food under different conditions of life and in different environments. Each part evolves directly to perform its own mechanical functions

and purposes, yet in such a manner that each subserves all the other parts.

After a long period of slow development, including the age of reptiles, and estimated at 15,000,000 years (p. 82), in the Eocene, the earliest epoch of the Cænozoic Era, there came a sudden expansion and evolution of mammals. The lay reader will surely be impressed with their variety and number, and by the size and aspect of many of them. In later periods there were horned beasts by the side of which the most corniferous rhinoceros would look tame. At one time it is estimated that mastodons were as numerous as the bison. Beginning about three millions of years ago (p. 58) with Eohippus, a four-toed quadruped of moderate size, there occurred a gradual reduction in the number of toes (Fig. 5) and a concomitant increase in the size and complexity of the grinding teeth (Fig. 15), until this continent literally swarmed with animals closely resembling the horses of to-day. Yet, during the period just preceding the present, they were all destroyed.

Pages 494-500 are devoted to the antiquity of man in North America:

> The time of the first appearance of man on the North American continent still remains to be determined, and is a problem of the very highest importance. Was man contemporaneous with the closing period of the second or Megalonyx fauna, or with the third, the Ovibos [musk-ox] and late Mastodon fauna? Did man enter this country from Asia or from South America? Are traces of human occupation found first on the Pacific or on the Atlantic coast? All these are questions which remain yet to be answered positively. No trace of human skeletons of the Palæolithic or Neanderthal type of Europe has been found in North America and all reported skeletons have been referred finally to the recent Indian type. There is some evidence of the coexistence of man with the late stages of the Megalonyx zone in California and in the Central States, as well as considerable evidence of the appearance of man before the disappearance of the mastodon in the Eastern States. This raises the further question as to the period of the final extinction of the mastodon. . . . It is necessary to exercise care in the use of facts that seem to bear on this question.

In this connection should be noted the comparatively recent discovery of the "Heidelberg man," whose lower jaw is shown in Fig. 178; with distinctively human teeth is combined the ape-like absence of the "mental prominence," or projection corresponding with the chin.

With this judicial consideration of the question most nearly concerning the human race, most readers would expect the text proper to close; somewhat in the nature of an anticlimax, yet not without interest, is the final section on the causes of the extinction, during the period immediately preceding the present, of the hosts of horses, camels, giant sloths, mastodons, and elephants that inhabited this continent. In place of the simple explanation that this was directly due to the Ice Age, the author concludes (p. 501) that "the Glacial Period originated certain new conditions of life which directly or indirectly resulted in extinction." Besides changes of temperature, diminution of food, etc., it has been suggested by the author and others that the horses may have been swept out of existence by some epidemic disease or diseases originating with or carried by insects comparable with the African tse-tse fly.

Among regrettable omissions are a tentative restoration of the problematic Barytherium of the African Fayûm Desert, a list of illustrations, and a chart of the evolution of Ungulates in Europe comparable with that for North America on p. 239. Although the index covers 30 pages, it lacks at least two-score words, *e. g.*, *arctogæa*, p. 36; *diphyletic*, p. 331; Heidelberg man, p. 403; horse (with no cross-reference from *Equus*); *miocene*, *monotremes*, p. 71; *phyla*, p. 30; *sewellels* (Haplodontids), p. 248; *phyla*, p. 30, and *Jeffries Wyman*, p. 2. Typographic errors might readily occur among so many technical and unfamiliar names; the only ones observed are "trace" for *traces*, on p. 494, fifth line from foot, and "afford" for "affords," p. 497, line 4.

"Forest Terminology," by J. Gerschel and W. R. Fisher, and "Australia: Physiographic and Economic Aspects," by T. G. Taylor, are among the science books announced by Frowde.

D. Appleton & Co. have in preparation "Extinct Monsters and Creatures of Other Days," by Rev. H. N. Hutchinson, fully illustrated.

"Plant Life" is the title of a forthcoming book by Professor Warming, which contains, besides 250 illustrations, sections on morphology, classification, and œcology. Messrs. Sonnenschein, the publishers, have procured Miss Thomas and Miss Rehling to do the translating.

Gustave Leveau, who died recently at the age of sixty-nine, had been long associated with the Paris Observatory; in 1892 he received the Damoiseau Prize of the Académie des Sciences for observations on the perturbation of the comet D'Arrest. He also computed the motion of the planet Vesta.

Dr. Edward Gamaliel Janeway, one of the best-known diagnosticians and consulting physicians in the country, and a specialist in nervous diseases, died on Friday of last week at his home in Summit, N. J., aged sixty-nine. He graduated from Rutgers College in 1860. He graduated from the College of Physicians and Surgeons at Columbia, after having interrupted his course in the years 1862-3 to serve as an acting medical cadet in the civil war. In 1866 he was appointed curator of the Bellevue Hospital Medical College; from 1872 to 1876 he was professor of pathology and anatomy, and held other positions in this institution until 1892, when he was called to the New York University Medical School. Dr. Janeway had held several important public offices. He was a commissioner in the Health Department, a member of the advisory committee of the Chamber of Commerce during the cholera scare of 1892, and a delegate to the sixteenth International Medical Congress at Budapest in 1909. He received the degree of LL.D. from Rutgers, Columbia, and Princeton. He wrote many medical papers and was the author of "Clinical Points in the Diagnosis of Hepatic Affections."

Drama

William Morton Payne has republished (Chicago: Charles H. Sargel & Co.) his translation of "Sigurd Slembe," the dramatic trilogy of Björnstjerne Björnson, which appeared first in 1888 and has long been out of print. The recent death of the illustrious Norwegian makes the reissue timely. This work, dealing with the adventures of the bastard son of the King Magnus Barfod in his effort to wrest the regal power, or, at least, his legal share of it—for in those days illegitimacy was no bar to succession—from his half-brother, Harald, has always been accounted among the finest achievements of the poet. It has a semi-historical basis, the events upon which it is founded dating from the twelfth century. Whether it will appeal more now than in the past, as Mr. Payne hopes, to the great mass of English readers, is somewhat doubtful, but it will richly reward the attention of all those who can appreciate the romantic and poetic value of the ancient Norseland myths and sagas. In many ways it is a noble and stirring composition, and, although—as was inevitable—the full power of it is manifested only in the original, yet no small proportion of its imaginative vigor and literary skill is reflected in this English version, which long ago won the enthusiastic commendation of the poet himself. On the dramatic side it is strong in stirring incident, barbaric intrigue, an abundance of vigorous, diverse, and consistent characterization, tragic love, and pathetic maternal devotion. From first to last it sustains itself on the heights of tragedy, without ever sinking to the lower levels of melodrama. Slembe himself is an essentially heroic figure. But, for all this, the work is one for the study, where full enjoyment may be had of its purely literary beauties, rather than for the stage, upon which nothing more than a lean synopsis would be practicable. Such treatment, especially in any other language than the original Norwegian, would be fatal. Richard Mansfield's experiment with Ibsen's "Peer Gynt" ought to be a sufficient warning. But the play itself will fascinate every lover of the true romantic drama, none the less, perhaps, because of the dash of modern political and social ideas with which its prevailing atmosphere of the old Northland is occasionally flavored.

The "Nobody's Daughter" of the well-known English writer "George Paston" (Miss E. M. Symonds), which was produced in the New Theatre on Monday evening, contains many indications of its feminine authorship. The piece has been one of the great successes of the present London season and was well received here, chiefly on account of its comedy passages, which are

brightly written, and its somewhat cheap sentimentality. As a transcript from actual life, it will not bear examination, its conditions being at once artificial and improbable, while the philosophy of it is much more emotional than moral. The heroine is the illegitimate child of a prosperous young couple, who ceased to care for each other after it had been born, and parted as friends, after putting their offspring out to nurse. Then each got married without mentioning the existent incumbrance. But they continue in later life—as Col. Torrens and Mrs. Frampton—to visit their unacknowledged child, Honora, in the guise of beneficent guardians. Presently Honora, a type of unspoiled country maidenhood, falls in love with a rising young mechanic, and to break off this connection, her unknown mother, Mrs. Frampton, resolves to take her home, introducing her as an adopted niece, daughter of a dead schoolmate. She and Col. Torrens have invented an elaborate story to account for their joint guardianship. In the end Frampton discovers the fraud—in an effective scene—and furiously denounces the wife and the friend who have so grossly deceived him. This leads to the objective point of the play, the crucial question whether the husband is justified in punishing a wife, after long years of faithful devotion, for a fault committed before he knew her. This is debated long and passionately, and at last a reconciliation is effected through the agency of Honora, who goes off to Australia with her young husband, setting a wholesome example of love and constancy. All this makes a pretty bit of stage-romance, but bears only the slightest relationship to the facts of life, while the morality of it, from one point of view, at least, is decidedly shady. Character is involved here as well as circumstance. Mrs. Frampton, after twenty years of misrepresentation and treachery, has something more than her first lapse to atone for. But the pathos of her suffering and the magnanimity of her husband are a potent combination in a theatrical scene, and logic and sanity are once more sacrificed to sentimentality. The play is fairly well done—not brilliantly—at the New Theatre.

Sir John Hare has abandoned all idea of acting in London this winter. He is expected, however, to make his reappearance before the footlights in the autumn. The play he has selected for the occasion is an adaptation of Pierre Wolff's "Les Marionettes," a comedy produced in October last at the Comédie Française. It contains a delightful character, a Monsieur Ferney, uncle of the heroine, who has passed his life in the country, tending the flowers and the animals which have become the objects of his special care. These he deserts, in order to look after the welfare of his niece, unhappily married in Paris. In the end, he is largely instrumental in reuniting husband and wife.

It is probable that Sir Herbert Tree will revive "A Midsummer Night's Dream" at His Majesty's, in London, before his production of "Macbeth."

Laurence Irving has just received a notification from the Lord Chamberlain's office that permission for the production of his version of Brieux's "Les Trois Filles de M. Dupont" cannot be granted save on his making certain changes, which, in his judgment, would utterly destroy its value. On the conclusion of the run of "The Unwritten Law," he will, therefore, produce at the Kingsway Belasco's adaptation of Pierre Wolff and Gaston Leroux's "The Lily." The three principal parts will be played by Laurence Irving, Mabel Hackney, and Geraldine Olliffe.

George Alexander has been an actor-manager twenty-one years. He is now meditating a revival of Oscar Wilde's "An Ideal Husband."

The report that Gordon Craig was to assist in the production of "Macbeth" at His Majesty's in London is now denied.

There is to be a performance in London for the benefit of Mrs. John Billington, who was a favorite actress for many years. She was acting more than sixty years ago, and bore a prominent part in many of the romantic and melodramatic triumphs won by Benjamin Webster during his famous management of the London Adelphi. She played Juliet to the Romeo of Charlotte Cushman.

At a recent meeting of the coronation committee in London, a gala performance, to be held at His Majesty's Theatre, was officially incorporated in the scheme of festivities. The entire proceeds of the occasion will be devoted to theatrical charities. The idea has been warmly welcomed by the theatrical profession, and a committee has been formed including Oscar Asche, H. Granville Barker, F. R. Benson, Frank Curzon, George Edwardes, Johnston Forbes-Robertson, Charles Frohman, William Greet, Laurence Irving, Gerald du Maurier, Otho Stuart, Edward Terry, Fred Terry, J. E. Vedrenne, Lewis Waller, and others. The executive committee includes Sir Charles Wyndham (chairman), Sir John Hare, George Alexander, Cyril Maude, Charles Hawtrey, H. B. Irving, Herbert Trench, Sir Herbert Tree (director), and Arthur Bourchier (organizing secretary).

A correspondent of a London journal recently saw the Italian tragedian Zacconi in "Othello." He writes:

He gave only the three last acts of the tragedy, and these with plentiful cuts. He was thus mad with jealousy from the beginning of the performance. In the famous scene with Iago, he gave an amazing picture of the physical pain of jealousy. It was not dignified or dignifying pain, but unbearable pain of the flesh, and he swooned as if worn out by the rack. In the scene in which he strikes Desdemona, his ferocity was tigerish. The end was very wonderfully played. Othello was calmed, but trembling with inward savagery. He spoke low, bent on the deed. He wavered for hardly half an instant when he kissed her asleep. The deed was done with his back to the audience, he turned, and his face had become ghastly to look at. While Emilia knocked, he hardly seemed to know what he was doing, and shuffled backwards and forwards from the door to the bed, as if in a nightmare. When he learned the truth, his face changed totally. All the ferocity was gone, and his eyes stared, hardly understanding the hideous thing he had done. Suddenly he leaped up, sprang like a tiger on to Iago's back, and stabbed him. He sank back again into stupor, then pulled himself together, and stood up for the "Nothing extenuate" speech, sank down again in the middle of it limply on a chair, and looked around him, helpless and downcast. He caught sight of a dagger on the floor, swiftly seized it without making a sound, stood up again, with one last moment of energy, and, speaking rapidly, "In Aleppo once," etc., stabbed himself in a flash and fell dead on the floor.

Walter Browne, the author of "Everywoman," died just a week ago.

Music

Daniel Bloomfield's "Games and Puzzles for the Musical," published in Philadelphia by the Theodore Presser Company, is a little book of 109 pages, containing a collection of selected puzzles and games for musical clubs and the home. Most of them appeared originally in the *Etude*, some of them in the *Musician*, and most of the games are of the author's own devising. To an adult reader some of them seem but mildly entertaining, but children have ideas of their own on such things, and it is likely they will find much here that will help to while away idle hours. Most of the games, at the same time, are more or less instructive, making young folks acquainted with the names of composers and some of their favorite pieces. Directions are given for the making of some simple musical instruments (tuned tumblers, etc.), but nothing is said about the most delightful of all such experiments, the making of a simple æolian harp by putting a tightly stretched horse-hair under a slightly opened window on a windy day.

Louis C. Elson's "Pocket Music Dictionary" (Oliver Ditson Company) is a condensation of the same author's "Music Dictionary." It contains the important terms used in music, in English, French, German, and Italian, with pronunciation and concise definition, together with the elements of notation, and a biographical list of above five hundred noted names in music, in which Americans are liberally represented, although the most popular American soprano and alto, Miss Farrar and Mme. Homer, are oddly missing. Under programme music it would be well to state in the next edition that Prof. Niecks has recently written a large and excellent treatise on this subject. The article on the organ is a model of concise description. There is a classified list of instruments, and the make-up of an orchestra and a military band is given in detail. The volume is in size literally a pocket dictionary.

The first volume of the "Catalogue du fonds de musique ancienne de la Bibliothèque Nationale" (Terquem), by Jules Ecorcheville, has just appeared under the patronage of the Académie des Beaux-Arts. It comprises both manuscript and printed pieces, and is to be completed in eight or ten volumes, with more than 10,000 music themes in the text besides insets. Only 150 copies will be offered for sale, at the subscription price of 500 francs for the entire work. This collection of ancient manuscript and printed music in the department of Imprimés is known to be the most important in the world; but it has hitherto, figured in no catalogue of the Bibliothèque Nationale. Thematic indexes will be given of the manuscript pieces, with facsimiles.

Puccini's "Madama Butterfly" had more performances than any opera in Germany during the season ending with September, 1910. It was sung 473 times. Bizet's "Carmen" came second, with 428, and D'Albert's "Tiefland" (which led last year) was third, with 409. Strauss's "Elektra," which had 105 performances the preceding year, fell to 65 last year, while "Salome" tumbled from 85 to only 37. Humperdinck's "Hänsel and

Gretel" had twelve more performances during the last operatic year in Germany than all of Strauss's operas combined! Wagner remains in the lead; his operas were heard 1,953 times, which is at the rate of five a day for every day in the year, with 128 days on which there were six. Debussy's "Pelléas et Mélisande," which in the opinion of some enthusiasts was destined to drive Wagner from the stage, dropped from 31 performances the year before to only four last year. Mascagni's "Cavalleria" held its own with 258, and Leoncavallo got royalties on 294 productions of his "Pagliacci." But Puccini is now far ahead of his colleagues. Besides the 473 hearings of "Butterfly" there were 164 of "La Bohème and 138 of "Tosca," making a total of 775.

One of the great events of the musical season will be the production of Victor Herbert's grand opera, "Natoma." Philadelphia will hear it first, on Thursday evening, February 23, and five days later it will be sung in this city at the Metropolitan Opera House. Campanini will conduct and the list of singers includes Mary Garden, Lillian Grenville, John McCormack, Mario Sammarco, Hector Dufranne, and Gustave Huberdeau. The opera will, of course, be sung in English, and, if it succeeds, Mr. Herbert will be able to say justly that it marks an event in our musical history, the birth of real American opera. To be sure, Mr. Herbert was born in Ireland (he is a grandson of the great Irish humorist, Samuel Lover), but he has been in this country the greater part of his life, and has become thoroughly Americanized.

Art

THE PENNSYLVANIA ACADEMY.

If it were necessary to take the one hundred and sixth exhibition of the Pennsylvania Academy in its eternal aspect, there would be little or, safer perhaps, nothing to say. Good advice to those who must have the best would be to look hard at Alden Weir's Spreading Oak, at Woodbury's snow-covered dunes heaving above a still sea, at Wilton Lockwood's beautifully seen peonies—to look at these three paintings and then go home satisfied. But apart from the eternities, this show must appeal pretty strongly to any lover of our own art. Well-sorted into kindred groups, the pictures are delightfully hung. The show is unusually small, with 375 paintings and 148 pieces of sculpture. It is less representative than usual, but in compensation more harmonious. The new school of frank painters and eschewers of black dominate the walls until harmony is a little in danger of passing into monotony.

This method of painting has been frequently discussed in these columns. In vigor and economy it has obvious merits, at the expense, however, of the especial depth and lustrousness proper to painting in oil and varnish mediums. In attenuating all shadows and insisting on the general shimmer, there is considerable impoverishment of effect. A Cotman, not to say a Homer Martin, would make many of the ablest landscapes of this exhibition seem just a little thin and chalky. In short, the effects of diffused luminosity now in favor seem unsuited to oils and well adapted to water color, or, better yet, to tempera. Already the most advanced painters of Munich and Vienna have taken on the gay and gummy medium. Such a revival would be logical here, unless, indeed, modern landscape still has something to learn from such old fogies as Ruysdael, Constable, and Rousseau. And here we may note that to general luminosity has been largely sacrificed the positive effects beloved of old painters. These required the unnatural and abhorred black. Your coming storms and passing showers also implied an emphasis that now seems not quite well bred—a shade too obvious. Ruysdael's Jewish Cemetery at Dresden is unquestionably melodramatic, but how splendidly so! And sometimes it seems as if the art that is not capable of melodrama is denied drama as well. And there are moments when much of our landscape painting seems settling into an imperturbable beamishness, quite as conventional in its way as the discredited brown tree.

Such misgivings make themselves felt even before the vigorous and wholesome work of Redfield, Schofield, Gardner Symons, Ernest Lawson, James Preston. These men sketch admirably, they command their material, they know many of the delectable shortcuts to representation, and, if all of landscape painting be strong and swift suggestion of reality, all these men have greatly achieved. If, however, all painting is chiefly valuable as a way of seeing and feeling, the world being improved and interpreted through a fine idiosyncrasy, then these painters and most of the newer men may seem to lack mood. They evidently love their own muscularity, and they have reason to do so, but they seem ill-stored with memory pictures. It will be said that it is precisely the merit of the modern school to approach nature without preconceptions, but here is fundamental error. What makes the artist is preconceptions. It is the *parti-pris* of harmony and nobility that makes Greek sculpture, of calligraphy that makes old Chinese landscape the most imaginative we have; and until these personal forms of feeling are developed and valued, our art will at best be fine craftsmanship—and not the finest, for that grows out of passionate preconceptions.

It is the pictorial quality, the sense of inner form, that gives distinction to William Sartain's little brown canvas, The Hills, to Harold M. Camp's ledgy mountain top thrust up into a bleak dawn. Daniel Garber, though his paintings—including the prize picture this year, The River Bank—tend to over-effacement in tapestry-like verdure, has this sense of the picture strongly developed. His April Day, lent by the Corcoran Gallery, with its two sapphire flashes of blue water before a blonde quarry, is most precise and refined. Higher ranges of pictorial capacity are shown in those canvases of Alden Weir and Woodbury which have already been noticed, and study of such work suggests that the pictorial sense in landscape consists mostly in the grasp of its larger rhythm and movement, implying, of course, a sense of its scale. Such knowledge really involves an intuition of geological and botanical fact—the growth of trees, the swirl of tides, the half-concealed workmanship of glaciers and torrents; in short, a culture amounting to a personal cosmology. The commonest shortcomings of modern landscapes are first to ignore these larger facts of movement, next to misapprehend the scale upon which they are pictorially available. Indeed, this indifference as to scale runs through all modern art, and is its most noticeable defect as compared with older art. It is possibly a corollary of the current delusion that we paint not things but the atmosphere at large; but to pursue this theme would take us far afield.

Neither Joseph T. Pearson, jr., nor Jonas Lie is quite a newcomer. John C. Johansen has had his share, we believe, of honors. To many visitors the chief interest of the exhibition will be the opportunity to estimate the work of these younger men. Of the three, far the most adroit is Johansen. His portraits are always decoratively, if at times rather obviously, arranged; his brush works loosely but accurately on the canvas; he has an eye for clever effects of illumination, and his persons have a winsome quality, as if appealing for sympathy. It is a sensitive art, recalling without imitation that of John W. Alexander; it could easily fall into the saccharine, which it ably avoids. It is very personal, and may yet attain that modicum of severity without which distinction is hardly possible. Mr. Pearson's landscape with cattle has this severity. A fine schematism regulates the placing of the planes; the very touch is schematic, consisting of multiplied firm, broad strokes. A similar precision is shown in the seated figure of a gunner with pointers, a large decorative composition, and in the vigorous and charming picture of white ducks feeding in a succulent meadow. There is an undeniable vividness in Mr. Pearson's work, and one awaits his development with interest. A certain dryness is clearly his danger. Yet so soundly constructed is the landscape which won the Jennie Sesnan medal that it could safely be hung by those Paul Potters which it distantly recalls. Jonas Lie

seems to the present writer to be the best eye among the younger painters. He builds up those expanses of sliding level sea which spell the hush of nature; he knows how luggers tend to free themselves soaringly from the water, while moored steamships nestle in the surface with perceptible weight. Beside these harbor scenes which apparently come from his native Norway, he shows a swirling black pool rimmed with snow, and a rush of tawny water over sloping ledges. With him everything is movement. His brush willingly takes all the mimetic hazards, and usually succeeds. Usually movement means rhythm with him, though he keeps the fresh and naïve quality proper to the land of his birth. There are minute signs that he may be adopting too readily certain approved Scandinavian formulas. One could wish that his native sense of rhythmical arrangement might reinforce itself from models too remote to be imitated, say the landscapes of old Umbria or of China.

Other paintings of distinct merit are too various to be held within any generalization, and may only be briefly enumerated. Paul Dougherty's two coast scenes are compactly put up and colorful. Augustus Koopman's Venetian fishing boats have quite extraordinary saturated color. By Elizabeth Roberts are two good studies of beach and sky, very simple and spacious. The astute visitor will have noted that Waugh's The Outer Surf, emphatically the prominent marine of the show, has been evaded, and in fact it is hard to find the right word for that remarkable experiment in aqueous anatomy and tumult. It shows the treacherous slant of a half-broken wave over the shallows, with the angry crests of oncoming rollers behind. And like the pendulum of Galileo, it moves. It might spill out of the frame and sweep away Benson's picnic party opposite. Great knowledge and diligence go to the making of such a picture, and the present writer reproaches himself a little for declining to be swept away. And yet if this is a fine picture all the men who have notably painted the sea, Ruysdael, Turner, Courbet, Winslow Homer, Korin, Hokusai must be wrong. None has desired or presented so clamorous and photographic a reality. There is a lack of personal attitude here, and to fall back upon an Irish paradox, the sea might possibly look like that if nobody had ever looked at it with love. The opposite of this kind of literalism is A. B. Davies's The Lifegiving Sea. Pale crags, in retreating perspective, cut across a faded nacreous sky. In the foreground is a tiny woman's form. Beside her the foam spurts up like a lily. Here are vast restful spaces and some hint of a solemn pagan annunciation, perhaps an ave to seaborn Venus.

Among the portraits Tarbell's Dr. Timothy Dwight, which receives the Beck medal; Lockwood's Dr. J. W. Elliott, and MacCameron's Joseph B. Thomas, jr., were shown in the winter Academy in New York. De Camp exhibits two portraits of men characteristically strong and satisfying. It would be an interesting exercise in æsthetics to distinguish between De Camp's portraiture and the more objective and official work of such men as Julian Story and Frederick P. Vinton, both of whom are well represented this year. The resemblance is close enough to deceive the ordinary eye. John Johansen's very ingenious and decorative work in this field has already been touched on. Ellen Emmett has as usual the gift of saliency, but still works more with her cleverness than with her sympathy. Cecilia Beaux is represented by two simple and forthright works, of which the head of a girl with a laurel wreath has rare distinction. Brush, who apparently can be had for exhibition purposes only by dint of borrowing, prevails against all present fashion and probability by the combination of severity and sympathy in his long observation and longer execution. None of his three contributions is quite of his best, but any of them make the average new-style portrait look both thin and loud.

What portraiture may be a glimpse about the early American gallery of the Academy will show, and the reason our neatest portraits look rather common beside Copley, Gilbert Stuart, or even Sully and Inman, is not that these older painters have the glamour of antiquity about them, but rather that they had more interesting ways of seeing their sitters, and probably a better economy of method. Possibly nature is too much in the way of the modern painter. Apparently he sees the sitter too often and observes too variously. The finest portraits in the world, those of Jan van Eyck and Hans Holbein, were, as every one knows, painted not from sittings, but from a sketch upon which the color was merely noted. To all intents and purposes the portraits were conceived within a few hours, though patient days doubtless went to the actual execution. It is a process that for sheer grasp and intellectualism puts to shame anything in the way of modern *premier-coup*. The painter, having once for all plucked the characteristic from the appearance, could safely dismiss the sitter, nay, must do so, for another sitting would imply another picture. And this may account partially for the odd, composite, uncharacteristic look of much portraiture faithfully done with the eye on the object.

What one might call the well-to-do interior is becoming something like a staple. These subjects afford to the modern artists, as they did of old to Terburg and Vermeer, a great variety of color, oddities of illumination and perspective, and interesting still life *ad libitum*. Tarbell and Paxton are, perhaps, the leaders in this kind. Their work seems a shade finer than the rest. Tarbell's interior, with its two figures set against the light from a casement, is most sensitively painted and observed, but lacks the concentrated interest that we find in his best work. Paxton's The Housemaid is wholly winning, though verging on prettiness. Both these painters usually observe the scale proper to these intimate subjects. Some of the ablest men unhappily paint these themes to salon measure. Richard Miller, in his richly-colored interior called The Chinese Statuette, gives us an Alfred Stevens creation on the scale of life. Stevens knew better than to stretch out these exquisite trifles too thin. Frieseke, whose picture of two women crouched about a parrot cage is, for sheer mass and vitality, perhaps the most remarkable bit of painting in the entire show, again must write his eclogue at dramatic length. At the risk of pedantry one must repeat that every subject has its normal scale, dependent upon its inherent character and destination. And much of the ablest work of the Paris men has no conceivable destination except the exhibition hall.

The nude is very little in evidence. Dufner's charming study of The Bathers is, on the whole, to be credited to landscape. Frieseke's girl crouching under a white parasol is clearly to be credited to flesh and blood, and the painting of the nude is exquisite. But again we have to do with a factitious exhibitionistic arrangement and an exaggerated scale. Sergeant Kendall's beautifully modelled nude, La Cicada, seems over-individualized. It was by way of being a fine academy when it unhappily determined to be picturesque. The strain of the intention is apparent.

One misses inevitably, the work of our mural painters, and less pardonably, it should seem, that of the men who paint the life of the people. In fact, the weakness of the show as a whole is just this suspicion that prunes and prisms are the sign in which one may conquer. The abstentions are of a serious kind. In many cases there are evident and good reasons. Mr. Hassam, for example, could not deplete his one-man show at New York. The independents probably prefer to detonate rather in New York than in Philadelphia. Such motives are evidently beyond the control of the Pennsylvania Academy. Yet the question is worth asking, if these exhibitions are not gradually sacrificing their most precious asset, their widely representative character, and falling insensibly into the sort of favoritism that afflicts most exhibiting societies. This issue is frankly raised because the Academy has set a high standard, and is still free from merely professional prejudices.

In the sculpture rooms Grafly's exhibits—especially the spirited bronze

head of The Painter Redfield, two fragmentary nudes representing figures of the zodiac, and two small heads in a severe and expressive style—seem easily the best. Abastenia St. Leger Eberle's splendidly poised housemaid sweeping a windy doorstep looks even better than it did in the Winter Academy. Beautiful craftsmanship is exemplified in Bela Pratt's Study of a Young Girl in bronze and in Frazer's marble head called Tristesse. There is good drastic expression in A. Stirling Calder's bronze statuette of a Dancing Sioux Indian. Roth's marble polar bear and Deming's bronze statuette of a she bear giving suck to her cubs have the rare quality of seeming modelled from the inside. Anna Hyatt's three colts are beautifully light on their feet, scrupulously modelled, and cleverly drawn into a seemingly impossible group. Enid Yandell's two children in a fountain group, The Water and the Flowers, is a very handsome bit of decorative sculpture. The sheer vigor and rightness of Grafly's Redfield makes it hard to pay due attention to other portrait busts, but the offerings of Edith Woodman Burroughs, of Theodore Spicer-Simpson, are excellent. Finally, one could not wish for more charming bijoux than the terra-cotta figurines of Bessie Potter Vonnoh, or the nervously modelled lizard by Albert Laessle.

If any very fine work has been omitted the present writer must put part of the blame with the hanging committee, which has made the whole so attractive that inspection of the parts becomes ungrateful. The list of prizes is added for the sake of the record: Beck medal, Portrait of Timothy Dwight, D.D., LL.D., by Edmund C. Tarbell; Temple medal, Chinese Statuette, by Richard E. Miller; Walter Lippincott prize, River Bank, by Daniel Garber; Jennie Sesnan medal, Landscape, by Joseph T. Pearson, jr.; Mary Smith prize, Portrait of Elizabeth Sparhawk-Jones, by Alice Kent Stoddard.

F. J. M.

Stokes will bring out in the Masterpieces in Color series "Corot" and "Delacroix."

Henry Frowde has in preparation the following books on archæological subjects: "Excavations in Nubia, 1909-10," by J. Garstang, F. Ll. Griffith, and A. H. Sayce; "Historia Numorum," by Barclay V. Head, second edition, and "The Suk, Their Language and Folklore."

An exhibition of the work of Ingres will be held at the Galerie Georges Petit, Paris, from April 25 to May 15, in aid of the Ingres Museum at Montauban. It will include 50 pictures, 200 portraits in crayons, etc., and 500 miscellaneous drawings.

Prof. Henry Thode will be succeeded as lecturer on the history of art in the University of Heidelberg by Prof. Carl Neumann.

Théodore Tchoumakoff, who died recently in Paris at the great age of eighty-seven, was born in Russia, but had long lived in Paris. He was a painter of landscapes and genre subjects.

Two Frenchmen, distinguished in the world of art, have recently died. Théophile Camel, the sculptor, was born in 1862; he exhibited frequently at the Salon des Artistes Français, and left the well-known works, Premier Regret, now at the Petit Palais; Montmartoise, and the group Maternité. Léon Ducarugе was born in 1842. He was both a *dessinateur fusiniste* and a painter, and was a member of the Société des Artistes Français.

Finance

A REMINISCENCE OF FIFTY YEARS AGO.

The past week has witnessed the semi-centennial of the date on which occurred one of the most striking events, alike as to causes, circumstances, and consequences, in the country's history. On Thursday, February 8, 1861, the delegates from the six States which led the movement of secession, having met in convention at Montgomery, Alabama, formed the Confederate States of America.

The story of how that action, and its sequel in the events of fifty years ago, were received in the community at large, has been often told from the political, the social, and the military side. It has not often been told from the side of finance pure and simple. It is true that the financial history of the civil war is a familiar topic, but that particular chapter in the great events of the period can scarcely be said to have begun until months after the declaration of secession. It was not until December, 1861, that the New York banks suspended specie payments. It was not until 1862 that the issue of irredeemable paper money found a place, for the first time since colonial days, among the expedients of the country; and it was not until 1863 that the national banking system emerged from the financial chaos. But the question may profitably be asked at the present occasion, how financial markets in particular and the financial community in general received the first outbreak of the conflict. If we can find from the record just what were the ideas and impressions of those markets when a state of war was first actually created, it may throw some light on the expectations, hopes, and apprehensions entertained at heart by the general public of 1861. In these present days, when people watch the Stock Exchange with breathless interest, to interpret from its rise or fall what is foreshadowed by that unfailing index of political and financial conditions, it ought to be interesting to inquire what the markets did in the face of the extraordinary crisis which introduced the longest and most destructive war of the century.

Nowadays, the Stock Exchange is one of the first places to which observant people look, when war is impending, for a hint as to what the character and result of the conflict will be. Most people remember the collapse of prices and the rise in the European bank rates which occurred on the eve of the Boer war of 1899, and the subsequent violent tightening of financial tension which foreshadowed the duration and cost of the struggle. The "Paris panic" of 1904 in Russian government bonds, when the Russo-Japanese war broke out, the fall of Japanese bonds at London, the quick recovery in both markets, and the absence of unsettlement in other securities, were still more recent, and pretty accurately prophesied the character and results of that war. What happened when the Montgomery Convention opened the ball in 1861?

The New York stock market had been much unsettled at Lincoln's election of November, 1860, and at the subsequent ordinances of secession by the Southern States. It had recovered its equanimity with the beginning of 1861, however, and, in fact, there were numerous evidences—from interior trade, railway earnings, merchandise exports, and import of gold—that a prosperous year was opening. In the week ending February 9, when the Montgomery Convention was in session, the Stock Exchange did little; nevertheless, the market had advanced, on what the financial articles called "the favorable character of the advices from Montgomery and Washington"—a view of the news which certainly seems a bit grotesque to those of us who, in the light of subsequently-collected historical fact, are able to see what was going on behind the curtain fifty years ago, although, given the same circumstances, exactly the same error might occur to-day; for the essence of a political crisis of that nature is that neither party should know exactly what is going on in the minds of the other. News of the convention's action reached New York on Sunday, the 10th, and the market had its first chance to respond on Monday. It took the news calmly; "a little weakness under hammering by bears" was all. On Tuesday, the 12th—to quote a New York daily paper's market review—stocks were "very active and buoyant; the shorts were covering," and on Wednesday the fact that the electoral votes for Lincoln had been officially counted in the Senate without disturbance was made the basis for another rise.

By Friday, with the market still firm, "the impression among brokers was strong that political matters were in a fair way to be settled peaceably"—so said even the *Tribune's* money article. A day or two of moderate reaction followed; then, on Saturday, the 24th, "large

activity and a buoyant market, on the peace conference"; by Monday, "the outside public in the market, and the bears covering"; by Wednesday, the 28th, "a bull movement." All this with the Union visibly disintegrating, war in the air, and the bombardment of Fort Sumter only six weeks away. The reader of the narrative, fifty years afterward, will certainly rub his eyes, and ask if they may not have had such things as Sunshine movements, even in 1861.

Perhaps, however, it would be fairer to say that every great war has a Sunshine movement in its early stages, when "On to Richmond," or "Guerre avec cœur léger," or the "Christmas dinner engagement in Pretoria," embodies the hope even of financial markets, and the belief that arises from the hope. Possibly, indeed, the Stock Exchange—prophetic though its general rôle may be—is even more subject to such self-delusions than the community at large. But, if so, it is quite as rapidly undeceived. The "bull movement" with which February ended on the New York market of 1861 disappeared at once with March. On the second of that month, stocks broke heavily on rumors that Virginia also would secede. On the fifth, they broke again on Lincoln's inaugural promise to enforce the laws of the United States. Rallying on March 11, under the rumor that the Government would abandon Sumter, prices broke again with great violence on the news that supplies were going from Washington to the beleaguered fortress.

The downward movement proceeded rapidly, interrupted only on April 12, the day before Beauregard fired on Sumter, by a "rumor"—Wall Street even then was Wall Street—that Jeff Davis would let the provision steamer land. Needless to say, he did not do so. The shot that began the war was fired from the Confederate battery at Charleston, and then the Stock Exchange showed its mettle. The market was supported after the startling news had come, one Sunday morning, and the North had begun to arm and organize. Patriotic speeches were made in Wall Street; the flag was unfurled on every building. Bear sales of United States government bonds at a decline were hissed by the members on the floor of the Exchange. Nevertheless, Virginia State bonds broke eleven points in twenty-four hours. A day or two later all the market fell into panic, and markets, like the people, accepted the fact of a long and costly war.

THE HISTORY OF THE ORGANIZATION AND DEVELOPMENT OF THE BRITISH POSTOFFICE. By MORLEY DE WOLFE HEMMEON, Ph.D.

PUBLISHED BY

HOUGHTON MIFFLIN COMPANY, BOSTON and NEW YORK

The Country Church and the Rural Problem

By KENYON L. BUTTERFIELD
President of the Massachusetts Agricultural College

The author maintains that no influence can be stronger or more effective in advancing the interests of the rural population than that of the church, but the church to which he looks is not the narrow denominational or institutional body without a programme of work and of effort. He would have a church which, under the inspiration and guidance of the religious motive, makes appeal to the ideals of personal development and neighborhood advancement.

The book is unique in the insight with which the concrete needs of rural life are pictured and the broad-mindedness with which the way is pointed out for supplying them.

165 pages, 12mo, cloth; postpaid $1.08.

The UNITARIAN ADVANCE

A MONTHLY MAGAZINE OF PROGRESS IN RELIGION

GEORGE H. BADGER, *Editor*

YOU have always taken it for granted, no doubt, that a religious magazine must necessarily be heavy, dull and uninteresting—though good!

We believe that Religion can be made the most interesting thing in the world—if you have the right sort of religion: eager; up-to-date; virile; not a thing of cant, but a reality; not an echo of old-time dogma, but a live-wire of tingling progress.

One Dollar a year; three months for 25c.

The Training of Teachers for Secondary Schools in Germany and the United States

By JOHN FRANKLIN BROWN

Author of "The American High School."

Cloth, $1.25 net

The Teaching of Agriculture in the High Schools

By GARLAND ARMOR BRICKER

Assistant in Agricultural Education, Ohio State University. *Cloth, $1.00 net*

Rural Hygiene

By HENRY H. OGDEN

Professor of Sanitary Engineering, Cornell University. A new volume in the Rural Science Series.

Cloth, illus., $1.50 net; by mail, $1.68

Dry Farming

By JOHN A. WIDTSOE

President of the Agricultural College of Utah. Rural Science Series.

Cloth, illus., $1.50 net; by mail, $1.67

The Chemistry of Food and Nutrition

By H. C. SHERMAN

Professor of Organic Analysis, Columbia University.

Cloth, 12mo, $1.50 net; by mail, $1.62

NEW NOVELS

By MRS. HUBERT BARCLAY

Trevor Lordship

A love story; the more interesting because its problem of adjustment is not quite of the ordinary type.

Decorated cloth, $1.20 net; by mail, $1.32

By HAMILTON DRUMMOND

The Justice of the King

Full of adventure, gallantry, and the tender, whimsical charm always associated with the name of Villon.

Decorated cloth, $1.20 net; by mail, $1.32

Prof. WILLIAM L. PHELPS'S *new book*

Essays on Russian Novelists

By the author of "Essays on Modern Novelists," notable among last year's books as a vital discussion of matters of current interest.

Cloth, 12mo, $1.50 net; by mail, $1.60

Mr. C. G. D. ROBERTS'S *new book*

Neighbors Unknown

One of the best of new books of nature fiction, refreshing by reason of an outdoor atmosphere and a detachment from human problems. *Cloth, $1.50*

The Outlook to Nature

By Professor L. H. BAILEY

Director of the New York State School of Agriculture, Cornell University. A new, revised edition.

Cloth, $1.00 net

Frederic Lassalle

By GEORG BRANDES

A new edition. *Cloth, 8vo. Just ready*

By ALLEN FRENCH

The Siege of Boston

A new volume in the interesting Series of Stories from American History. *Cloth, illus., $1.50 net*

NEW NOVELS READY NEXT WEEK

While Caroline was Growing

By JOSEPHINE DASKAM BACON

Author of "The Madness of Philip," "The Biography of a Boy," etc. *Cloth, $1.50*

By GUSTAV FRENSSEN

Klaus Hinrich Baas

The story of a self-made man. Translated from the German by Esther E. Lape and Elizabeth F. Read.

Cloth, $1.50

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, FEBRUARY 23, 1911.

The Week

It was certain from the beginning that if the Senate failed to vote on the reciprocity agreement, an extra session of Congress would come. Mr. Taft is pledged to the Canadian Government to use his best endeavors to procure action on the bill. He does not feel himself at liberty to weigh the advantages or disadvantages of an extra session. Party and personal considerations cannot enter into the matter; he is bound. At the same time, through the medium of Mr. McCall, he has applied persuasion and something that sounds almost like menace to the case. That reciprocity is an essential feature of orthodox protectionism is proved by a long list of historical citations. That reciprocity is the only way to stave off the downfall of the entire system of protectionism is an argument that would come nearer home to the practical men in the Senate to whom history is an academic amusement and consistency a moral luxury. The argument that will really come closest to the hostile Senators is that an extra session, with a Democratic House, must play the mischief with business and delay the return of that prosperity which the country has so long been awaiting. On this point the recalcitrant Senators will probably base their action. If they make up their minds that an extra session will hurt business, and that the responsibility can be fixed on the Democratic House, they will have an extra session. But if they decide that popular opinion will insist on fixing responsibility upon those who had the chance to give the country relief and refused it, there may still be a vote on the trade agreement before March 4.

Our Canadian friends should understand that although Champ Clark is the prospective Speaker of the House of Representatives in the next Congress, his *obiter dicta* are not regarded in this country as having world-shaking importance. When, in the course of his reciprocity speech last week, he spoke of being for the bill because he hoped "to see the day when the American flag will float over every square foot of the British-North American possessions clear to the North Pole," he was not expressing a permanent and deeply-cherished sentiment of his own—not to speak of the Democratic party, or the nation—but merely filling out a sonorous paragraph. The people of the United States are thinking so little about absorbing Canada that if Mr. Clark's remarks had not been telegraphed to that country, nobody in his own would have given them a second thought, and very few would have known that he had made them. This is not saying that Mr. Clark is without ability or even influence, but his best friend will not deny that he is a little given to exuberance.

The one thing quite clear about the second-class postage question is that the case is not yet clear enough to warrant action upon it. The question concerned is not only that of the popular magazines, but that of the entire second-class postage system, and indeed of the causes of income and outgo of the post office as a whole. But even in regard to the prominent popular magazines the basis of facts on which the proposed change is predicated seems to be very far from definitely ascertained. The matter is complicated by many elements not entering into a purely business question, but it ought not to be beyond the powers of the Department to have an investigation and report made taking into account all the elements of the case in a spirit so fair, and with a thoroughness so manifest, as to give its conclusions greater weight than has been commanded by anything thus far produced. To the charge made on behalf of the magazines, that the Administration is actuated by a desire to crush out the propagation of aggressive political views through the medium of those periodicals, we attach no weight whatever. But it does not follow that the methods of the Department have been free from the kind of unfairness that goes with overzeal.

In the jam of business in the Senate at the close of the session it is to be hoped that time will be found—and fifteen minutes ought to be enough—to pass the bill to do away with negligible error on appeal in the Federal courts. It passed the House without an opposing vote on February 6. There could be no serious opposition in the Senate if the matter were brought to vote. The measure is favored by the special committee of the American Bar Association, as well as by many eminent lawyers and judges and the President. The gist of it is in the following words: "No judgment shall be set aside, or reversed, or new trial granted, by any court of the United States in any case, civil or criminal, on the ground of misdirection of the jury or the improper admission or rejection of evidence, or for error as to any matter of pleading or procedure, unless, in the opinion of the court to which application is made, after an examination of the entire cause, it shall appear that the error complained of has injuriously affected the substantial rights of the parties." The whole is completely in line with common sense and with the movement to do away with merely technical delays and vexations in the trial of causes.

The real significance of the happy-go-lucky methods that have obtained in our management of the vast national domains is sharply brought out in such facts as those presented in the report on the lumber industry of the United States by Herbert Knox Smith, Commissioner of Corporations. Laws enacted many years ago for the purpose of facilitating the acquisition of moderate-sized homesteads have been allowed to operate unchecked in the case of millions of acres of timber land which has never served, and has never shown any sign of serving, any such purpose. Apart altogether from any question of fraud, an arrangement by which valuable timber land can be bought at an insignificant price fixed by law, by any one who is willing to go through the prescribed formalities, is calculated to have precisely the effect that the figures given by Commissioner Smith show it to have had. Such land stays but a very little while in the hands of the original claimant, whether there was any collusion or not in the filing of his claim.

Under these laws, the vast holdings, which threaten something like a monop-

oly of timber ownership in this country, have been continually enlarged. And yet whenever a vigorous and determined effort is made to save for the nation the natural possessions still remaining in its hands, an outcry is instantly raised by the so-called "practical men" against the "theorists" and "fanatics" who wish to block the country's development. That is the kind of thing upon which the anti-Pinchot and pro-Ballinger forces concentrated themselves in regard to the Alaska question. The fact is that what the conservationists desired, and still desire, in Alaska and elsewhere, is not to stop the use of our natural resources, but to prevent their being gobbled up by great private interests, and in such a way that the nation gets little or no benefit from their possession. The report tells of lands worth many hundreds of millions of dollars given away for next to nothing by the Government, and now held by big corporations for a still further rise in the future on the basis of real scarcity value for the timber.

Gifford Pinchot again displayed himself as dull, narrow-minded, and ignorant of New York political conditions at New Rochelle the other day, when he asked: "Who will dare maintain that Sheehan is the choice of a majority of the Democratic voters of New York—Sheehan, whom Murphy, except for a little group of patriotic men, would already have inflicted on the State?" Here is a prophet of the moral uplift who thus confesses himself unaware of all those good deeds of Mr. Sheehan since his retirement from politics, all his alliances with movements for reform and good government which made him so irresistible a candidate for the unwilling Murphy. But aside from this, we must admit that Mr. Pinchot tried to be fair to both sides. "Murphy and Tammany," he declared, "are well-balanced by Barnes and the Black-Horse Cavalry. The party controlled by one can throw no stones at the party controlled by the other."

Who at Albany took bribes during the anti-racing fight of three years ago, and who refused them, and who handled them, will never be completely known. But one thing is altogether certain, that an enormous fund was collected and distributed for the purpose of defeating the anti-gambling bills. Of what magnitude must have been the "interests" that could afford to throw so heavy a contribution in the scale! Opponents of the bill wailed over the tens of millions of dollars in property and vested rights that the Hart-Agnew bills were certain to destroy. Well, the anti-racing bills have been in force for two years and the threatened millions have presumably been destroyed. But has any financial panic followed the wanton destruction of so much property, have the ranks of the unemployed been swelled with waifs from the race-tracks and the stables, has the sum of human happiness in New York State these last two years shown any diminution as a result of the suppression of public gambling at the race-tracks?

Gov. Johnson of California calls the enactment by the Legislature of the Eshelman-Stetson railway law, by a unanimous vote, the greatest legislative achievement of the State in many decades. The fight against the domination of the commonwealth by the Southern Pacific machine, he says, ended in a triumphant victory for the people. Under the provisions of the new law, the Railroad Commission of three members is empowered to fix absolute instead of maximum rates only, as under the present law, and to establish and make fair division of joint rates between two roads, as well as to order through tariffs. The act provides also that the commission shall have means to determine the physical valuation of the roads, that it shall hear complaints of shippers, and that it shall have power to begin investigation of rates without complaint if it shall deem this proper.

President Taft's veto of the joint resolution of Congress reinstating at West Point the nine cadets who had been dismissed for hazing, is a welcome check to a very bad practice. Again and again have the authorities of the Military Academy seen their efforts to maintain discipline thwarted by act of Congress. In their determination to stamp out hazing and to make the future officers of the army learn the first lesson of obedience, they ought not to be interfered with by a too good-natured Congress too open to political influences. The President rightly states that the proposed restoration of the nine cadets would be "very injurious" and would "tend seriously to demoralize the discipline" at West Point. His veto will have a tonic effect. It will be easier, after this, to enforce the rules at the Academy, and insubordinate cadets will understand that they cannot so readily appeal to politicians to undo the work of their military superiors.

The new dean of Barnard College scored a pretty point in her address of acceptance last Thursday, when referring to the dread that a college education must make a woman a portentously learned and awe-inspiring person. "I have never discovered," she said, "that a young man graduated from Columbia, Yale, or Harvard, is looked upon as such a paragon of learning—rather the opposite, I fear." And she added the express statement, founded on actual experience, that "a college course does not make the average girl a profound scholar." One thing that it does do, Miss Gildersleeve went on to point out, is to make the world a more interesting place to live in. Whatever other purposes colleges may serve, this is one that ought to be looked upon as primary, though in recent years there has been a pretty general disposition to ignore it. More than one prominent figure in college circles has not only failed to maintain that the acquiring of a liberal education is in itself a worthy end, but has virtually affirmed the opposite. Yet the possession of liberal culture not only makes the world more interesting to those who have it, but tends to make the world as a whole more interestng. And it would be a hazardous venture to undertake to prove that, in the present condition of things, the "marginal utility" of whatever tends to enhance the interest of life in this way is not greater than that of anything else that the persons who seek it in college could otherwise acquire or produce.

The ominous report of the formation of a Literary Trust dominated by Wall Street has been received in Indiana with a becoming spirit of resolution. That State admits that it produces more and better literature than any other. What would happen to its present prosperity with its leading industry stricken down it is impossible to contemplate unmoved. For a lighter menace, peoples have risen in revolt. Indiana will not do

that. Careless both of her own comfort and of the literary prestige of the Anglo-Saxon nations, she will, if worse comes to worst, starve the Trust into surrender by withholding her accustomed supply of raw material. The extent of this practice can be comprehended only when it is considered what an amount of denunciation, arising from lack of appreciation of her motives, the self-sacrificing commonwealth will bring down upon herself by her prudent but too ideal course. Deprived of their daily Hoosier novel, the rest of the people will lose sight of the moral issue involved and will clamor for government ownership and operation of literary production.

With the introduction in the House of Commons on Tuesday of the Government's Veto Bill, the constitutional and political crisis in England came once more to the front. On the surface, all is clear sailing for the Ministry. They have a large majority; they obtained as plain a mandate from the constituencies to pass a bill limiting the veto power of the Lords as could well be got; they have the promise of the King to create new peers if necessary to overcome opposition in the Lords; their followers are united—at least on this particular measure—while the Opposition is divided and without firm leadership. Yet it is a fact that the best of the Liberals are not thoroughly satisfied with the situation. They press forward, because they are politically bound to do so, but they are troubled with grave doubts whereto this thing may grow. The thoughtful men among them are not deceived by glib assertions that the Veto Bill will settle the question of the Second Chamber in England.

One thing that helps to make this question acute and pressing is the unexpected decision of the Lords not to proceed with the plans for reforming their own body. No longer ago than February 6 the London *Times* set forth what was supposed to be the Unionist purpose to push forward the work of changing the composition of the upper chamber so as to make it both more representative and more efficient. It said that if the Peers were now to drop the project, it would expose them to "odium and contempt as never having been in earnest at all, and as having merely passed a few sham resolutions in a hurry to stave off something unpleasant." Yet on February 10 the *Times* had to announce that "the Unionist leaders in the House of Lords do not now consider it a desirable course to introduce a bill in that Chamber embodying their proposals for reform." This decision can only mean that enough of "the Lords from the wild" have made it clear to Mr. Balfour and Lord Lansdowne that they intend to stand firmly on their hereditary privilege. At first sight, this makes the course of the Liberals still plainer; yet there has always been a hope on the part of their leaders that the House of Lords might be reformed—it is openly expressed in the preamble of Tuesday's resolutions—as well as limited in its legislative rights. They will now fear that a stubborn opposition by the Lords to all change will induce the Radicals to seek to go greater lengths.

Along with the news of the formation in Germany of a league for the restoration of good manners, comes the information that French politeness is sick unto death. Among those who have been in haste to ring its knell in the Paris papers, some attribute the trouble to the bad manners of women; they have, it is argued, by placing themselves on a level with men in the pursuit of a living, forfeited their right to that deference from the strong to which their former position entitled them. Such a narrow view of the nature of politeness excites surprise; politeness, we had supposed, was not confined to the relations of the sexes; that gracious abatement of one's absolute rights we had thought quite as much a matter of the relations of man to man. Politeness was born in an age when men wore swords for the purpose of exacting it, and the "very pineapples of politeness," as Mrs. Malaprop put it, lived before swords were utterly laid by. Politeness, it seems, is dying in an age of umbrellas and subway crowds, and it must be admitted that the manners of the eighteenth century could not, without serious disrepair, get across the Brooklyn Bridge. We may, in time, develop a code of manners less elaborately gallant than the old, but sprung, perhaps, from true good feeling.

A new crisis is reported from Lisbon, where the navy has adopted a menacing attitude toward the Provisional Government, because of the enforced retirement of a popular officer and revolutionary leader. Portuguese political crises, nowadays, need to be considerably discounted; but even if the difficult situation exists and the present Government is in some peril, it does not follow by any means that the Republican régime in Portugal is endangered. It is the misfortune of all military revolutions that the ease with which they are accomplished is a constant incentive to further revolution on the part of those who believe that things have not gone far enough. The navy and army in Portugal are more radical than the Government, and for the simple reason that a Government, setting out from no matter how radical a position, is forced to moderation by the very exigencies of the business of governing. Thus we have had in Turkey continuous dissension between the Committee of Union and Progress, which engineered the late revolution, and many of the Ministers whom the Committee itself placed in power. But whereas in Turkey such dissensions constitute a real peril, because of the presence of a powerful reactionary element that might learn to take advantage of the situation, in Portugal, it is generally understood, the monarchical system had so rotted away that even Republican dissensions can avail it little.

Russia's contentions in the frontier controversy with China have a sounder basis than we are accustomed to associate with Russian aggressive policy in the Far East. There seems to be no intention on the part of the authorities at Peking to take issue with the legal case made out by the St. Petersburg Foreign Office. It is a conflict between the rising national spirit in China and the vested interests of a foreign Power, and this particular incident is bound to hasten the movement within China for the abolition of extra-territorial privileges, which is one of the immediate aims of the progressive party within the Empire. It is a problem, however, that offers no easy solution. The foreign Powers will not yield their sovereign rights till China demonstrates her ability to maintain order within her frontiers. At the same time, the maintenance of extra-territorial privileges constitutes a perpetual source of irritation and national unrest.

OUR WASTE OF POLITICAL ENERGY

The question of the referendum has suddenly become one of the leading issues of English politics. Advocated for a considerable period almost solely by the *Spectator*, and adopted apparently without deliberation by Mr. Balfour in a campaign speech, it has now been taken up by the Conservative leader as necessary to the proper working of the British Constitution. In a recent speech at the Constitutional Club, Mr. Balfour declared that the referendum ought to be a permanent part of the Constitution for dealing with "great differences of opinion between the two houses of Parliament." He went even further and urged the application of the referendum even to cases in which the two houses are agreed, upon the demand of a sufficiently large minority of the House of Commons for reference of the question to a vote of the people.

It is not our purpose to discuss either the merits of the referendum as an institution or the prospects of its adoption in any form by the British Parliament. But it is extremely interesting to contrast the character of the propaganda now made in its favor in England with that of the movement in our own country in favor not only of the referendum but of the allied measures of the initiative and the recall. With us the keynote of the campaign for these "progressive" expedients has been the necessity of giving the people a weapon wherewith to counteract the influence of corrupting moneyed "interests" and corrupt politicians. Upon the fact, or the alleged fact, that Legislatures cannot be trusted to be honest, virtually the whole weight of the agitation of the initiative and referendum has rested; because mayors and other public officers may prove to be either corrupt themselves or under the domination of corrupt politicians, the recall has been regarded as necessary by those communities that have adopted it. But in the English discussion of the referendum we are in an entirely different world. There the referendum is not a police question, it is a political question—a question of the play of great political forces, not of the personal honesty or dishonesty of individuals. The *Spectator*, for example, has been using some very heated, perhaps even violent, language concerning the present coalition majority in the House of Commons; but it is always as a political coalition, and not as the tool of hidden interests, that the Government combination is treated. A leading argument, for instance, made in behalf of the referendum is that it would be a means of getting the nation's verdict on each one of two or three vital measures which a coalition might put through as part of their joint programme, but no one of which, taken separately, might command the approval of the people. How different this from the sort of discussion which necessarily forms so large a part of our American political life!

If we had but imagination to see what a price we are really paying for political corruption, the revelation would be staggering. One is in the habit of thinking of that cost as measured by stealing and wanton waste, by inefficient management, by bad workmanship; but it is very much to be doubted whether the aggregate of all this is comparable in importance to the injury inflicted upon the country by the diversion of so large a part of its civic and political energy from the consideration of real questions of public policy to the mere fighting of political abuses. In city, State, and nation, and in legislation and administration alike, the question of sheer honesty has, during a large part of our history, absorbed an inordinate share of the public attention. It is true that we have prospered in spite of this. It is true that the people of the United States are on the whole better situated materially, intellectually, and morally than those of any other nation. But our natural advantages are so enormous, the energy of our people and the freedom of our institutions are so superior, the absence of evils inherited from past ages has been so much in our favor, that merely being better off than other people is by no means sufficient to justify complacency. We do have bad tenement conditions, bad mine conditions, bad factory conditions, manifestly defective laws, staring imperfections in the administration of justice, and we are not quicker but slower than older peoples in remedying them. In the national domain we have allowed natural opportunities such as the world has never seen to melt away in great measure through sheer neglect. In the legislation of most of our States, year after year, the energy that should be devoted to making the most of our possibilities is largely expended upon the thwarting of evil schemes. Our cities have been growing up like Topsy, while the men who might have been engaged in making them what they should be have either kept out of "the mire of politics" or have had their hands full fighting bosses and boodlers.

Such a spectacle as has been presented at Albany during the session of the present Legislature should alone be enough to bring home the truth. That we should have to be happy because "Christy" Sullivan will probably not succeed in ripping up the principal courts of the common people of New York city for the benefit of political heelers; that we should look forward to a sensation of triumph when it shall finally be demonstrated that Murphy does not altogether carry the Legislature in his pocket—what could be more humiliating? Is it for this that we convene the Legislature of a great State? To what country can we point in which such an exhibition would be even remotely possible? But America will not tolerate these things indefinitely. They are already on the road to complete extermination in some of our States, and that they can be completely exterminated is perhaps even more fully evidenced by the history of England. Ancient wrongs and abuses undoubtedly still exist there; but a condition of corruption by the side of which even our condition is purity itself seemed there, a century and a half ago, to be part of the order of nature, and of this now no trace remains. But it is high time we were not reduced to the necessity of summoning up the shade of Robert Walpole when we need to keep ourselves in countenance.

RECIPROCITY AND THE FARMERS.

The trade agreement with Canada should set our farmers to doing some thinking about the effects of high tariff duties on their business. They have been ready to believe it when they were told that, because other countries cannot send us their farm products without paying heavy duties, therefore our farmers are "protected." Manufacturers and politicians have presumed on the gullibility of the farmers. That they have done this with so much success is one of the curious facts of our tariff history. Perhaps farmers are a bit slow to look into a complicated system that oppresses them. In France of the eighteenth century, it has been well said that the farm-

ers were the mules of the Old Régime. They carried the burdens; the other classes had whatever advantages there were. When the French peasants finally woke up to the situation, they became the mainstay of the Revolution. One may hope that our farmers, too, are on the eve of a great awakening. For, as a class, they gain nothing from the tariff; on the contrary, they suffer a huge economic loss every year from its operation.

If the farmer studies the case, he will discover that, in the first place, our tariff does not and cannot raise the prices of our agricultural staples. These are constantly exported; they have to find their markets abroad, and must accept the prices that result from competition with similar products from Canada, Argentina, Russia, and all other farming countries. The price of wheat in Liverpool is surely not "protected" by our tariff. And since the price of wheat sold at home, for consumption here, cannot even equal the Liverpool figure, it is as clear as day that our tariff duty on wheat has never added a cent to the price of wheat in the United States. And what is true of wheat is true of all other farm products that enter into our export trade. If our duties exclude some Canadian wheat, barley, meat, etc., the only effect is to increase Canada's export of those articles to Europe, where our products must meet their competition, and submit to the resulting price. And, we repeat, this European price governs the price here. Clearly, therefore, if our farmers will consider, they cannot fail to see what an empty favor the tariff on farm products offers them.

But this is far from being the whole case: it is only one side of it—the side of no gain. Now for the loss. This falls under two distinct heads. First, the obvious loss to our farmers from having to pay high prices for most of the things they buy for their own consumption. The prices of nearly all manufactured articles, whether imported or made at home, are enhanced by the tariff. When the farmer buys any of the thousand and one articles needed for himself and his family, he pays prices made higher by the tariff than they would be without it. That is what the tariff on manufactures is for. The tariff on farm products is meant to bamboozle the farmers. But the tariff on manufactures is a very different matter. The prices of our manufactures are not fixed in free competition with all the world. The tariff wall comes between.

This immediate and direct loss appears at once when a tariff is set up in a country. The producers of exports lose as buyers of other commodities. But there is another and probably greater loss that comes slowly and indirectly. It is more difficult to explain, because it depends on the working of more obscure though quite irresistible laws of trade. A tariff wall disturbs the natural movement of money between countries. It does not at once diminish exports, but does diminish imports. The customer countries have to remit money instead of the goods they formerly sent. This movement of money goes on through a term of years until a new equilibrium of trade is reached in which each country's exports are again roughly equal to its imports. One of the forces at work to reëstablish equilibrium is the rising scale of prices in the tariff country. The inflow of money has this sure result in the course of years. Producers of exports feel this rise of prices in all things that they buy; but in selling their own product they get no rise, for the price of their product depends, even at home, on the price it commands abroad. That is the precise position of American farmers to-day.

In this indirect price-raising by the tariff, as in the direct and immediate effect, farmers have no share as regards their own product. Their costs of producing are increased: they pay more money for labor and implements, and their family purchases are at raised figures. But the prices of their exportable crops are in fact lowered, for they are fixed in other countries where the supply of money is relatively small—fixed by the cost of producing similar crops in countries where money goes farther in paying costs. So our farmers are burdened by the indirect operation of the tariff.

Does some one think that in saying the tariff causes our country to have a greater supply of money than it would have without the tariff, we give a conclusive argument in favor of the tariff? Why, a common laborer has been heard explaining to his companion that if you get two dollars where you formerly got only one, but have to pay two dollars for what formerly cost you only one, you have gained nothing. That is good sense and good political economy. Unfortunately for our farmers, their case is different. They get no increase of price by the tariff, but have to pay more for what they buy. The excess of money brings *them* only damage and loss. Can they wonder that they are so often disappointed at the results of their labors?

THE DECLARATION OF LONDON.

It is announced that the British Government will not press for the Parliamentary ratification of the Declaration of London of 1909, until after the meeting of the Imperial Conference in May. The desire is first to consult the colonial authorities. But this does not imply that the Ministry has receded, or will recede, from its approval of an international agreement to which it had given official consent, and which Sir Edward Grey, the Foreign Minister, has vigorously defended against the attacks that have been made upon it. The matter is adjourned, not dropped. Yet the protests against ratifying the Declaration have been so strong, some naval men and many chambers of commerce having pronounced against it, that the clearest understanding of exactly what is proposed, and of its advantages, will be necessary before Parliament can be got to act.

The Declaration of London may be regarded as a highly important addendum to the Declaration of Paris of 1856. It deals more at length and in greater detail with the chief questions taken up at the earlier conference—namely, the rights of neutral commerce in time of war, blockades, and contraband of war. The United States, it will be remembered, did not adhere to the Declaration of Paris. This was because it did not go far enough toward meeting the views of this country. Our position was that all private property at sea, not munitions of war, should be exempt from capture. This principle in its entirety was not accepted at the London conference of naval Powers, but so long a step in that direction was taken as to satisfy our representatives that much had been gained for the historic contention of the United States, and they assented to the Declaration. What it did was, first, to make out a list of articles which should under no circumstances be regarded as contraband. This list consists principally of the raw ma-

terials of manufacture, such as cotton, wool, silk, flax, rubber, hides, etc. With these goes a large number of enumerated manufactured goods, which are never to be treated as contraband; neither are articles serving exclusively to aid the sick and wounded. The Declaration likewise made out a list of "conditional contraband"—foodstuffs, grain, clothing, fuel, money, railway material, wireless telegraphs, telephones, and so on. These are contraband or not, according to their destination. If intended for the direct use of the enemy's forces, they are liable to capture; otherwise they are free.

Now, the agitation on this subject in England springs from two different lines of reasoning. One is that of the high and mighty sea-power men. They desire to have all these questions left to the navy, to the end that British commanders may seize whatever they please in order to inflict a blow upon the enemy's commerce, and may blockade his ports so completely that, as Sir Arthur Wilson, the First Sea Lord, has said, not one of his merchant vessels can put to sea. This is the extreme fighting theory of the Admiralty, by which the standard of British naval superiority must be kept so high that every hostile fleet can be destroyed, and every harbor blockaded. But it is another view which has influenced the business men. Their fears have been excited lest, in case of war, England should be starved by having her sea-borne food supplies cut off. This danger arises, it is argued, from the language of Article 34 of the Declaration of London, which would make foodstuffs contraband if they were "consigned to a fortified place belonging to the enemy, or other place serving as a base for the armed forces of the enemy." Might not Liverpool be made a "base"? Rosyth is a fortified place and has railway connections with Glasgow; would not food shipped to Glasgow be contraband? These are some of the questions with which Thomas Gibson Bowles has been seeking to alarm Englishmen, and to persuade them not to "embark in these international agreements."

It is to be hoped that all this excitement is but a passing flurry. The Government has so far stood firm, its consent to postponement of the matter until after the meeting of the Colonial Premiers in May being explained as only a fitting deference to colonial opinion. Neither Sir Edward Grey nor Mr. Asquith has wavered in the judgment that the Declaration of London represents a marked advance over existing practice, and ought to be ratified. In this position they are supported by many publicists of weight in England, and by several professors of international law. It is always easy to get up an outcry in England by any one who will affirm that the navy is not what it ought to be, or that the over-ocean commerce upon which the life of the island-kingdom depends is imperilled. But Englishmen have not the money, if they had the will, to build ships enough to outrank all the navies of the world and thus to be in a position to make their own rules of international law. The strong drift of peacefully-minded nations is toward such broad and humane provisions as are embodied in the Declaration of London, and it is probable that English sentiment will yet swing round to approving them.

FOR AN IMPROVED M.A.

About the time that the Teutonic Doctorate in Philosophy became an academic staple among us an attempt was made to give meaning to the venerable and decrepit Master's degree in Arts. No title more needed rehabilitation. By a misreading of the English precedent, which made the M.A. a qualification for graduate voting in Convocation, this easy honor was open to almost any American college graduate who managed to live ten years and spare ten dollars. But, naturally, the honor at length got too cheap, and there was a reaction, amounting in some cases to revolt. We know of a Princeton alumnus who deliberately dissuaded some dozens of his classmates from taking the degree "in course."

By way of mending matters, the better colleges abolished the degree in course and made it a reward for a single year of graduate study. That is the general practice to-day, and under these conditions, while the degree may not mean very much, it has at least come to mean something. Meanwhile the whole subject of graduate study has begun to clear up. It was assumed, when Johns Hopkins showed the way, that every university student was or should be engaged in original research and thus a candidate for the doctor's degree. This not unnatural assumption had the unfortunate result of dividing all graduate students, sheepwise and goatwise, into those who got the doctorate and those who failed, and here the M.A. came in as a *solatium*. To pursue higher studies for a year without enlisting as an investigator thus became respectable. This was a gain. It enabled school teachers and college graduates of scholarly tastes to undertake university studies without later having to explain that they had not been refused the doctorate.

As the university experiment has been tried more fully it has become clear that a great many graduate students with serious purpose and a just claim upon our universities have no vocation for original research and no need of it in their professional work as teachers, writers, or what not. Now, while the strength and the pride of a university will always lie chiefly in its productive scholars, and any lowering of the ideal of research would be calamitous, it is pretty certain that in most universities there will be a proportion of graduate students who wish a broad scholarly groundwork for the various learned professions, or men who indulge an intellectual curiosity of the merely acquisitive sort. It seems to us that such students should be cared for by the university, and that our present system provides very ill for them.

What we need is a reasonable attitude toward the doctor's degree. It is a certificate of proficiency in research. For a generation it has been treated as evidence of teaching capacity, but experience shows that many excellent teachers are not doctors, whereas some highly recommended doctors are but sorry teachers. As long as the Master of Arts is set at the end of the first year of graduate study, the inducement is strong to regard it as a goal. Many graduate students who would greatly profit by extended studies are thus encouraged out of the university, if only that they may not seem to fall into the class of disappointed candidates for the doctorate. The first year of graduate study is usually a time of orientation and uncertainty. Many a good student merely learns the use of his materials and sound habits of work within this space. In most cases a second year of university residence is desirable, and in some cases a third. We need a way of keeping men a little longer at work without forcing them into the routine of preparation for the doctor's degree. And

If the Master's degree were granted for two years instead of one, we should have an arrangement well adapted to the wants of a great many graduate students. Unless an undergraduate has already gained good habits of study—and this is the exceptional case—a year is not much time either for repentance or attainment. In two years something substantial may be accomplished, and men with this amount of training should be sufficiently equipped for ordinary college teaching. It seems to us that the complete rehabilitation of the Master's degree involves the raising of the requirement for one year of graduate study to at least two, and that such a reform is already implied in the present system. This change would be no mere furbishing up of an academic title; it would give a real inducement to wider and sounder studies, rid university life of quite unnecessary tragedies, and the scholarly work at large of much forced, premature, insincere, and relatively valueless research.

THE POPULAR MAGAZINE.

In the present controversy between the Post Office and the magazine publishers one fact stands out clearly, that something like a crisis has supervened in the affairs of the low-priced periodical press. The rise to power of the popular magazine has taken place within a very few years. The publication of Miss Ida Tarbell's history of the Standard Oil Company in *McClure's Magazine* for 1894 may be taken as the beginning of a movement which attained speedy culmination with Mr. Lawson's "Frenzied Finance" in the pages of *Everybody's*. There were cheap magazines before Miss Tarbell and Mr. Lawson, but they were not the popular magazines that we know to-day. Lawson's success was both a symptom and an incentive. Boston's fervent rhetorician had tapped an abundant source of popular interest. But at the same time he had opened up a vast new field of publishers' profits. He had discovered the secret that circulation goes with agitation, a discovery that had been made in the newspaper world a goodly number of years before. Between him and Miss Tarbell the distinction might be made that, whereas the historian of Standard Oil, in spite of the bitter indictment she drew, set out to deal with a subject of wide public interest, Mr. Lawson valued his subject because it was capable of creating wide public resentment. Miss Tarbell forged the weapon and Mr. Lawson turned it to new uses, from which only now, after three or four years, we are beginning to see the blunted edge spring back.

We have said that Mr. Lawson was a symptom as well as an incentive. He was the first loud magazine mouthpiece of that widely-ramified movement which we have learned to speak of as the "uplift" and the "awakening." In the newspapers the battle had long been going on. It was then taken up by the weeklies and the monthlies. The periodical press, in great part, underwent an astounding transformation. From being merely recreative or "sedative," as some of the older magazines were content to remain, it became combative. The novelist retreated before the special-article writer, the "fiction-story" made way for the "fact-story." The editor's monthly instalment of mildly inconsequential chat became exhortation ranging from the oratorically vehement to the suggestively sulphuric. It got to be said of the magazine of to-day that it was largely a copy of the newspaper of last week. Not that this attached any stigma to the magazine. Given the great upheaval in public sentiment, it was inevitable that the magazines should rise on its crest. Mr. William Archer, an ardent admirer of our popular periodicals, has pointed out that for geographical reasons we cannot have in this country a national daily newspaper like the *Times*, the Manchester *Guardian*, or the *Scotsman* in Great Britain. The American farmer has always been dependent upon his weekly paper. The low-priced weeklies and monthlies found their opportunity and used it to the utmost.

That opportunity, it must be noted, was a double one. The years after 1903 were a period of material as well as of moral progress. Whatever may have been the case with the working population in the large cities, the farmer, and with him the great West and Middle West, was prosperous. If he cherished resentment against political and corporate dishonesty, he could also afford to subscribe to the magazine that voiced his resentment. Circulation growth, on a scale undreamt of a dozen years ago, became the rule. And with circulation came a great development in magazine advertising, for here again the magazine performed a function which the newspaper could not attempt. As we see it now, the magazines were not the Golcondas they were fond of pretending to be; but there can be no doubt that in the fat years between 1903 and the panic of 1907 the magazines were abundantly prosperous. With prosperity came both power and extravagance. Mr. Archer speaks with admiration, and justly, of the princely ways of American magazine editors. Thousands and tens of thousands of dollars would be spent on a single series of articles. Authors of established reputation got for their work whatever they asked. Even the ordinary magazine hack learned to expect two or three hundred dollars for his "story." It was all very magnificent, but, as events after October, 1907, have shown, it was not wholly wise.

It should be said at once that the power wielded by the magazines during the last five years, though exaggerated, has been very great, and that such power has had its good as well as its evil aspect. They have corrupted taste, and they have often hindered genuine reform by rousing a spasmodic hysteria. There have been weird exaggerations and aberrancies. This would not be America if, having seized upon a "good thing," we did not work it to death. Exposure of public evil is essential to public health; even the "muckraker" performs a useful function. But it is on record that, carried away in a frenzy of witch-hunting, we, an optimistic people and a people boasting of a lively sense of humor, began to see the world all in black. Having uncovered every imaginable political and social evil, we went into pathology and began a passionate hunt for anything that could possibly be the matter with us. After Standard Oil and Wall Street and the railways and the churches and the colleges came the hook-worm and pellagra, and heaven knows what. A vast appetite for horrors had been created, and to satisfy that appetite editors grew reckless; then they grew desperate; then they grew ridiculous. When one magazine began a crusade against dishonest dentists, it was evident that the possibilities of the situation had been exhausted, and that a change must come.

VERNACULAR LITERATURE IN INDIA.

SIMLA, India, January 15.

Our vernacular literature, of late years, has received a great impetus from the reactionary wave that has been sweeping over India. The immediate result of the introduction of English education in Hindustan was to infatuate the young men of the land with a reverence for everything Occidental, good, bad, and indifferent. Indians who passed through the schools and colleges organized on Western lines utterly gave up their old ways of life and thought. They adopted European clothes, and borrowed Occidental manners. They spoke pure Anglo-Saxon or their native tongue freely interspersed with English expressions, and some of them even changed their Hinduism for Christianity. The waning years of the nineteenth century saw the pendulum begin to swing back. When the Mongols beat the Slavs on the Manchurian battle-fields, and, as a consequence, the intelligent among the brown men of this country became fired with a pride and enthusiasm they never before possessed, the reaction against the Westernization of India set in at its full strength. Native Christians ate raw cow dung—the prescribed penance—in order to be re-admitted into the Hindu fold. Modernized Indians cast aside their European garb and donned the *dhoti* and *chaddar*, or *kurta* and *chapkan*. They vowed that they would boycott English goods and encourage indigenous industries. Some of them even went to the length of founding national schools and reviving the old ways of teaching. Hindustan resounded with the cry of "Back to Indian Civilization," and English-educated Hindus gave themselves up to cultivating their art and studying their philosophies and religions. This movement is finding its culmination in the propaganda for the culture of the various vernaculars.

Indeed, to-day the country has become a great battlefield, on which the numerous dialects and languages spoken and written by the congeries of races and religions that compose the Indian population are engaged in a fierce fight for supremacy. To the Hindu, the Devnagri or Sanskrit characters; to the Moslem, the Arabic or Persian alphabet; to the Sikh, the Gurmukhi script, are religiously sacred. As the Sikhs are confined to the Punjab, the controversy over Gurmukhi—a derivative of Sanskrit—is restricted to the province of the Five Rivers. The Hindus and Moslems, however, being distributed all over India, the contest between the characters sacred to them rages over the whole peninsula, though doubtless the battle is most sanguinary in the United Provinces of Agra and Oudh, and the Punjab. The Hindi-Urdu question, as it is popularly called, has, in fact, become so vexed that it is creating bad blood between the educated Hindus and Moslems. It is only fair to state that probably twice or three times as many people use Sanskrit as employ Persian or Arabic characters, and hundreds of thousands of Mohammedans have been using the Sanskrit; but, as education increases among the Indian Mohammedans, and the controversy between Hindi and Urdu waxes hotter, the followers of the Prophet are becoming more and more averse to teaching Sanskrit characters to their sons and daughters.

Meanwhile the larger question of the national language itself remains. One might say that in addition to English, Hindi and Urdu are the *lingua franca* here. One may also say that to all intents and purposes, the two are one and the same. The chief difference is that the Hindus use a number of Sanskrit terms, and the common language becomes Hindi. The Mohammedans, on the other hand, burden the *lingua franca* with Persian and Arabic expressions and phrases, and it becomes Urdu or Hindustani. This artificial process can be carried on to such a length that Hindi and Hindustani may appear to be absolutely distinct tongues, or it may be relaxed so that either a Hindi or Hindustani speaking people may be able to understand each other with tolerable ease and accuracy. But if the Hindus and Moslems are wrangling for their respective sacred scripts, they are fighting all the more fiercely for their own favorite language. Hindus are infatuated with Hindi, and Mohammedans with Hindustani.

Moreover, provincialism forms a marked characteristic among the natives of India, and as a consequence the discussion is enlivened by the agitation for various provincial dialects. The Bengalis favor improving Bengali; the Punjabis wish to concentrate on Punjabi; the Bombayites are engrossed in their Marhati and Gujerati, and the Madrasis advocate going ahead with their Telugu, Tamil, Kanarese, etc. Where such divergent interests exist, the chance for the evolution of a common, country-wide language is small and remote.

Depressing as is the situation in regard to a common language, or even common script in India, there is no doubt whatever that the various vernaculars are making a great headway. Every year the number of newspapers, periodicals, and books printed in one or more of the native tongues increases, and the publication of vernacular literature is coming to be highly remunerative to those engaged in it. India, especially Bengal, has produced a host of feminine writers. Most of them make it their life-work to edit newspapers and write pamphlets and more pretentious volumes for the particular benefit of the members of their own sex. Indeed, the most notable feature of the present-day vernacular literature is the number of papers and books exclusively devoted to feminine topics. In Calcutta a clever little magazine called *Bharati* is issued, in Bengali, by a Bengali woman, Mrs. Ghosal. In Allahabad a number of Hindu ladies, all belonging to the advanced family of Moti Lal Nehru, edit and publish a Hindi magazine in feminine interests. In Delhi, the Moghul capital of India, a Moslem woman conducts a woman's monthly magazine. At Lahore, Miss Fatima, the talented daughter of Mahbub Alam, the editor of the Urdu daily, *Paisa Akhbar*, gets out the *Shrif Bibi* (Gentlewoman), writing her articles and editing her "copy" while secluded in the privacy of the harem, and viewing the world from the narrow lattice-work of her *Burq'a*, which completely enshrouds her body as, properly chaperoned, she occasionally goes out of her home. Both of these last-named Moslem women's magazines are printed in Hindustani. At Lahore, too, is published *Chand* (Moon), a Hindi woman's magazine, of which Mrs. Harkishen Lal, a distinguished graduate of Bombay University, two of whose sisters are doctors, is managing editor. At Ferozepore, at the farther extremity of the Punjab, more than a thousand miles from Calcutta, a monthly magazine for women, quite appropriately called the *Punjabi Sister*, is published under the auspices of the Sikh college for girls. This is printed in Punjabi. About a thousand miles to the south, in Bombay, a woman's paper, *The Stree Bodhi*, printed in Gujerati, recently celebrated its fiftieth anniversary. This is by no means a complete list of the publications issued by women and for women in India, but it gives a fair idea of how the various vernaculars are pressed into the propaganda of uplifting the fair sex.

Many women use their native dialects to write novels. Most of these are poor things, but some notable volumes have been issued. "A Fatal Garland," written by a Bengali woman, Mrs. Swarana Kumari Devi, in Bengali, recently Englished, is a powerful and fascinating romance of the days when Moslems ruled Bengal. Before leaving the subject of Indian women who write in their provincial dialects, it is fair to add that many of them engage in writing serious books, some only translations of Occidental, mostly English, works—others volumes on sanitation, housekeeping, the bringing up of children, and even travel sketches.

Many men, also, try their hand at fiction. Indeed, novels in the different dialects are becoming very popular in this country. Not only do the half-educated men devour them, but the middle-class and aristocratic women with primary schooling are greedy for them. As a rule, Indians write much better nov-

els in their native tongues than they do in English, and, as a result, several notable volumes have been produced during the last generation.

In a country like Hindustan, where religion holds unquestioned sway, religious books naturally are the order of the day. The Bhagvad Gita, the Ramayana, and the Mahabarata are very popular, as are also the commentaries of the Vedas and Upanishads. Printed in various vernaculars, in easy language, they command fairly large sales, and are read out to thousands who cannot themselves read or own them. Commentaries of the Koran and Hadis, and the religious lore of the other sects, are equally popular. Enterprising publishers of vernacular literature are constantly bringing out translations and new editions of these old favorites, while fresh commentaries are always forthcoming. My attention has been called to a splendid concordance of the Vedas, recently compiled by Swamis Nitayananda and Vishweshvaranand, and published under the patronage of the Gaekwar of Baroda, which is so well done and printed that it might be the work of an Occidental *savant*. Some Hindus are making it their business to dig deep into the old literature, and are publishing brochures and books to show just what the ancient civilization was. These volumes tell us just how progressive the old-time patriarchs were, and all of them are written with a view to making the people of to-day hark back to "the old enlightenment." Creed-cursed Hindus and Moslems seem to be open to just one influence—the authority of their spiritual tradition. Naturally, religious and social reformers, no matter whether they advocate reform of early marriage, re-marriage of widows, the improvement of the status of the low castes, or of divorce and marriage laws, are forced to quote chapter and verse from the sacred scriptures. It must be said to the credit of these people that they possess the genius to use those very texts which have been quoted as prescribing these evils in such a way as to uphold the arguments for reform.

But, despite this reactionary wave that is carrying the Indians back to the old days, level-headed people are stirring themselves and writing books in the vernaculars that tell what the world to-day is doing, invariably appending a moral as to what India ought to do. Much of this work necessarily means mere translation or compilation—but it should not be under-rated on that account. The attempts of a man like Mahesh Charan Sinha, who lately wrote some treatises on chemistry and physical science, and of the Indians trained abroad, who have produced in their native dialects simple books dealing with scientific agriculture, fruit culture, and kindred subjects, mean much to the land where the prevalent methods and implements are too old-fashioned to be efficient. Great importance should be attached to the vernacular pamphlets which have been issued of late years, many of them by the Government, and which are being increasingly brought out on sanitary and medical topics.

The vernacular political literature has not been a very important factor in India—until the virulent pamphlet made its début a half-dozen years ago. Since then a great many vitriolic brochures, abusing the foreign administration of the land in unmeasured terms and inciting the people to murder English officials in cold blood in order to terrorize the Government, have been surreptitiously printed, and secretly circulated. The police have displayed a great deal of activity in running down those engaged in such agitation, but, despite their efforts, the flow of anarchistic literature has not been entirely checked. Many of the hundreds of daily, weekly, semi-monthly, and monthly publications printed in the different dialects have interpreted freedom of press as license, and have written rabidly about the Government and its officials. The advent of the terrorist in India is almost wholly attributable to the fulminations of these yellow sheets. The consequence has been the enactment of a stringent press law, which has been in operation since the beginning of last year. It promises to cope with the situation.

It must by no means be supposed that all the vernacular press in India is tinted red. On the contrary, there are many journals printed in the leading languages of the land which confine themselves strictly to purveying news and legitimate discussion of current topics. *Saraswati*, a Hindi magazine, may be mentioned as one of the best of this type. It may also be added that to-day in India there are some vernacular publications devoted exclusively to the interests of children, such as *Bachaun ka Akhbar* of Lahore.

SAINT NIHAL SINGH.

Correspondence

POSTAGE ON BOOKS AND MAGAZINES.

TO THE EDITOR OF THE NATION:

SIR: I believe that the following principles may be considered established beyond serious argument:

(1.) That the government should so conduct the affairs of the Post Office that it should be run without a loss, and, on the other hand, without any considerable profit.

(2.) That no considerable class of mail matter should be carried at such a rate that its handling will prove a loss to the Post Office, and on the other hand, that no considerable profit should accrue from handling any considerable class of mail matter.

The last of these two principles has nothing to do, it seems to me, with such questions as the rural delivery or the parcels post which the magazines have cited in their defence, but which belong in an entirely different category because they affect the country as a whole, and which may reasonably be established and carried on whether by so doing the postal service makes a loss or a profit out of such measures.

If the principle set down as No. 2 above is departed from and it should be decided still to continue to carry magazines at much less than the cost of distributing them, because of the alleged educational and other good influences that magazines are supposed to have, then, in that case, the government should also handle other classes of material in the same way.

Notably, there should be added to the class of matter which is carried at less than its cost to the government all books, which are at least as valuable to the public from the educational point of view as magazines, and which are now carried at a rate which is prohibitive when compared with the rate charged for magazines.

All publishers and distributors of books have felt very seriously the competition of the popular magazines, and most of the different classes of books have decreased in sale (some classes of books have been wholly exterminated), because of this competition of the popular magazines, while even the classes of books which have not decreased in sale because of this competition have failed to increase in sale correspondingly to the growth of the country in intelligence and population.

Thousands of book printers, book binders, publishers, and booksellers have serious cause to complain of the action of the government in discriminating in favor of the magazines, and against books, in the postal charges for the distribution of publications.

It is my opinion, and the opinion of many of those engaged in the above trades with whom I have spoken, that the charge for postage for magazines should be increased to a rate which would cause them to be carried without loss to the Post Office and that the new rate for magazines should be the same as that which is charged for the distribution of books.

In other words, there can be no question whatever that the rate on magazines is too low and that the present rate on books is too high, and that the one should be advanced and the other reduced until both pay precisely the same rate of postage.

GEORGE P. BRETT.

New York, February 18.

THE JOHNS HOPKINS IN ITS STORM AND STRESS.

TO THE EDITOR OF THE NATION:

SIR: The Johns Hopkins University Circular, 1911, No. 1, is dedicated "In Memoriam A. Marshall Elliott." Truly, a noble tribute to a noble scholar and man. Far be it from me to attempt to associate my feeble voice with the voices of Gildersleeve, Mardon, Bright, and other intimate associates of the deceased. I merely seek to enter a brief comment upon one passage in Gildersleeve's address. In speaking of the early days of the university, its Nestor says:

To the few survivors of that joyous storm and eager stress nothing can ever have the personal value of those first few years. Charles Wesley sings of the sweet comfort and peace of a soul in its earliest love; but he is singing of a divine love. There was not much comfort in the hall-bedroom studies and kitchen laboratories. There was not much peace in the to-and-fro of drawing up programmes and holding consultations and going to lectures in order to encourage our colleagues, but it was a glorious time for all that and by reason of all that, and that was the time when Elliott came to us, etc.

Professor Gildersleeve will be glad, I am confident, to get confirmation of his historic sense, to learn how the youthful Johns Hopkins appeared to an outsider. In March, 1881, while professor in the University of Cincinnati, I made my first visit to the Johns Hopkins, of which I had heard so much. I passed the entire week in Baltimore—it was spring recess in Cincinnati—and made the acquaintance of all the staff and many of the students in language and literature. True, I did not visit "kitchen laboratories," science not being in my line. But I did visit many a "hall-bedroom" study, and got there many a wonderful revelation of the possibilities of work. I saw accomplished before my eyes things which I had regarded only as fond dreams for America. No need to go into particulars. Two impressions only I will recall as characterizing the whole. The one was that the young university was dominated by the *demon* of work. The term is used deliberately, and Professor Gildersleeve will not challenge it. The other was that the barrier between instructor and student seemed to be non-existent. Teachers and taught were merely fellow-workers, sitting round the tables, using the same books, exchanging views rather than giving and accepting dogmas. On both sides was inspiration, unstinted, unquestioning devotion.

Well, my impression of 1881 is still fresh in 1911. I give it for what it may be worth; it will help other scholars to understand why and how the Johns Hopkins rose to eminence.

Yes, "it was a glorious time." Shall I not quote, in Miss Swanwick's translation, the famous passage in Goethe's "Iphigenie"?

> Endless, my friend, the projects which the soul
> Burns to accomplish. We would every deed
> Perform at once as grandly as it shows
> After long ages, when from land to land
> The poet's swelling song hath rolled it on.
> It sounds so lovely, what our fathers did,
> When, in the silent evening shade reclined,
> We drink it in with music's melting tones.
> And what we do is as it was to them,
> Toilsome and incomplete.

And it is fitting to conclude in the minor key, in the words of another great poet. It was a time when "to be *young* was very heaven."

J. M. Hart.

Cornell University, February 13.

PENSIONS.

To the Editor of The Nation:

Sir: In the *Nation* for January 12 appeared a letter from Mr. T. G. Dabney of Mississippi on the subject of Confederate pensions. In the main, I am disposed to agree with Mr. Dabney. Especially, I glory in the honor and pride of those old veterans who, as a body, not only pass no resolutions about service pensions, but who, as individuals, scorn to take aid from the state when not actually in need. I am personally acquainted with a veteran who enlisted when a mere boy and fought all through the war, but would not for a moment think of taking a pension. For a time he was associated in business with a man from the North who, I believe, never smelled powder on the battlefield, but is now drawing a handsome pension.

No, the veterans themselves are not inoculated with the virus so prevalent and deadly elsewhere, but it begins to look as if some of our lawmakers were. The last Georgia Legislature seriously discussed a service pension, and the Arkansas House of Representatives, after being in session only about ten days, has passed a bill increasing the appropriation for pensions from $1,000,000 to $1,250,000 for two years. Yet the treasury is now facing a serious deficit. Tennessee has also voted an increase of $250,000.

If this continues, can any one say that education will not suffer? We have almost reached the limit of taxation in this State. Along with the pension bill goes one to limit the rate of taxation for school purposes to seven mills. Yet our public schools are inadequate and the university is seriously handicapped for lack of funds.

But the main purpose of this letter is not to discuss pensions and education in the South; rather I wish to enter an emphatic protest against the shameless and outrageous system of Federal pensions. It has been bad enough, really beyond endurance, for years, but now the nation is to be outraged and insulted by another raid in the Sulloway service-pension scheme. We talk of tariff reform—heaven grant that this generation may live to see it!—but a reform is needed in the pension business also. Indeed, this raid for an additional $45,000,000 looks as if it were timed to create a deficit which would make tariff reform impossible. Where is the manhood of the North that it does not rise up against this outrage?

David Y. Thomas.

University of Arkansas, February 10.

WOMEN STUDENTS.

To the Editor of The Nation:

Sir: In a recent number you remark that "to a logical mind" the election or non-election of Mme. Curie to the French Academy would be equally useful in an argument against the contention that women are incapable of the highest scientific work. If the discussion of this contention were relegated to logical minds, probably little would be said on it for some time to come; but a great deal is said on it, in indecent haste, generally to the effect that women have had a fair trial and have been found wanting. How unfair the trial has been perhaps only those familiar with the leading co-educational institutions really know.

There are two things which exert much subtle influence on the intellectual accomplishment of women. One is the basis on which women are chosen for intellectual positions. The other is the attitude toward women of those who have assumed the charge of their education.

Of the first little need be said. But apart from the weight given in this connection to "feminine charm" and social graces, it should not be forgotten that the demands in such things as dress are far heavier on women than on men, and at the same time variation from the customary standards more severely penalized. Let me add only that I have seen a woman's plainness of feature bewailed on a teachers' agency blank by a professor of astronomy!

As to unfavorable treatment of women students, this ranges all the way from subtle condescension to downright insolence. One professor recommends a student "for any position which a woman can fill, that is, anything but a head-professorship." Another boasts that no woman has taken the doctor's degree in his department, or ever shall. Two professors, standing in the presence of a woman student, calmly compare the relative importance of their departments on the basis of the number of their men students. To be sure, the student who with a lordly air delivers the opinion that it is hardly worth while for a woman to apply for a fellowship, as there are so many men applying, may find himself third on the departmental list, after two women. And there are men on the faculty who blush for these manifestations of masculine pettiness. But my point is that the college girl who, while the tenderness of youth is upon her, gets her impression of the spirit of the learned world from such incidents can hardly be said to start fairly on the scholarly career.

In the case of one young woman some of the things said during the discussion of segregation at the university in which she was then a student induced a deep sense of shame and injustice which broke her spirit for years. I do not know how typical this experience is. The only parallel to it which I have known is the case of Mark Pattison. The results, that is to say, were very similar; but the cause of her depression seems less inadequate, because the meanness which shattered her confidence in life was displayed immediately in the men whom she had most honored, while it was directed against the freedom of all her sex, and was greeted with widespread applause.

Perhaps stronger natures do not let mere expressions of opinion affect them so much. But perhaps, also, as Darwin thought, great mental ability is likely to be associated with extreme sensitiveness. Be this as it may, there are many women who go ahead and do their work, their best, and do it well, who take such things as a matter of course, and with no apparent resentment. I have sometimes been astonished by the sex-humility of rather able women. "Oh, yes," they say, "Women can do all the ordinary things fairly well, but can never equal the best men." I think the women's colleges abound in instructors with that spirit. But I remember that when Bain remonstrated with Mill for not basing his argument for the improvement of the opportunities of women on a more moderate estimate of their endowments, Mill replied that women needed to be stimulated to confidence in themselves. And I almost think that if I were educating a girl I would rather have her stay at home and study Mill than go to a woman's college.

E. B. Harrison.

Chicago, February 11.

A CORRECTION.

To the Editor of The Nation:

Sir: Permit me to correct Mr. Kildal's letter on "Scandinavian Literature" (February 2) in one item in the part dealing with

Swedish books. August Strindberg's "Svarta fanor" is not a volume of essays, but a satirical novel, in which he attacks what he regards as a coterie of literary pirates. It created a sensation when it appeared, in 1907. The first edition was sold out within a very short time, and second-hand copies sold at fabulous prices. On the last page of the book the following statement was printed: 'This book is printed in only a limited number of copies. A new edition will not be issued." In spite of this, a new edition was issued last year by another publisher than the one who had published the first, without any indication of its being a new edition.

Strindberg published last year three volumes of essays: "Tal till svenska nationen," "Folkstaten," and "Religiös renässans." The first-named, in which the author plays havoc generally with Swedish traditions, both historical and literary, gave rise to an animated free-for-all fight of a not very edifying character, which finally terminated with a controversy between professor Bengt Lidforss and the critic, Dr. Frederik Böök, about the integrity of the late Oscar Levertin as literary critic.

FRESHMAN ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: A number of your correspondents have complained of "Freshman Composition" as being very poor. It is true that the writing of freshmen often is poor, yet many of these very students, one feels sure, are perfectly capable of conducting affairs in which they feel an interest, and of writing efficient letters concerning them. They are grown persons, they have graduated triumphantly as seniors from their recent high school courses. It is strange that they should so lose their efficiency when they enter the college theme course, unless there is a reason for it for which the situation is partly responsible. The situation, I think, really is that the ordinary young college student "does not know what the instructor wants," supposing the matter personal. Not having a subject, he postpones getting one to the latest moment, and then begins to write at once without shaping it. Moreover, he is pressed for time, and means to give no more to his theme than is absolutely needed.

If the instructor, who, of course, knows that a subject must be thought on, perhaps talked over, fully absorbed, hence cared for, should himself take these preliminary steps with his class, he will find that the members of it will "talk up" a subject well, with mere chairmanship on his part, and that they will leave the classroom in the state of the real writer, with a subject in heart which they are eager to express. The well-formed paragraph comes, then, of its own accord. This method of teaching English partly, at least, banishes those weaknesses which instructors abhor with such good reason. The idea was pronounced long ago in the words, "of the abundance of the heart his mouth speaketh." H. C.

A MAN OF TWO MINDS.

TO THE EDITOR OF THE NATION:

SIR: Whether Mr. Taft's journeyings have lately taken him over the road to Damascus, I do not know; but he has evidently seen a great light since last November. He now, very wisely, asks why we should put a duty on commodities of which we produce a surplus. Why, indeed? And the Aldrich-Payne tariff is the best ever evolved by merely human wisdom.

Omne tulit punctum qui miscuit free trade and stand pat. That is bad Latin; but here is a bit of good Latin uttered by an old Roman twenty-one hundred years ago: *Vir ancipitis animi communis hostis.*

THE BOY SCOUTS.

TO THE EDITOR OF THE NATION:

SIR: It is a pity that such promises of good results as are given by the young organization called the Boy Scouts should be injured by any association with militarism. The denial of such methods and allurements is often made; but if this be the truth, why not remove all objection by a return to the original name and purpose, "Woodcraft"? G.

FRENCH WORDS IN ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Comments published in distant parts of the country evince the interest which is felt in the attempt by a New York public-speaking club to select the twenty-five most beautiful words in English. Sixty-three lists of twenty-five words each were submitted. The list of Mr. James Shea, a lawyer, was voted the best. It was as follows: Melody, splendor, adoration, grace, eloquence, virtue, innocence, modesty, faith, joy, honor, love, divine, hope, harmony, happiness, purity, justice, truth, liberty, peace, radiance, nobility, sympathy, heaven. It may be added that the censors struck out from this list grace, divine, justice, and truth as lacking in euphony. Experiments of this sort have often been tried, and have a real value, in spite of the sneering attitude of many who consider themselves as of the elect. While no such list can be considered "final," it has its value from the historic point of view, as a record of what seemed at a given time the preference of an intelligent jury. A list prepared by a jury of specialists—of philologists, for example—would lack the popular interest of this one, since the philologists are certain to be influenced by considerations of etymology, by theories of their own, perhaps. The rôle of the philologist, however, begins when such a list has been prepared by popular preference, for he it is who can analyze the list, indicating the sources of these supposedly beautiful words, thus enabling us to judge of the elements which enter into our so-called vocabulary of beauty. Of these twenty-five words, four come from Anglo-Saxon: love, hope, truth, heaven. One is derived from Scandinavian: happiness. Three are said to come into English from Latin: splendor, adoration, radiance. These three words all show French influence, and some dictionaries state that they came into English from French. It is better to ascribe their immediate derivation to the Latin, in accordance with the recent edition of Skeat's "Etymological Dictionary of the English Language," Clarendon Press. As for the remaining seventeen words, they are all derived directly from the French.

An experiment of a different sort was recently tried at Columbia University with two clever classes. The students were requested to select fifty English words of basic importance in the expression of human life. In choosing these words, they were to aim at reality and strength rather than at beauty. No attention was to be paid to the rhyme value of a word, and the matter of etymology was not even mentioned until after the lists had been prepared. In the two lists that were thus made, a number of words were common, although fewer than might be supposed. When united, the lists offered seventy-eight different words, whose etymologies were as follows: From French, thirty-nine words (exactly one-half of the total), to wit: nature, disaster, suffer, pleasure, tender, flower, spirit, beauty, joy, honor, virtue, fantasy, ambition, country, devotion, peace, despair, regret, paradise, grief, glory, noble, mortal, divine, parting (with Germanic suffix), mercy, justice, destiny, enchantment, fortune, age, courage, faith, melody, eternity, melancholy, immortality, harmony, solitude. From Anglo-Saxon, thirty-five words, as follows: love, tears, soul, fair, man, death, sleep, spring, youth, star, night, heaven, hate, life, sorrow, song, friendship, longing, time, hope, day, heart, freedom, earth, god, sea, knell, moon, wind, pride, sigh, weep, glow, whisper, dream. From Scandinavian, three words: happiness, bloom, dawn. From Latin, one: dirge. (Of course, the French words given above nearly all came ultimately from the Latin; the point noted in the experiment is the immediate provenience of the English words.) It is evident that this list of seventy-eight words could easily be improved upon. None the less, it has considerable interest. One of the two classes carried the experiment further, in a tentative manner, and decided that, if an additional list of a hundred words should be prepared, it would be found to contain a larger proportion of French words.

RAYMOND WEEKS.

Columbia University, February 16.

SHAKESPEARE AND HOOKER.

TO THE EDITOR OF THE NATION:

SIR: Two passages in "Macbeth" appear to owe something to Hooker's "Chronicle of Ireland," published in Holinshed in 1586. The first (act v, sc. iii) is in the conversation between Macbeth and the doctor concerning the mental condition of Lady Macbeth:

> Canst thou not minister to a mind diseased,
> Pluck from the memory a rooted sorrow,
> Raze out the written troubles of the brain,
> And with some sweet oblivious antidote
> Cleanse the stuff'd bosom of that perilous stuff
> Which weighs upon the heart?

To which the physician replies:

> Therein the patient
> Must minister to himself.

With this compare Hooker's account of the death of the Earl of Essex, in which after denying the common report that it was due to witchcraft, he continues:

It was thought and so affirmed by the

most part of all men, that some inward griefe of the mind and secret sorrow of the heart had hastened that which no infirmitie of the bodie nor anie other devises extraordinarie could compasse. For where that maladie is once entered, and hath seized and taken possession, and which by no physicke can be releeved or cured, it is but in vaine to minister the same to the bodie.—(Holinshed, ed. 1808, VI, p. 386.)

A few pages farther on (p. 441) is a passage, which, if not the source, is more closely analogous to one of Macbeth's striking similes than any parallel I have found cited. It will be remembered that in the great soliloquy (Act I, sc. vii), in which Macbeth argues why he should not raise his hand against Duncan, he concludes:

> I have no spur
> To prick the sides of my intent, but only
> Vaulting ambition, which o'erleaps itself
> And falls on the other—

Hooker tells of one Henry Moile, who was thrown by his horse into the middle of a ford. A friend led the horse to the other side, whereupon Moile, being hard pressed by his enemies, and

> coveting with all hast to leape up, did it with such hast and vehemencie, that he quite over leapt the horse and fell into a mire fast by, and so his horse ran awaie.

RECENT MOVEMENTS IN PERSIA.

The Persian Revolution of 1905-1909. By Edward G. Browne. Cambridge: University Press; New York: G. P. Putnam's Sons. $3.25 net.

More even than the Turkish revolutions—first, counter, and, so far, final—those of Persia have been tenebrous and almost unintelligible to the western onlooker. In Constantinople the newspaper correspondents too often did their work poorly enough, but their ignorance in Teheran was plainly thrice confounded and confounding. For one thing, the Persian constitution, with its basis in the Shi'ite faith, is far less generally understood than the simpler Sunnite Islam of the Turks. We have all grown up with some vague idea from the Arabian Nights of what a Caliph is, and Commander of the Faithful rings familiar in our ears. But a Shah means little or nothing, and if we imagine, as has happened to too many, that we can regard him as only another kind of Caliph, we are mazed in error from the very start. A Caliph—leaving aside the question whether any now reigning Moslem ruler can claim that title—combines constitutionally the rights, powers, and duties of the Head of the Church with those of the Head of the State; his position is about such as we should see if that of Pope had become combined with that of Emperor in the Holy Roman Empire, but with the large restriction that a Caliph has absolutely no authority to promulgate or state doctrine. His spiritual authority is thus administrative only. He can, further, legally be deposed, for cause, but otherwise is, by the nature of the case, an absolute ruler in both spiritual and temporal things. The Sultans of the Ottoman Turks claim that title, and, in consequence, a Parliament with them cannot in strictness be anything more than an advisory council. Of course, the Turkish Parliament is very much more than any such inactive body, but there exactly is where the essential breach with the past has entered. It is easy to find legal support, both in the Koran and in the traditional sayings of Mohammed, for the existence of such a body of advisers—Mohammed used himself to consult with his followers—but successors and representatives of the Prophet, and such the Caliphs are, must still bear the personal burden of maintaining the institutions of the faith and administering the empire. The democracy of Islam elected to fulfil itself by choosing an individual and putting all authority and power in his hands. The only limitations are (1) a sacred right of insurrection inherent in that democracy by which it can remove such a ruler when he has plainly broken fundamental laws of Islam, and (2) a more or less vague belief that the theologians and canonists—the Ulama or "learned"—are the interpreters of Islam. This has even crystallized into a tradition, "The Learned are the heirs of the Prophets." So, when the people rise the legal process is that a question is solemnly submitted to the Shaikh al-Islam, the head of these Ulama: "Can one who does such and such things be a Moslem ruler?" and on his negative answer deposition by the people follows. The opinion of the Ulama as jurisconsults has this weight and may overthrow the Caliph himself.

But the Shah is in very different case. He is a mere maintainer of public order, and, even as that, is only a *locum tenens*. According to the Shi'ite faith, the state religion of Persia, the real ruler and head of the people is the Hidden Imam, Mohammed al-Muntazar (Mohammed the Expected One), the twelfth in descent from Ali, who vanished from mortal eyes in A. H. 260 (A. D. 873) and who now, from the place where God is preserving him, follows and directs the fortunes of his people. At the end of time he will return to restore justice to the earth and to bring about the final victory of the true faith. It was by his blessing and assistance that the recent revolution was carried through. Compared with him, the Shah is only a temporary head, chosen by the people and deposable by them, whereas he himself was divinely appointed and rules by divine right. The Ulama of Persia, and especially their chiefs, the Mujtahids, are his representatives, and through them his will can be mysteriously conveyed and interpreted. This last point is always somewhat obscurely expressed, but apparently a quasi-inspiration from him is implied in these theologians, similar to the divine illumination which Sunnite Islam teaches to be accessible to all true believers. They are not the only theologians who have claimed to know more of the will of the Lord than other people. According to the Supplementary Fundamental Laws of October 7, 1907, an ecclesiastical committee of these Mujtahids was to be appointed to act as a Supreme Court and to decide with regard to all new laws whether they were in accord with the principles of Islam. By this it is evident that the doctrine of the Shi'ite Church is extremely "high" and far removed from that of low church Sunnite Islam. But such distinctions were quite beyond the grasp of the newspaper correspondents, one of whom, according to Professor Browne (pp. 165, 335), used to confuse the Mujtahids, these Persian archbishops, so to speak, with the Mujahids or national volunteers.

In one way the confusion was pardonable, for the Mujtahids gave themselves as absolutely to the popular cause as did the Mujahids, and suffered as grievously after the *coup d'état* of June 23, 1908, which for a time swept away the Parliament. And their devotion to liberty is much more intelligible than many on-lookers—as, for example (pp. 123 and 164), an anonymous correspondent to whose letters from Persia Professor Browne was much indebted—seem to have found it. Their position was almost exactly that of the leaders of the Scottish Kirk for the first hundred years after the Reformation. The Kirk was equally high in its doctrine with the Church of England; as to that there was really no difference between Laud and the Covenanters. But the English church accepted the headship of the crown, while the Scottish clergy would have nothing but the headship of Christ, and asserted for themselves that they were the mouthpieces of that invisible head. They were thus free from all subordination to the crown, and virtually claimed to rule in both spiritual and temporal things. But, not holding with the court party, they of necessity stood with the people, and so the Kirk of Scotland, with all its branches and secessions, has been to an elsewhere probably unparalleled degree the representative institution of the country. It is quite possible that the nearest parallel is in Shi'ite Persia, with its clergy frankly opposing to a purely temporal and temporary sovereign the divinely appointed rulership of an invisible Head and themselves as his representatives. Professor Browne's explanation (pp. 146, 237) of their attitude is that the Persian clergy "are, like the Irish priests, a truly national class, sprung

from the people and thoroughly in touch with the people," and there is undoubtedly forec in it. But whatever their origin, their whole attitude toward religion and the state leads them to independence of the Shah and his government.

That being so, it is strange to find some of the higher clergy playing with the idea of a union with Turkey, which would involve virtually an abandonment of the fundamental Shi'ite position and an acceptance of the Ottoman Sultan as Caliph. It is noteworthy that, so far, the practical steps toward such a union have been made in Russian territories where Sunnites and Shi'ites are living intermingled together. There, too, the question of the caliphate as opposed to the imamate is not a burning one. Yet for a Persian to give up the privilege of damning Abu Bekr, Omar, Othman, and, above all, Yezid, is as though an orthodox Jew were to bless Haman and curse Mordecai. Further, the entire doctrine of the headship of the Hidden Imam would go by the board—a change perhaps possible in process of long years, even as the descendants of the Covenanters have so largely abandoned their high estate and become Voluntaries, but not to be brought about by any *coup d'état*. References, it is true, to such a plan of union occur again and again on Professor Browne's pages (30, 83f, 95, 107f, 169, 412, 417). But they are, more than anything else, a tribute to the tremendous influence exercised through the Moslem East by Sayyid Jamal ad-Din al-Afghan, the great protagonist of Pan-Islamism.

With a biography of this man Professor Browne fitly begins his book. Dying in 1897, Jamal ad-Din was probably, during the last twenty or thirty years of his life, the most weighty figure in the Moslem world. As a wandering scholar, teacher, orator, author, publicist, European statesmen were either ignorant of his existence, or despised him as negligible, or regarded him as a dangerous adventurer, or, in rare flashes of insight, made clumsy and generally short-lived attempts to use him. Yet if the Pan-Islamic movement had any one creator, it was he, and he was certainly its most eloquent preacher. That the different countries of Islam should sink their variances and unite to face the instant European peril was the dream of his life. That dream he pursued in India, Persia, Egypt, and Turkey, everywhere also laboring to quicken the intellectual life of the people. It is curious to watch this Moslem Erasmus and Mazzini combined working in part at the same cause with England, the power which he most hated. It might even be said that it was the work and influence of that power in the East which made him possible. On another side he was a belated pupil of Averroes, and an incautious allusion to the "Two-fold Truth" led to his expulsion from Constantinople; for that is evidently the meaning of the incident on p. 6f. He returned, however, and his last five years were spent there as a pensioner of Abd al-Hamid, who was prepared to use the Pan-Islamic idea for his own purposes. Apparently, Jamal ad-Din thought at one time that the Moslem world could be rallied around the Ottoman Sultanate, but was later undeceived. There is no sign that his memory was an influence in the Turkish revolution. That had no contact with Pan-Islamism.

But in the moulding of the new Persia he had a great part. It was he who urged the Mujtahids to the religious boycott which overthrew the tobacco monopoly in 1891, and it was by pupils and friends of his, if not with his connivance, that Nasir ad-Din Shah was assassinated in 1896. More peacefully and legitimately he, by his writings, stimulated the national sentiment, the breaking out of which into action he was not to live to see. Yet, as in Turkey, the outbreak, when it came, took no Pan-Islamic direction but was strictly an expression of the Persian nationality.

With that great upheaval Professor Browne deals step by step. His materials are newspaper reports—European first, and, after the Constitution, Persian—personal letters from Persia and conversations with Persian leaders, Persian documents, journals, and books. During Muzaffar ad-Din's reign the story is one externally of Anglo-Russian rivalry and internally of growing discontent at the extravagance and lack of patriotism of the government, at the Russian loans and at the arrogance of the Belgian customs officials. It culminated in the great taking of *bast*, or asylum, on the part of some 15,000 Persians of all classes in the gardens of the summer quarters of the British Legation at Gulahak, a protest which forced the Constitution of August 5, 1906. Muzaffar ad-Din died on January 4, 1907, and Mohammed Ali Shah succeeded. He was a thorough reactionary, and it could be only a question of time when the struggle would open between him and the Parliament. One attempt against it in December, 1907, failed, but in a second on June 23, 1908, he succeeded, assisted by his Cossack body-guard and Russian officers, and Persia was again under absolute rule. Meanwhile the agreement on spheres of influence between England and Russia had been concluded on August 31, 1907, and Persian feeling had been sorely shaken as to England's support of their integrity. But Tabriz, the Manchester of Persia, as Professor Browne calls it, rose and endured the long siege from June to December, 1908, and when it was forced at last by famine to open its gates to Russian troops, other provinces took up the struggle, and finally a revolutionary army, largely mountain tribesmen of the Bakhtiyaris, marched on Teheran, and captured the city July 13, 1909. Absolutism was over. Elsewhere, too, great things had been done. On July 24, 1908, had come the first Turkish revolution; on April 13, 1909, the mutiny and the counter-revolution; on April 24 Constantinople had been captured, for the second time only in Turkish annals, and constitutionalism ruled —in a fashion—from the Ægean to the Indian Ocean. If Pan-Islamism had been a dream, freedom had not.

With the accession of the little Shah, Sultan Ahmad, and the reconvocation of Parliament, Professor Browne closes. He adds in an appendix the basal documents of the Persian Constitution, and forty-eight pages of notes, or rather excursus. Throughout the book are scattered forty-six excellent illustrations. There can be no question that he has accomplished his object of making the Persian revolution intelligible, even though some of the theological and constitutional problems involved, and in the East these are one and the same, might have been more clearly developed. He is enthusiastic, and with good right, over his Persians, but he also sees clearly the ever-instant northern danger in the entanglements of Russian loans and concessions. The events since then, and especially the latest news, have amply justified his fears. While England's anxiety has been that the trade routes of the south should be kept guarded and open, Russia has maintained an army of occupation in the northern provinces of thousands of men, and has attempted to extort concessions as the price of their withdrawal. It is not then unnatural, though hardly quite just, for Persians to view both as working for the same end. As in the case of Turkey the situation calls for patience, good will, and letting alone. The issue is on the lap of the gods, but Persia, like Turkey, has at least—and at last—a chance.

CURRENT FICTION.

The Root of Evil. By Thomas Dixon. New York: Doubleday, Page & Co.

The new novel of a writer who has qualified as a "best-seller" always has one sort of interest, at least. Has it the kind of merit that produced the earlier success? If so, it is entitled to a certain consideration. Mr. Dixon's books are not written upon a high plane, as works of literary art; but they are written upon a plane to which a large class of readers is restricted, a plane of emotional and vague didacticism. Mr. Dixon, for example, has been shocked to discover that the time is out of joint; but the prospect of setting it right does not appall him. In "The Leopard's Spots" he had a race problem to tilt at, and

reaped the reward due to the prestige of that burning national question. The theme of the present prophetic utterance is Mercenary Woman. Blazoned upon the cover in red ink is the device under which the champion battles: "Has the woman who turns from a great love to marry for money a soul? If she can deliberately break the heart of a lover, will she not commit murder when put to the test? What is the true source of crime? These are some of the questions asked in my story."—So efficiently does Mr. Dixon officiate as his own press agent.

From the point of view of the reader who demands people and action, not merely wax images and situations, from their writers of fiction, this prolonged tract (or melodrama, for every melodrama is a tract, and most tracts are melodramas) will prove a tedious performance. The figures propelled by wires ill-concealed, and made vocal by means of a megaphone in the wings, are far from "convincing." But they are probably convicting—in the minds of that order of society which the British critic would have the advantage of us in being able to denominate "the lower middle class." It is a national foible of ours to spurn the intimation that there can be anything lower than the middle of society.

> He walked with leaden steps through Tenth Street to Broadway, stopped and gazed for a moment on the graceful spire of the church before whose altar Nan would soon stand and perjure herself for money. How could she! . . . Why? Why? Why? His heart fairly shrieked its cry of despair.

The plain answer would be that she did it as in duty bound, because her author expected it of her. But no conscientious lower middle class mind gives a plain answer: the conventional answer is so much more respectable. It would take for granted that this alleged female represented in some vital way all lapses from that perfect indifference to dollar-and-cent considerations which should mark the perfect heroine. The "Nan" of this tale would have been called by uncomplimentary names in the eighteenth century; here she is simply a type of the New Woman.

When God Laughs. By Jack London. New York: The Macmillan Co.

If Mr. London's more recent novels show an increase of power, his short stories still exhibit mere crude energy, and are content to stand for that alone. Crude energy and the unblinking record of harsh or even brutal fact are the earmarks of this writer. No doubt his popularity with the magazine-devouring public demands that his shorter work shall continue to bear the familiar brand. The stories here collected are the accumulation of the past five years. The initial tale, with its sensational title and sexual theme, is not particularly characteristic of the writer. The relations of men and women have a secondary interest for him, and women make a purely incidental appearance in the succeeding stories. There is, to be sure, "A Wicked Woman"; but the writer is altogether at a loss in the treatment of her femininity—she is meant to be touching and humorous, and is merely silly. Of the other ten stories, it is interesting to note that there are two which are not based upon brutality. "Just Meat" is the pretty tale of two thieves who steal a fortune and rather than divide it poison each other at the same moment, dying horribly together. "The 'Francis Spaight'" is an edifying account of a cruel and useless murder at sea: no detail is spared. "Semper Idem" is the hospital nickname of a man who, under surgical advice, cuts his throat properly—a second time. "Properly done upon my life, sir, properly done," says the surgeon pleasantly, when the suicide is brought in a second time. "Took my advice to the letter. . . . Take it along to the morgue." There is one story in the book which is neither revolting nor futile. It is called "The Apostate," and deals with a poor young weaver who, after giving up his youth to the endless and thankless labor of the looms, has the monstrousness of it all suddenly revealed to him, and takes to the road, a free man. If Mr. London could only strike so true a note a little oftener!

The Shogun's Daughter. By Robert Ames Bennet. Chicago: A. C. McClurg & Co.

A melodramatic tale of an American who becomes involved in Oriental intrigue has, inherently, an abundance of thrilling opportunities. In the present instance they are utilized to the full, and usually with sufficient plausibility. The hero, who tells his own story, is "the equal though younger heir of one of the largest plantations in South Carolina," with the exaggerated feeling of his social rank proper to the part. Among his ancestors was one who became a Japanese noble, and this fact, together with a longing for adventure, made him accept eagerly the chance and the risk of joining a young Japanese in an effort to induce the Shogun to enter into commercial relations with the United States and to introduce Western ideas into Japan. The Japanese youth was of high rank, and betrothed to the daughter of the Shogun, but all his ambition was for his country's enlightenment. The danger lay in the deadly rivalry of court factions, especially in his violation of the ancient edict prohibiting a native from leaving Nippon and an alien from entering. The arrival of an American fleet causes a truce in the factional struggle, but its departure is the signal for the renewal of even more desperate adventures, in which high treason, ambush, poison, torture, and hara-kiri deepen the tragic atmosphere. The dénouement, which comes with the rescue of the American and with the close of a romantic love affair, is not the least dramatic episode of the book.

The Gilded Way. By Victor Mapes. New York: Neale Publishing Co.

An easy recipe for writing a novel is to file carefully for several years one of the sensational newspapers, and then to string together the scandals recorded therein of members of our richest and vulgarest set. Fashion all this into one well-rounded narrative, spice it thoroughly with descriptions of life with the demi-monde, then add as a final flavoring a dedication to the "mothers and fathers of America, who are blessed with riches," in the hope that it will help them to bring up their children properly. This Mr. Mapes has done in his latest novel. The misdeeds of the dissipated rich he sets forth any newspaper reader can identify who has read that sort of stuff for the last five years, or had it forced upon him by the headlines of the sensational press. The hero runs through his vast inherited wealth in most approved style, and after a final *débâcle* takes up his residence in France. The heroine, his wife, procures a divorce and marries the modest but useful doctor whose love she could have had from the beginning. The story is well enough told; it is, as already said, based upon actual happenings. But he would be rash, indeed, who should say it will serve any useful or moral purpose. That it will not add to the author's reputation is certain.

A BRIEF FOR GOLDSMITH.

The Life of Oliver Goldsmith. By Frank Frankfort Moore. New York: E. P. Dutton & Co. $3.50 net.

In "A Georgian Pageant" Mr. Moore turned his pen from fiction to miscellaneous studies of the eighteenth century, with the boast that at last the truth was to be told about the men of that age—particularly about Goldsmith and Johnson. He now publishes a formal biography of Goldsmith in which that truth has plenty of room to expatiate in. Of this volume, extending to nearly 500 pages, it would be safe to estimate that one-third is concerned with the known facts of Goldsmith's life and with proper criticism of his works; while the other two-thirds contain Mr. Moore's inferences, and moralizings, and his exposition of the "truth." The biography proper is commendable for a certain sprightliness of tone, and for its full delineation of the Ireland in which Goldsmith was born and passed his early years. It is spoiled by the intolerable deal of padding. Mr. Moore evidently likes to write as a novelist,

and indulges in endless psychological disquisitions that have, to say the least, the most insubstantial basis. For example, he devotes a chapter to the three years, 1749-1752, that Goldsmith passed in idleness after leaving the University of Dublin, and this is his manner of comment:

> It was in these idle years that he learned, though without realizing it, all that was necessary for him to learn. It was during these years that he acquired his way of looking at things, his perfect sense of proportion, so that he never shocks by exaggerating any detail—his grasp of character and of incident—that happy appreciation of the mingling of the elements of seriousness and comedy in daily life—of the comedy of vanity, and the humor of pretence—of the divine beauty of simplicity, etc., etc.

No doubt Goldsmith learned a good deal of life in his three years of idleness, as he learned of life at Dublin and Edinburgh and London and on the Continent; but where, in the sacred name of whatever Muse once presided over biography, did Mr. Moore acquire this exact knowledge? This sort of presumption, endlessly extended, grows tiresome.

But the main thing in the book is Mr. Moore's thesis. Mr. Moore holds that Goldsmith's works are the best beloved of all that was written in the eighteenth century, and that the name of the author is the best beloved in the long roll of English literature. Few will disagree; certainly the present reviewer will not, for he thinks, to go no further, that "The Deserted Village" has a charm of language and sentiment that can scarcely be matched elsewhere out of the lines of Virgil. But Mr. Moore also believes that Goldsmith, as an Irishman, was not understood, and, when understood, deliberately maligned by the circle of Englishmen and Scotchmen among whom he lived, and particularly by Boswell, who is responsible for our present conception of that society. Goldsmith is represented in the memoirs of the day, and again particularly in Boswell's "Johnson," as childishly vain and ineptly garrulous—

> Who wrote like an angel, but talked like poor Poll.

Now, to a certain extent, we will admit that Mr. Moore has made his points. For example, the story of Goldsmith's wounded vanity at Lille, when the French officers admired the Miss Hornecks at the window of the inn and neglected the poet, is probably a bit of stupidity. No doubt Goldsmith was merely jesting in mock gravity when he pretended to be hurt. Mr. Moore has done well in insisting on this explanation, and indeed his whole account of the friendship of Goldsmith and the Hornecks is the best thing in the book—as it has long been the author's peculiar province. It is easy to suppose that other misunderstandings of this sort occurred, and that men accustomed to Dr. Johnson's form of humor may have had their senses blunted to the slyer Irish wit of Goldsmith, and laughed sometimes at him when they should have smiled with him. But after all, the tradition of Goldsmith's vanity and prattle is too persistent to be explained away, nor were his English friends quite such dullards as Mr. Moore would have them. And why this fury of resentment? Mr. Moore admits, indeed takes many pages to show, that Goldsmith was a scatterbrain in the affairs of life, as were all his family. "In his achievement, he [Goldsmith] was, as Dr. Johnson said, a great man, but in the ordering of his life he was, as Cooke said, a fool. Of every step in life that he took it might be said that no one but a fool would have acted thus." Why is it so much worse to be heedless in conversation than a fool in practice? and why is the former so much more inconsistent with greatness of literary achievement and lovableness of character than the latter? Indeed, Mr. Moore himself quotes the well-known story of Goldsmith's reply to Lord Shelburne (always spelled Shelbourne in this book), which shows how a man can be a Malaprop in language and practice at the same time. Said Goldsmith, who was then in sad need of a pension, to Lord Shelburne, who had been reviled by "Junius" as a Malagrida: "Do you know that I never could conceive the reason why they should call you Malagrida, for Malagrida was a very good sort of man."

But enough of a book conceived in a spirit which made fair biography out of the question. There are many sophisms that might be pointed out, and much might be said in regard to the author's almost frenzied jealousy and dislike of Johnson and Boswell, and others of that circle. "Really," he observes, "we do not think that the conversations, as reported by Boswell, differ so greatly in character from the gossip of the wheezy village gaffers around the ale-house fire." We submit that such comments as these are not necessary to maintain Goldsmith as the best-beloved author of his age.

Pennsylvania in American History. By Hon. Samuel W. Pennypacker, LL.D. Philadelphia: William J. Campbell. $4 net.

This volume consists of a series of studies mostly in Pennsylvania history which were "delivered upon the mellowing of occasion"—either at the dedication of a statue, the opening of a park, the celebration of a birthday, or the memorial services for a defunct boss. There is no particular consistency in the subjects, and the effort to obtain it by the occasional mention of Pennsylvania in the essays on "The Purchase of Louisiana" and "The War of the Rebellion" is merely amusing. The biographical essays concern Anthony Wayne, Washington, Johann Gottfried Seelig, and Matthew Stanley Quay, "this statesman that Pennsylvania has lost." In the last essay we are forced to wonder how we could have got such mistaken ideas of Mr. Pennypacker's hero. The only explanation is that we belonged to "the dull and grubbing flock" which "pecked and abused" the "strange bird" which "one day rose aloft on strong pinion and soared away to the distant ether" to return to us no more. As Mr. Pennypacker, having reference to Quay, sagely remarks: "However much we may admire, we seldom love the austerely virtuous." The political virtues of "Wolsey, Shaftesbury, Clarendon, Disraeli, and Gladstone" are all drawn upon to illustrate those of Matthew Quay. Miletus, too, and William Pitt and Cæsar and Cromwell are merely prototypes of this great Pennsylvania hero, who without the sources of power possessed by a great general or captain of industry "prevails upon a million of men to forget their diverse views and to walk together for a common political purpose." He "overcame his opponents because he saw more clearly, reasoned more accurately, and delved more deeply." The unselfish devotion of the man is shown, the essayist points out, in Quay's assertion that "of all this Union of States, Pennsylvania is the fairest and the happiest and the most intelligent and the best governed." It was "this real leader among men" who saved us from President Cleveland's rash efforts to "destroy the tariff." "Neither Marlborough nor Bonaparte ever contended with such odds in opposition." All this comes as a revelation. It takes a man like Mr. Pennypacker to understand a statesman like Matthew Quay.

Several essays of an ethnological character, "The Dutch Patroons," "German Immigration," and "The Pennsylvania Dutchman" contain some interesting results of an antiquarian's researches, though here, as in the other essays, we are obliged to be content with the author's assurance that the studies are "almost exclusively based upon original sources of information," for the pages are nearly guiltless of footnotes. However, there are few palpable misstatements of facts, though we are provoked "to ridiculous smiling" by thrasonical Teutonisms. "The hammer of Thor, which at the dawn of history, smote upon the Himalayas, now resounds from the Alleghenies to the Cascades" is only the summit of an imposing rhetorical mountain up whose steep slopes our author has toiled for several pages.

One essay which no one should fail to read is that entitled "Pennsylvania and Massachusetts," written to refute an article in the *Atlantic Monthly* on the

"Ills of Pennsylvania." Among the refutations of the charge of political depravity in Pennsylvania of to-day is the unanswerable assertion that "the English Bible and Testament, Milton, Shakespeare, and Blackstone were all reproduced for the first time in America in Philadelphia." Moreover, the ancestors of some who are charged with corruption fought in the Revolutionary War! Still more convincing is the fact that Massachusetts men failed at last to prevent the British from climbing up Bunker Hill, while at Stony Point, Pennsylvanians climbed up the hill and captured the British defenders. Finally, there is a comparison of Matthew Quay and Daniel Webster.

Notes

Houghton Mifflin Co. issues this week: "Robinetta," by Kate Douglas Wiggin, Mary and Jane Findlater, and Allan McAulay; "The Soul of the Indian," by Charles A. Eastman; "Reminiscences of the Geneva Tribunal of Arbitration," by Frank W. Hackett, and "Partners of Providence," by Charles D. Stewart, which is taken over from the Century Co.

A new series of books for the young, called The Washington Square Classics, is announced by George W. Jacobs & Co. The volumes now in preparation are: "Treasure Island," "The Wonder Book and Tanglewood Tales," and "Black Beauty." These will be followed by "Alice in Wonderland" and "Through the Looking Glass," "Water Babies," "Tales from Shakespeare," "Grimm's Fairy Tales," "Andersen's Fairy Tales," "Swiss Family Robinson," "Robinson Crusoe," etc.

The Macmillan Co. will bring out March 1 Josephine Daskam Bacon's "While Caroline Was Growing."

A book dealing with Finnish music, painting, sculpture, architecture, literature, and politics will be issued shortly by Fisher Unwin. The title of the book is "Finland To-day," and the author is George Renwick.

Messrs. Constable have in the press "The Memoirs of Sir William Butler."

Giuseppe Baretti's writings in Italian, English, French, and Spanish are to be included by Laterza & Figli of Bari in their series, Scrittori d'Italia. They will occupy about ten volumes.

The Macmillan Co. announces the transference of the agency of the Columbia University Press publications to Lemcke & Buechner, No. 30 West Twenty-seventh Street, New York city.

Mrs. Russell Codman has placed in the hands of the Century Co. her new book, "An Ardent American," which is the diary of a young American girl visiting America for the first time.

It was some time in 1875 or 1876 that Lafcadio Hearn began work on a translation of Flaubert's "Temptation of Saint Anthony." After thirty-five years Hearn's version has been put into print by the Alice Harriman Company of New York and Seattle. Elizabeth Bisland, in the introduction, echoes Hearn's "scornful mocking" of the blind puritanism of American literature, "which complacently accepted the vulgar seductions and the theatrical Brocken revels of Faust, while shrinking piously from Flaubert's grim story of the soul of man struggling to answer the riddle of the universe." But America shared in the sin of Flaubert's own countrymen, who eagerly seized upon the sensualities of "Madame Bovary" and refused to read the "Temptation," for all its jewelled magnificence.

If the character and personality of Sir Philip Sidney had not possessed such charm, doubtless more prominence would have been given, from his day to this, to his writings. His life was held up as a model by all, even by his father, who said of him:

> He is a rare ornament of this age, the very formula that all well-disposed young gentlemen of our court do form also their manners and life by. In truth—I speak it without flattery of him or of myself—he hath the most rare virtues that ever I found in any man.

Naturally, then, it has grown more and more the fashion to treat what he wrote merely as links in the chain leading up to his last supreme act at Zutphen. Yet when one considers that he first introduced into England the study of literary criticism in something like Aristotle's manner; that his "Arcadia," though indulging the privilege of romances then to be crude and formless, has an imagination which throughout hundreds of pages seems seldom to flag; and when one considers that in his sonnets to Stella he often turned the Petrarchistic convention of his predecessors into original poetry—one must admit that his literary achievement, quite apart from his life, should excite an important interest. We are glad to observe that "The Poems of Sir Philip Sidney" have at length been included in the Muses Library (Dutton), in this instance edited, with introduction, by John Drinkwater.

R. M. Leonard has compiled, and the Oxford University Press has published, "A Book of Light Verse," which will give more pleasure to many a reader than the ordinary anthology based on a severer principle of selection. To be sure, a standard that admits such poems as Byron's "Stanzas to Augusta" is light in no trivial sense and is far from the gayety of the mere *vers de société*. It is, in fact, difficult to see on just what theory of taste the selection is made, but the result is good. The starting point was Locker-Lampson's "Lyra Elegantiarum" (how admirable a title!), but recent years have necessitated the inclusion of "upwards of 60 poets, contributing between (*sic*) them 120 poems, whose names will not be found in the last edition of the older anthology." Mr. Leonard has searched wisely and well, but he has made one extraordinary oversight. A volume of "light verse" that embraces Lowell, Bret Harte, Bayard Taylor, and other Americans can offer no excuse for omitting Thomas Bailey Aldrich; yet Aldrich's name is not in the index, and we have come upon no poem of his as we turned the pages. The book is brought out in attractive form, and may be had in ordinary or thin paper.

The January number of the *American Journal of International Law* opens with a paper by Robert Lansing, who was one of the counsel of the United States in the recent North Atlantic Fisheries arbitration at The Hague, setting forth certain historical and legal antecedent conditions deemed requisite to a complete understanding of that proceeding and its results. For two hundred years after the opening of the sixteenth century, when Europeans began regularly to frequent the fishing banks near Newfoundland and use those harbors for refuge and the shores for curing and drying codfish, methods changed but little. By the close of the nineteenth century the British and French had monopolized the industry, and as early as 1713, by the treaty of Utrecht, rights were defined, those accorded to France remaining in force until 1904, when, by reciprocal concessions, Great Britain obtained their surrender. By the definitive treaty of peace of 1783 between Great Britain and the new American republic we obtained the acknowledgment of certain rights, which were enjoyed without dispute until about 1812, after which, on renewal of peace relations, the English contended that the war had abrogated the fisheries article of the treaty of 1783. After a diplomatic controversy that lasted three years, the treaty of London was signed, containing the article which the recent arbitration tribunal was asked to construe. The differences between this article and that of 1783 were marked. Mr. Lansing briefly sets forth certain of those differences. The coasts accessible to Americans were defined more closely, and when any parts thereof should become settled the right to cure or dry fish there was to terminate. Had not those settled areas been enlarged there would have been no fisheries controversy to be arbitrated. Then, the scope of the fisheries broadened. At first only codfish had been caught and cured. Later the mackerel fisbery was begun, then the herring. Thus the American fishermen were brought into more frequent conflict with the local; restrictions were imposed which the United States believed to be in flagrant violation of the treaty provisions. A perusal of Mr. Lansing's paper will convince the reader that his lucid setting forth of the antecedent conditions was important. The president of the Fisheries Arbitration, Dr. Lammasch, the eminent Austrian diplomat, acted also in the capacity of umpire in the more recent adjudication of the controversy between the United States and Venezuela in the matter of claim of the Orinoco Steamship Company, and we next have his opening address in that proceeding, followed by an elaborate paper by William Cullan Dennis on that arbitration, giving the adjudication on the several claims submitted, then Dr. Lammasch's brief closing address. A departure from the usual course of the *Journal* is the insertion of a translation from the French of Ernest Nys's remarkable paper on "Francis Lieber, His Life and Work." Those who recall the great war meetings held in Cooper Union and elsewhere during the time of the civil war, and the frequency with which the platform was graced with the presence of Dr. Lieber, and also recall that in 1856 he had come to Columbia College to occupy the chairs of history and political economy for twenty years, will be glad of this opportunity to become acquainted with the details of his career. Another important paper, also translated (from the French of G. Scelle), discusses the Eastern question, especially the government of the Young Turks, its

purposes and policy, and the new outlook for Bulgaria, now independent. A translation of the principal agreement between the two Powers, stipulating for this result, is appended, dated April, 1909.

It is not easy to appraise with either impartiality or discretion a book which, like Norman Angell's "The Great Illusion" (Putnam), comes heralded from the other side of the water as the wisest and most convincing thing on its topic that ever has been said. What Mr. Angell has done is to frame, with considerable acuteness and cogency, an interesting and partly novel argument against war. The substance of his contention is that the wealth of nations, being founded, not on military or political prowess or on physical ability to defend themselves against aggression, but upon "credit and commercial contract," cannot, economically speaking, be destroyed by another nation; since the "credit wealth" would vanish under such conquest, and drag down both victor and vanquished to economic ruin. Moreover, since the wealth of acquired territory must remain in the hands of its conquered inhabitants, territorial aggrandizement is of no advantage; while, at the same time, the complicated conditions of international finance render it impossible for war to help trade. That nations still talk of war or prepare for it, is due, he maintains, to a widespread misconception of the law of social evolution. War does not make for survival, physical force is a diminishing factor in modern society, and the broad social and economic interests of peoples, rather than their geographical or political divisions, are increasingly the bases of social classification. While we cannot think that students of economics or sociology will find these views wholly new, the skilful and forceful presentation of them, and the pertinent illustrations adduced in their support, merit cordial praise. Doubtless, in the present imperfect state of political morals, such doctrine is the familiar counsel of perfection; but the volume should do something to develop the state of mind which will make unjust war a relatively remote contingency, and reduction of armaments practically possible.

In "Sociology and Modern Social Problems" (American Book Co.), Prof. Charles A. Ellwood has furnished a convenient and readable handbook for the student who wishes to get, in brief compass, a summary of the most advanced thought on some of the important problems of modern society. The discussions are of necessity somewhat superficial, since such weighty topics as the family, immigration, pauperism, crime, the negro, and socialism—subjects upon each of which volumes have been written—are treated altogether in three hundred pages. Neither is there much here that is new or original. But the author's views are, on the whole, sound, and his conclusions rational and definite. A wholesome spirit runs through the book, which is in pleasing contrast to the tone of some sociological writings; and the author finds the generally accepted institutions of morality and righteousness to be backed up by fundamental sociological principles. The family, in its present status, and in its historical development, receives a particularly extended and enlightening treatment. Certain dangerous tendencies in twentieth century life are clearly and fearlessly stated, but they are, in almost every case, accompanied by a practical programme of reform. To be sure, certain great mooted questions, such as the existence of an early state of promiscuity among the human species, and the truth of the Malthusian doctrine, are dismissed with a somewhat surprising degree of finality. But the ordinary reader of such a volume desires a certain amount of finality, and it is possibly best that he should have it. One profound truth, on which Professor Ellwood lays frequent and commendable emphasis, is that the explanation of a social phenomenon is scarcely ever to be found in a single principle, but in the combination of a number of complex and interrelated forces. The search for the single set of causes he characterizes as "the bane of social science in the past."

The present interest in missions is so great that it is gratifying to be able to call attention to the biography (published some months ago) of an English missionary who won for himself the title of Central African Livingstone. Its appropriateness is shown by Sir Harry Johnston in his "George Grenfell and the Congo" (Appleton), for his aim is not so much to tell the story of Grenfell's religious work—that is being done by another—as to give the results of his extensive explorations and careful, painstaking studies of the natives. The Baptist Missionary Society sent him in 1874 to the Cameroons and Fernando Po, and six years later transferred him to the Congo, where he remained till his death in 1906. His work was extremely varied in character. To the ordinary duties of his profession he added those of the explorer, and to him more than to any other man, with the exception possibly of Stanley, we owe the opening to the world of the great Congo Basin, which in the not very distant future will be one of its principal granaries. He founded stations, introduced industries, fought diseases and the evils which civilization brings to the savage, studied languages and reduced them to writing, and made copious notes on the plant and animal life of the regions visited. His exploration work was so important as to win for him the Founder's Medal of the Royal Geographical Society, while King Leopold made him his commissioner in settling the boundary between the Portuguese territory and the Congo state. In addition to the biographical record Sir Harry gives a history of the state and much valuable information, anthropological, linguistic, and biological, derived chiefly from the manuscript notes and other material collected by Mr. Grenfell and his co-laborers in the mission.

Three large volumes, packed with information of the enduring rather than the entertaining type, constitute a notable output for a single historical society in a single year. The Colonial Society of Massachusetts in 1910 issued two volumes of Transactions (X, 1905-6; XI, 1906-7), and one volume of Collections (IV, the first volume of Collections to be published being IX), two of which, XI and IV, are before us for notice. The contents of these volumes are exceedingly substantial, though there are pages in the Transactions that may be read with pleasure by any one who desires to turn to history for diversion. The rescue of Dr. Thomas Young from an undeserved oblivion is admirably achieved by Henry H. Edes, and the title of Andrew McFarland Davis's paper on "Barberry Bushes and Wheat," though it suggests a new volume of poems, covers, in reality, an interesting supplement to Professor Kittredge's "The Old Farmer and His Almanac," and concerns the colonial war against barberry bushes as destructive of wheat. The most valuable pages of the Transactions are taken up with thirty letters of Washington, written between 1789 and 1793, to his nephew and to the manager of the Mt. Vernon estate. The collection, very little of which has ever been printed, supplements the volume of letters to Tobias Lear and others, issued in 1906 and reviewed in the *Nation* for October 4 of that year. Additional contributions are a learned paper on "The Feoffees of Impropriations," a phrase that will be Greek to most people; a disquisition on "Mr. Blackstone's Excellent Spring," which seems rambling and inconclusive; and a very valuable article by Albert Matthews on the "Snake Devices, 1754-1776," in which the writer convicts the late John Fiske of five errors or misleading statements in a single paragraph of ten lines in his "American Revolution" (1891). A number of minor original documents are printed in the same volume, and many admirable engravings, particularly of snake devices to illustrate Mr. Matthews article.

The volume of Collections is designed strictly for the serious student, investigator, and antiquarian. It is composed of three parts: seven papers relating to the land and silver banks of Massachusetts Bay, prepared by Mr. Davis; a biography of the Massachusetts Home Journals, 1715-1776, by Worthington Chauncey Ford; and a bibliography of the laws of Massachusetts Bay, 1641-1776, by Mr. Ford and the editor, Mr. Matthews. Mr. Ford's bibliographical contributions have wide interest and great value. He has been able to locate and describe in the first case a nearly complete file of the Journals of the House of Representatives of Massachusetts Bay, 1715-1776, and in the second instance all, or nearly all, of the official and contemporary issues of the laws of Massachusetts Bay from 1641 to 1776. This laborious undertaking, which had engaged Mr. Ford's attention for a number of years, was brought to a successful conclusion, with the aid of Mr. Matthews, in 1905 and 1907, when special editions from advance sheets were issued. Copies of the laws are widely scattered in a dozen or more libraries, and it is noteworthy that one issue, the Book of Laws of 1648, exists to-day in but a single copy, in the collection of E. D. Church of Brooklyn.

News has been received from Weimar, Germany, that, on account of failing health, Bernhard Suphan has resigned the directorship of the Goethe and Schiller Archives, which he has held for nearly twenty-five years. He has won a permanent place in the history of German literature as editor-in-chief of the definitive edition of Herder (32 vols., Berlin, 1877-1909), and of a large number of volumes of the monumental edition of Goethe (135 vols., Weimar, 1887-1910).

John Rickman, of whom there is an exceedingly readable account by O. Williams in the February number of *Blackwood's Magazine*, was thus described by Charles Lamb in a letter to Manning: "He is a

most pleasant hand; a fine rattling fellow, has gone through life laughing at solemn apes; himself hugely literate, oppressively full of information in all stuff of conversation, from matter of fact to Xenophon and Plato, . . . up to anything; down to everything; whatever *sapit hominem*. A perfect man." Rickman was an intimate of Lamb, of Coleridge, and especially of Southey. With the last he was almost in daily communication, and his unpublished correspondence which forms the basis of the *Blackwood* article, comprises more than a thousand letters between the two men. Rickman was for nearly forty years a clerk of the House of Commons and was the originator of the population census in Great Britain. He was a fanatical Tory and had the power to give adequate utterance to his opinions. He pays his respects to the "Whiggamores," the "mobocracy," the "hell-hounds of the Press," and "O'Connell's squadron of Irish devils." His early admiration for Fox is not lasting. In 1806 Rickman writes:

Charley Fox eats his former opinions daily, and even ostentatiously, showing himself the worst man but the better minister of a corrupt government where three people in four must be rogues and three deeds in four bad.

Yet this bitter dogmatist had a very soft spot in his heart for the weaknesses of his friends. Among Rickman's letters are two from George Dyer, that absent-minded, kind-hearted, incompetent, whom Lamb is continually laughing at. It was Dyer's craze to make himself useful to his friends, and one of the letters to Rickman recommends to his good services a young man in great destitution, who "was warmly spoken of by his washerwoman."

The Rev. Dr. Amory Howe Bradford, who died at Montclair, N. J., last Saturday, in the sixty-fifth year of his age, had for many years been a notable figure in the councils of the Congregational Church of this country and Europe, and in the history of the New Jersey suburban communities. He graduated from Hamilton College and from Andover Theological Seminary, and studied at Oxford, where subsequently he was the first American clergyman to preach a baccalaureate sermon. He was long an associate editor of the *Outlook;* contributed to other religious publications, and was the author of the following books: "Spirit and Life," "Old Wine, New Bottles," "The Pilgrim in Old England," "Heredity and Christian Problems," "The Growing Revelation," "The Sistine Madonna," "The Holy Family," "The Art of Living Alone," "The Return to Christ," "The Age of Faith," "Spiritual Lessons from the Brownings," "Messages of the Masters," "The Ascent of the Soul," and "The Inward Light."

The Rev. Dr. Charles Marsh Mead, for fifteen years a professor at the Andover Theological Seminary, and later at the Hartford Seminary, died suddenly last week at New Haven. Dr. Mead, whose home was in Cornwall, Vt., was one of the original members of the American Bible Revision Committee, and was active in the work of the revision of the Old and New Testaments. He was born in 1836; he graduated from Middlebury College in 1856, and from Andover Seminary in 1862. Three years at German universities led up to the Ph.D. degree which he gained at Tübingen. From Middlebury he received the D.D. and LL.D., and from Princeton the former degree. His works include: "Exodus" (in Lange's Commentary), "The Soul Here and Hereafter," "Supernatural Revelation," "Romans Dissected" (under pen-name E. D. McRealsham, also in German, "Der Römerbrief beurtheilt und geviertheilt," under pen-name Carl Hesedamm), "Christ and Criticism," and "Irenic Theology."

The death is reported from Bonn, in his sixty-ninth year, of Wilhelm Wilmanns, philologist, and professor at the university of that town since 1877. He is remembered chiefly for his studies of the "Nibelungenlied" and Walther von der Vogelweide, and for "Beiträge zur Geschichte der älteren deutschen Literatur."

Science

Henri Fabre's "The Life and Love of the Insect" has been translated by A. T. de Mattos, and is to be brought out by Black.

The "Poultry Laboratory Guide" (Macmillan), by Prof. H. R. Lewis, will enable students easily to grasp the principles of poultry raising, and will furnish them with many shortcuts to efficiency. It is a digest of valuable information contained in various bulletins and reports of some of the most successful State experimental stations and of the Department of Agriculture's Bureau of Animal Industry. The practical poultryman will be repaid for a careful reading of the book; it shows no patience with the *laissez-faire* attitude which has wrecked so many poultry establishments, nor, on the other hand, with high-flown theories. Especially useful is the rotation of crops suggested by Professor Lewis for those following the double-yarding system, as well as his insistence upon discrimination in the selection of eggs for incubation. The illustrations are numerous, but rather ineffective.

The text-book for second-year engineering students on "Continuous Current Machine Design," by William Cramp of the Victoria University, Manchester, discusses the construction and operation of these machines in a thorough manner. The tentative and empiric aspects of the subjects are dealt with rather than the theoretical side. The eighth edition of the text-book on "Dynamo Electric Machinery," by Profs. Samuel Sheldon and Erich Hausmann of the Brooklyn Polytechnic Institute, has been issued. The book, which has been completely rewritten, is undoubtedly successful, but it still seems thin and meagre. It is designed for ordinary classroom exercises of students pursuing electrical or non-electrical engineering courses. Such students should have a stiffer course, and should have also, for the price charged, a book printed on decent paper and bound in a less flimsy fashion. Professors Crocker and Arendt of Columbia University, in their new book on "Electric Motors," have written on the operation of electrical machinery rather than on its design and construction. It is, in fact, a curious thing that most books have but little space for the details of operating electrical machinery, and many students who have a fair knowledge of a machine must feel helpless when they meet the problem of keeping it running. This book, therefore, is useful. The same criticism of weak binding applies to this, and, indeed, to all the books mentioned in this note. Nearly every piece of electrical machinery and apparatus has connected with it a solenoid, and, unfortunately, the solenoid cannot be determined accurately from theoretical deductions. Charles R. Underhill has prepared a very useful book on "Solenoids, Electro-magnets, and Electromagnetic Windings." Not only the ordinary types of the solenoid are discussed, but also many of the rarer forms. Much of the constructive details and testing is the result of his own observation; many useful diagrams and tables are given. The definitions and physical laws are not always well chosen, and often are not presented in the best form. It should be quite possible to preserve the concreteness demanded by the engineer, and, at the same time, scientific accuracy. (All published by D. Van Nostrand Co.)

"La Conquête du Sahara" (Paris: Armand Colin, 260 pages, 3.50 francs) is an "essay of political psychology" by E. F. Gautier, who, with R. Chudeau, has already published two large volumes—"Sahara Algérien" and "Sahara Soudanais"—containing results of exploring missions of the French government. The present volume leads up to a practical conclusion, not more startling than the increase and development of French colonial dominion in Africa. This is nothing less than the Trans-Saharian Railway, that is from Algiers to the Niger, along the postal route already in use by which French officers also go and return to their posts. A carefully studied chapter is given to this enterprise, which is neither so Utopian nor so distant as those unfamiliar with what is doing in Western Africa might believe; and this chapter properly concludes the book. It is preceded by chapters on the conquest of the Touareg Sahara, which has passed all but unobserved in our own time; and the conquest of the Moroccan Sahara, which is contemporary history still in the making; the camel service, which has enabled France to accomplish such conquests; the oases; and the Touareg tribes, whom French tactful administration has made its willing instruments. M. Gautier has the experience of twenty years in Algiers and eighteen months of continuous exploration of the Sahara. He has no illusion as to any probable exploitation of the desert itself. At best, there may be mineral discoveries (all the states of Europe are seeking within their bounds or colonies for the great modern staple, petroleum). "The Sahara must be taken for what it is—a solid surface, which is a possible platform for the inter-communication of Berbérie and the Sudan—between the tropics and the Mediterranean. . . . Restricted to this modest point of view, it is not difficult to conceive of the Sahara paying, even from the economic side."

The death is reported from Cassadaga, Fla., in his seventy-fourth year, of Dr. Emmet Densmore, the author of "How Nature Cures," "Sex Equality," and "Introduction to Arcana of Nature."

Dr. Edward Hitchcock, professor of hygiene and physical education, and the oldest member of the faculty of Amherst College, died last week, at the age of eighty-two.

He was the first physician in this country to be placed in charge of a college gymnasium, and was the author of "Anatomy, Physiology and Anthropometry."

Drama

Monsieur D'Or. By John Louis Haney. Philadelphia: The Egerton Press. $1.20 net.

This "dramatic fantasy," as it is called, is one of the most capable and pregnant plays that have appeared in the last decade, or longer. Fanciful, as it undoubtedly is in one sense, it is yet essentially veracious in its representation of existing conditions, and fulfils one of the true functions of the drama in uttering a message, sound in both morals and philosophy, under the guise of light, satiric, comprehensive, and occasionally sentimental comedy. This is a work written by a man possessing literary facility and knowledge of men and affairs, with a firm grasp of his subject, and is worth a dozen of recent commercial sensational plays on similar subjects. It shows how a progressively interesting story may be made out of the development of character by circumstance, without the use of one abnormal or lurid incident. Moreover, the story, if fantastic, is human.

Monsieur D'Or is the adopted name of Bobbie Dorr, the son of an American Crœsus, who assumes that title when he inherits his dead father's millions. He is a clever, well-educated, attractive young materialist and sensualist, who believes in nothing but the omnipotence of gold for success or happiness. It is his creed that all men and women may be bought and that idealism of any kind is rubbish. The play shows—in a prologue, four scenes, and an epilogue—how he is finally converted. There is no continuous plot, each scene being a comedietta in itself; but the interest, centred in the development of D'Or himself, is not diminished by this episodical arrangement. The study of this dominant figure is minute and admirable, and the characterization of many of the minor personages—mostly familiar types—are deftly sketched. At first D'Or is the golden idol of Lenox; but there is one in the subservient crowd who rebels against his selfish cynicism; and she is the girl to whom he is engaged. He meets his first check when she breaks the engagement. In the second scene, as the controlling shareholder in a great lace factory in France, he violates all his principles by compelling a ruinous surrender to the demands of the striking hands to gain the good will of a working girl who has taken his fancy. He is hailed as a savior by the mob, but the girl is honest and stanch and will have none of him. Next in his château at Versailles he illustrates the money power by bribing a great radical journalist to turn conservative and an idealistic artist to paint a grossly realistic picture; and by corrupting a banker's wife; but he is routed ignominiously by the dainty daughter of a musician whom he coveted. At Interlaken, as the agent of the greatest capitalists of Europe, he meets the representatives of the Powers on their way to a peace conference at Geneva, and, pleading the interests of trade, exacts a pledge from them that no real step in the direction of a reduction of armaments shall be made. But in a junior secretary and in the stenographer, whom he had suborned, he finds two rebels who treat him with defiant scorn. In the fourth scene, where, for the first time, there is a touch of symbolism, he lies a victim of nervous prostration, despondent, and forlorn in a Balkan palace; and here—in chance meetings with a boy, a nurse, a physician, and an Oriental pilgrim—he is awakened fully to a sense of the failure of his life and his philosophy. All this is very naturally told. For the first time he gets an inkling of the possible happiness to be found outside of self-indulgence; and while in this chastened mood he hears that the first love of his boyhood, Eleanor Richmond, still unwed, is at the head of an international movement for the relief of famine in India and is on her way thither to superintend the work. Inspired by her example, he makes over to her, anonymously, the bulk of his millions, intercepts her at Port Said in the guise of a ruined spendthrift, and the curtain falls upon the prospect of wedding bells and a new philanthropist.

There is nothing novel in this story or its moral, but no recent drama has treated the subject of wealth, its power, and its use and abuse, with such veracity, intelligence, and point. And the piece is not a preachment, but a genuine comedy, full of living types, of effective situations, of keen observation, and sharp satire upon the social and political shams and follies of our modern civilization. And the significance of it all is general, not merely local. Altogether this is a notable piece of work.

Maurice Baring's "Diminutive Dramas" is one of the books which Houghton Mifflin Co. promise this week.

Granville Barker is trying the experiment of presenting some of Arthur Schnitzler's sketches in one of the London music halls.

Miss Horniman and the well-known company from her Gaiety Theatre, Manchester, are acting in the Coronet Theatre, London, for a brief season. They began with a revival of Sheridan's "The Critic." A prominent London critic writes:

> There is happily no doubt about there being a public for Sheridan, or, at all events, for "The Critic." Line after line was followed last night with delighted laughter, especially when Miss Edyth Goodall as Tilburina and Miss Hilda Davies as her confidante were on the stage.

During his present English provincial tour Martin Harvey will produce several new pieces. One of these is from the Spanish of Angel Guinera, and, as translated by Wallace Gilpatrick and Guido Marburg, bears the title of "The Wolf of the Lowlands." The action takes place in Catalonia, and special Spanish costumes have been imported for the production.

The London critics confidently predict success for "The Witness for the Defence," the play by A. E. W. Mason, which has just been produced at the London St. James's Theatre. The piece itself, judging from the accounts of it, seems to be more valuable theatrically than in other ways. In the first act, in India, the curtain falls upon Mrs. Ballantyne defending herself with a gun against her brutal, furious, drunken husband. The natural presumption is that she shoots him. Two years later, she has been tried for killing him and acquitted, chiefly on the testimony of a lover, Henry Tresk, who swore that Ballantyne had confessed that he was in terror of his life because of a Hindu assassin, who had already tried to shoot him. Tresk added that he himself had seen a swarthy arm beneath the folds of Ballantyne's tent. So the jury acquitted her, and she is living happily in an English village, where the squire's son, Dick Hazlewood, has fallen in love with her. An old uncle, a shrewd lawyer, doubts the justice of the verdict and slyly cross-examines Tresk, who, however, sticks manfully to his earlier story, although (in the eyes of the audience) he is plainly lying. Then there is a midnight interview between Tresk and Mrs. Ballantyne, in which the whole truth is revealed. Tresk offers to take the whole blame upon himself and pay the penalty for perjury, if she will promise to wed him afterward. When she refuses to do this, he says that she must, at least, tell the whole truth to Dick. This she is unwilling to do, and the discussion grows so warm that Dick's father is awakened, enters the room, and so, necessarily, is admitted to a full knowledge of the situation. Finally, Mrs. Ballantyne pledges herself to make a clean breast of it to Dick. The piece ends happily, after all the storm of passion.

Music

Resonance in Singing and Speaking. By Thomas Fillebrown. Boston: Oliver Ditson Co.

The Brain and the Voice in Speech and Song. By F. W. Mott. New York: Harper & Bros.

The world clamors for great singers. Opera companies are springing up in various cities, but unless the singers are of the first rank these companies do not prosper. Under these circumstances music-lovers must welcome as a public benefactor every writer who contributes something of importance to the vexed problem of creating great singers. Such a writer is Dr. Fillebrown. For twenty-one years he has been professor of operative dentistry and oral surgery at Harvard University; he has lectured on voice development and has mastered the contents of more than fifty

books on this subject, of which he gives a list. His own book is, naturally enough, concerned chiefly with the cavities of the head, to which his professional duties have daily attracted his attention.

His main contention is that voice-trainers have heretofore given too much attention to the vocal cords, treating them as the principal cause of tone, whereas these are in themselves insignificant as sound producers. "It is the vibrations of the air in the resonance chambers of the human instrument, together with the induced vibrations of the instrument itself, which give tone its sonority, its reach, its color, and emotional power." Loudness of tone is less due to increase of breath pressure on the vocal cords than to the character of the resonance. As long ago as 1863 Helmholtz pointed out that in respect to resonance the human voice is far superior to all other instruments, for other resonators are fixed and unchanging, whereas the human resonator is flexible and "admits of much variety of form, so that many more qualities of tone can be thus produced than on any other instrument of artificial construction." The importance of such resonance as compared with mere vibration of the vocal cords is illustrated vividly by the analogous case of a tuning fork, which, set in vibration, can, unaided, scarcely be heard by the person holding it, whereas, if rested on a table, or, better still, on the bridge of a violin, it can be heard distinctly throughout a large hall.

Dr. Fillebrown demonstrated in his surgical work the existence of a hitherto unrecognized connecting passage between the cavities of the face and those of the forehead, which helps to explain the play of resonance in the cavities above the nostrils. Sometimes the thin walls of the cavities and the contained air vibrate with such surprising force that the singer is blinded for a moment, when sounding a note intensely. The author points out that perhaps the most important element is nasal resonance, and he comments on the folly of the numerous teachers who, in their desire to overcome the common American nasal twang, increase it by shutting out the nasal chambers from all participation in speech and song. He does not overlook the fact that the chest also serves as a resonance chamber, but this does not falsify his thesis that the principal vibrations are above the vocal cords. In several pages of examples with musical type, he clearly shows how the all-important head resonance can be acquired. It is hardly too much to say that if teachers and pupils throughout the country were to follow these hints, a new epoch in voice culture would begin and the opera houses would soon have all the great singers they need. These singers would last longer, too. Lilli Lehmann, at the age of sixty-four, is still delighting audiences, because she recognized the importance of nasal and head resonance. Jenny Lind had been taught wrongly, and her beautiful voice began to fail while she was physically in her prime.

While the neglected but all-important subject of resonance is the main theme of Dr. Fillebrown's book, he also discourses soundly on registers, on placing the voice, on throat stiffness, and its remedies, on the way to overcome stage fright, etc. His directions for deep breathing are, perhaps, the most lucid and valuable ever printed; they are important not only to students of singing who have to become professional breathers, but to all who wish to enjoy perfect health, for, as the author remarks, "we seldom find an individual who breathes correctly without education in the matter." He also dwells on the fact that a good way to improve the speaking voice is to cultivate the singing voice, and maintains that an orator may, by cultivation, develop a speaking voice of musical quality without being able to distinguish "Old Hundred" from "The Last Rose of Summer." Here, too, resonance is the all-important consideration. A broken nose spoiled the splendid voice of the elder Booth and virtually ended his career as an actor.

Dr. Mott's volume is not, like Dr. Fillebrown's, a guide for singers and teachers, but a collection of papers on popular science appealing to readers who are interested in such questions as the origin of speech, the cerebral mechanism of speech and song, speech and right-handedness, localization of speech centres in the brain, the primary site of revival of words in silent thought, pathological degenerative changes producing speech defects and what they teach, etc. The writer's statements are based on the latest researches in physiology and pathology, of which he is professor in the London County Asylums. Numerous diagrams help to show "how the wheels go round" in the human brain and organs of speech, and the author has endeavored to write in as simple language as scientific accuracy and requirements permitted. The most eloquent page in the book is the last, in which he tells how a mad Frenchman's facial expression and whole personality changed when, by request, he sang the "Marseillalse."

The interest in folk-music is growing apace; hardly a musical periodical appears without an article on some phase of it. In England there is great activity in collecting what remains of these treasures of former generations, under the direction of various organizations, one of which is the Oxford Folk-Music Society. In a lecture delivered before this society, J. Steuart Wilson expressed his belief in the communal origin of folk-songs. One paradox is pointed out by him in these words:

I believe that our English folk-songs do give undoubted evidence that we are fundamentally musicians, and yet it must be confessed that most of our cultivated music, whether creative or interpretive, has seldom up to the present shown any very definite characteristics of its own. When we hear French or German music—whether good or bad—there is no doubt that it is French or German. But can any one ever say, except in a very limited degree, "That violinist belongs to the English school," or "That piece of music is obviously by an Englishman"?

In this country there are still a number of persons who call genuine negro songs the "folk-songs of America." That they are really African is shown conclusively by Jeannette Robinson Murphy, in her book, "Southern Thoughts for Northern Thinkers and African Music in America" (New York: The Bandanna Publishing Co.). Mrs. Murphy is a well-equipped folk-lorist, a composer herself, and a singer who can reproduce exactly the curious qualities of the music of the Southern negroes. During her childhood in Kentucky she followed the one-time slaves in their tasks, listening to their crooning in their cabins, in the fields, and especially in their meeting houses, and all of them assured her that the tunes they sang came from Africa. She explains what a singer must do to reproduce this music as it is sung by the blacks; the voice must be made nasal and undulating; around every prominent note must be a variety of small notes, called trimmings; he must sing notes not found in our scale; he must carry his breath from line to line and from verse to verse, even at the risk of bursting a blood-vessel; he must introduce peculiar humming sounds, etc. All this, surely, has nothing in common with real (white) American folk-songs, such as were written by Stephen Foster and others. Nevertheless, the American-negro music is decidedly worth studying, and it would be well if some one interested in the subject provided Mrs. Murphy with the funds necessary for carrying out her researches. She lives at Orlando, Florida.

Art

Art's Enigma. By Frederick Jameson. With eight illustrations. New York: John Lane Co. $2 net.

This book has the merit of treating æsthetics strictly as a branch of psychology, but like other works that have assumed this obviously sound attitude there are concrete analyses of the conditions and effects of the several arts. At the outset the author clears away current misconceptions. "Bad art" is a contradiction in terms. As well say incorrect arithmetic. Bad art can only mean inartistic art, or no art at all. More sweepingly, such terms as "realism, idealism, and impressionism describe and distinguish nothing in art. . . . These terms are meaningless in relation to some arts, and could not, therefore, denote any fundamental artistic qualities." We think realism and idealism, which mean only more or less correspondence to the vision of ordinary folk, might well go to the scrap heap. So might impressionism in the sense adopted by our author of a sum-

mary or incomplete form of execution. But, taken psychologically, the word impressionism serves a useful purpose. It denotes an art that makes a minimum use of memory. In this sense it denotes a fundamental attitude and is applicable to all the arts.

From a study of harmonized melody Mr. Jameson deduces his definition of the work of art. It is a projection of a form of feeling, its ingredients being naught; their relations everything. We quote:

A work of art is the representation of an imaginative conception of a group of things composed together in such a manner as to produce a number of æsthetic and emotional impressions, not all pleasant in themselves, but combining into one whole intensely delightful, complex, but harmonious mental impression. Its essence and the source of its charm and of all the effects above quoted—emotional suggestion, change of painful impressions to pleasant ones, unity and perfection of the whole—lie in the form and the relation of the parts, and not at all in the separate component elements. The work appeals to the imagination alone, and the reason, or consciously acting part of the intellect, is insensible to its appeal, and is unable to explain or in any way account for its attraction or even to tell whether any group of things form a work of art or not. Its sole aim, so far as we can see at present, is a certain kind of pleasure, of which the source is a highly complex kind of beauty.

There are certain elements of *petitio principii* in this definition, but it is suggestive, clear, and—granting the presupposition that an æsthetic experience cannot be rationalized at all—pretty satisfactory.

We have no space to notice Mr. Jameson's vigorous comments on the various arts, but refer the reader especially to the final chapter, in which a theory of relative impersonality in art is effectively urged. It should be said, however, that what Mr. Jameson calls an impersonal attitude might with equal warrant be called the employment of the whole self. All that is implied is a kind of detachment from ordinary and partial emotionalism. The æsthetic experience is incompatible with concurrent personal passion. One emotion must slay the other. On the practical side art renders harmless usually harmful subject matters, but in a larger sense art can do us neither good nor ill. Nor is art merely a vehicle of select emotions:

The whole effect of a work of art is different from and deeper than that of any feelings it expresses. These are transferred from our ordinary consciousness to the realm of the imagination, where they become part of a broader and profounder kind of emotional experience. . . . In other words, emotion of any kind must cease to be absorbingly personal before it can find poetic expression, and the value of such expression depends on its universality, and not on its personality.

In closing Mr. Jameson hints at a possible broadening and purgation of ordinary experience through the cultivation of the artistic imagination. The peculiar, almost neo-Platonic, mysticism of the book is maintained with eloquence, and the analytical portions are both picturesque and sensible.

"Cathedrals of Spain," by John A. Gade, is issued this week by Houghton Mifflin Co.

A new contribution to a special form of literature is "Indiana Bookplates," issued through the Nicholson Press of Richmond, Indiana, by Esther Griffin White. Information is given concerning the bookplates of the author's State, and about their makers as well. Incidentally, she pays a tribute to her late brother, Raymond Perry White, a designer of many plates. She is an enthusiast in the subject, and this enthusiasm shows itself on every page of the present volume. The book is well printed and copiously illustrated. The edition is limited to 250 copies.

William Edgar Fisher, the well-known engraver of this city, has issued "A Portfolio of Book Plates, No. 5," which contains twelve signed proofs executed by him since the issue of his portfolio No. 4. The edition was printed in December of 1910, and was limited to 128 copies. The present collection includes Mr. Fisher's recently executed plate for Bowdoin College Library, the gift of the class of 1882. The proofs are printed directly from the original coppers on Japan vellum approximately 8x10, and are uniform with the preceding issues.

The archæologist and anthropologist will find much valuable material in a recent volume consisting of a treatise entitled "Antiquities of the Ouachita Valley," by Clarence B. Moore, and a "Report on an Additional Collection of Skeletal Remains from Arkansas and Louisiana," by Dr. Ales. Hrdlicka. The former is a reprint from the Journal of the Academy of Natural Sciences of Philadelphia, Volume XIV, and is the work of an eminent archæologist. The latter deals with ninety-one lots of bones obtained from certain of the old burial places in Arkansas and Louisiana. In addition to the human remains described, a detailed account is given of those mounds and dwelling sites which were found by the party, earthenware pipes, and earthenware bowls, pots, and bottles; also pipes of limestone, ceremonial axes, and pendants of hematite. The volume, which is thoroughly scientific, contains also maps, illustrations in text, and eight colored plates.

Several interesting excavations are being carried on in Athens by the Archæological Society of that city. Northwest of the Acropolis, on the site of the Bouleuterion, several important antiquities have been brought to light, among them a marble head of a youth belonging to the fifth century B. C. of the type of the Apollo of the Omphalos. In order to determine the date of the retaining wall which supports the soil of the Pnyx, the public meeting-place of the Athenians, the embankment behind this wall is being cleared away. Here have been unearthed vase fragments of the fifth century and some stamped vase handles belonging to the fourth century B. C. It should therefore seem that the retaining wall could not be older than the fourth century. However, at a distance of about eight yards inward, there has been discovered another retaining wall, built of smaller stones laid in courses, which is considerably older, though the exact time of its construction cannot as yet be fixed. In the Agora, the ancient market-place, have been found in an almost perfect state of preservation a portico consisting of two pillars of Pentelic marble, three metres high, the torso of a youth in marble similar to the Eleusis boy, and several interesting bas-reliefs and portions of inscriptions. These excavations will be continued throughout the winter.

Dr. Paul Richer continues the publication of his lectures at the Paris Beaux-Arts by a little book on the artistic anatomy of the horse. It follows the same method of adapting scientific information to the needs of artists which was followed in the author's previous book on the artistic anatomy of man. Text and plates are all that could be desired.

For more than twenty years a distinguished Paris artist, Paul Baudouin, has been making experimental studies in the fresco painting which gave such brilliant and lasting results from Giotto to Michelangelo. The technical secret of the art was thought to be lost beyond recovery. Some years ago Paul Baudouin declared that he had discovered it and that the painting was perfectly adapted to the Paris climate. The first application of the colors must be successful, for the process admits of no retouching; and the colors must form one body with the lime and sand mortar to which they are applied, becoming an integral part of the architectural material and lasting quite as long. The Paris municipal council has given the artist an opportunity to test this new painting, revived from the old, on a large and splendid scale. He has decorated with his frescoes the semicircular gallery forming the eastern side of the beautiful interior court of what is popularly known as the Petit Palais, that is, the Fine Arts Palace of the City of Paris. The entire painting covers nine hundred and fifty square metres. Two hundred figures are enlaced in the rhythm of a lozenge trellis, with leaves, flowers, and fruits running all along above the gallery. It is an interpretation of the course of the year. In each of the four entering squares there are four nude figures, two men and two women, symbolizing together one of the seasons. In the three vault sections are the Months; the Hours of Day and Night; and the Animals associated with Months and Hours. The trellis catches up the Months in great medallions; the Hours in medium ovals; the Animals, which are between, in small octagons, the entering squares alone breaking the rhythm. On steps supported by the cornice, around the whole gallery, groups of personages recline in prolongations of the ovals or springing of the arches. Idyllic Latin inscriptions complete the Virgilian character of the varied, rhythmical, and harmonious, delicate and fresh-colored decoration, which also agrees well with the blue and gold enamels of the two water basins of the court. In one thing alone has the Paris climate taken its revenge; the great glassed doors leading into the court let in such draughts that they are permanently closed in cold weather, preventing a near view of this novel and important achievement of the new fresco painting.

Thomas George Linnell, an English painter of country scenes, died a fortnight since, at the age of seventy-five.

Alice Morse Earle, whose books on old costumes, antique china and furniture, and gardens of a bygone day are authoritative as well as charming, died just a week ago in her fifty-eighth year at the home of her son, Alexander Morse Earle, at Hempstead. She was a member of the Colonial Dames and the American Historical Association, and author of the following volumes: "The Sabbath in Puritan New England," "China Collecting in America," "Customs and Fashions in Old New England," "Life of Margaret Winthrop," "Diary of a Boston Schoolgirl," "Costumes of Colonial Times," "Colonial Dames and Goodwives," "Old Narragansett," "Colonial Days in Old New York," "Curious Punishments of Bygone Days," "Home Life in Colonial Days," "Child Life in Colonial Days," and "Stage Coach and Tavern Days." Mrs. Earle was also part-author of "Early Prose and Verse," "Historic New York," "Chap Book Essays," "Old-Time Gardens," "Sundials and Roses of Yesterday," and "Two Centuries of Costume in America."

Finance

PASSING OF THE "GOULD REGIME."

Shortly after the close of business on the Stock Exchange, one day last week, a St. Louis dispatch announced that attorneys acting for the Rockefeller interests, and for the international banking house of Kuhn, Loeb & Co., had made formal demand for the stock books of the Missouri. Pacific Railway. That action had been taken, it was explained, to procure the names and addresses of shareholders in a contest for proxies to oust the Goulds from control of the system. George J. Gould has been president of that company since 1893, and at each annual election. he has named all thirteen of the directors. On learning of this action, Wall Street leaped somewhat hastily to the inference that a struggle for control of this important property was at hand—possibly such as occurred in Northern Pacific during 1901, or in Illinois Central during 1907. It did not come. Instead, after prolonged conferences between the opposing forces, it was officially announced next day that Mr. Gould would retire from the presidency of the company and that at the annual meeting of shareholders, to be held on March 14, new directors would be elected. Wall Street at once declared that this marked the end of the "Gould régime."

Something of historic interest is attached to the railways known as Gould properties; they are a relic of one of the most picturesque episodes in American finance. In 1881, Jay Gould occupied, in the mind of Wall Street and the public, very much the place which Harriman occupied in 1909. He was by no means the equal of the late Union Pacific chieftain in pure constructive ability; Gould was a wrecker in the long run, where Harriman was a builder. But the newspapers none the less called him the "wizard of American finance." While he lived, every one wondered where his programme of railway acquisition would stop. When he died, leaving to his family an estate of $200,000,000, with a controlling interest in half a dozen great railways, people wondered what would become of the "Gould régime."

The properties controlled by the Gould régime were not always the same. Once Jay Gould absolutely dominated the Erie; later, the Union Pacific. Neither was handed over to his heirs; when his methods had brought each company to the verge of unsuspected insolvency, he sold out and deserted the ship. Similarly, he once owned and then quietly dropped the St. Louis and San Francisco and the Missouri, Kansas and Texas. Control of the Manhattan Elevated was disposed of by his will; it remained a "Gould road" until the Interborough bought it in 1902. Control of the Western Union Telegraph Company remained in the family until 1909, when the Mackay interests bought it. At the present time, the term "Gould properties" applies to the Missouri Pacific and allied lines which, as part of the Gould estate, were turned over to the present management.

It is not generally believed that the Goulds went into Wednesday's conference with more than 25 per cent. of Missouri Pacific's $83,000,000 stock in their own possession. What had happened on previous occasions of the sort was that enough other shareholders had voted with the Goulds to give them a majority. At last week's conference, when a strong opposition was able to show holdings of the stock sufficiently large to dispute the Gould control, these other holders turned over their proxies to the interests who favored a change in management. Next year the Gould interest will have only four representatives on the board, instead of the whole thirteen. The retiring president will be made chairman of the board, with the understanding that his successor will follow out the instructions of a majority of the directors.

Few people realize what the magnitude, on the railway map, of this Gould system actually is. Very recently it was possible to say that the interest which controlled this system controlled more mileage than belonged in any other railway system in the country. With the Harriman system in the field, this sounds improbable. But, including the Southern and Central Pacific, the Union Pacific system comprises 17,500 miles. As the head of the Missouri Pacific, the holding company for the Gould system, George Gould at one time personally controlled nearly 19,000 miles of road.

After the appointment of receivers, after the panic of 1907, for the Western Maryland, the Wheeling and Lake Erie, the Wabash-Pittsburgh Terminal Railway, and the International and Great Northern, the mileage of the Missouri Pacific system was reduced to the extent of 2,175. But even with that disputed mileage eliminated, the president of the Missouri Pacific controlled the Wabash, the St. Louis and Iron Mountain, the Denver and Rio Grande, the Texas Pacific, the Colorado Midland, the Western Pacific, and certain smaller allied lines, which make a system of 17,000 miles. Since the death of E. H. Harriman, no other man has occupied a similar position.

With the passing of the Gould régime in the railway world, the question is again raised as to whether in time all of the railways of the country will not be part of three or four consolidated systems. Certainly the trend of events during the past decade points in that direction. First A. J. Cassatt, to protect the Pennsylvania against rate-cutting, acquired control of the Norfolk and Western, the Baltimore and Ohio, and the Chesapeake and Ohio. The New York Central then joined hands with the Pennsylvania, and control of other Eastern roads was acquired. Then James J. Hill of the Great Northern bought control of Northern Pacific, and Northern Pacific and Great Northern jointly acquired the Burlington. Harriman, starting with the Union Pacific, soon merged the Central and Southern Pacific and the Oregon Short Line. In New England the New Haven began to reach out for other lines, and in the South the Southern Railway and the Atlantic Coast Line accomplished the same results.

To-day there is only one railway in the country of any real strategic importance, which can be called independent in the sense applied to that word ten years ago. That is the Pennsylvania. All the rest are either controlled by other companies or allied with interests which control the other systems also. It used to be said, as long ago as 1901, that American railways were even then, after allowing for banking affiliations, virtually divided up into the Vanderbilt system, the Hill-Morgan system,

Financial.

No. 59 Wall Street, New York

the Harriman system, and the Gould system; and in 1904 Supreme Court Justice Brewer, in his opinion against the Northern Securities merger, remarked that "if the parties interested in these two competing railways," which had been placed under common ownership, "can, through the instrumentality of a holding company, place both under one control, then in like manner . . . could the control of all the railways in the country be placed in a single corporation." Considering the ultimate possibilities of combination, the justice concluded, three or four individuals might through the same machinery obtain "the control of the whole transportation system of the country."

The Northern Securities decision itself squarely blocked the path to this result; the two merged systems were returned to their original owners. It still remained to see what would happen as a result of outright purchase in the market, without the paraphernalia of a holding company. The ending of the "Gould régime" is in this regard an interesting landmark. In operating efficiency and financial judgment the Gould management has long been notoriously wanting; the new management is certain to improve matters in both directions. Just what will be the result of the lodging of control of this hitherto independent system in the same hands as exercise general control over the Union Pacific lines, is a question for the future.

BOOKS OF THE WEEK.

Audoux, M. Marie-Claire. Translated by John Raphael. Introduction by Arnold Bennett. Doran Co.

Barrington, Mrs. R. Essays on the Purpose of Art. Longmans.

The CHILDREN'S CITY

New York for Young People

By ESTHER SINGLETON

This book—the only one of its kind—is a guide and companion to New York City for young people. It takes them on leisure-hour trips and outings that leave them with an idea of the many-sided interest of the metropolis—its historic landmarks, pleasure-grounds, galleries, zoological gardens, etc.

Love and Marriage

By Ellen Key

Author of "The Century of the Child," etc.

Crown 8vo. $1.50 net.

A discussion of the problems the most vital to the welfare of the human race, problems which have throughout the centuries engaged the attention of leaders of thought. Daring and iconoclastic as they may be, the views of Ellen Key are presented with a calmness and philosophy of method that is absolutely free from any trace of sensationalism.

"In **Love and Marriage** *we feel that we are in the inspiring presence of a woman whose personality is one of the chief moral forces of our time."*—**Havelock Ellis.**

B. W. HUEBSCH, Publisher, New York

Just Published:

H. R. H. The Duke of Mecklenburg's
In the Heart of Africa

By ADOLPHUS FREDERICK—"The Foremost Sportsman in the Kaiser's Dominions."

"An excellent book of an expedition numbering 700 men. No scientific detail is allowed to clog the story or crowd out interesting and stirring incidents." ***New York Sun.***

One of the most important of modern expeditions into Africa was made by the Duke recently, accompanied by a great party of hunters and scientists. The expedition was a complete success. The Duke's narrative covers the essential features of the expedition, and apart from its scientific value (London "Times": "It is safe to say that this book is likely to remain for some time the standard authority on African Exploration") it will be found of the deepest adventurous interest by sportsmen, tourists and readers of travel. *Large octavo, 233 illustrations, sumptuously printed. Net, $5.00 (postage, 30c.).*

G. H. B. WARD
The Truth About Spain

"Spain is at last waking up from her long sleep. But how shall she rise and walk along the road that leads to better things?"

Here is the answer. Mr. Ward, for many years a close student of Spanish affairs, analyzes the situation from many different points of view—political, ecclesiastical, educational, legal, social, industrial, commercial, economic, military and naval—reveals what is wrong and points to the remedy. The true story of the trial and execution of Ferrer is given. *12 full-page plates. Net, $2.00 (postage, 20c.).*

S. H. LEEDER
The Desert Gateway

Have you read "The Garden of Allah"?

Then you will thoroughly enjoy Mr. Leeder's fascinating book, for in it he deals in the flesh with the characters who people Hichens's famous story, and their surroundings and manner of life. "Biskra and Thereabouts" is the sub-title of this delightful narrative of pageants and prayers and of feasts and visits. Those who would understand the Arab people will find this book of the greatest interest and value. *Illustrated. Net, $1.75 (postage, 15c.).*

E. Keble Chatterton's "Steamships and Their Story"

"This massive, comprehensive, and splendid volume, which is as interesting as it is informing." ***Boston Transcript.***

A most fascinating volume of progress, of fact, anecdote and contrasts, describing the struggles and triumphs which finally evolved the monster turbine liners of to-day. *153 illustrations, many in colors. Net, $5.00 (postage, 30c.).*

CLEMENT K. SHORTER
Napoleon in His Own Defence

"This volume is likely to give an entirely different direction to the study of Napoleon. For it is the first time in which the man is heard to speak of his tremendous plans, his wonderful achievements and the causes of his downfall as perhaps never before in all that wilderness of records already extant about him." *St. Louis Globe-Democrat. 4 rare plates. Net, $4.00 (postage, 25c.).*

CAPT. FRANK H. SHAW AND ERNEST ROBINSON
The Sea and Its Story

"If anything relating to the sea and to its navigation has been omitted from this massive and remarkable volume, it is probably of little value and of little interest. Every phase of the sea and its story is given a separate chapter, and each of the more than fifty stories is complete in itself." *Boston Transcript. With more than 250 illustrations. Octavo. Net, $3.50 (postage, 40c.).*

JOHN FOSTER FRASER
Australia: The Making of a Nation

"He is the candid friend, but a truly appreciative one, and he has made an exceedingly lively book, which the Australians may not like. It can be commended to Americans who wish to gain an intelligent and by no means cut-and-dried knowledge of Australia." *Philadelphia Press. With 64 plates. Net, $1.75 (postage, 15c.).*

The New Fiction:

Warwick Deeping's "The Lame Englishman"

"The best modern novel Mr. Deeping has yet written." *Athenæum.* You live again through the eager days of the Garibaldi insurrection in this vivid and enthusiastic story of love and the march of troops in '49. *Frontispiece in colors. Net, $1.20 (postage, 12c.).*

Other Books by Mr. Deeping: THE RUST OF ROME, Net, $1.20—BERTRAND OF BRITTANY, $1.50—THE RED SAINT, $1.50—MAD BARBARA, $1.50—BESS OF THE WOODS, $1.50—UTHER AND IGRAINE, $1.50—A WOMAN'S WAR, $1.50—THE SLANDERERS, $1.50—SEVEN STREAMS, Net, $1.20—LOVE AMONG THE RUINS, $1.50.

Percy Brebner's "The Brown Mask"

By the author of "The Princess Maritza." The brown mask conceals a mysterious but fascinating highwayman, whose chivalry, deeds of daring, faithfulness to his love, combine to make him a truly noteworthy character in recent fiction. *Frontispiece in colors. Net, $1.20 (postage, 12c.).*

VOL. XCII.—NO. 2383 THURSDAY, MARCH 2, 1911 Reg. U. S. Pat. Office. PRICE TEN CENTS

"That wonderful book"

ONE WAY OUT

A Middle-Class New-Englander Emigrates to America

By William Carleton

It tells what might be your own story to yourself; puts your own problem before you as perhaps you never saw it before—the story and the problem of every one who is working for a living—*a real living*—and to whom this problem is vital and dramatic.

"Simple, true, inspiring, gripping, galvanic," writes an enthusiastic reader.

"The most vital and significant book that has appeared in a number of years," writes a leading bookseller.

"Here at last is a new book really worth reading," says a critic.

"It appeals to every man and woman in America except perhaps the very rich and the very poor," says a business man.

A young physician read it, was inspired and encouraged by it, **sold his practice** and moved away to begin again where his opportunities were better. **This is an actual and unsolicited fact.**

ONE WAY OUT

A Middle-Class New-Englander Emigrates to America

By WILLIAM CARLETON

FOURTH LARGE PRINTING

IN this remarkable narrative a man tells simply but with dynamic power how at thirty-eight he lost his position in the office of a big corporation; how he learned that the special training of his own office was of no value in getting him a position in any other office; how at thirty-eight he was already "too old" to get such a position as he had found easily enough at eighteen; how he and his wife and boy in their trim little suburban home were actually confronted with the fundamental problem of how to exist; how he met and solved that problem in a way unexpected and dramatic, though to him and his wonderful wife, Ruth, obvious and natural, by "emigrating" to America; and how in all their struggle they found their lives enriched and inspired by the old adventurous pioneer spirit of their forefathers.

A few brief chapters from this narrative were recently published in a great weekly magazine, and awakened an animated discussion from one end of the country to the other. The present volume contains the complete story.

Once in a while a book appears which so profoundly impresses the public mind that it wins its place as a force in public opinion. Such a book, not only on account of its deep human appeal but also on account of its illumination of the present problem of "the high cost of living," is *One Way Out*.

Remember—and tell your customers—that this is the complete story, **five times** as long as the brief chapters which won such an audience in the **Saturday Evening Post**, and at least **fifty times** as good!

$1.20 net; by mail, $1.32.

Three Splendid New Novels

THE GHOST

A Modern Fantasy

By ARNOLD BENNETT

Author of "The Old Wives' Tale," "Clayhanger," etc., etc.

MR. BENNETT tells a story here that shows his consummate artistry in the creation of character and his exacting feeling for the right word.

In addition, he depicts a unique situation, developing an unhackneyed plot with rapid movement and unexpected turns which satisfy the reader's craving for the unusual and delight his sense of literary art.

The world of the opera forms the setting of the story and in its diverse elements the reader finds gradually developing the tempestuous love story of a brilliant and beautiful singer.

THE GHOST

A Modern Fantasy

By ARNOLD BENNETT,

Author of "The Old Wives' Tale," etc.

A thoroughly engrossing story of a much-loved opera singer and her suitors, with a strange influence guarding her jealously.

$1.20 net; by mail, $1.32.

CAPTIVATING MARY CARSTAIRS

By HENRY SECOND.

A charming story of mystery and gay young love in a little Hudson River city—full of genuine entertainment.

$1.30 net; by mail, $1.42.

A PRINCE OF ROMANCE

By STEPHEN CHALMERS,

Author of "When Love Calls Men to Arms," etc.

A most alluring story of Scotland in the early days of the last century, when the memory of Bonnie Prince Charlie was still the most romantic fact of the Scotchman's imagination. A delightful love-story and a thrilling and unexpected mystery.

$1.20 net; by mail $1.32

SECOND EDITION

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning, and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The North Carolina REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

The Nation

NEW YORK, THURSDAY, MARCH 2, 1911.

The Week

In spite of the negative votes of several Southern Senators, due solely to their objection to the Sutherland amendment, the resolution for a Constitutional amendment providing for the popular election of Senators came very near being passed by a two-thirds vote of the Senate on Tuesday. Why the question of the Federal control of elections should have been brought up at all is inexplicable. Had no mention of it been made in the Borah resolution, the existing satisfactory conditions would have prevailed, under which the Federal Government has control over the election of Senators and can prescribe the qualifications of voters, and the resolution would have been carried triumphantly. Northern Senators like Root and Depew challenged the Borah resolution on the correct ground that it deprived the Federal Government of a control it ought not to relinquish. Being opposed to it anyway, they were glad of the additional argument. And when the Sutherland amendment, which properly corrected the Borah resolution and met this argument of its critics, had been adopted, the resolution was defeated by the votes of Southern Senators who feared that it might interfere with the disfranchisement of the negroes. Thus we have another illustration of the way a gross injustice to a certain portion of our citizenship works injury to the whole body politic. It is a comfort to find, at least, that many of the Southern Senators were not afraid to vote for the resolution as amended.

Attempts by Senator Cummins and other Republican insurgents to defeat the Canadian reciprocity agreement by arguing that it is not so much of a free-trade measure as they would like, can hardly be regarded as sincere, even by their authors. They know the facts. To them as to everybody else it must be perfectly apparent that a bargain of the sort struck between the Canadian Government and our own is never of an ideal nature. It merely represents the best that could be got by the method of give and take. Either side would, no doubt, have liked to see it different in important respects. But there it is, to be taken or left as a whole; and any effort to improve it now is really an effort to defeat it. This is scarcely denied by Senator Cummins, who must be fully aware of the impossibility of proceeding now as if the framing of a better bill were fairly before the Senate. His proposal to add wool and clothing and some other things to the free imports from Canada was, moreover, instantly exposed by Senator Root. The concessions we make to Canada are in each case for concessions received. If we add others without any equivalent in return, we at once compel ourselves, under our most-favored-nation treaties, to extend them to other countries. That is the last thing which Senator Cummins would wish to do. But this demonstrated hollowness of his contention will not prevent him from urging it, or doing everything else in his power to bring about the rejection of a trade agreement which very shame, after his tariff speeches of last year, ought to drive him to support.

Congress will fail in the performance of an urgent duty of patriotism if it does not pass the Burton joint resolution for the protection of Niagara Falls from further spoliation. The American Civic Association is making an earnest fight to procure the passage of the resolution, in default of which the restrictions imposed by existing law on the amount of water that can be diverted from the Falls for power-generating purposes will expire by limitation on June 29 next. The chief of engineers of the United States army, in a report made September 20, 1909, after the most careful investigation, said: "As a whole, the Falls have unquestionably been seriously injured by the diversions already made. Additional diversions, now under way, will add to the damage." How great the additional damage is likely to be if the Burton resolution should not be passed, is clearly pointed out in the Civic Association's circular. Even if a great public revenue were derived from the use of the Falls, it would still be an imperative duty to protect this glorious national possession from destruction; but, as a matter of fact, the exploiters of the power have been getting it without payment for the privilege, either to the State of New York or to the United States.

The Treasury Department at Washington now knows the exquisite delight of coming across an overlooked half-dollar in the pocket of an old coat. It is a pleasurable sensation altogether out of proportion to the intrinsic value of the retrieved coin. Not that ten million dollars is a sum to be sniffed at, even by a Secretary of the Treasury. Ten million dollars is the amount that has been recovered during the last two years' crusade against customs defrauders. Of greater value, however, is the knowledge that honesty and efficiency have replaced graft and slovenliness in the custom-house. It is something to have found the missing half-dollar; it is more important to have sewn up the hole through which a good many more half-dollars might have slipped in the course of time.

The opinion of the coroner's jury that the great dynamite explosion at Hoboken was caused by a careless smoker does not contribute anything to the question of the supervision of explosives, but it ought to direct general attention to the inexcusable practice, indulged in by so many persons who ought to know better, of throwing away stumps of cigars or cigarettes while still alight. Nobody can tell what will happen to such a stump, what frightful loss of property and even of life may be caused by it. The great Baltimore fire of 1904 has been traced with a very high degree of probability to such a cause. The place where the fire originated was absolutely known, namely in the cellar of a great wholesale dry-goods house. The day was Sunday, and the only probable cause of the fire that could be found was in the fact that one of the sidewalk bulls-eyes over this cellar was missing, and that a lighted cigar or cigarette might have fallen through this hole and set fire to the stuff underneath. To throw into the street a thing that will keep burning perhaps for several minutes, and may be carried by the wind or otherwise no

one h[illegible] whither, should be looked upon as an act of criminal carelessness.

It is no easy matter to determine whether crime is actually on the increase in a given country; and in this country, owing to the very defective character of our criminal statistics, any conclusion on the subject must be viewed with great caution. But when the English Home Office, with its highly organized system, speaks of "the steady increase of crime during the last ten years," as it does in the blue book on criminal statistics for 1909, it is safe to say that that increase is a demonstrated fact. The conclusion arrived at by the English authorities, that the increase of crime "is largely due to a general relaxation in public sentiment with regard to it," may also be accepted as in the highest degree probable. To say that the inhumanity and cruelty which marked the treatment of criminals in England a hundred or two hundred years ago did not keep crime down is no answer to this view; from the fact that one extreme is bad it does not follow that the opposite extreme is good. The full report has not reached us, but it would be interesting to know to what extent the relation is traced not to mere sentimentality, but to the spread of the doctrine that the only justifiable aim of enactments relating to crime is the reformation or restraint of criminals, not their punishment. That doctrine is deliberately held by many estimable persons who are not wanting in intelligence, but on the contrary have done excellent and highly intelligent work in the improvement of methods of dealing with crime; nevertheless it is a most harmful doctrine, and the arguments on which it is maintained—so far as they are grounded on practical experience and not on abstract dogmas—are thoroughly fallacious.

When the Attorney-General of the United States, speaking at the dedication of the new law-school building at the capital, declares, according to the press dispatches, that American lawyers have made a fetich of procedure and have created a mass of artificial rules that are an obstacle to justice, it begins to look as though something might be expected in the way of reform. President Taft is, of course, emphatically on record to the same general effect, and, indeed, the volume of protest from high legal quarters is steadily accumulating. Nothing could be more appropriate than to tell young men about to enter the profession of law that it is their privilege to contribute to the clearing away of this accumulation of obstructions. There is a splendid opportunity for a law school that should devote special effort to the cultivation of this spirit and the equipment of young men to bear their part in that work of law reform the need of which is now becoming so widely recognized.

In the fifth annual report of the President of the Carnegie Foundation, a point not generally taken into account is brought forward conspicuously. "In every report issued by the Carnegie Foundation," says Dr. Pritchett, "the effort has been made to call the attention of colleges and universities to the fact that the endowment in the hands of its trustees would provide at most an adequate retiring allowance system for only a small minority of the institutions in the United States and Canada bearing the name college or university." The Foundation, he adds, has only hoped to establish the custom in a sufficient number of institutions to make the principle of it an accepted part of the American system of education; and it now records with gratification the fact that the trustees of Haverford College have provided a scheme of retiring allowances within the college, upon the same basis as that obtaining in the Carnegie Foundation. It must be a satisfaction to every one to find a college preferring to continue on its own lines—in this instance, the requirement that the trustees of Haverford shall be members of the Society of Friends was the point at issue—rather than waive its traditions for the sake of pension relief. Brown University has taken a similar decision, and is engaged in an effort to raise the necessary funds.

The main body of the report deals with "The Relations of Colleges and Secondary Schools," and throughout the discussion the changes are rung on two dominant notes—the want of proper co-ordination between secondary schools and colleges, and the want of thoroughness in the training obtained by the ordinary student at either the higher or the lower institution. It is impossible to deny the truth of either the one criticism or the other; both have long been familiar and admitted. But Dr. Pritchett brings out many phases of the matter in fresh and illuminating ways; and though, in the process, he can hardly fail to impress most readers with a heightened sense of the complicated difficulties in the way of a radical improvement, he does not hesitate to point out at least one specific change which he thinks will be highly effective. Instead of either accepting the mere certificate of the secondary school, or on the other hand (as is now done by the examining colleges) demanding the passing of examinations in a large number of special or technical requirements, Dr. Pritchett would have the colleges impose an examination test which should require real mastery of a few fundamental things and prove the student's power to think. Failure to pass that examination as a whole he would make an unconditional bar to admission.

Reciprocity between Canada and the United States was of course at once recognized by the organs of the Conservative party in England as knocking out the last hope of its tariff-reform programme; but their lamentations were by no means so moving as might have been expected. The London *Economist*, indeed, looks upon it as quite plain that they are glad to have so fine a chance of bidding farewell to a lost cause with good grace. Instead of making a frantic effort, as might naturally have been expected, to impede the ratification of the reciprocity agreement, the leading Conservative newspapers, it says, have "seized upon it as a convenient pretext for throwing over Mr. Chamberlain." A cruel experience has been that of the English "tariff reformers" these seven years or more. They started out with wonderful zeal and spirit, decrying the free-traders as blindly sticking to an outworn formula, and seeing victory plainly written in the sky for their crusade. But the two things on which their chance of making headway with the nation depended broke down disastrously. The decline of British trade, the supposed indications of which formed the chief staple of Mr. Chamberlain's arguments, refused to come about; and Mr. Chamberlain, whose extraordinary vigor and power of leadership were the mainstay of the movement, failed in health. With either of these factors

missing, the protectionist agitation had little chance; with both wanting, it was doomed. The trade figures for 1910, by the way, again show a record-breaking total, both of exports and of imports.

The virtually unanimous vote by which the new treaty with Japan has been ratified should mark the beginning of the end of the jingo delusion on the Pacific Coast. Great credit is undoubtedly due to Mr. Taft for the skilful way in which he went about allaying the fears and suspicions of the timid West. The Japanese Ambassador's formal pledge on the part of his Government to continue its restrictions on coolie emigration to this country has satisfied pretty nearly every one in California. And in that rests the significance of the treaty. The Japanese laborer is to be kept out not because we are going to stand like stout Cortez, gazing out eagle-eyed on the Pacific, club in hand, but because the Japanese Government has pledged its honor not to allow its laborers to come. In other words, the people of California are actually willing to trust to the honor of that perfidious nation which has seized Manchuria, is just about to seize the Philippines, strives for the supremacy of the Pacific, threatens the dominance of the white race, and interferes with Capt. Hobson's sleep.

The controversy between Slavs and Hungarians centring upon the person of Count Albert Apponyi has taken a slant that is scarcely relevant to the point at issue. It may or may not be that Apponyi as an individual has been an enemy of Hungary's Slavic subjects. The fact remains that he is one of the leaders of the Magyar majority in Hungary whose treatment of the minor races within the kingdom, Slav or Ruthenian, has been inexcusably harsh, and, as events have shown, inexcusably unwise. The Kaiser's Government has not been half so resolute or ruthless in imposing German institutions on the Prussian Poles, as the authorities at Budapest have been in their attempts to Magyarize the people of Croatia-Slavonia. This circumstance does not detract from Count Apponyi's merits and sincerity as an advocate of international peace. It is an inconsistency from which no nation or race is exempt. The record of every people of importance is besmirched with the charge of oppression or injustice toward a weaker people. And too often it is true that the victims of oppression will in turn deny justice to a race over whom they have been given power. On that score there are no pots that can call the kettle black.

The continued rioting at the Comédie Française over Henri Bernstein's latest play shows to what a piteous level the royalist cause in France has fallen. It is not to the play itself that the monarchist crusaders take exception; such a course would be fairly comprehensible. The fault lies with M. Bernstein's Jewish origin, which in some mysterious way constitutes an outrage upon the divine right of kings. That the Orleanist cause should be reduced to fighting battles of this kind must afford great comfort to all good French republicans. Within the royalist camp itself dissension is rife. Léon Daudet and his rowdy gang of *Camelots du roi* have been virtually disavowed by the Duc d'Orléans upon the representations of the more respectable element among his followers. But Daudet and his young ruffians have announced their intention to keep on serving their "king" in spite of himself. In the way of advertising these "servitors of the king" have been fairly successful. To assault a Prime Minister and go to jail, as Lacour, one of the vice-presidents of the *Camelots*, has done, is an act that impresses the popular imagination. But what the violences of the royalist faction really advertise is, at bottom, its own impotence and futility.

Senatorial reform is another feature in the Spanish Premier's democratic programme. The upper house of the Cortes comprises 360 members, of whom one-half are elected for a term of five years. The other half comprise Senators for life, nominated by the Government or holding their seats *ex officio*, as in the case of certain grandees, the captains-general of the army, the archbishops, and the presidents of various State councils. Of the 180 elective Senators, thirty are designated by the archbishops, the universities, and various learned societies. It is the Liberal contention that the Conservatives are thus in control of a permanent majority in the upper house. M. Canalejas proposes to change this state of affairs, and without going to the trouble of tampering with the Constitution. The number of *ex-officio* seats is to be reduced and the number of appointive seats for life is to be correspondingly increased. The Spanish Liberal Ministry, in the exercise of its normal powers, hopes to accomplish what the British Liberal Ministry is contemplating as a weapon of last resort only—a wholesale nomination of peers. The casuists may go on demonstrating the failure of democracy; the fact remains that in the United States, Great Britain, Spain, and Italy, there is the same movement on foot to bring the upper houses of the national Legislatures into closer touch with the masses.

India is smoothing her brow and preparing to evince joy in anticipation of the Delhi coronation. The Viceroy has been permitted to travel to Allahabad without any special precautions or guards on the line. The tours of the Lieutenant-Governor are being made without throwing heavy guard duties on the regular officers. There have been no political outrages for some time. The tone of the vernacular press for the last few months is described as remarkably moderate, and the speeches at the recent Indian Congress were wanting in the undercurrent of hostility to British rule which called out the suggestion some years ago that the organization should be proclaimed an illegal association. The Government is even said to be thinking of withdrawing the notifications issued under the Seditious Meetings act, and it is asserted that, unless a change for the worse occurs, all the special laws that were passed at the time of the unrest in Bengal will very shortly be suspended. Defenders of British rule in India attribute these evidences of improved feeling less to dislike of the restrictive laws than to fear of anarchy. The best element in the situation, however, is the recognition by those loyalists that "we have here three hundred millions of people whose outlook on life is alien, whose character is but little understood, and who are liable to be swayed by strange gusts of passion and religious emotion." The Durbar ought to be made a means not only of impressing the Indian imagination with the power of the British Raj, but also of widening the Englishman's view of the real nature of his task.

OTHER AMERICANS WHO "RISE."

The clinging of Americans to the tradition that theirs is the land of unlimited opportunity, where the poorest may rise by his own efforts to be the greatest, was made a little harder and a little more pathetic last week by Senator Lorimer's recital of his personal struggles and triumphs. He is not exactly the sort of man we have been in the habit of pointing to as an illustration of our proud possibilities. By preference we have dwelt upon Lincoln or Garfield, working their way from lowly beginnings to the highest station; or an Edison mounting to fame over obstacles; or a Carnegie starting on meagre pay and ending as the possessor of a dazzling fortune. Such men have been the examples perennially held up to our youth, with the swelling reminder, "What man has done man can do." It has been the delight of our orators and moralists and teachers to show that rail-splitting or canal-boat driving in early life is no bar to the greatest distinction in manhood. They have eagerly seized upon the "men who have risen" from the cabin or the attic or even from the gutter.

It is obvious, however, that there is more than one way of "rising." The question is not so much from what as to what. The mere fact of climbing up from the bottom, we now see, does not make a man an exemplar. Much of what occurred in Senator Lorimer's career we might easily call typically American: the sordid poverty of his boyhood, the alert, indomitable spirit, the steady advance out of adverse conditions. Yes, but the result! Wealth and power, to be sure, but ignominy. Many another political boss could look back to similar hardships and exertions. Cox and Ruef and Murphy—what limitations were laid upon them in early manhood, and with what sure skill they rose to be feared and hated! In any full estimate of the career open to talent which America holds out to the aspiring, we must not forget these other Americans who "rise."

Nor can we comfortably dismiss them as simply instances of perverted energy and misdirected ambition. When we see able but unscrupulous politicians go far, we are apt to sigh over them as men who would have been ornaments of our public life if they had only been honest, and we let the matter go at that. Nay, if we are stubbornly patriotic, we even try to get a certain amount of satisfaction out of such cases as theirs. "Wonderful country," we say, "in which a man can go so high even though he be wicked. If he had been high-minded, now, what could have stopped him?" The fallacy here is to forget that, in the particular career which he chose, his wickedness was no handicap, but an aid. Will any man contend that Murphy has an intellectual power which would have carried him much further if he had not been unscrupulous? It is his very lack of scruples which largely explains his rise.

This shows that we have to look outside of the disagreeable Americans who have risen, before we can arrive at a complete account of the causes of their rise. In general, a man becomes what he is, owing, first, to native endowment, and, secondly, to environment. And after we have granted all that is asked in regard to the inborn vigor and astuteness of a Cox or Lorimer or Croker, we shall have to admit that their inherent genius for bad politics was somehow furnished with uncommonly favorable surroundings. In other words, the worst party boss ever known is not a mysterious monster. He is a man whose rise is humanly explicable, although the explanation is not soothing to our pride. There is a common social and political responsibility for having produced him and allowed him to flourish. We are not entitled to draw away shudderingly as from one with whom we have no part nor lot. Rather, as in the old story the pious and humble exclamation was made, when a deep-dyed criminal was led away to be hanged: "There, but for the grace of God, goes John Bunyan," we ought to look about us with compunction, when a Lorimer or a Murphy afflicts our sight, and try to discover what share of responsibility we have for the conditions that spawned him.

Properly used, therefore, the other Americans that we do not like to think of among those who rise may serve as well as our more favored and treasured examples to point a moral. They may be singled out as highly successful Americans whose success is a reproach to their country. Whether we see them in that light and perspective or not, we may be very sure that the rest of the world does. We know, too, how common is the experience of Americans being away from home for a time and getting abroad reports of public affairs in the United States with much of the shock that Lowell felt in 1874 when he "scanned the festering news" from his own land, and

> —read of public scandal, private fraud,
> Crime flaunting scot free while the mob applaud,
> Office made vile to bribe unworthiness,
> And all the unwholesome mess,
> The Land of Honest Abraham serves of late.

If it can be said, and we think it can be said truly, that things are not as bad now as they were when Lowell wrote those lines, the improvement has come about partly from the greater willingness of Americans to concede that their beloved country provides unexampled opportunities for the rise of scoundrels as well as heroes; and also from their giving more attention to the need of incessantly fighting the scoundrels, political and other, and doing away with the conditions that breed them.

THE PROBLEM OF BANKING REFORM.

With the end of the Sixty-first Congress, the question of preparing for debate and legislation on the banking system of the country enters upon a new stage. It has apparently been felt by Congressional advocates of such legislation that to urge it while the Congressional elections of 1910 were on the calendar would have been to throw the discussion into the arena of partisan politics, and that to bring it up in the present short session would only have led to the side-tracking of the bill, under stress of other immediate and urgent legislation.

It is true that even the Sixty-second Congress will be handicapped in regard to this question, first by the fact that politicians will be laying their plans for the Presidential contest of 1912, and secondly by the fact that the new Congress is Democratic, whereas the Monetary Commission, with which the concrete proposition of reform would originate, was appointed by a Republican Congress. But there must be a beginning in the matter, and it is difficult to see how even a beginning is to be made except through formal public hearings by the Commission during the Congressional recess.

If it should prove to be advisable that declarations on the subject should

find a place in the national party platforms of 1912, the subject ought to be canvassed beforehand with thoroughness and publicity. The history of the discussion, since the Monetary Commission was organized in 1908, shows the necessity of such action. It cannot be said that the country as a whole is at present in touch with the discussion, much less that it is prepared to decide the question upon its merits. Congress has taken no interest in it; the Monetary Commission itself has not yet acted as a unit. As was to be expected, the banking community has made more progress toward defining its ideas; but there is in that profession also wide divergence of opinion regarding specific plans. The recent informal conference of bankers at Atlantic City, summoned for careful consideration of Senator Aldrich's scheme of banking reform, agreed on the main essentials but differed widely in respect to particular provisions. Until these differences are reconciled and the ignorance or indifference in other quarters is removed, it is useless to expect any genuine progress.

As readers of the *Nation* are aware, we have approached with reserve the proposal of a central bank pure and simple. Apart from the familiar objections based on political tradition, sectional prejudice, or doubt as to possible controlling influences, there still remains the fact that the great central banks of Europe, which were cited as a model, were themselves almost invariably the outgrowth of circumstances which made them the logical nucleus of a growing system of private banks, not a superstructure imposed on an already fully developed system. Senator Aldrich's recent scheme of reform was interesting because of its suggestion of ways in which this difficulty might be obviated. The framework there outlined may in a sense be said to have contemplated building from the bottom up rather than from the top down.

Instead of a central bank with branches, distinct in its organization from the existing smaller institutions, it proposed that national banks in a given section of the country should constitute themselves into a district board, and that from these boards (fifteen in number) certain larger powers over the general banking system should be delegated to a central board. Mr. Aldrich's plan did not insist on special supervisory responsibilities for these several district boards; to them were specifically assigned only the duties of electing part of the national directorate, and of endorsing or guaranteeing certain classes of bills presented by banks in their several districts for re-discount by the central institution. But it is not difficult to imagine enlargement of these duties, along wholly conservative lines, in such shape as should distribute geographically the task both of promoting the interests of sound banking and of restraining the excesses of unsound banking.

It seems to us that discussion may profitably be directed toward the extent to which this part of the scheme of banking reform can be developed. This would do something to remove the prejudices of interior banks against a central institution which should deprive them of a part of their own autonomy. It may also be conceived as a means of preserving and extending an influence which has been gradually assuming an important place in American banking—the supervision of individual banks in a given community or section by a committee representing all the banks. At present it is the clearing-house organizations which have, with greater or less success, performed this task; and the good work which such committees have done has prompted many observant people to urge, in the course of the discussion, that the process of national organization and unification shall be pivoted on the clearing houses themselves. This plan, based simply on existing institutions of the sort, has never seemed feasible. It is at least worth discussing whether similar ends may not be accomplished through the scheme of district boards.

The essential need, however, is that the general plan be brought into the focus of active discussion. If this is not done now, it will almost certainly have to be postponed until after the inauguration of the next President.

M. BRIAND'S RESIGNATION.

In the Parliamentary debates that followed on the collapse of the French railway strike last autumn, M. Briand was accused of having virtually driven the railway servants into revolt in order that he might pose as the saviour of his country. The charge cannot be taken seriously. But if M. Briand did resort to such Machiavellian tactics, it is certain that he made the mistake of his career. His immediate object, of course, was attained. The fear of social revolution rallied to his support men who did not hesitate to express their hostility toward the Prime Minister, his associates, and his general policies. But at the same time M. Briand split his own party in two. He had, to start with, the solid vote of the Unified Socialists against him. Of the group with which he was formally affiliated, the Socialist-Radicals, nearly half joined hands with the Socialists. Ever since the days of Waldeck-Rousseau and the Dreyfus case, these two groups, the Socialists and Socialist-Radicals, have formed the majority in the Chamber and described themselves as the only true republicans. M. Briand, driven to accept the support of the moderate republicans, exposed himself to the charge that he was governing with an anti-republican majority. The fact that even a few monarchist votes were occasionally cast for the Government only gave color to the charge.

Hence it was certain that if the Briand Government could not be overturned only because it pointed to the labor-union menace, it could count upon but the very briefest respite. M. Briand had won the hatred of the great body of Radicals and Socialists, without really winning the favor of the Moderates and Conservatives. M. Jaurès rose to the very heights of his impassioned eloquence in denouncing the turncoat, the "climber," the Minister who ordered out troops against the men whom, only a few years ago, he had fed on anarchistic doctrine. And, in fact, it was the weakness of M. Briand that he had grown too fast. It is customary for politicians to rise upon their dead selves to higher things. Yet M. Briand's revolutionary past was not dead, but a living memory. The day after M. Briand made his dramatic declaration that if extra-legal means had been necessary to break the strike he would not have hesitated, Jaurès, in his paper *L'Humanité*, announced the sale of an interesting pamphlet on the inalienable right of armed insurrection by Aristide Briand. And if the Socialists were enraged against M. Briand, they fell little short of the indignation aroused among the Moderates and Conservatives when he boldly gave a portfolio in his reconstructed

Cabinet to M. Lafferre, head of the Masonic order in France, the man most prominently associated with the system of espionage on army officers which stirred the country to wrath a half-dozen years ago, and overthrew the Combes Ministry.

Something more than personal resentment, however, has brought about the fall of the Briand Cabinet. The Government's Church policy has been condemned by the Radical majority as excessively mild, and the Government's foreign policy has been criticised as ineffective. The separation of Church and State is an accomplished fact, but its consequences are still a source of unsettlement. Now the anti-clerical fight centres upon the public schools. The spirit of elementary public-school instruction in France today is undoubtedly anti-clerical and largely anti-religious. The Church has attempted to combat this tendency by invoking the rights of parents to have their children brought up in their own faith. The question of the *école laïque* and the neutral school is complicated, and is bound to prove the undoing of more than one Ministry. In the sphere of foreign affairs, the policy of the Briand Cabinet has been bitterly criticised. M. Delcassé has carried on a sharp campaign against M. Pichon, whom he accuses of having allowed the Triple Entente—England, France, Russia—to fall into decrepitude. The British Cabinet recently found it essential to affirm formally the integrity of the understanding with France, and Russia's growing friendship with Germany has naturally aroused the resentment of her ally.

The names of the men who are mentioned as possible successors of M. Briand indicate that something like a reconstitution of the old "bloc" has taken place. M. Combes, the "pope" of the anti-clericals, and M. Delcassé are both spoken of. M. Delcassé was Foreign Minister under M. Combes, and a Cabinet comprising the two men would be a return largely to the condition of six years ago. Yet neither man is conceivable at the head of the French Government. The advent of M. Combes would mean a virulent outburst of religious strife. M. Briand may have been too mild to suit the Radical majority, but the accession of M. Combes would drive things farther than the Radical majority would care to see them go. As for M. Delcassé, he is the man whom Germany forced out of the Foreign Office under the threat of war. His appointment would mean a challenge to the Kaiser, and France is not yet prepared for that. The chances are that the new Ministry will be organized by one of the second-rate men in the Radical group—a man of the type of Berteaux, Monis, or Cruppi, all of whom have had Cabinet experience.

THE OPPORTUNITY OF THE SMALL COLLEGE.

We have increased our machinery of education enormously and have thrown the old engines into the junk heap, yet somehow we cannot get away from an uneasy feeling that the product has in some respects deteriorated. The continual complaint that athletics and social functions have usurped the place of study in our colleges is only one expression of a pretty wide dissatisfaction. President Lowell made this the key-note of his inaugural address, and declared that the one thing necessary was to reawaken the imagination of the students and to arouse their ambition by some sharpening of competition for honors in scholarship. Many causes have contributed to this condition of benumbed intellects: perhaps the most obvious is the simple fact that students no longer have any real community of intellectual interests, owing to the variety of courses followed. What common ground of conversation can there be, or what basis of stirring emulation, between the student, for example, who is spending his afternoons in a laboratory investigating the pressures of steam and one who is giving laborious days to a comprehension of the human problems that underlie the Greek tragedy, or between the student who is absorbed in the delightful research into Gothic roots and one who is concerned with the literature of an age that used the word Gothic as a synonym for barbarous?

Here is a difficulty which, for the large university at least, may seem at present insurmountable. The university, in the very nature of the case, may feel bound to foster all the diverse activities of the world for which it is at once a place of training and of progressive experiment. And in truth the lack of community among the students of our universities is only a reflection of what has come to be the state of society at large. Compare any circle of men who meet together to-day for the discussion of intellectual matters with a similar reunion of one or two centuries ago. It used to be a common rule of such gatherings that any subject might be the centre of conversation except politics. On the contrary, any such circle to-day, which does not exclude men of affairs, is almost sure to drift away from every theme except politics and reform—only there can all minds touch. There is no greater error than to suppose that bodies of men are attracted together by diversity of interests.

The way of escape from this deadening dispersion is thus almost blocked, as matters now stand, for the large university. But with the small college, technically so called, the case is different. The very limitations of its means and faculty prevent it from competing with the large university as a general work-shop, so to speak, of all the intellectual activities of the age. If it develops its laboratories the humanities are bound to suffer; and if its money and choice of men are for the humanities, the laboratories are sure to go unfed. And even within a particular study it cannot look for completeness from a number of balancing specialties, but must cultivate the subject itself in a general way.

This limitation has been recognized by some of the more firmly established Eastern institutions. A few years ago there was a good deal of talk, for example, about definitely limiting the number of students at Williams; but we note that this year's freshman class is considerably above 200. An "Address to the Trustees of Amherst College by the Class of 1885," recently published, goes into the question more thoroughly and with more decisive purpose. The committee makes five proposals:

(1.) That the instruction given at Amherst College be a modified classical course as the meaning of that term has been described;

(2.) That the degree of bachelor of science be abolished;

(3.) That the college adopt the deliberate policy to devote all its means to the indefinite increase of teachers' salaries;

(4) That the number of students attending the college be limited;

(5.) That entrance be permitted only by competitive examination.

The real difficulty is likely to lie in the matter of the first two articles, which define the quality of the excellence to be aimed at. To abolish the degree of bachelor of science, and make

the classics the heart of the curriculum—one can hear the protests that are likely to be hurled at the authorities. Yet it is not easy to see how the small college, leaving out of account the technical institutions which give science degrees and have their own exclusions, is to derive any advantage from its limitations save in just this direction. In salary it can scarcely hope to go beyond the richer universities, if it can equal them. It can, however, attain that unity of scholarly interests—with, of course, proper variety—the absence of which is having so benumbing an effect on the larger and more heterogeneous institutions. At a dinner where were present several members of the faculty of a certain small college which apes notoriously the university system, the talk turned into kindly remembrance of the absent brothers; and said the learned investigator in biology to his neighbor of the physical laboratory: "Do you know that Smith came to me to-day and wanted to know about something in biology; what has a philosopher to do with biology?" It is just that spirit of dispersion that might be eliminated by giving to education, where it can be given, a sure order and hierarchy. And, whatever may be said here and there against the "dead languages," however they have been abandoned for easier and seemingly more direct paths to success, there are no studies other than Latin and Greek that can be practically proposed as the centre of such a system. Indeed, the committee whose report we are considering makes a strong appeal for their unique value in individual culture and in the national life. And there are other indications that such views in regard to the classics are becoming commoner to-day among men of wide knowledge of life than among our professional educators. It is not unusual to hear from practical men such opinions as Mr. Bryce put so well in his letter to the Symposium on the Classics held at Ann Arbor in 1909:

> It is a mistake to live so entirely in the present as we are apt to do in these days, for the power of broad thinking suffers.
>
> A mastery of the literature and history of the ancient world makes every one fitter to excel than he would have been without it, for it widens the horizon, it sets standards unlike our own, it sharpens the edge of critical discrimination, it suggests new lines of constructive thought.

In the same spirit Mr. James Loeb, formerly of Kuhn, Loeb & Co., could say: "That a classical course is a valuable training for business life has always seemed to me a self-evident proposition."

Latin and Greek are still the humanities, and the first small college that shall be brave enough to bring back to its halls the true humanistic spirit, may be an influence in education the ends of which no one can foresee.

A LITERARY BOYCOTT.

We have had many instances of stage censorship, more or less intelligent, in this country and in England, but something of a novelty in that line is reported from Italy. "Salome" and "La Samaritaine" had at least been produced in some cities before being suppressed in others, but the Italian proposal is to boycott a drama not yet seen anywhere, and not even entirely written! Gabriele d'Annunzio is the object of this anticipatory attack, and his forthcoming play, "San Sebastiano," is expected to be so offensive a mingling of immorality and sacrilege that Italians are called upon to subject it to the severest kind of *boicottaggio*.

Catholic authorities, naturally and to their credit, are taking the lead in the movement. The *Civiltà Cattolica* of February 4 sounded the alarm. It had a long article on the subject, in which a due meed of praise was given to D'Annunzio as an artist in words, but a strong arraignment made of the repeated affronts to the moral sense encountered in his writings. As for the coming play on the martyrdom of Saint Sebastian, it is denounced in advance as an "outrage not only upon morality but upon all that is most sensitive in the religious conscience." And then an impassioned appeal is made to Italians, especially to Italian women, to abstain in every way from giving countenance to D'Annunzio's work. They are asked to boycott his dramatic representations, to refuse either to buy or read his books, and to refrain from anything which could in any way "contribute even indirectly to the spread of the dangerous poison." We quote a few of the vigorous sentences of the *Civiltà Cattolica:*

> There has been far too much foulness, with provocations to licentiousness, in D'Annunzio's works. He has no right to abuse his indisputably great gifts in offending the conscientious convictions of Italians and corrupting what is still most sacred in our youth. Enough of this! Away with the barbarians! Away with them from the beautiful Italian sky and the country of Dante and Manzoni!

It will not do to dismiss all this as the ravings of an intolerant religionism. The Church authorities often show themselves narrow and short-sighted, but in this matter they are wisely jealous in guarding that purity in widely-read literature which we must all struggle to preserve if our civilization is not to fall into the pit. And clamorous methods against D'Annunzio are the less objectionable because he is one of the most persistent and clamorous self-advertisers living. Every art and trick of *réclame* he uses without delicacy or scruple. His going to Paris last year was attended by endless artifices to fasten attention upon him and give him vogue and increase his gains. It is this unblushing attitude of his that makes his position distinctly apart from that of a sincere and self-forgetting artist, devoted to his work for its own sake, and feeling that he has an important contribution to make to the world's thought and ideals. Such a man, laboring in silence and obscurity, may more plausibly be forgiven for perverse and even harmful ideas; but when a writer lives forever in the glare so as to make his indecencies the more conspicuous and profitable, the ordinary excuses cannot be made for him.

The article on D'Annunzio to which we have referred is entitled, "Sensuality and Mysticism." This gives the clue to the kind of treatment of Saint Sebastian's martyrdom which is to be expected of the author of "Più che l'Amore." Renan was guilty of the same sort of unwholesome toying with lascivious possibilities in the work of his old age, "L'Abbesse de Jouarre." Now, such things may exist—such mixtures of grandeur with dust, such mystical exaltations of the spirit alongside the grossest fleshly lusts—but what have their presentation and exploiting to do with art, what place can they have in books for broadcast circulation? Filth for sewers and sewers for filth, but let us see to it that art be kept sweet and books and plays untainted and newspapers disinfected, lest the love of whatsoever is pure, lovely, and of good report utterly perish.

Correspondence

THE PRIVILEGE OF THE ACCUSED.

To the Editor of The Nation:

Sir: Your editorial entitled "The Criminal's Privilege," in the issue of February 2, is a praiseworthy contribution to our persistent but tardy agitation for the reformation of our procedure in the detection, trial, and punishment of criminals. The Federal constitutional provision, that "no person shall be compelled in any criminal case to be a witness against himself," or its equivalent in the State constitutions, has, as you say, been "stretched beyond its natural scope, even though it be manifest that such stretching can serve no purpose whatever except the escape of the guilty." I hesitate, therefore, to direct your attention to a part of one sentence in your editorial which seems to me to be open to amendment. I refer to your assertion that "the danger of persecution or intentional injustice in criminal proceedings has long ceased to be a real and practical consideration." I regard this as not only an error, but a grave one, entertained far too widely

To illustrate the erroneous character of this assertion by a single example, I direct your attention to the prevalence of that form of extra-legal police examination of prisoners figuratively designated "the third degree." Under this form of inquisition, a person suspected of a crime, of which he may be entirely innocent, is clandestinely carried to a municipal jail, there secretly withdrawn from every form of communication with friend or counsel, and placed in the hands of lawless policemen, who themselves are too often guilty of most of the crimes denominated in the criminal code, as a helpless subject for their torture. A young man was recently tortured by the police of one of our American cities into signing a written confession that he had poisoned his wife and six-year-old daughter. Afterwards the cause of their death was, by conclusive and unimpeached evidence, by chemical analysis and by a scientific experiment on a dog, proved to the satisfaction of the trial judge, a jury of twelve men, two able prosecuting attorneys, and a distinguished university professor of chemistry, to have been the inhalation of carbon-monoxide gas, given off from a defective gas water-heater. He, too, was seriously poisoned by the gas, was rendered unconscious by it, and was locked in a hospital for treatment and police surveillance. Upon gaining semi-consciousness, he was carried from his hospital bed to the municipal chamber of torture. In his weakened physical and distressed mental condition, he was subjected to such bodily violence at the hands of the police, for the purpose of procuring from him this confession, that his body bore the marks of it for several weeks. He was indicted for murder solely upon that confession, which was the only evidence against him. He spent three months of his life in jail waiting for the trial by which he was not merely found not guilty, but judicially proved innocent. Nor is this an isolated case. The third degree is firmly established among the police throughout the United States as an instrument in the administration of criminal jurisprudence. Similar atrocities are of more than daily occurrence in this country. The United States Senate, during the present session of Congress, has taken notice of the character and prevalence of this national disgrace by appointing a special committee to investigate it.

Most persons assume that such conduct on the part of the police, being unlawful, has its appropriate penalty. Under the best of statutes the infliction of punishment would be infrequent on account of the difficulty of proving the offence. But Colorado, which has made this offence a felony, is, I believe, the only State in the Union which has provided specific punishment for it. In most of the States the punishment for this offence, if indeed in many cases there may be punishment at all, is only that applicable to a simple assault, or an assault and battery, a punishment which is shamefully inadequate. Many persons confuse with the proposition to provide punishment for this monstrous cruelty the rule of evidence by which confessions thus obtained are inadmissible. It is apparent that the inadmissibility in evidence of the confession of guilt obtained from a prisoner by torture, while that rule humanely safeguards innocence in the trial court, is not a suitable deterrent from the infliction of the third degree, nor in any manner a punishment. In torturing a man until he confesses guilt, the police are seeking not merely the confession, which in itself is often unimportant, but such other evidences of crime, or alleged crime, as the confession may incidentally disclose, evidences receivable in a court of justice irrespective of the manner in which they are obtained. The police are willing, moreover, to take chances on deluding the court and getting the confession to the jury.

It is my judgment, therefore, that the constitutional inhibition referred to was never more necessary or applicable to an existing peril than it is now. I conclude from my knowledge of human nature that the persecution which it was designed to prevent will be ever imminent. While a sane interpretation of it is demanded by the necessity and justice of administering punishment to the guilty, an equally sane enforcement of it is demanded by the necessity and justice of safeguarding the lives and the liberties of the innocent.

Harry Eugene Kelly.

Denver, Col., February 14.

COMMERCIAL ENGLISH.

To the Editor of The Nation:

Sir: Beyond question the purity of our mother-tongue is threatened by incursions of "commercial English," as pointed out in the interesting letter from Mr. McKnight in your issue of February 9. Unfortunately, it is to be feared that—if he will pardon a locution of so flagrantly "middle-class origin"—he has started out to lock the stable door after the horse has been stolen. For consider to what extent the English language has already been corrupted by adopting terms with "vulgar" associations. Such expressions as, "let the mind lie fallow," "harrow up the soul," "sow sedition broadcast," "winnow a mass of testimony," have crept into the writings even of authors generally held in repute. These phrases smell of the plough-tail. But the base mechanical crafts of the smith, the joiner, the tanner, and the rest have also had their share in the evil work. But, on second thought, is it so alarming that in an age when the highest intelligence and energy are drawn into commerce more largely, perhaps, than into any other career, some of the technical terms—the "cant," if you will—of commerce, no less than the cant of the law courts or of the card-table, should be absorbed into the common speech? Is not this the very way in which a language is enriched—is kept alive? Take some of the offending words: "To be posted" is something more than to be informed—the knowledge in the one case is possessed; in the other it is also classified and kept ready for immediate reference. "Endorsement" is something more than approval—it implies responsibility, whether the thing endorsed be a promissory note or a person's character. And so with other words in the purist's Index Expurgatorius.

Nor is it an answer to say that such discriminations are not made by the careless speaker. The same is true of the finest old crusted vocables in the dictionary. Take "temperament," "atheist," "artistic." Nothing "middle-class" about them. But when eager aspirants to culture get to handling them—"Lord, what work they make of it," as old Selden says.

Weston Jenkins.

Talladega, Ala., February 16.

THE CENTAURS.

To the Editor of The Nation:

Sir: It is not generally known that there exists at Paris a Society of Centaurs—not of the classic type to be found in the marbles of Phidias and the pages of de Guérin, but centaurs of modern style. The members of the society are students at the Beaux-Arts: Italians, Americans, Tchecks, what not. This band meets every Sunday morning at the station of the Luxembourg, and goes out to a town just south of Paris, by name Robinson. Here they take on their true centauresque form, each one mounting a hired courser and clattering through the town in the direction of the Wood of Verrières. Their curvets, their caracoles, their high feats of equitation, would awe the most distinguished cow-puncher in all Wyoming. As horsemen they have become so famous that all the slim-waisted, long-legged young officers come in from the forts of Chatillon, Paliseau, and Villeras, "for to admire and for to see"; they realize that even the aptest pupil of the Cavalry School has much to learn from this extraordinary society.

Personal acquaintance with many of the centaurs has given me some opportunity for observing them, though I regret to say I have not been able to join their company. All candidates for membership must be able to whistle the "Mass of Saint Hubert" from one end to the other—which I cannot do. But there is nothing to prevent my studying them with great interest from without the pale. Consequently, I often accompany them to Robinson and add my involuntary cries of wonder to those of the officers mentioned above. When the centaurs leave the town I hurry after, and plunge into the Wood of Verrières, eagerly foi-

lowing their trail with notebook in one hand and pencil in the other. In every direction I hear them tearing through the underbrush and galloping over the fallen leaves; in every direction I rush in eager pursuit, on foot unfortunately, because they have hired all the horses in Robinson. Of course, it is not often that I catch more than a fleeting glimpse through the trees, and of their more extended raids over the countryside I have seen nothing.

But I am determined to write a "History of the Society of Centaurs," though I am perfectly aware of the traditional difficulties which beset the historian who writes of events he has not seen. In this respect I admit that Xenophon and Gabriel Hanotaux have a certain advantage over me. Not being a direct witness, I feel some hesitancy in relating matters of which I personally may not doubt the truth and accuracy. Furthermore, the exploits of the Centaurs already begin to be disguised by the romantic and grandiose veil of Legend. Good people of the peasantry who live round about, in the neighborhood of Villaine, of Vauhallan, of Vélizy, have told me the most astonishing things with respect to these wild riders. Many are convinced that the Centaurs are envoys of the Evil One; and certainly the tales they tell in proof of this, crossing themselves anxiously, are marvellously strange: horses that clear at one leap the great redoubts on the plateau of Verrières and thereby cause all the guns to go off of their own accord, through the influence of some infernal sympathy; furious races on the highroad, in which the fastest motors are overtaken and passed with ease, while the amazed chauffeurs, in confusion and terror, stamp on their accelerators and call on Saint Christopher; stag-hunts by the light of the moon, where hounds and quarry are phantoms, and all the woods ring with the sounding of ghostly horns. I should not dare repeat a sixth of all I have heard on this subject. These facts must be scanned with a close and critical eye before being set down on the august page of history.

CRANBURY PIKE.

Passy, France, February 5.

SCIENCE AND THE CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: Such extravagant attacks upon the classics as are made by a college professor in a recent number of the *Popular Science Monthly* cannot be answered, because the writer shows himself incapable of understanding the other side. It is only to be regretted that a serious journal should choose to print such indiscriminate denunciation. Would it print (let us suggest) an equally sincere plea from a student of literature with no taste for scientific studies and no sympathy with them, who felt called upon to assert that science is without educational value? In spite of the utilitarians, there will still remain some who, in their secret souls, cherish the belief that culture is the end of true education, even as practical efficiency is the proper object of technical or professional training; that culture provides not only the broadest, but also the surest, foundation for the highest type of efficiency; that vision should precede service, and that "where there is no vision, the people perish." We may be grateful to this rash assailant of Plato for his "ponderous" style, of Marcus Aurelius for his "dreary platitudes," of the Homeric poems for their "inferiority" to the "Kalevala," in so far as he admits that "Socrates was unquestionably a man of great intellect," and lets off Aristotle with a patronizing pat on the back. Perhaps, however, we shall prefer the judgment of Emerson, the most "useful" man that America has produced:

Rather let me be "a pagan suckled in a creed outworn" than cowardly deny or conceal one particle of my debt to Greek art, or poetry, or virtue. Certainly I would my debt were more, but it is my fault, not theirs, if 'tis little. But how pitiful if a mind enriched and infused with the spirit of their severe yet human beauty, modulating the words they spake, the acts they did, the forms they sculptured, every gesture, every fold of the robe; especially animating the biography of their men with a wild wisdom and an elegance as wild and handsome as sunshine; the brave anecdotes of Agesilaus, Phocion, and Epaminondas; the death of Socrates, that holy martyr, a death like that of Christ; the purple light of Plato which shines yet into all ages, and is a test of the sublimest intellects—to receive the influences, however partial, of all this, and to speak of it as if it were nothing, or, like a fool, underpraise it, . . . I call that mean-spirited, if it were Channing or Luther that did it. ("Journals of Ralph Waldo Emerson, 1833-1835," pp. 418f.)

Perhaps we shall prefer the view of another professor of science who has been called "the greatest physician in the English-speaking world":

The tap-root of modern science sinks deep in Greek soil, the astounding fertility of which is one of the outstanding facts of history. As Sir Henry Maine says: "To one small people . . . it was given to create the principle of progress. That people was the Greek. Except the blind forces of nature nothing moves in this world which is not Greek in its origin." Though not always recognized, the controlling principles of our art, literature, and philosophy, as well as those of science, are Hellenic. We still think in certain levels only with the help of Plato, and there is not a lecture-room of this university in which the trained ear may not catch echoes of the Lyceum. (Dr. William Osler: "Man's Redemption of Man," the *American Magazine*, Dec., 1910.)

"Utility" and "efficiency" are words that need defining as much as do "culture" and "education." The writer in the *Popular Science Monthly* maintains that "a curriculum which ignores utility is wasteful." What, then, are the "useful" studies, and how does the schoolboy know what subjects will prove "useful" to him in after-life? We have the testimony of an eminent professor of psychology—that his broad training without reference to future vocation up to the time when he "reached the intellectual level of the graduate school" proved in fact the best possible preparation for his life-work. (Hugo Münsterberg: "American Traits.") From all the years spent on the study of arithmetic—a supposedly "useful" subject—many a man retains for use little more than the simple processes of addition, subtraction, multiplication, and division. How few find use in their after-lives for algebra and geometry! How much of the physics and chemistry learned in school is of actual service to the average man in his calling? And these are imagined to be practical studies in contrast with Latin and Greek. In fact, there is only one subject in the curriculum of which we may predict with absolute certainty the future "utility" for all students, and that is the study of English, the cultivation of the ability to express one's self correctly and clearly in speaking and writing. All divergent views as to the curriculum must find in this their common point of departure; and on this rock of agreement the oft-assailed citadel of the classics stands, we believe, and will forever stand unshaken.

> Sta come torre ferma, che non crolla
> Giammai la cima per soffiar de' venti.

As to the old and outgrown quarrel of modern *versus* ancient languages, which this same writer picks up again—here he may be answered. The scholar whose work lies in modern languages will be the first to assert that no adequate knowledge of his subject is possible without some acquaintance with the linguistic and literary sources. Modern literature is unintelligible without Greece, modern language is inexplicable without Rome. Here are the words of one of the most experienced and efficient teachers of modern languages in America:

An eminent professor in a scientific school has been heard to declare that he would rather have, as advanced students of applied science, men who had devoted themselves to Latin, than those who had spent their time on scientific studies; and his voice is one of many. It appears to be the unanimous opinion of college professors of modern languages that their best pupils are those whose school years were given mostly to Greek and Latin, while their poorest are those in whose previous curriculum French or German or "science" was the principal factor. (Prof. C. H. Grandgent: "Is Modern Language Teaching a Failure?" in the *School Review*, September, 1907.)

But this writer says: "Since the study of language is essential, the language in the curriculum should be useful. English, German, and French are quite as difficult as Latin and Greek; and their literature is sufficiently inspiring." He tells us that "neither the 'Iliad' nor the 'Æneid' is superior to 'Paradise Lost' or to the 'Inferno.'" No classicist is likely to come short of his admiration for Dante and Milton; and any classicist may ask him the pertinent question: Where would Dante and Milton be without the Classics, and what modern reader can appreciate them at all without knowledge of the Classics? Their poetry is an outgrowth from the rich soil of Graeco-Roman culture; it is fed by the streams of Virgil and Plato and many another ancient spring of inspiration; and it cannot be transplanted.

Translation, we are told, will suffice to give acquaintance with ancient literature, at least; but how much more true this is of modern literature! English versions of French and German classics are far more satisfactory than translations from Greek and Latin, because modern modes of thought and expression, and modern verse-forms, have much in common; whereas no ancient poet has been rendered in a way to satisfy those who know him: the magic remains incommunicable. If one must get great literature through the unsatisfying medium of translation, it is far better that the modern literatures should come to him that way; both because they are essentially less great than the ancient, and because translators can do them greater justice. It may be added that the classicist is more likely to have a fair reading-knowledge of modern languages, a fair acquaintance with modern literatures, than is the modernist to have a first-hand acquaintance with the classics. The cause of the modern lan-

guages, including English, is bound up with that of the classics; there can be no quarrel between them. To the sober and far-seeing eye, we believe, the cause of the sciences appears almost equally bound up with that of the classics. No classicist would wish to banish the sciences from the curriculum; least of all would he wish to return to the days of compulsory study of the classics for all; but every lover of literature must regret the publication of a reckless attack on the classics from the pen of a man of standing in the scientific world, because it is just such rash and uncalled-for utterances as this, with their catch-words of "utility" or "waste of time," which make it possible for even the best minds among our youth to miss the chance of drinking at that perennial source of inspiration.

Hobart College, February 14.

THE DISCOVERIES AT SAMARIA.

TO THE EDITOR OF THE NATION:

SIR: For some time past the newspapers of Europe and America have had much to say regarding the excavations carried on at Samaria by the Harvard Semitic Museum. And well they might, in view of the important Roman, Greek, and Hebrew discoveries made at Samaria. But in some points ill-informed writers have circulated exaggerated accounts of the work. I refer specially to the statement that a letter from an Assyrian King to Ahab has been found, and that a "tablet" has been discovered containing an inventory of the furniture in Ahab's palace. There is no such letter and no such inventory.

We have good reason to believe, however, that the massive structure resting on the rock underneath the buildings of the Greek and the Roman period is the palace of Ahab; and equally good reason to believe that about one hundred fragments of pottery with writing in the ancient Hebrew character are from the time of Ahab. The records on these fragments are written in ink; they are memoranda relating to wine and oil, and the discovery is one of the greatest importance.

DAVID G. LYON.

Harvard University, February 23.

HAWTHORNE'S SMOKING.

TO THE EDITOR OF THE NATION:

SIR: It may interest Mr. Kennedy to know that a portion of the letter by Hawthorne from which he quotes in a letter in your issue of January 26, appeared in Moncure D. Conway's "Life of Hawthorne." On page 115 of that work it is stated that Burchmore, who was head clerk in the Custom House at Salem when Hawthorne was surveyor of the port, and whom he vainly endeavored to save from his own fate, after his dismissal opened a small shop; and that Hawthorne sent him several letters. Mr. Conway quotes from that dated April 7, 1851, which was written at Lenox: "Do you deal in cigars? If you meet with any good ones, at a reasonable rate, I should like to have you reserve a quarter of a thousand for me; and I will call for them when I come to Boston," and from one written in July, 1852, at Concord: "Is there any first-rate brandy to be had? I shall want a gallon or two before the liquor law goes into operation." Mr. Conway comments, "So his patronage went all the way to Salem for the sake of this humiliated clerk."

"HOWARDS END."

TO THE EDITOR OF THE NATION:

SIR: Since a writer is naturally particular about the form in which his work is presented to the public, I should like it to be known that the chapter headings that appear in the American edition of my novel, "Howards End," are not by me, and were added without my knowledge.

The book should be read without chapter headings.

Literature

CHINA UNDER THE EMPRESS DOWAGER.

China under the Empress Dowager, being the history of the life and times of Tzu Hsi. Compiled from State papers and the private diary of the Comptroller of the Household. By J. O. P. Bland and E. Backhouse. Illustrated. Philadelphia: J. B. Lippincott Co. $4 net.

It used to be said that Chinese history was too dull to be studied by any but specialists or Germans, and that the Germans had not discovered it yet. The authors of this volume have shown that it may be made to compare in romantic interest with the history of any nation, and that the Chinese themselves are masters of graphic description. For this illuminating account of the great Empress Dowager and her court is essentially a story by Chinese writers, and is chiefly valuable because of its numerous and admirably translated documents. It constitutes the first authentic record of the acts and opinions of the ruling group in China which has ever been disclosed to the world outside.

Tze Hi—to adopt a more familiar spelling of her name than that employed by the authors—is the first pair of sixteen honorific characters imperially decreed to the Empress Mother after the birth of her son, and is a title rather than a name. As every maiden's name is taboo outside of her own family, she was known in the palace, either by her clan name of Yehonala, or as the "Yi" Concubine. To the mass of her subjects, she was either Empress Dowager or the Old Buddha—a nickname safely used even to her face. Her husband, the Emperor Hsien-feng, a nonentity given over to the pursuit of pleasures that were chiefly carnal, upon attaining the throne at nineteen dismissed the narrow, but respectable advisers of his father, replacing them with favorites who added to an equal amount of bigotry greater sensuality and greed. Into this immoral court, the child of sixteen was introduced as a concubine of the third class to live with some two hundred ladies of the highest rank in the empire, and two thousand other Manchu females, employed as handmaidens, under the direction of eunuchs. The legends of her origin, which have floated about the markets of Peking—that she was once a slave, and the like—must be finally discarded in the light of the precise information which we now possess about her early youth. There can be no doubt that she was brought into the palace in the ordinary way among the eligible daughters of "Bannerman" rank, and that she owed her influence from this time onward to her natural charm, sheer ability, and determination to equip herself with the best classical education offered at court. By this means only could she expect to hold her own with Chinese statesmen, when her high ambition was fulfilled. We get a pleasant glimpse in these early days of a graciousness that never wholly left her, when she obtained permission to visit her mother:

> All the neighbors in Pewter Lane turned out to see the eunuchs and the yellow-draped chair. The mother and all the members of the household (including some of an older generation) ranged themselves on either side of the entrance courtyard as the chair was borne within. At the head of the steps leading to the inner courtyard the eunuchs in attendance requested her to descend; she then entered the main room, where she took the seat of honor. Her family approached respectfully to salute her, all kneeling except her mother and the elder relatives. A banquet was then served, at which, by special arrangement, the mother took a seat lower than that of the daughter, thus recognizing her position as mother of the Heir Apparent. All present were most favorably impressed by Yehonala's unaffected and affectionate disposition; she seemed quite unspoiled by the formalities and splendors of court life, talking with all the old vivacity as a daughter of the house, showing the keenest interest in the family's affairs, and particularly in the education of her sisters.

What strikes the Western observer in making his first acquaintance with the palace life which these pages reveal is its commingling of ceremony and laxity in social intercourse. There is always the nicest determination of rank and etiquette, but with it goes a sort of freedom that reminds us that absolute autocracy in itself develops none of the stiffness inevitably associated with the officialdom of bureaucracy. Into this court, which persistently maintains the theory of a sacrosanct sovereign before whom all other rulers stand in fealty, youths are admitted as eunuchs to rise, if they have the brains, to controlling positions in the empire. Two of these have played parts of the first magnitude during the life of Tze Hi; the elder, An Te-hai, met his fate through the hatred of Prince Kung, whom he once insulted. After his execution—which she never forgave—his mistress consoled

herself with another and shrewder eunuch, Li Lien-ying, who for forty years held the fortunes of the highest and best in China in his supple hands, amassing an enormous property by blackmail and corruption. Invincible in the might of her favor, he levied "squeezes" upon every official in the empire, virtually making common cause and a common purse with his mistress, to whom he was unflinchingly loyal. And so precious is this quality in an Asiatic court that Li survived the awful dangers of a power behind an autocratic throne to walk in the funeral cortège of the old empress, the only one of all the vast throng of officials and palace servants to show signs of genuine grief.

In a book of such extraordinary interest to students of modern China it is possible to indicate here only a few hitherto obscure matters that are at last revealed to outsiders. Those who are familiar with the recent history of the Empire will recall in such incidents as the Tsai Yuan conspiracy, Tung Chih's death, and the coup d'état of 1898, some critical occasions in Tze Hi's career when the fate of the dynasty may be said to have rested in her hands. It would be interesting to examine them all, but there is only space now to inquire how far in the supreme crisis of the Boxer uprising the doom of China depended upon the temper of this resolute woman. Upon her lies the blame for the great disaster, it should seem, but hers is the credit also for the recovery. Yet from the Chinese standpoint she is hardly culpable. It was a magnificent venture, a blind bargain, and she lost. She hoped to find in the Boxers a ready means of meeting the ogres of the West by magic and fanaticism. If she erred in the conviction that this rabble was the instrument required for the great effort, it must still be allowed in her defence that the terrible miscalculation was rather her misfortune than her fault. There were a few, indeed, such as her cousin Jung Lu, who deplored her growing infatuation, but no one *knew*, and all to whom she turned for counsel urged her incontinently to the fatal decision. It is difficult for any one unacquainted with life in China to realize what to most outsiders is its inconceivable ignorance of physical science and of the strength of other nations, but if this is once appreciated it becomes possible to understand how her Boxer proclivities passed into an obsession. She was conjuring, she thought, with a supernatural power, and she believed, in the intensity of her hatred of those Europeans who had humiliated China and flouted her supremacy, that their science and resources must succumb to this inspired host. That she listened at all in the heat of her passion to the protests of such as Jung Lu and the Viceroy Liu, shows some conflict in her emotions, but when, at the critical moment, the arch-conspirators, Prince Tuan and Na Tung, forged a dispatch from the foreign ministers, couched in most insolent language, "demanding her immediate abdication, the degradation of the heir apparent, and the restoration of the Emperor, . . . the wrath of the Old Buddha was beyond control." So the colossal blunder conceived in ignorance seems to have been consummated in a burst of passion engendered by a deception. It is a fearful tale.

The principal contribution of importance to our understanding of the siege which follows is the diary of a Manchu official found in his *yamen* at the capture of Peking. It is a story of absorbing and even pathetic interest, for its author was intimately acquainted with the chief actors in the great drama and was careful to note every item and opinion that came to his ears until the day of *débâcle*, when he fell a victim to the cupidity of his unnatural son. From this relation we obtain for the first time some idea of the distraught gang that attempted to influence the Empress and frustrate their personal rivals, of the utter recklessness of the extremists, and of the fine determination with which Jung Lu resisted them to the end, thereby saving the legations because he withheld his trained troops and artillery. Yet through the turmoil the redoubtable Dowager maintained her place as the undisputed master of them all. She loses her temper often, yet she gives ear to unpalatable warnings and quotes the classics in rebuttal. She orders two righteous patriots beheaded because they worry her by their repeated protests, but she has the grace to call them brave men. She seems never to have appreciated the enormity of assailing the envoys of foreign states in her capital; in the midst of the siege she sent them presents of vegetables and ice, "to which she subsequently referred with pride as convincing proof of her good faith and good will." And through all her inconsistencies she showed herself consistently feminine. Here is a laconic note of the Manchu diarist:

> Yesterday afternoon the Empress Dowager crossed over to the Lake Palace for a water picnic, attended by several ladies of the court. The continual bombardment of the French Cathedral eventually made her head ache, so she dispatched a chamberlain to the officer commanding at the Hi-Hua Gate, ordering them to cease firing until her return to the Forbidden City.

The charge of cruelty against Tze Hi must be considered as fairly proved by the disclosures of this volume. She had the typical Asiatic's indifference to inflicting pain or death, if her purpose seemed to demand it. We may easily exaggerate such indifference, and call cruelty blood-thirstiness, but blood-thirsty she was not. As to the alleged murders of her coadjutor, the Eastern Empress, of her son Tung Chih, and of his widow, frequently laid at her door, the authors admit her capable of the crimes, indeed, but dismiss the charges as not proven. Her most brutal deed, a swift stroke delivered in the hour of agony, when she fled in disguise from the palace on August 15, deserves to be told in the old diarist's own way:

> All the concubines were summoned to appear before Her Majesty at 3:30 A. M.; she had previously issued a decree that none of them should accompany her for the present. The Pearl Concubine (the Emperor's favorite) came with the rest, and actually dared to suggest that the Emperor should remain in Peking. The Empress was in no mood for argument. Without a moment's hesitation, she shouted to the eunuchs on duty, "Throw this wretched minion down the well!" At this the Emperor, who was greatly grieved, fell on his knees in supplication, but the Empress angrily bade him desist, saying that this was no time for bandying words. "Let her die at once," she said, "as a warning to all undutiful children, and to those owls who, when fledged, peck out their own mothers' eyes." So the eunuchs Li and Sung took the Pearl Concubine and cast her down the well, which is just outside the Ning Shou Palace.

It is not a pretty tale—neither are some of those told of Queen Elizabeth—but there must have been something fine about her fierceness, for men admired her, even when they feared her most. Kwang Hsu, the wretched Emperor, upon whom the rigor of her wrath reacted more cruelly than upon any other, could not utterly condemn her, though in his dying hour he wrote, "She has always hated us."

There was hatred, greed, and guilt enough in the old tigress to make us turn with relief to the better side of her nature, and note some of the good she did. After regaining her ravished capital, she was sufficiently heroic to acknowledge full responsibility for her mistaken policy and declare

> a change of front unparalleled in the history of China. Certain it is (as was fully proved in the case of the Emperor in 1898) that no other ruler of the Dynasty could have proclaimed such drastic changes without causing serious dissensions and possibly civil war. But so masterly were her methods of dealing with the necessities of the situation, and so forcibly did the style and arguments of her decrees appeal to the *literati*, that they carried very general conviction.

The sincerity of her conversion was proved by six years of consistent action that has brought the party of Young China to the fore and made genuine reform possible. Without her, it is not easy to see how any conceivable force in the empire could have dominated at once the just indignation of the foreigners, the susceptibilities of the provincial gentry, "the backbone of China's collective intelligence," and the lethargic fa-

talism of her Manchu kinsmen. For though the Manchus have been ruling nearly three centuries over China, they have, as a race, learned as little of their business as the Parthians did in old Persia. In the lapse of these centuries, the direct descendants of the founder of this clan have multiplied into a mob of poor relatives whose kinship to the Emperor forbids them to work, and whose presence near the throne inevitably restrains them from taking any course that might endanger their unearned incomes. The fact that the habits of these parasites unfit them more and more, as the clan endures, for intellectual leadership drags the whole policy of the ruling house down to the dead level of maintaining widespread corruption throughout the empire and petty intrigues within the palace. The most enlightened monarch cannot wholly escape from this paralyzing influence. That Tze Hi, though not undefiled, rose above it to see in which way salvation lay, marks her as a woman of genius and entitles her, despite her iniquities, to the title of great.

CURRENT FICTION.

Marie-Claire. Roman. Par Marguérite Audoux. Préface d' Octave Mirbeau. Paris: Bibliothèque-Charpentier.

Marie-Claire. By Marguérite Audoux. Translated by John Raphael. With an Introduction by Arnold Bennett. New York: George H. Doran Co.

In his preface to the recently published fragments of Taine's single projected work of fiction, "Etienne Mayran," Paul Bourget presents two probable explanations of its unfinished state. The first was the author's repugnance for self-confession in the person of a hero who was only too palpably himself; the second, his perception that in carrying out the story along the lines it was beginning to take, he could not avoid going directly counter to the basic canon of his artistic creed, complete objectivity. We are reminded of this clash between instinct and theory by "Marie-Claire," the work of the Parisian seamstress, Marguérite Audoux, which, as almost everybody must know by this time, is the literary sensation of the hour in France, where it has taken a great prize established for women writers of fiction. Like "Etienne Mayran," "Marie-Claire" is at bottom nothing but a bit of autobiography served up as fiction. Aside from the difference in the sex of the characters, and from the fact that Marie-Claire employs the first person, whereas Taine's hero is presented in the third, the two books show a singular resemblance, particularly in the opening pages. Both begin with scenes of death, with the breaking up of homes, and the entrance of children, in early infancy, upon a new and strange life, that of school-room and dormitory. Both, too, follow the objective method so far as mere emotionlessness and a certain restraint of manner are concerned, and in this particular it is noticeable that Marie-Claire speaks of herself quite as impersonally as Taine talks of Etienne. In either case the author seeks simply to record facts, ideas, and impressions, without critical comment or sentimental enlargement on the theme.

Yet in spite of all these precautions, it is as impossible for one as for the other to keep himself out of his book. Through the carefully measured sentences, deliberately shaped, it should seem, to give the effect of remoteness, the personalities of the great thinker, divided between his avidity for sensations and his passion for intellectual system, and of the little Parisian dressmaker, looking on life with eyes of infinite purity and a nameless, half-conscious longing, shine as fully revealed as in the ostentatious outpourings of any egoist. Thus the conflict between intention and achievement is present on both hands, but the perception of this conflict which acted as an inhibition upon Taine and prevented him, to the loss of literature, from finishing his novel, is happily absent in Marguérite Audoux. The result is a work through which is effected that complete release of an individual soul which, if not the end of great literature, is the source of one of its most delicate and abiding charms; while the self-imposed objective discipline, the scrupulous regard inculcated by naturalism for the precise and, as it were, scientifically accurate statement of every significant detail of exterior and interior life, operate simply to chasten the style, to chisel it to a crisp clarity and concision of form.

M. Mirbeau in his preface to the original French edition notes, as the supreme miracle of the little book which Mr. Bennett characterizes as "a divine accident," the elegance of expression achieved by this hard-working woman without any literary culture save such as she acquired by her own efforts and through her own infallible instincts. More, perhaps, than any other French writer since the reign of romanticism and naturalism set in, she has restored French prose to that mood of dreamy and delicious revery, half-spiritual, half-sensuous, which it possessed after Rousseau had revealed nature to man as the great source and storehouse of his sentiments and emotions. What she has accomplished is very much that which Renoir accomplishes in painting. Just as Renoir interprets scenes and characters of modern life with the grace and intimacy of a Chardin or a Watteau, so Marguérite Audoux has, without sacrificing anything of its essential reality, transfigured her experience so that the commonest and crudest episodes, the simplest and most undistinguished actors, with her, in the ordinary but infinitely moving little drama of her life, attain charm and significance.

This is particularly seen in the second part of her book, which Mr. Bennett notes as "full of marvellous beauty," and in which Marie-Claire, after leaving the convent orphanage described in the first part, becomes a little shepherdess on a farm in Sologne. Here her daily duties and small adventures form a pastoral idyll of the freshest simplicity and loveliness. The familiar rural motive of modern fiction is revived with new poetic force and imaginative fantasy. Marie-Claire is unhappy at first, separated from her old friends, and runs away to return to the convent. It was at night. "The wind was blowing very hard, and big black clouds were rolling across the sky under the moon." It was a long way to the highroad, and she had to cross a slippery bridge to reach it. At a fork she did not know which branch to take. Choosing that to the left, she walked very fast:

> In the distance I saw a black mass which covered the whole country. It seemed to be coming towards me, and for a moment I wanted to turn back and run. A dog began to bark, and that gave me a little confidence, and almost directly I saw that the black mass in front of me was a wood through which the road passed. When I got into it the wind seemed to be rougher than ever. It blew in squalls, and the trees struck at one another and rattled their branches and moaned and stooped down to get out of its way. I heard long whistling sounds as the branches cracked and clattered and fell.

The flight ends by her being overtaken by the farmer, Master Sylvain, when she is nearly overcome by fatigue. He carries her tenderly home, and very soon she becomes reconciled to the new life and quite happy in it.

With the dog, Castille, she goes out to tend the sheep, and tries to keep them from wandering and getting lost. Once she herself loses her way in a heavy mist and lets the flock lead her towards home. Another time she sees a yellow wolf carry off one of her charges. When she tells about it on her return, the men get their guns and give chase to the thief. It is all as simple as this, but the simplicity is that of a deep and responsive nature. The author combines those two qualities of sentiment and sensuality as they are to be found combined only in the finest French temperaments, so that when she is most absorbed in the interior movements of her sensibility, she is most attentive to the sights and sounds of the outer world, and her mood gives them their imaginative coloring:

> There were days when I felt so lonely that I began to believe that the earth had fallen all to pieces round me, and when a crow cawed as it flew past in the gray sky, its hoarse voice seemed to me to be singing of the misfortunes of the world.

She feels the wet, the wind, and the

cold; notes the blue curling smoke, the white fog folded like a soft thick blanket above the water in the river, all as part of her revery, of that strangely intense concentration, only dimly and half consciously turned inward on itself, which is the condition of her existence.

It is not difficult to trace analogies and affinities between this work of Marguérite Audoux and that of other contemporary writers in France. Her simplicity, her feeling for nature, immediately suggest the poetry of Francis Jammes, but she is without the diffusive sentimentality that marks that writer, or the bizarre flights of fancy, the rather pedantic cult of the inanimate, and the precious eccentricities of phrase and of diction, that afflict much of his utterance with an air of affectation. The fineness of her taste and of her sincerity relates her more closely to certain of the less merely sensational among the poets of her own sex—Marie Daguet, for example—whose senses have awakened to a new passion and seduction, that of nature, and who have transcribed their impressions and the stirrings of their sensibility with truthful observation, just sentiment, and genuine imaginative originality and power. The accession of Marguérite Audoux to this small band of real poets is one proof more that to-day the creative tradition of French letters has passed into the hands of women rather than of men.

A NOTABLE PHILANTHROPIST.

Morris Ketchum Jesup: A character sketch. By William Adams Brown. New York: Charles Scribner's Sons. $2.50 net.

Mr. Jesup left but a brief autobiographic fragment, and he wrote few letters, hence there was little material for a memoir, beyond what is revealed by his connection with the many institutions for which he labored so incessantly. The list of those of which he was president is a long one. But even more impressive is his early determination to give away money as soon as he made it. His benefactions were rarely the result of sudden impulse. He believed that charity must rest on a firm economic basis, aiming to remove the causes of poverty. Hence, in the language of his biographer, "his interest in industrial education, in the cause of which he was one of the pioneers. Hence his earnest advocacy of forest preservation and his efforts to obtain the application of sound business principles in the administration of public affairs. Hence, finally, his interest in those studies which increase our knowledge of the conditions of productive industry." When, in 1884, Mr. Jesup decided to retire from business and devote all his energies to public matters, it was after a training in practical philanthropy such as few men have had.

In 1852, when but twenty-two years of age, he became one of the founders of the Young Men's Christian Association of New York city, and through it he was led into wider fields. The measures advocated by him in behalf of railway employees, while serving on the International Railroad Committee of the association, were gradually applied to miners, lumbermen, cotton-mill hands, factory operatives, government employees in the Canal Zone, and in construction camps, as well as in military camps and naval stations generally. Equally absorbing and effective was his work for the Five Points House of Industry, his connection with which began in 1867, and ended only with his death. Each successive sphere of usefulness widened his outlook and led to new activities. The knowledge gained by him in gathering the collection of woods for the Museum of Natural History awakened an interest in forest preservation, and led to his presenting in the Chamber of Commerce, in 1883, a memorial urging the acquisition of the Adirondack wilderness as a forest preserve.

Mr. Jesup became early interested in the cause of the negro. His sympathies were aroused in the course of a business trip to Richmond, in 1858, when the horrors of the slave market so impressed him that he abandoned his idea of investing capital in Virginia. He made up his mind that no State or community could prosper that sanctioned slavery. In 1882, he was consulted by Mr. Slater as to the best method of devoting his gift of a million dollars to negro education, and thenceforth he proved an invaluable member of the board of the Slater Fund. He became interested in the industrial education of the negro in the South, familiarizing himself with conditions in the Southern States by thorough investigations on the spot, and always giving liberally and wisely. In general, he was not a believer in endowment that rendered yearly gifts unnecessary. "Charity," he said, "needs a constant living stream running every day."

In 1899, Mr. Jesup was elected president of the New York Chamber of Commerce, and in this capacity he rendered most important service to the city, particularly in connection with the Rapid Transit Commission. On the occasion of the destruction of St. Pierre, he purchased, on his own responsibility, several vessels loaded with grain which were bound for Martinique, and telegraphed to the American Consul at the nearest point on the island to take possession of the cargoes for the relief of the sufferers. Equally prompt was his action at the time of the San Francisco earthquake, when, largely on his initiative, an efficient bureau of relief was established in that city. Mr. Jesup's address at the dinner given by the London Chamber of Commerce to a representative delegation of American merchants testified to the grace and dignity with which he acted for the chamber on all official occasions.

Of the many religious associations which claimed Mr. Jesup's attention, none appealed to him so strongly as the Syrian Protestant College at Beirut, whose president he became in 1896. He had known its foremost professor, the admirable Dr. George E. Post, from boyhood, and the unsectarian though distinctly Christian character of the institution enlisted his enthusiastic support. With all his profoundly religious convictions, he had no tolerance for narrow theological opinions. This was further attested during the trial of Dr. Briggs for heresy, when, as one of the leading directors of the Union Theological Seminary, he stood most earnestly for religious liberty. His donations to American universities were prompted by a desire to procure for others educational benefits of which he had himself been deprived in his youth. In various ways he made gifts to Harvard, Yale, and Princeton.

Mr. Jesup's name is inseparably connected with the American Museum of Natural History, one of whose organizers he had been, and whose president he became in 1881. As his biographer amply shows, he procured for the Museum money, men, and a place in which to house properly the increasing collections. With his own means he purchased the unique palæontological collection of lower vertebrates by Professor Cope. Through his interest in various explorations, he added largely to the anthropological department of the Museum, helped organize the Peary Arctic Club, and gave powerful aid to the explorer in his crowning work.

The personal touches lent by the biographer, in the chapter "In the Home Circle," complete the picture of a singularly attractive and forceful man. One of his most striking traits was his tact—not the least important element in the make-up of the successful philanthropist—which sprang from a ready self-control and a spontaneous regard for the feelings of those, high and low, with whom his manifold activities brought him in contact. And perhaps the most valuable lesson which his life conveyed is expressed in this tribute to him, by Bishop Lawrence:

> Some men seem to reach the climax of their development at forty; others, at sixty; and a few continue to the very end of life. To this last group Mr. Jesup belonged.

Reason and Belief. By Sir Oliver Lodge. New York: Moffat, Yard & Co. $1.25 net.

Most of this book of sermons, as it might be called, is made up of addresses

to students and Sunday talks to workingmen. It has three parts, which are entitled, respectively, Incarnation, The Old Testament in Education, and The Scope of Science. Of these the first is the longest and much the most important, as it gives an outline of Sir Oliver's philosophy, of which the fundamental thesis is suggested by the title of Part i—Incarnation—and is expressed as follows:

> My message is that there is some great truth in the idea of preëxistence; not an obvious truth, nor one easy to formulate—a truth difficult to express—not to be identified with the guesses of incarnation and transmigration, which may be fanciful. We may not have been individuals before, but we are chips or fragments of a great mass of mind, of spirit, and of life—drops, as it were, taken out of a germinal reservoir of life, and incubated until incarnate in a material body.

This thesis is put forward as a strictly scientific working hypothesis. And although, of course, he does not regard it as verified, it is rather surprising to find the author so convinced of its truth. His evidence consists in part of the common experience of "false memory," while the rest of the argument is supplied by an appeal to the poets, especially Wordsworth, Tennyson, and F. W. H. Myers. The book, in fact, from cover to cover, is so packed with poetical quotations that the author gives up his final chapter to a justification of their use. This, however, was quite unnecessary; for no one who reads the book will deny that the quotations form by far the best part of it.

The Philosophy of Incarnation naturally (and quite properly) concludes with a consideration of Christianity, and especially Christology. The traditional view of the nature of Christ is accepted with little variation or question. In speaking of this doctrine of the Church, he says:

> As a student of science, I am bound to say that, so far as we can understand such an assertion, there is nothing in it contrary to accepted knowledge. I am testifying to it because I have gradually found that it may be true—because I have gradually become assured of the possibility of such an incarnation. The historical testimony in its favor is entirely credible. The Christian churches have hold of a great truth. That is what I want people to realize distinctly and forcibly and without any convention.

There can be little doubt that these words of the great physicist will be quoted from innumerable pulpits all over the world as the last deliverance of "Science." The warfare of science and theology, we shall now be told, is at last over and science has capitulated. But, seriously, it should be clearly understood once for all (though it probably never will be) that a man who is an authority in one field is not therefore necessarily an authority in all. Since this fact is so often forgotten, this little book, which in itself is perfectly harmless, is quite likely to mislead a good many of its readers.

Part ii, on the Old Testament, contains some quite sensible, though not very original, remarks on the use of the Bible in education; and Part iii proves beyond dispute that hypotheses are useful in science. In short, while the book contains much that is true, and much that is appropriate for Sunday afternoon talks to workingmen, it is a little hard to see why a man of Sir Oliver Lodge's attainments found it worth his while to publish them.

Letters to Severall Persons of Honour. By John Donne. The text edited, with notes, by Charles Edmund Merrill, jr. New York: Sturgis & Walton Co. $5 net.

It is fitting that Donne's Letters in their first reprint in the original form since the original edition of 1651 should appear in a style worthy of the author, and this the publishers have certainly given them. The paper is of the best texture and the type clear and handsome; we can only regret the deckel edges, the chief practical function of which is to accumulate dust. And the letters are well worth reprinting, if only for the fame of the author as perhaps the chief influence of the Elizabethan age upon the new "metaphysical" manner of the Carolinians.

Readers, however, who take up this volume expecting to be carried along by the piquant and extravagant wit, mingled with flashes of profound inspiration, that characterizes Donne's poetry, will, of course, be disappointed. Here and there, to be sure, these sudden sallies enlighten his correspondence. The very opening words of the first letter, "To the worthiest Lady Mrs. Bridget White," have the fine alluring flavor of his best verse: "I could make some guesse whether souls that go to heaven, retain any memory of us that stay behinde, if I knew whether you ever thought of us, since you enjoyed your heaven, which is your self, at home." And that note, or something like it, is heard elsewhere, as, for instance: "So in our souls health, an innocence is better then the heartiest repentance" (Letter ii); "I have occasion to sit late some nights in my study, (which your books make a pretty library) and now I finde that that room hath a wholesome emblematique use: for having under it a vault, I make that promise me, that I shall die reading, since my book and a grave are so near" (Letter xii); "For I have much to take in, and much to cast out; sometimes I thinke it easier to discharge my self of vice then of vanity, as one may sooner carry the fire out of a room then the smoake: and then I see it was a new vanity to think so" (Letter xxvii). There are, too, occasional sentences that give a glimpse into the real character of the man. In an interesting letter to Sir H. Goodere (No. xviii) we catch the note of his weariness of this world and his desire of the next, and we learn how he was diverted from the study of the law "by the worst voluptuousness, which is an Hydroptique immoderate desire of humane learning and languages." And in another letter to the same person (No. xxxiv) we get the expression of the feeling, common to other writers of the age, that there was something derogatory to a serious character in the production of profane poetry. But these more intimate passages are rare, and as a rule the letters move in the peculiar field of generalization that makes most of the correspondences of the age neither quite literature nor quite familiar self-revelation.

In fact, it would appear that the aim of these letter-writers some three centuries ago, when they were not dealing with practical or political matters, was entirely different from our more homely purpose of to-day. Friendship was then one of the ideals of many minds (it was to Donne a "second religion"), and the letters that passed from man to man were written not so much to acquaint the recipient with the details of the sender's life, as to foster this ideal; they were little fragments of a "De Amicitia" with personal application. It is in this vein that Donne speaks of his writing as "the coarse but durable garment of my love," and it is with this understanding that we must approach his Letters to-day if we would not be grievously disappointed.

It remains to be said that Mr. Merrill has appended to the Letters a series of explanatory and historical notes that show both judgment and learning.

Through Five Administrations: Reminiscences of Col. William H. Crook. Compiled and edited by Margarita Spalding Gerry. New York: Harper & Bros. $1.80 net.

The reminiscences of any honest observer at close quarters of the great men of our civil war period have their value, and Col. Crook's are no exception to the rule. At first a soldier, then a District of Columbia policeman, then a body-guard of President Lincoln, he became finally a clerk and an assistant secretary in the White House, remaining until the end of Arthur's Administration. In these humble capacities, he was a careful, if not always discriminating, spectator of what went on in the Executive Mansion. His recollections of matters political, as set down by Miss Gerry, are not distinguished by insight or good judgment. Yet, as a whole, the book has been worth doing.

For Lincoln, Col. Crook had the same

reverence that marked all those who came into intimate contact with that lofty soul, and the incidents he relates of Lincoln are welcome contributions to the picture of the great martyr, to which ten thousand pens have already contributed. Particularly valuable is Col. Crook's story of Lincoln's visit to Richmond, during which he walked by the President's side, ready to protect him with his body from any rebel bullet." Mr. Lincoln," he records, "never looked sadder in his life than when he walked through the streets of Richmond and knew it saved to the Union and himself victorious." Even more interesting is the fact Col. Crook brings out that, although Lincoln's regular body-guard, Parker by name, was absent on the night of the assassination, no inquiry was ever made as to that neglect of duty or as to Parker's whereabouts, and no punishment was ever awarded to him for this negligence, which Col. Crook believes to have been fatal. If Parker or he had been on guard that night at the entrance of the box, Col. Crook feels that Booth could never have reached his victim. It is an idle speculation now, yet the failure to clear up this mystery is certainly astonishing, particularly because it was fully understood before the assassination, according to Col. Crook, that Lincoln's life was in danger.

For President Johnson, Col. Crook had the warmest affection. Here was a President who was a hero to his guardian. He bears testimony to Johnson's sobriety, and against the old stories of intemperance. Johnson's Congressional enemies were Col. Crook's enemies, and are so to this day. The narrative of Johnson's personal bearing during the days of the impeachment would alone lend value to the book. Like the rest of the story, Miss Gerry tells it artlessly, with no attempt at literary flavor. Evidently of a kindly disposition, Col. Crook speaks warmly of the other Presidents he observed at close range—Grant, Hayes, and Arthur—and has much of interest to record of their family life.

Woman in Italy: From the Introduction of the Chivalrous Service of Love to the Appearance of the Professional Actress. By William Boulting. New York: Brentano's. $4 net.

Mr. Boulting is already favorably known as the author of a one-volume condensation of Sismondi brought up to date, and of an excellent book on Tasso. The present volume should give him an honorable position among the few persons in England who speak with authority on Italian history between the thirteenth and the nineteenth centuries. The number who revamp well-known material and send it out adorned with fine illustrations is very large, but Mr. Boulting does not belong to this class. He has made an important contribution to an important subject.

If the eternal feminine leads mankind on, then it must follow that the position of woman at any given period ought to give, more or less accurately, the measure of civilization at that period. It is the great merit of Mr. Boulting that he enables us to trace the unfolding of woman's capacity in Italy during some four hundred years. He has done for his special theme what Burckhardt did for the Italian Renaissance, as a whole.
